Following the 1954 division of Vietnam, in 1955 Thieu assumed command of the South Vietnamese Military Academy in Da Lat and then rose rapidly through the ranks of the South Vietnamese army. During the military coup against South Vietnamese President Ngo Dinh Diem in November 1963, Colonel Thieu led a regiment of his troops against the presidential palace. Promoted to brigadier general, shortly thereafter he became a member of General Duong Van Minh's ruling Military Revolutionary Council. Thieu and a group of other officers led a coup against Duong in January 1964, which brought Major General Nguyen Khanh to power. Thieu cooperated with a subsequent coup against Khanh and was appointed deputy prime minister in the short-lived government of Dr. Phan Huy Quat. In June 1965, Thieu was promoted to lieutenant general and became chief of state and chairman of the military junta, the National Leadership Committee, while General Nguyen Cao Ky was installed as prime minister.

In the 1967 presidential elections held under the auspices of a new constitution, the junta selected Thieu as the presidential candidate and Ky as the vice presidential nominee. They won the election with 34.8 percent of the vote against ten other tickets. Staunchly anticommunist, Thieu presided over a regime that opposed any settlement with the Democratic Republic of Vietnam (DRV, North Vietnam) and its National Liberation Front (NLF) in South Vietnam. Taking advantage of the January 1968 Tet Offensive, he launched a general mobilization that doubled the size of the South Vietnamese armed forces. In 1971, he finessed an election law that effectively

disqualified his major opponents, Ky and Minh. Thieu was thus reelected president in 1971.

Agreement was reached in the Paris Peace Talks in late 1972 on a framework to end the war, and U.S. Secretary of State Henry Kissinger traveled to Saigon to present it to Thieu. He rejected the agreement, however, believing that it provided few guarantees and that the U.S. government had betrayed South Vietnam in the negotiations, chiefly because People's Army of Vietnam (PAVN, North Vietnamese Army) forces did not have to withdraw from South Vietnam but merely had to promise not to reinforce. When the North Vietnamese refused to renegotiate, President Richard M. Nixon ordered extensive bombing of North Vietnam in December 1972. This brought Hanoi back to the negotiating table, and a new peace agreement was reached in January 1973 with a few cosmetic changes. Kissinger insisted that Thieu sign or face the end of U.S. aid.

As the last of the American troops departed, fighting resumed in South Vietnam between the two sides, and Thieu ordered attacks on areas controlled by the communists in defiance of the peace agreement. By mid-1974, the so-called Third Indochina War was well under way. The situation steadily deteriorated for the South Vietnamese government forces, especially after the U.S. Congress reduced military aid to Saigon and Nixon resigned because of the Watergate scandal in August 1974.

When the North Vietnamese government launched the Ho Chi Minh Campaign in the spring of 1975, Thieu made the disastrous decision to abandon northern South Vietnam, which precipitated collapse elsewhere. On 21 April 1975, with PAVN forces closing in on Saigon, he appeared on television and addressed his people. He accepted no blame himself and denounced the United States. Five days later, he fled to Taiwan in a U.S. transport plane. Thieu later settled in the United States and died in Boston, Massachusetts, on 29 September 2001.

Lieutenant General Nguyen Van Thieu, president of the Republic of Vietnam (RVN, South Vietnam) during 1967–1973. (Yoichi R. Okamoto/Lyndon B. Johnson Library)

Nicaragua

Central American nation encompassing 49,998 square miles, slightly bigger than the U.S. state of New York. With a 1945 population of just 1 million people, Nicaragua borders Honduras to the north, Costa Rica to the south, the Pacific Ocean to the west, and the Caribbean Sea to the east.

Nicaragua gained its independence from Spain in 1821. In 1823, Agustín Iturbide, the Mexican emperor in charge of the region, was overthrown. The United Provinces of Central America, led by Guatemala, rebelled and created a federation. Soon, each Central American entity became a republic, and the federation dissolved in 1838.

Considerable political turmoil characterized Nicaragua during the nineteenth and the twentieth centuries. The strategic position of the country attracted the attention of the larger powers, first Great Britain and then the United States. In 1850, the United States and Britain signed the Clayton-Bulwer Treaty, thereby agreeing to joint control of a canal across Nicaragua. The treaty is emblematic of American will to dominate the area, as Nicaragua's government was not even consulted before the treaty was signed.

In addition to U.S. governmental involvement in Nicaragua, there were also American adventurers, known as filibusters, always eager to be part of the Nicaraguan predicament, sometimes even in opposition to U.S. official policy. The most prominent of these filibusters was William Walker, who invaded Nicaragua in 1851. Walker's invasion was defeated by a coalition of Nicaraguan political parties in 1858, with the support of Great Britain and the economic aid of Cornelius Vanderbilt, the American financier and railroad magnate.

U.S. troops intervened repeatedly to protect the economic interests of the United States. A major intervention occurred in 1927 to stop a civil war. Some Nicaraguans resented such frequent intrusions in their national affairs and organized a guerrilla campaign led by Liberal Party General Augusto César Sandino. Although Washington considered Sandino an outlaw, many Latin Americans supported him as a resistance hero.

In 1932 Liberal leader Juan Sacasa won the presidential elections, and the United States withdrew its troops. President Sacasa appointed Anastasio Somoza as director general of the Nicaraguan Army (National Guard). In June 1936, the ambitious Somoza overthrew Sacasa and took control of the presidency and the Liberal Party. From 1936 to 1979, a Somoza dynasty ruled Nicaragua through its control of the National Guard. Before his death in 1956, Somoza had transformed the country into a family estate. His two sons, Luis and Anastasio "Tachito" Somoza Debayle, subsequently controlled Nicaragua's politics and economy.

The Somoza brothers continued their father's personal dictatorship. Congress chose Luis Somoza to complete his father's term. In 1966, Tachito became president and commander of the National Guard. Ruthless dictators who played on Cold War sensibilities, the Somozas presented themselves as the last anticommunist bulwark in Latin America. They ruled Nicaragua with fierce anticommunist rhetoric and by torturing and killing their political opponents. The Somozas controlled not only Nicaragua's politics and the army

NICARAGUA, 1979

but also the entire economy. In 1979, the Somoza family's personal wealth was estimated at \$900 million.

By the mid-1970s, Somoza's control began to erode. An earthquake destroyed Managua in 1972, killing more than 10,000 people and leaving many more homeless. With complete disregard of the tragedy, Somoza profited from the international aid and the control of government contracts for reconstruction. Such corruption strengthened the armed opposition known as the Sandinista Front, a radical leftist organization inspired by the 1959 Cuban Revolution. In 1974, Somoza ran for president in fraudulent elections in which the leader of the legal opposition refused to participate and which Archbishop Miguel Obando refused to recognize. Needless to say, Nicaragua remained desperately poor as the Somoza dynasty siphoned off any money earmarked for poverty mitigation and economic development. While the Somozas weaned the country from its reliance on banana imports, they did nothing to build or modernize the economy.

When Jimmy Carter became president of the United States, human rights became a central focus of U.S. policy toward Latin America. Somoza felt betrayed by an American president who placed human rights above anti-communist loyalties. The Carter administration viewed Somoza as a liability rather than an asset to the United States and began to pressure him to implement reforms.

On 10 January 1978, a plot organized by Pedro Ramos, a right-wing Cuban American exile, killed the leader of Nicaragua's moderate opposition, Pedro

Joaquín Chamorro. Somoza was blamed for the murder, catalyzing a united front against the dictatorship. Afraid that a reformist solution might neutralize their insurrection, the radical Sandinistas had accelerated their armed struggle in 1977 and created a national front. The Sandinista opposition found receptive friends not only in Cuba but also in Costa Rica, Venezuela, and Panama, which recognized a state of belligerency in Nicaragua. Indeed, the Organization of American States (OAS) passed a resolution declaring Somoza “the fundamental cause” of the Nicaraguan crisis.

On 28 May 1979 the opposition proclaimed a provisional government in San José, centered on a democratic program of political pluralism and a mixed economy. During the first half of 1979, the Sandinista leftists undertook a formidable guerrilla offensive with massive military aid from Cuba, Venezuela, Panama, and Costa Rica. The different Sandinista factions also reconciled among themselves, focusing on the overthrow of Somoza and suspending ideological differences. Some were social democrats, others were Marxists, and a significant group was Fidel Castro’s sympathizers. On 19 July 1979, the insurrection triumphed. A Nicaraguan provisional government was inaugurated with massive popular support and international approval. According to the Inter-American Human Rights Commission, more than 45,000

Nicaraguans had died during the war against Somoza, and the country had suffered more than \$2 billion in economic losses.

Carter's policy toward the Sandinistas tried to avoid a confrontation of the kind that pushed Castro into the Soviet bloc. In September 1979, Carter met with Daniel Ortega, Sergio Ramírez, and Alfonso Robelo, leaders of the new government. In the meeting, Carter and Ortega agreed not to let the past interfere with relations between the two governments. The Carter administration then announced that it would not support the ex-Somoza guardsmen who were organizing subversive activities. At the same time, Carter pointed out that human rights were a major concern of the United States. The Nicaraguan officials expressed support for the policy and committed to not aiding civil conflicts in Guatemala and El Salvador.

The end of détente by 1980 influenced the mood in both Washington and Managua. In Nicaragua, the moderate members of the junta—Robelo and Violeta Barrios de Chamorro—resigned when the Sandinistas packed the Council of State with their own supporters. In the United States, new U.S. President Ronald Reagan defined Nicaragua as a test case to stop Marxist subversion. His presidential campaign platform had called for terminating all economic aid to Nicaragua and for supporting anti-Sandinista forces.

Whereas Carter had tried to keep Nicaragua out of the East-West conflict, the Reagan administration transformed Central America into a Cold War battleground. On 9 March 1981, Reagan instructed the Central Intelligence Agency (CIA) to organize covert antigovernment actions and to support the group of Somoza loyalists led by Colonel Enrique Bermúdez who were already battling against the Sandinista government. Yet the Reagan administration faced two main obstacles in its unilateralist policy toward Nicaragua. Domestically, the U.S. Congress was reluctant to engage in a war, and it reduced and then banned aid to the anti-Sandinista forces (Contras). In Nicaragua, a significant sector of the opposition did not support the radicalization of the revolution but instead sought a third negotiated option to the Contra program. Indeed, this internal moderate opposition was critical of Reagan's support of the Contras and finally articulated an alternative to both the Sandinistas and Contras.

The civil war in Nicaragua cost more than 30,000 lives and close to \$2.5 billion, without increasing the likelihood of a stable democracy or dislodging the Sandinistas from power. The ideologues behind the war in Washington and Managua provided each other with enough provocation and cannon fodder to last for more than a decade of war in Nicaragua, with important ramifications for El Salvador and Guatemala. In addition, between 1986 and 1988, congressional reports confirmed that Reagan administration officials diverted profits from arm sales to Iran to provide illegal support to the Contras in what became the Iran-Contra Affair.

Alarmed by Reagan's interventionist policy and the deterioration of Nicaraguan democracy under the Sandinistas, Mexico, Venezuela, Colombia, and Panama created the Contadora Group in January to search for a Latin American solution to the Nicaraguan problem. After democratization processes

in South America, the Contadora Group included a support group (consisting of Argentina, Brazil, Uruguay, and Peru) that provided a unified appeal for regional agreements of peace and reconciliation among and within Central American countries and that received significant support from the democratic majority in the U.S. Congress.

In February 1989 another summit of Central American presidents held in El Salvador led the Sandinista government to agree to hold elections in early 1990. The internationally supervised elections of 25 February 1990 brought an opposition victory and a democratic transition process under the moderate leadership of Violeta Barrios de Chamorro.

Niebuhr, Reinhold

(1892–1971)

Influential Protestant U.S. theologian and political activist, perhaps most well known for his ideas that link Christian principles with statecraft and diplomacy, and also a key contributor to modern-day just war theories. Karl Paul Reinhold Niebuhr was born on 21 June 1892 in Wright City, Missouri, the son of German immigrants. His father was a Protestant minister. From an early age, Niebuhr exhibited interest in pursuing a clerical career. He graduated from Elmhurst College in Elmhurst, Illinois, in 1910, majoring in religion and theology. From there he went to the Eden Theological Seminary in St. Louis, from which he graduated in 1913. He entered Yale University in 1914 and received a master's degree in theology in 1915. That same year, he was ordained to the Evangelical Synod, an offshoot of the German Lutheran Church.

Niebuhr's first assignment was the pastorate of the Detroit Evangelical Church, which mainly served automobile workers. There he came to identify with the harsh effects of industrialization on American workers. He soon became an archenemy of industrialist Henry Ford and a staunch proponent of unionization. The effects of World War I infused Niebuhr with a powerful strain of pacifism, which he extolled both in print and from the pulpit.

In 1928 Niebuhr took a faculty position at New York's famed Union Theological Seminary. In the 1930s he strongly advocated on behalf of the more militant faction of the Socialist Party of America, and he believed that a united front that included the Communist Party of the United States was the only prescription for the ills of the Great Depression. World War II moved Niebuhr away from his earlier pacifist stances. Indeed, he became a supporter of war to arrest the march of the Axis powers.

During and after World War II, Niebuhr continued to modify his beliefs and political sympathies. He became the key adherent of what would be called Christian Realism, which advocated a tough approach to politics and diplomacy, especially those that dealt with communist powers such as the Soviet Union. Soon, he became an influential anticommunist crusader and a supporter of nuclear weapons as a deterrent to Soviet aggression. Indeed, he had come full circle from his early years in the ministry.

Niebuhr had a profound influence on policymakers and political thinkers such as George F. Kennan and Hans J. Morgenthau, who are credited with the rise of political realism, a direct offshoot of Christian Realism. From the early 1950s through the mid-1970s, Niebuhr's prolific writings and lectures on theology, politics, and social issues made him the most important theologian of the time and one of the top political philosophers of the mid-Cold War period. Dr. Martin Luther King Jr. read widely in Niebuhr's many works.

In the end, Niebuhr expressed optimism in the U.S. journey toward social justice, despite the prickly issues that were emerging from the Vietnam War. He was perhaps unique for his era in the sense that he was able to straddle the political and the theological so ably. His influence on social, political, and religious thinking cast a long shadow over the Cold War and continues to influence modern-day thinking. Niebuhr retired from the ministry in 1960 and died in Stockbridge, Massachusetts, on 1 June 1971.

Western African nation and Africa's most populous country. Nigeria covers 356,667 square miles, about one-third larger than the U.S. state of Texas. Nigeria is bordered by Benin to the west, Cameroon to the east, the Gulf of

Nigeria

Guinea to the south, and Niger and Chad to the north. In 1945 Nigeria's population numbered 22 million and by 1990 had grown to at least 90 million. During the Cold War, the country gained independence from Britain (1960), underwent a civil war (1967–1970), and alternated between short periods of democratic government and long spells of military rule.

Since its days as a British colony, Nigeria has been divided along ethnic and geographic lines. Among hundreds of ethnic groupings, three are especially prominent, as reflected in the regional division of the country at the time of independence. Muslims of the linked Hausa and Fulani groups dominate the northern half, or Northern Region, of Nigeria. The Western Region, which takes up the quadrant of the country to the south and west of the Niger River, is populated heavily by the Yoruba people. The southeastern quadrant of Nigeria, known as the Eastern Region, is home to a large population of Igbo (or Ibo) people.

Britain made the kingdom of Lagos into a Crown colony in 1861 and then expanded its imperial influence along the Niger Delta in the 1870s and 1880s. By the turn of the twentieth century, virtually all of modern Nigeria was under British control. In 1914, British officials united the Muslim Northern Region and the mostly Christian Southern Region under a single administration. Following World War II, Britain slowly granted more autonomy to Nigeria's native population. British policy favored continued federation for the rival ethnic regions and also institutionalized the preeminence of the Muslim Northern Region.

Nigeria gained its independence on 1 October 1960 under civilian leadership and formalized a federation style of government in 1963. While this structure was meant to provide the various regions with a high degree of autonomy, in practice the central federal government has typically dominated affairs. At independence, Nigeria was divided into just three regions, but over time it continued to subdivide and reapportion provinces in response to the political demands of smaller ethnic groups. There are now dozens of states.

The country elected rulers democratically until January 1966, when a coup overthrew the First Republic and Major General Aguiyi Ironsi came to power. Ironsi himself fell to another coup just six months later, when senior military officer Yakubu Gowon seized power. Gowon ruled during 1966–1975. Subsequent military rulers of the country included Ramat Mohammed (1975–1976), Olusegun Obasanjo (1976–1979), Muhammad Buhari (1983–1985), Ibrahim Babangida (1985–1993), and Sani Abacha (1993–1998). A civilian, Shehu Shagari, served as president during the years of the Second Republic (1979–1983).

Regional tensions in Nigeria came to a head in 1967, when the Eastern Region attempted to secede from the Nigerian federation as an independent nation called Biafra. Despite some international support for the Biafran cause, Nigeria's federal government had defeated the separatist movement by 1970. More than a million people died during the conflict. Most of the deaths occurred among the Eastern Region separatists, and many of those deaths were caused by starvation, as federal military forces used blockades of food and food shipments as a key strategic weapon to crush the rebellion.

An Ibo tribesman inspects a rifle at a training camp in Owerri in July 1968. Following their training, the soldiers joined the fighting in Biafra's war against Nigerian federal forces. (Bettmann/Corbis)

The 1970s witnessed an economic resurgence as the country recovered from the civil war and reaped great profits from its considerable oil reserves. Since independence, the nation's economy has been increasingly dominated by oil, which accounts for more than half of Nigeria's gross domestic product (GDP) and the vast majority of its exports. Much of the wealth derived from oil has ended up in the hands of Nigeria's military rulers and civilian bureaucracy, and there has been little technological transfer from foreign-owned oil concerns to native-owned industries.

During the Cold War, Nigeria remained formally nonaligned but generally maintained warm relations with the United States and Great Britain. English remained Nigeria's official language, as it had since colonial days. Nigeria also carried on steady trade with France, the Federal Republic of Germany (FRG, West Germany), and other Western commercial nations. At various times, Nigeria attempted to assert itself as a regional diplomatic and economic leader, such as in its opposition to South Africa's apartheid during the Second Republic in the early 1980s. While economic mismanagement and corruption hampered Nigeria's development, the country produced many

famous intellectuals during the Cold War era, including international literary figures and Nobel Prize winners such as Chinua Achebe and Wole Soyinka.

Nitze, Paul Henry (1907–2004)

Prominent U.S. Cold War strategist and arms control negotiator. Born on 16 January 1907 in Amherst, Massachusetts, the son of a college professor, Paul Nitze graduated from Harvard University in 1928. He then became an investment banker with Dillon, Read & Company on Wall Street. In 1940 he joined the firm's former vice president and future secretary of defense, James V. Forrestal, in government service in Washington. Nitze's first assignment was to help draft the Selective Service Act. In 1942, he became head of the Metals and Minerals Branch of the Board of Economic Warfare, and at war's end he was vice chairman of the Strategic Bombing Survey.

Nitze's greatest contribution to the Cold War occurred during his directorship of the U.S. State Department's Policy Planning Staff (PPS). He was one of the first to suggest a massive U.S. aid program as essential to European recovery. Beginning in August 1949, he was deputy director of the PPS under George F. Kennan, assuming the top spot in January 1950 after Kennan's resignation. In this post, Nitze played a central role in the drafting of the National Security Council report NSC-68.

NSC-68 was a comprehensive, top secret review of American national security policy and was triggered in part by the Soviet's first atomic bomb explosion in September 1949. The report was given to President Harry S. Truman in April 1950 but was not officially approved until September 1950, several months after the Democratic People's Republic of Korea (DPRK, North Korean) invasion of the Republic of Korea (ROK, South Korea). Convinced that the Cold War was entering a dangerous new phase, NSC-68's authors called for a vast conventional and nuclear rearmament program to counteract perceived Soviet aggression. The report provided the blueprint for U.S. defense planning during the next twenty-five years.

Nitze left the State Department at the end of the Truman administration but nonetheless continued to play an active role in the development of U.S. Cold War policy, contributing to the 1957 Gaither Report that was critical of Eisenhower's New Look defense posture. The report was most notable for warning of a missile gap between the United States and the Soviet Union, an erroneous conclusion.

After advising President John F. Kennedy during the Cuban Missile Crisis, Nitze became secretary of the navy in 1963. He served as deputy secretary of defense during 1967–1969 and assistant secretary of defense for international affairs during 1973–1976.

Skeptical of détente, Nitze was a member of the U.S. delegation to the Strategic Arms Limitation Talks (SALT) and was the principal U.S. negotiator in arms-control talks in Geneva (1981–1984). In an effort to break a deadlock over intermediate-range missiles in Europe, Nitze took a walk in the woods with Soviet Ambassador Yuli Kvitsinsky in 1982, resulting in a sweeping and unauthorized compromise that was, however, rejected by President Ronald Reagan. Nitze was the principal negotiator of the Intermediate-Range Nuclear Forces (INF) Treaty of 1987, serving until his retirement from government service in 1989 as special advisor on arms control to Reagan.

A quintessential Cold Warrior, Nitze died in Washington, D.C., on 19 October 2004.

Secretary of the Navy Paul Nitze (*left*) is shown here being escorted around a base in Vietnam by Lieutenant Colonel F. S. Wood of the U.S. 1st Marine Division. (National Archives and Records Administration)

U.S. politician, vice president, and president of the United States. Born in Yorba Linda, California, on 9 January 1913, Richard Nixon graduated from Duke Law School and then practiced law in Whittier, California, until 1942. During World War II he spent four years in the U.S. Navy, serving in the South Pacific and becoming a lieutenant commander. After demobilization in 1946 he ran successfully for Congress as a Republican and in 1950 for a California Senate seat, races notable for his use of anticommunist smear tactics

**Nixon, Richard
Milhous**
(1913–1994)

American withdrawal from Vietnam was only part of the broader strategic realignment that Nixon and Kissinger termed their “Grand Design.”

against his Democratic opponents. In 1952 Dwight D. Eisenhower selected Nixon as his running mate for the presidency, and Nixon spent eight years as vice president, demonstrating particular interest in foreign affairs and traveling extensively. In 1960 he narrowly lost the presidential race to John F. Kennedy. Eight years later Nixon was elected president on the Republican ticket.

As president, Nixon belied his earlier reputation as an uncompromising anticommunist, restructuring the international pattern of U.S. alliances by playing the China card and moving toward recognition of the communist People’s Republic of China (PRC) while using the new Sino-American rapprochement to extract concessions on détente and arms control from the Soviet Union. In doing so, Nixon worked closely with his energetic national security advisor, Henry A. Kissinger, restricting Secretary of State William P. Rogers largely to routine diplomatic business. Kissinger finally replaced Rogers in August 1973.

In 1968 the inability of the United States to achieve victory in the controversial Vietnam War, despite increasingly high deployments of troops, dominated the political agenda. Nixon, promising that he had a plan to end the war expeditiously, won the presidency. He accelerated the program of Vietnamization begun under President Lyndon B. Johnson, gradually withdrawing American troops while providing Republic of Vietnam (RVN, South Vietnam) forces with massive amounts of war supplies intended to enable them to defend themselves. In August 1969 Kissinger embarked on protracted negotiations with the Democratic Republic of Vietnam (DRV, North Vietnam). To win time for Vietnamization, Nixon ordered the secret bombing of Cambodia as well as a ground invasion of that country that helped bring the communist Khmer Rouge to power there later. At Christmas 1972 Nixon ordered a massive bombing campaign against North Vietnam to pressure its leaders to accept a settlement. Some assailed him for winning a peace settlement that effectively assured South Vietnam only a decent interval before a North Vietnam takeover two years later.

American withdrawal from Vietnam was only part of the broader strategic realignment that Nixon and Kissinger termed their Grand Design. The Nixon Doctrine, announced in July 1969, called upon American allies to bear the primary burden of their own defense, looking to the United States only for supplementary conventional and, when necessary, nuclear assistance.

Conscious that their country no longer enjoyed the undisputed supremacy of the immediate post–World War II period and that growing economic difficulties mandated cuts in defense budgets, Nixon and Kissinger hoped to negotiate arms limitations agreements with the Soviet Union. To pressure the Soviets, whose relations with communist China had become deeply antagonistic by the early 1960s, Nixon began the process of reopening American relations with China, visiting Beijing in 1972, where he had extended talks with Chinese communist Chairman Mao Zedong and Premier Zhou Enlai, and preparing to de-emphasize the long-standing U.S. commitment to the Republic of China (ROC) on Taiwan and recognize the communist People’s Republic of China (PRC) in its stead.

These tactics alarmed Soviet leaders and facilitated a relaxation of Soviet-American tensions, broadly termed *détente*. At a May 1972 Moscow summit meeting, Nixon and Soviet leader Leonid Brezhnev signed two arms limitations treaties, jointly known as SALT I, that took effect the following October. The Anti-Ballistic Missile (ABM) Treaty limited antiballistic missile defense sites in each country to two, with neither hosting more than a hundred ABMs. The Interim Agreement froze for five years the number of nuclear warheads possessed by each side. *Détente* did not mean the end of Soviet-American rivalry, however.

After winning a second presidential victory in 1972, Nixon hoped to move toward full recognition of the PRC and further arms control agreements. The outbreak of the Yom Kippur War in October 1973, however, diverted his administration's attention from these plans. The war precipitated an Arab oil embargo on Western states that followed pro-Israeli policies, contributing to an international spiral of skyrocketing inflation and high unemployment that afflicted the United States and Western Europe throughout the 1970s.

Presidential summit meetings with Brezhnev at Moscow and Yalta in June–July 1974 brought no immediate results, in large part due to Nixon's own calamitous domestic problems, even though they set the stage for the Helsinki Accords and additional arms control agreements under Nixon's successor, Gerald Ford. The Watergate political scandal, which led to Nixon's resignation in August 1974, aborted all his ambitions for further progress in overseas affairs.

Nixon devoted his final two decades to writing his memoirs and numerous other books and essays on international affairs, part of a broader and reasonably successful campaign to engineer his political rehabilitation and to win respect from contemporaries and a place in history for his presidential achievements and foreign policy expertise. In Nixon's final years, several presidents, including Ronald Reagan, George H. W. Bush, and William Jefferson Clinton, sought his insights on various international subjects, especially relations with the PRC and the Soviet Union. Nixon died in New York City on 22 April 1994.

Nixon Doctrine

(3 November 1969)

Cold War foreign policy doctrine of President Richard M. Nixon, formally enunciated in an address to the nation on 3 November 1969. The Nixon Doctrine called for the United States to continue to meet all its current treaty commitments and to provide a nuclear shield for vital allies. However, the doctrine backed away from the open-ended commitment that the United States had made to contain communism via the 1947 Truman Doctrine. As such, the United States promised only economic aid and military weaponry to developing-world allies threatened by communist aggression, with the stipulation that such nations must enlist their own manpower to confront armed challenges to their security. In the wake of the politically unpopular deployment of hundreds of thousands of U.S. troops to Korea and then Vietnam, the Nixon Doctrine warned that the United States would no longer bear the burden of directly confronting communist threats in the developing world.

Criticized as a foreign policy retrenchment, the Nixon Doctrine grew out of a changing international strategic and economic environment. The doctrine signaled an end to the postwar bipolar era in which a nearly omnipotent United States rose to counter every perceived Soviet challenge. Nixon saw the world of the late 1960s as multipolar, a pentagonal world in which the United States, Western Europe, Japan, the Soviet bloc, and the People's Republic of China (PRC) all exerted powerful military and/or geopolitical influence. The Sino-Soviet rift, France's 1967 withdrawal from the North Atlantic Treaty Organization (NATO) military command, Britain's retreat from

the Persian Gulf, and the rise of the developing world all marked this sea change. The Nixon Doctrine also took into account the relative U.S. economic decline as Western Europe and Japan forged competitive economies. The costs of the Vietnam War, in conjunction with other U.S. commitments, clearly influenced Nixon's posture.

Nixon and his national security advisor, Henry Kissinger, realized that domestic resistance precluded direct U.S. intervention in another bloody brushfire war such as Vietnam. Indeed, Nixon alluded to his new strategic initiative on 25 July 1969, the very day that he announced the first U.S. troop withdrawals from the Republic of Vietnam (RVN, South Vietnam). South Vietnam served as the first model for the Nixon Doctrine. Nixon's implementation of Vietnamization, the gradual replacement of U.S. troops with South Vietnamese forces, shaped U.S. policy in the later years of the war, although greater economic assistance and military equipment transfers to South Vietnam accompanied Vietnamization.

The United States employed the Nixon Doctrine in other key areas of the globe in the early to mid-1970s. Increasingly, the doctrine relied upon strong men, or so-called deputy sheriffs, assigned by Washington to guard U.S. interests. These U.S.-backed deputy sheriffs included Iran's Shah Mohammad Reza Pahlavi, Egypt's Anwar Sadat, Filipino strongman Ferdinand Marcos, Nicaragua's Anastasio Somoza, Zaire's Mobutu Sese Seko, and King Faisal of Saudi Arabia, among others. All were to safeguard U.S. interests in their respective regions, while the United States provided them with aid and arms.

Relying on the despotic rule of many of these deputy sheriffs elicited sharp criticism, however. Opponents viewed the Nixon Doctrine as a stragem for U.S. hegemony on the cheap. Indeed, when many of the rulers fell in the late 1970s and 1980s, there were costly negative consequences to U.S. strategic interests. The 1979 collapse of the shah's regime in Iran offered a prime example of the Nixon Doctrine's distinct limitations.

The Nixon Doctrine was born of the recognition that U.S. power had limits following the Vietnam debacle. No longer could the nation afford to "pay any price" or "bear any burden," as President John F. Kennedy had promised in his 1961 inaugural address. The world had changed drastically since then. Nixon and Kissinger attempted to manage the U.S. retreat as cost-effectively as possible, without undue loss of U.S. power and influence. In the economically stagnant 1970s, the use of U.S. proxies and arms transfers, together with rapprochement with the PRC and détente with the Soviet Union, seemed the best solution to maintaining U.S. hegemony in a multipolar world. President Ronald Reagan's use in 1983 of U.S. troops in Lebanon and Grenada effectively ended the Nixon Doctrine, signaling the return of U.S. unilateralism and direct U.S. military interventions overseas.

Nkrumah, Kwame (1909–1972)

African nationalist, prime minister (1957–1960), and president (1960–1966) of Ghana. Born in Nkroful on 21 September 1909, a date debated by scholars but accepted by him as accurate, Kwame Nkrumah was educated in mission schools, where he later taught. He pursued higher education at Lincoln University in Pennsylvania, and in 1943 he earned a master's degree in philosophy at the University of Pennsylvania.

Nkrumah then traveled to London in 1945 and studied at the London School of Economics. Influenced by his earlier experiences with racism in the United States and his studies of American independence and revolution, Nkrumah's politicization and nationalist views were furthered in London,

where he founded the West African National Secretariat and served as joint secretary for the Fifth Pan-African Congress in 1945.

In 1947 Nkrumah returned to the African Gold Coast to lead the movement for independence. His position as general secretary of the United Gold Coast Convention (UGCC) and founder of the Convention People's Party (CPP) led to his 1950 imprisonment by British colonial authorities. In 1951 Nkrumah, still incarcerated, won the Gold Coast colony's first general election with a huge majority. Released in January 1951 as leader of the colonial parliament, he became prime minister of the Gold Coast in March 1952. He won reelection in 1954 and 1956 and became prime minister of an independent Ghana on 6 March 1957. When Ghana declared itself a republic on 1 July 1960, he became president.

Only months after independence, however, Nkrumah's regime moved toward dictatorship. As president, he championed a nonaligned foreign policy and pursued relations with both the United States and the Soviet Union. An advocate of economic growth through industrialization, he negotiated the U.S. financing of a hydroelectric dam on the Volta River, despite his vocal commitment to socialism.

Nkrumah's popularity declined steadily, along with the Ghanaian economy. On 24 February 1966, while he traveled abroad, political opponents staged a coup in Accra. Six

Kwame Nkrumah of Ghana led the drive for independence and became his nation's first premier in 1957 and president in 1960. (Library of Congress)

days later Nkrumah flew to Guinea, where he spent the next six years in exile. Suffering from cancer, he arranged for secret transport to Bucharest in August 1971. Nkrumah died there on 27 April 1972.

Prize established by the estate of Alfred Nobel on 27 November 1895, whereby funds are to be disbursed on a yearly basis among five prizes in the areas of physics, chemistry, physiology or medicine, literature, and peace. Nobel also stipulated that prizes were to be given to those who, during the preceding year, “shall have conferred the greatest benefit on mankind” or “shall have done the most or the best work for fraternity between nations, for the abolition or reduction of standing armies and for the holding and promotion of peace.” With this objective in mind, a nongovernmental organization known as the Nobel Foundation was established in 1900 to make such determinations.

The Nobel Peace Prize is judged by a special committee of five members known as the Nobel Committee, appointed by the Norwegian parliament rather than by the Nobel Foundation. The committee evaluates nominations with the assistance of numerous experts. The nomination must be received by the committee before 1 February of the year that the nominee is to be considered for the prize, while the final decision is made in October. The Peace Prize award ceremony is held on 10 December in Oslo, Norway. The Peace Prize itself is presented by the chairman of the Norwegian Nobel Committee in the presence of the King of Norway. Each laureate receives a medal, a diploma, and a monetary award and is expected to present a Nobel lecture to be published in *Les Prix Nobel* yearbook.

The first Nobel Peace Prize was awarded on 10 December 1901 to Jean Henry Dunant (1828–1910), the Swiss founder of the International Committee of the Red Cross.

1987	Óscar Arias Sánchez	Costa Rica
1988	United Nations Peace-Keeping Forces	International
1989	Dalai Lama Tenzin Gyatso	Tibet
1990	Mikhail Sergeyevich Gorbachev	USSR

Of awards during the Cold War, a number have been given to individuals whose efforts had been directly related to the work of the United Nations (UN). For example, the 1950 Peace Prize went to Ralph Bunche (1904–1971), the principal secretary of the UN Palestine Commission, for his brokering of the 1949 armistice agreements following the Arab-Israeli War of 1948. In 1957, Canadian Foreign Minister Lester Bowles Pearson (1897–1972) was awarded the prize primarily for his role in trying to end the 1956 Suez Crisis through the UN. One of the more interesting awards occurred in 1953, when

the Nobel Peace Prize was presented to General George C. Marshall of the United States for his efforts as secretary of state in promoting the European Recovery Program, also known as the Marshall Plan. Marshall is the only professional soldier to be so honored. The 1990 Peace Prize went to Soviet President Mikhail Gorbachev for his effort to liberalize the Soviet regime and its East European satellite states. Notwithstanding that a principal Nobel requirement is that recipients have to work “for the abolition or reduction of standing armies,” the 1988 Nobel Peace Prize was awarded to the UN Peace-keeping Forces.

The Russian term *nomenklatura* was derived from the Latin word *nomenclatura*, meaning a list of names. The Soviet Nomenklatura alluded to a list of persons who held senior positions in the bureaucracy of the Soviet Union, such as those in the Communist Party of the Soviet Union (CPSU), state institutions, trade unions, and the like. The appointees to such positions were nominated by and subject to approval at various levels of the CPSU’s committees, including the Central Committee (CC) of the party or local provincial and district-appropriate governmental authorities.

The term *nomenklatura* was first mentioned in a 12 November 1923 decree issued by the Russian Communist Party’s (RCP) CC Organization Bureau, although it has never been used in government-issued legislative appointments. Officially, the Nomenklatura system was first created to act exclusively inside the party hierarchy. In fact, however, it was a nationwide system, since the party Nomenklatura spread its influence over all Soviet government communities, at various levels. The lists included not only those persons to be considered for party appointments and official state institutions but also to those in various social institutions. Even public offices that were considered to be nominally elective, such as those in the Supreme Soviet of the USSR and the Central Executive Council of Trade Unions, were eventually included in the lists of Nomenklatura appointments.

As a rule, Nomenklatura personnel could perform general administrative and political leadership functions, as their success in climbing upward in the bureaucratic hierarchy depended almost exclusively upon political factors rather than on their competence and skill per se. In fact, party leaders rarely took into account the fact that many Nomenklatura members holding

Nomenklatura

government office often had below-average education or lacked formal education altogether. They were only required to meet the primary requirement for advancement, demonstrating unfailing loyalty to the party.

Soviet leader Mikhail Gorbachev's perestroika reforms, begun in the mid-1980s to revitalize and streamline government institutions, began with a campaign to weaken positions of high-ranking Nomenklatura members, and he drastically reduced the importance of the Politburo. The CPSU CC Secretariat lost its function as a body of joint leadership, while new personnel gradually replaced high-ranking old members of the Nomenklatura. Quite naturally, such reforms proved unnerving to many members of the old guard.

As the Soviet system collapsed in the late 1980s and very early 1990s, a paradoxical situation developed and was exploited by parts of the party elite and governmental personnel, including members of the Nomenklatura. These individuals declared themselves "defenders of the democratic course of developments" but at the same time tried to use their former clout to push their way into the postcommunist governing elite. Thus, despite Gorbachev's attempts to de-emphasize the influence of the Nomenklatura, its clout continued in the post-Soviet, post-Gorbachev era.

Non-Aligned Movement

A loose association of nations opposed to Cold War entanglements that sought to create a third force between the communist bloc and the Western Bloc. The Non-Aligned Movement (NAM) was originally comprised of twenty-four Afro-Asian countries plus Yugoslavia. It held its first summit in Belgrade in September 1961. From the outset, NAM embraced issues theoretically unrelated to the Cold War, including anticolonialism, antiracism, economic development, and, under the Arab states' influence, anti-Zionism. To date there have been thirteen summits at approximately three-year intervals. After Belgrade, NAM met in Cairo (1964); Lusaka, Zambia (1970); Algiers (1973); Colombo, Sri Lanka (1976); Havana (1979); New Delhi (1983); Harare, Zimbabwe (1986); Belgrade (1989); Jakarta, Indonesia (1992); Cartagena de Indios, Colombia (1995); Durban, South Africa (1998); and Kuala Lumpur, Malaysia (2003). In 2003, the movement had 116 members. Mutual interests in protecting state sovereignty and promoting development account for its expanding membership and durability.

Cuban President Fidel Castro and Palestine Liberation Organization leader Yasir Arafat raise their hands together during a session at the Seventh Summit of the Non-Aligned Movement in New Delhi in March 1983. (Alain Nogues/Corbis Sygma)

Before NAM's foundation, Indonesian leader Sukarno's Asian-African Conference at Bandung in April 1955 demonstrated the value of small-state collaboration. Indian Prime Minister Jawaharlal Nehru's vaguely worded *Panch Sheel* (five principles of peace), which formed the basis for Sino-Indian relations and was popularized at Bandung, anticipated NAM principles by stressing mutual respect, preservation of state sovereignty, and peaceful coexistence. In the five years before the Belgrade conference, the founding countries—India, Yugoslavia, and Egypt—took exception to Great Power interference in weaker countries' affairs and to the superpowers' unwillingness to reduce nuclear tensions.

The simultaneous Suez Crisis and Hungarian Revolution of 1956 drew together Nehru, Yugoslavian Marshal Josip Broz Tito, and Egyptian President Gamal Abdel Nasser. Although their politics were dissimilar, they shared concerns about the Cold War, decolonization, and national independence. The emergence of sixteen African states in 1960, the intensification of South African apartheid, the worsening U.S.-Soviet relations, the Congo Intervention, the U.S.-sponsored Bay of Pigs incursion (1961), and the Second Berlin Crisis furnished the first summit's historical context.

The Belgrade meeting established enduring precedents for NAM. First, the organizational meeting, which took place in Cairo in June 1961, confined

In 2003, the movement had 116 members. Mutual interests in protecting state sovereignty and promoting development account for its expanding membership and durability.

membership to countries that rejected participation in what were termed “Great Power conflicts” or signaled their intention of eventually departing from them. Countries that did not fully meet these criteria could nevertheless be invited as observers. Second, the Algerian provisional government’s invitation as a full member, one year before that country’s independence, underscored NAM’s commitment to anticolonialism. Subsequent summits conferred diplomatic recognition upon the Angolan provisional government, the Palestine Liberation Organization (PLO), the Zimbabwe African National Union/Zimbabwe African People’s Union, the African National Congress (ANC) in South Africa, and the Southwest African People’s Organization (SAPO) in Namibia. Third, the members reached agreement by consensus rather than by ballot, a procedure that led to criticism from the United States at later summits. Finally, Belgrade concluded with a communiqué outlining joint concerns. Although Nehru wished to make the first meeting a forum on global peace, the foremost issues were decolonization, noninterference in sovereign countries’ internal affairs, and combating racism. While the People’s Republic of China (PRC) was not invited to Belgrade, NAM—as China’s exclusive representative—called for its admission to the United Nations (UN).

Cairo illustrated the host country’s influence over the NAM agenda. Forty-seven countries attended the 1964 summit. NAM invited all members of the new Organization of African Unity (OAU) because its 1963 charter adopted nonalignment. Under Nasser, NAM called for a Palestinian homeland three years before the PLO’s foundation. Cairo was also significant for what was ignored: in October and November 1962, the PRC invaded India. At Cairo, the Chinese invasion was not mentioned because many members wished to cultivate good relations with the PRC. The selective treatment of security issues where members’ national interests were at stake typified this and subsequent meetings. The departure of many NAM founders partially accounted for the six-year hiatus between Cairo and Lusaka. Nehru died just before the Cairo summit. In the intervening years, Sukarno, Kwame Nkrumah, and Burma’s U Nu were deposed.

The conference at Lusaka established the movement’s minimal institutional base. The host country’s leader served as NAM spokesperson between triennial meetings, and its foreign ministry and permanent UN delegation dedicated offices to NAM affairs. At Lusaka, members agreed to hold annual foreign ministers’ conferences and to work as a caucus in the UN. Occasionally, NAM has established emergency funds to support anticolonialist causes such as the Africa Fund, which assisted the antiapartheid frontline states of Mozambique, Angola, and Zimbabwe in the 1980s.

Unlike the Afro-Asian People’s Solidarity Organization (AAPSO), NAM was not an adjunct of Soviet foreign policy. Certain members, such as Saudi Arabia, had close U.S. ties, while others, such as Yugoslavia, feared Soviet interference. The movement nevertheless supported certain Soviet initiatives, such as the call for two special UN disarmament sessions and the establishment of nuclear-free zones. Quick to condemn by name Western countries deemed responsible for violating developing-world countries’ sov-

ereignty, such as the continuing U.S. naval presence at Guantánamo Bay, Cuba, NAM did not apply this standard to Soviet interventions in Czechoslovakia and Afghanistan.

Although U.S. policymakers in the 1950s decried neutralism as aiding the Soviets, successive U.S. administrations, even President Dwight Eisenhower's, retained strong relations with many uncommitted countries. Presidents Lyndon Johnson and Ronald Reagan issued reminders to the Cairo and New Delhi summits that Soviet expansion constituted another form of imperialism. The Soviets anticipated that NAM would facilitate their goal of frustrating Western-developing world alliances and of becoming eventual adherents to the Soviet bloc. A split over North-South issues in the 1970s demonstrated that Soviet and NAM interests were not identical, however.

The Non-Aligned Movement has repeatedly lobbied for economic aid to the developing world. A special NAM meeting in Cairo in 1962 called upon the UN to facilitate development, which led in early 1964 to the first UN Conference on Trade and Development (UNCTAD) in Geneva, at which the Group of 77, then the world's poorest countries and including many NAM members, was formed. At the Algiers conference and afterward, NAM called for a special UN General Assembly session on development. In 1974, the UN passed the New International Economic Order (NIEO), an agenda that sought increased technical, financial, and agricultural aid for nations in the developing world, to which the Soviets, partly for ideological reasons, showed little sympathy.

Noriega, Manuel

(1938–)

Panamanian military leader and de facto leader of Panama (1983–1989). Born in Panama City on 11 February 1938, Manuel Antonio Noriega Moreno became a career soldier. He attended the elite Military School de Chorrillos in Peru and the School of the Americas at Fort Benning, Georgia. Noriega rose quickly through the ranks of Panama's National Guard. Following a 1968 coup that placed Omar Torrijos Herrera in control of Panama, Noriega became chief of military intelligence. After Torrijos died in a plane crash in 1981, Noriega was appointed chief of staff to General Rubén Darío Paredes, head of the National Guard.

Allied with a group of officers who moved against Darío in August 1983, Noriega proclaimed himself general and effectively took control of the Panamanian government. He increased the size and scope of the National Guard, with which he controlled the government and economy mainly through cronyism and corruption. He courted popular support among the urban and rural poor and used the National Guard to eliminate or intimidate his political enemies and challengers.

Panamanian dictator Manuel Noriega, shown here at a ceremony in Panama City in 1987 commemorating the national hero Omar Torrijos. (Bill Gentile/Corbis)

Panama's first presidential elections since 1972 were held in October 1984, with Nicolas Ardito Barletta emerging as the winner. Nonetheless, it was Noriega and not Barletta who controlled Panama. In 1985, Noriega was accused of ordering the assassination of Hugo Spadafora, an outspoken critic of Noriega and the National Guard. When President Barletta ordered an investigation into the murder, Noriega ousted Barletta from office.

In 1986, allegations surfaced that Noriega was involved in drug trafficking and money laundering and was working for the U.S. Central Intelligence Agency (CIA). When Panamanians staged mass protests demanding that Noriega relinquish power, he brutally suppressed the demonstrations and cracked down on civil liberties in 1987. At the same time, President Ronald Reagan's administration, embarrassed by Noriega's illegal activities and his ties to the CIA, began to plan for his removal from office. On 5 February 1988, the U.S. Drug Enforcement Agency (DEA) indicted Noriega for racketeering and drug trafficking.

The United States resorted to diplomatic pressure and economic sanctions to force Noriega from office, although these proved largely futile because of Noriega's absolute hold on power. In the presidential elections of May 1989, the U.S.-supported candidate Guillermo Endara Galimany beat Noriega's handpicked candidate by a large margin. To avoid losing power and being extradited to the United States, Noriega nullified the results of the election, ordered his thugs to severely beat Endara, and crushed anti-Noriega demonstrations. In December 1989, President

George H. W. Bush sent 27,000 troops to invade Panama and remove Noriega from power.

Noriega fled to the Vatican embassy in Panama City, but after a week and a half of psychological warfare tactics designed to flush Noriega out of the embassy and negotiations with the Vatican, U.S. forces secured his surrender. Noriega was immediately taken to Florida, where he was tried and convicted in September 1992 of drug trafficking, money laundering, and racketeering. He was sentenced to forty years imprisonment, reduced to thirty years in 1999.

U.S. Army and Air Force general and supreme Allied commander for Europe during 1956–1963. Born on 24 March 1907 in Minneapolis, Minnesota, Lauris Norstad graduated from the United States Military Academy, West Point, in 1930. The following year he transferred from the cavalry to the U.S. Air Corps, commanding the 18th Pursuit Group at Schofield Barracks, Hawaii. Early in World War II General Henry H. “Hap” Arnold appointed Norstad to his advisory council, a group of bright young air force officers entrusted with long-range planning. Shortly thereafter Arnold assigned Norstad to London, where he helped to organize Operation TORCH, the Anglo-American North African invasion campaign, in the process attracting favorable notice from Supreme Allied Commander General Dwight D. Eisenhower.

Promoted to brigadier general in March 1943, as director of the Mediterranean Allied Air Forces Norstad helped devise the bombing campaign against Axis forces in the Balkans and Italy. Returning to Washington in 1944 as Arnold’s chief of staff, Norstad worked on planning the B-29 strategic bombing campaign against Japan that preceded the detonation of atomic bombs over Hiroshima and Nagasaki. He subsequently served on the Spaatz Board, which revised American airpower doctrine and policy in light of nuclear weapons and established the Strategic Air Command (SAC). He was promoted to major general in June 1945. From 1945 to 1950, he held several air force staff positions and was closely involved in postwar air force planning.

In October 1950 Eisenhower, returning from retirement to become the first Supreme Allied Commander Europe (SACEUR), which headed the new

Norstad, Lauris
(1907–1988)

U.S. Air Force General Lauris Norstad, Supreme Allied Commander Europe (SACEUR) during 1956–1963. (NATO Photos)

In July 1952 Norstad became, at age 45, the youngest American four-star general.

North Atlantic Treaty Organization (NATO), appointed Norstad commanding general of United States Air Forces in Europe, soon expanded to include control of all Allied air forces in Central Europe. In July 1952 Norstad became, at age forty-five, the youngest American four-star general. In July 1953 he became air deputy to General Alfred Gruenther, the new SACEUR, whom he succeeded in 1956, the only air force officer ever to hold this position. In 1958 Norstad was concurrently appointed Commander in Chief, U.S. European Command (CINCEUR).

From the late 1950s Norstad lobbied fiercely for an independent NATO nuclear-armed force, including both long-range strategic and short-range tactical missiles, which he believed were essential to demonstrating NATO's resolve to utilize such weapons if necessary in its own defense, and increased threefold the number of such missiles under his command. In 1961 Norstad's pressure persuaded President John F. Kennedy to commit Polaris submarines to such a force, with each NATO member retaining a veto over nuclear decisions. Norstad wished to enhance West German defense capabilities, initially proposing a West German nuclear-armed force, and was instrumental in equipping Germany with nuclear-capable missiles, although these remained under his control. During the 1961 crisis over Berlin, Norstad unsuccessfully urged Kennedy to state publicly that the United States would, if necessary, employ nuclear weapons to defend Berlin. In January 1963

Norstad's belief that the Kennedy administration's defense posture overemphasized conventional forces at the expense of nuclear weaponry brought his early resignation.

In retirement, Norstad held various top positions with Owens-Corning Fiberglass Corporation. In the mid-1960s he urged the Republican Party to endorse an independent NATO nuclear force. In 1972 he was one of several senior statesmen who, at the request of President Richard Nixon, successfully opposed the congressional Mansfield Amendment, which would have cut American troops in Europe. Able and energetic, he was instrumental in setting the direction of post-1945 U.S. aviation and strategic doctrine. Norstad died in Tucson, Arizona, on 12 September 1988.

Binational military organization established in 1957 between the United States and Canada to provide collaborative defense for the two countries, especially against nuclear attack from the Soviet Union. The North American Air Defense Command (NORAD) had its origins in the cooperation of the two countries during World War II and a formal agreement on defense collaboration signed in 1947. In 1954, the United States and Canada began developing the Distant Early Warning (DEW) Line across northern Canada

North American Aerospace Defense Command

and Alaska to provide advanced warning of a Soviet bomber attack across the polar region.

As the DEW Line became operational in August 1957, the United States and Canada reached agreement to create an integrated operational control system for the air defense forces of the two countries. NORAD was thus established in September. Its headquarters was located at Ent Air Force Base in Colorado Springs, while an operations center was constructed in a deep, hardened bunker inside nearby Cheyenne Mountain. Initial operations began in April 1966. The NORAD commander was a U.S. general who also commanded the U.S. Continental Air Defense (CONAD) Command and the U.S. Air Force component, the Air Defense Command (ADC). The deputy commander was a Canadian flag officer.

The NORAD command and control system integrated the full range of air defense capabilities. The early warning system included the northern DEW Line, the Mid-Canada Line, the Pinetree Line, coastal radar sites, Texas Tower radar sites at sea, U.S. Navy picket ships, and U.S. Air Force airborne radar platforms. NORAD directed its active defenses through a series of computerized operations centers that controlled air defense assets for designated regions of the two countries. The system controlled American and Canadian interceptor aircraft and U.S. Army and Air Force surface-to-air missiles (SAMs) dedicated to strategic defense as well as other available resources such as fighter aircraft that could be assigned to air defense in an emergency. As the missile threat evolved, NORAD also became responsible for the Ballistic Missile Early Warning System (BMEWS) and a range of space-tracking systems. Although CONAD was responsible for operational antiballistic missile (ABM) capabilities (the Safeguard system was briefly operational in 1975–1976), the Canadian government declined to become involved in ABM activities.

During the 1970s, the air defense forces assigned to NORAD were significantly reduced, and subordinate command structures were revised, reflecting the increased threat from ballistic missiles and changing national strategies. The strategic SAM sites were phased out, dedicated interceptor units were substantially reduced, and the multiservice CONAD was disbanded, replaced by the Aerospace Defense Command. The Canadian component changed from the Canadian Forces Air Defence Command to the Air Defence Group. The role of NORAD shifted to emphasize warning and attack assessment as well as space surveillance and supporting nuclear deterrence by ensuring that a surprise attack would not destroy U.S. retaliatory forces. In 1979, a major U.S. Air Force reorganization resulted in most ADC operational capabilities being dispersed to the Tactical Air Command and Strategic Air Command (SAC), with the ADC being inactivated in 1981.

The increased role of space in NORAD operations was recognized when the name was changed to the North American Aerospace Defense Command in 1981. As the Cold War ended, NORAD's functions continued to provide the warning and space surveillance missions.

Collective security treaty that served as the basis of the North Atlantic Treaty Organization (NATO). The North Atlantic Treaty was signed in Washington, D.C., on 4 April 1949 by Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, the United Kingdom, and the United States. The treaty was a seminal event in the Cold War because it provided for the eventual militarization of the containment policy and the Cold War and was soon followed by the Soviet bloc's creation of the rival Warsaw Pact. The treaty was also the first permanent peacetime alliance that the United States had ever concluded, a major break with the long-established isolationist U.S. foreign policy tradition. Still, the treaty adhered to the United Nations (UN) Charter and upheld the principles of democracy, liberty, and the rule of law. The self-defense and collective security agreement provided that all signatories desired to live in peace and security within the North Atlantic area. If one nation were attacked, all signatory nations would endeavor to maintain the peace and security of the other nations. The treaty came into force on 24 August 1949 and consisted of fourteen articles.

Article 1 simply stated that the treaty was in accord with the UN Charter and that international disputes were to be settled peacefully. Article 2 asserted that “free institutions” were to develop cooperative economic arrangements and prevent economic conflict among the twelve signatory nations. Article 3 held that to pursue the objectives of the treaty it was necessary to adopt and maintain measures to repel “armed attack.” Article 4 stipulated that signatories would consult with one another if the “territorial integrity, political independence or internal security” of any were threatened. Article 5 stated that if one or more of the signatory nations came under “armed attack,” such attack would be deemed an attack upon all nations of the treaty, recognized pursuant to Article 51 of the UN Charter. Article 6 qualified Article 5 by stating

North Atlantic Treaty (4 April 1949)

that an attack on one or several nations or on the military and their equipment wherever stationed constituted an attack on the territory of the signatory nations.

Article 7 held that the role of the UN Security Council to maintain international security was not to be undermined and that the rights of UN members were not to be affected. Article 8 declared that the treaty did not conflict with previous international agreements. Article 9 established a NATO Council to meet upon request and to establish a defense committee to ensure the implementation of Articles 3 and 5. Article 10 stated that other European nations could accede to the treaty with the unanimous agreement of the signatory nations. Article 11 declared that ratification would be undertaken within each member nation and that the treaty would be in force when the majority of signatories ratified it. Article 12 stipulated that a treaty review could take place after ten years. Article 13 maintained that once the treaty had been in force for twenty years, nations could leave the organization providing they gave one year's notice to the U.S. government. Article 14 declared that the treaty was to be written in English and French and was to be deposited with the U.S. government.

North Atlantic Treaty Organization, History of (1948–1990)

Preliminary discussions surrounding an Atlantic treaty among the United States, Canada, and the Brussels Treaty Powers (Belgium, France, Luxembourg, the Netherlands, and Britain) began on 6 July 1948 in Washington, D.C. By the end of October, the framework for a mutual defense pact for the North Atlantic region was agreed upon. Drafting commenced in December 1948, and the final text was made public in March 1949. On 15 March 1949 the United States, Canada, and the Brussels Treaty Powers formally invited Denmark, Iceland, Italy, Norway, and Portugal to join the alliance. These nations all endorsed the North Atlantic Treaty on 4 April 1949, providing the legal basis for the North Atlantic Treaty Organization (NATO). On 24 August 1949 the treaty entered into force, and the first North Atlantic Council (NAC) meeting took place in Washington on 17 September.

The first and primary task for the new organization was to put in place an effective and credible apparatus for collective defense. During NATO's first

few years, efforts focused primarily on defense-related problems and their economic implications. The political process of cooperation, which was also a component of the alliance, remained largely undefined. In October 1949 President Harry S. Truman signed the Mutual Defense Assistance Act, setting the stage for U.S. involvement in NATO collective security arrangements. In January 1950 he approved plans for the integrated defense of the North Atlantic region and authorized the expenditure of a significant sum of money for military aid.

Other important tasks after NATO's founding were establishing its main organizations and bodies and making them operational. To this end, the NAC appointed U.S. General Dwight D. Eisenhower as the first Supreme Allied Commander Europe (SACEUR) on 19 December 1950. In April 1951, Supreme Headquarters Allied Powers Europe (SHAPE) became operational at Roquencourt, near Paris. Later that year, the NATO Defense College (NDC) was unveiled in Paris. In March 1952, British General Hastings Lionel Ismay was appointed NATO's first secretary-general. A month later, NATO opened its provisional headquarters in Paris and convened the first NAC meeting in permanent session. The first enlargement of the organization also took place in 1952, when Greece and Turkey were invited to join NATO.

On 31 March 1954 the Soviet Union requested membership in NATO but Britain, France, and the United States vetoed it. The Federal Republic of Germany (FRG, West Germany), on the other hand, was invited to join and became a member in 1955. By the mid-1950s, broad lines of intra-alliance cooperation on defense issues had been defined, and the main institutional bodies had been established. Thus strengthening the political consultation process and cooperation in nonmilitary areas was identified as the new priority for NATO. In 1956 the NAC approved the recommendations on nonmilitary cooperation within NATO. In 1957, Belgium's Paul-Henri Spaak succeeded Ismay as NATO secretary-general. At an NAC meeting later that year, member nations reaffirmed the principles and purposes of the alliance. In 1958 NATO defensive strategy was likewise reaffirmed, and in 1959 a new NATO headquarters was opened in Paris.

In 1961, Dirk U. Stikker of the Netherlands succeeded Spaak as secretary-general. In an NAC meeting that year, NATO members reaffirmed their support of West Berlin, strongly condemning the building of the Berlin Wall, and approved the renewal of diplomatic contacts with the Soviet Union. In the 1962 Athens Guidelines, the circumstances involving the use of nuclear weapons were reviewed. Toward this end, the United States and Britain agreed to contribute and integrate part of their strategic nuclear forces to NATO. In a NATO military exercise (dubbed Operation BIG LIFT) in 1963, the United States ably demonstrated how quickly it could reinforce NATO forces in Europe in the event of a crisis. The following year, Italy's Manlio Brosio became the new secretary-general.

In a move deeply troubling to other NATO states, French President Charles de Gaulle withdrew his nation from the integrated military structure of NATO in 1966. As a consequence, NATO offices were relocated. In 1967 the NDC moved to Rome, SHAPE relocated to Mons, and NATO's

Secretaries General of NATO during the Cold War

<i>Name</i>	<i>Country</i>	<i>Term</i>
Lord Hastings Lionel Ismay	United Kingdom	April 4, 1952–May 16, 1957

Dirk Stikker	Netherlands	April 21, 1961–August 1, 1964
Manlio Brosio	Italy	August 1, 1964–October 1, 1971
Joseph Luns	Netherlands	October 1, 1971–June 25, 1984
Lord Peter Alexander Rupert Carrington	United Kingdom	June 25, 1984–July 1, 1988
Manfred Wörner	(West) Germany	July 1, 1988–August 13, 1994

headquarters was established in Brussels. In 1967 the NAC also approved the Harmel Report, aimed at reducing East-West tensions by proposing a new military strategy for NATO. The new strategic concept of flexible response provided the alliance with myriad options to respond to many types of enemy aggression. NATO's old strategy had required a massive military response to any form of aggression. Improving East-West relations thus became a new priority for NATO. In 1968, NATO issued the Declaration on Mutual and Balanced Force Reductions (MBFR), an initiative to work for disarmament and nuclear nonproliferation.

In 1970 NATO's first communications satellite was launched, and at the ministerial meeting later in the year the United States announced that it would not reduce its forces in Europe unilaterally. In 1971, Joseph Luns of the Netherlands succeeded Brosio as NATO secretary-general, while Brosio was tasked with conducting exploratory talks with the Soviets and other governments vis-à-vis MBFR. In 1974, member countries signed the Declaration on Atlantic Relationships, reaffirming the partnership between Europe and North America and also ensuring the continued development of transatlantic cooperation. Also in 1974, Greece withdrew its military forces from the integrated military structure of NATO to protest Turkey's military intervention in Cyprus.

In 1976 the prospects for MBFR were discussed. Because of the relentless growth in Warsaw Pact forces, the NAC agreed to further strengthen NATO conventional defenses. Unfortunately, this decision interrupted the promising developments in the MBFR process. The 1979 Soviet invasion of Afghanistan also endangered the improvement in East-West relations. The controversial double-track decision made at a special ministerial meeting in 1979 announced the deployment of intermediate-range ballistic missiles (IRBMs) in Europe, to be paralleled by an arms control effort to obviate the need for such deployments. In 1980 Greek forces were reintegrated into the NATO military structure. In 1982 Spain joined the alliance.

The first deliveries of IRBM components to Britain in 1983 were the ultimate result of the double-track decision. Deployment of the missiles proved highly controversial and sparked a considerable nuclear freeze movement throughout Western Europe. In response, the Soviet Union suspended negotiations on intermediate nuclear forces reductions. In 1984, Britain's Peter Alexander Rupert Carrington, 6th Baron Carrington, became the new secretary-general.

In the mid-1980s, East-West relations began to thaw. In 1986 NATO called upon the Soviet Union to help promote peace, security, and a productive East-West dialogue. A high-level task force on conventional arms control was established in 1986, and at the end of the year NATO foreign ministers issued the Brussels Declaration on Conventional Arms Control, calling for further negotiations on confidence-building measures and conventional stability. In 1987 the Intermediate-Range Nuclear Forces (INF) Treaty was signed, which eliminated American and Soviet land-based IRBMs. The forward progress in East-West relations continued throughout 1988. NATO issued a statement on conventional arms control, calling for progress in eliminating conventional force disparities. In July 1988, West Germany's Manfred Wörner succeeded Carrington as secretary-general. In December, NATO foreign ministers welcomed Soviet reductions in conventional forces and outlined NATO proposals for negotiations on confidence-building measures and conventional stability.

In 1989 two new sets of negotiations were launched at the Conference on Security and Cooperation in Europe (CSCE) follow-up meeting in Vienna: talks on conventional armed forces in Europe (CFE) between NATO and the Warsaw Pact and negotiations on confidence-building and security measures among all thirty-five CSCE members. In December 1989 NATO celebrated its fortieth anniversary at a special summit meeting in Brussels. NATO set forth new goals and policies in recognition of the recent and sweeping changes in the waning Cold War and to further extend East-West cooperation. In July 1990 NATO issued the London Declaration, which provided a road map to guide the transition of the alliance from the era of Cold War confrontation to the age of post-Cold War cooperation and partnership. A joint declaration and commitment to nonaggression was signed in Paris in November 1990. The transformation of the alliance in the new security environment was clearly reflected in its new strategic concept unveiled in November 1991. Cooperation and partnership with Central and East European nations thus became a central and integral part of NATO policies.

The roots of change in NATO's history can be traced as far back as the Harmel Report of the late 1960s. Throughout the decades, NATO continued to play an important role in providing the framework for consultation and coordination of policies among its member countries to diminish the risk of crisis and war.

North Atlantic Treaty Organization, Origins and Formation of

Multinational politico-military organization, the mission of which is to safeguard freedom and security in the transatlantic region. In 1945, the United Nations (UN) was founded on the assumption that the big powers would be able to reach agreement on major issues and that none of them would seek any territorial aggrandizement. Neither of these premises came to pass once the Cold War began.

British Prime Minister Winston Churchill expressed his concerns over this as early as 1945, as he witnessed Soviet policy in action and the withdrawal of U.S. troops from Europe. In 1947, numerous conciliation efforts between the Western powers and the Soviet Union concerning the future of Germany failed, and that same year President Harry S. Truman announced in what became known as the Truman Doctrine that the United States would support free people in resisting subjugation by outside forces. As such, Greece and Turkey soon received American aid to wage the fight against communism.

In general, in the immediate postwar era, West European economies and military establishments were weak and almost wholly uncoordinated. Thus, the idea of European economic and military cooperation and integration began to emerge. Churchill mentioned the idea of a defensive alliance between like-minded nations as early as 1946.

In a bid to encourage Western cooperation, U.S. Secretary of State George C. Marshall initiated the European Recovery Program, also known as the Marshall Plan, in June 1947. The 1947 Dunkirk Treaty was a sign of collaboration between Britain and France, serving as a basis for Britain's proposal for a Western union, which would consist of a network of bilateral agreements. This concept was fine-tuned at a March 1948 meeting in Brussels among Belgium, France, Luxembourg, the Netherlands, and Great Britain. A few days later, leaders of these states signed the Treaty of Brussels, which set up a joint defense system and strengthened economic and cultural ties to resist ideological, political, and military threats.

U.S. involvement and commitment in such arrangements was still open to question, however. The Vandenberg Resolution passed by the U.S. Congress in June 1948 bridged the legal gap and made it possible for the United

Representatives from twelve nations convened in Washington, D.C., to sign the treaty establishing the North Atlantic Treaty Organization (NATO) on 4 April 1949. (NATO Photos)

States to enter into an Atlantic alliance in time of peace. Preliminary talks on the Atlantic Treaty began on 6 July 1948 in Washington, D.C., and by the end of October the principles of a defensive pact for the North Atlantic area had been agreed upon.

The drafting of the treaty began in December 1948, and the final text was made public in March 1949. On 15 March 1949 the United States, Canada, and the Brussels Treaty Powers invited Denmark, Iceland, Italy, Norway, and Portugal to join the North Atlantic Treaty, signed on 4 April 1949 in Washington, D.C.

The treaty is a classic diplomatic document, offering wide areas of cooperation among its members. Its purpose was to establish a just and lasting peaceful order based on the commonly shared values of democracy, human rights, and the rule of law. It committed each signatory to share the risks and responsibilities, as well as the benefits, of collective security. The North Atlantic Treaty Organization (NATO) currently has twenty-six member nations.

Norway

Scandinavian nation located in the western portion of the Scandinavian Peninsula. The Kingdom of Norway borders the Norwegian Sea to the west, the North Sea to the south, Sweden to the east, and Finland and Russia to the north. Norway covers 125,181 square miles, making it just slightly larger than the U.S. state of New Mexico. Norway had a 1945 population of nearly 3.1 million people.

During 1397–1814 Norway was part of the Kingdom of Denmark, and during 1814–1905 it was part of Sweden. Norway has also had significant ties with Britain as a trading partner and guarantor of its access to the high seas. During World War II, in spite of its effort to remain neutral, Norway was invaded and occupied by Germany (1940–1945). The outcome of the war gave Norway a shared border with the Soviet Union.

At the end of the war, King Haakon (ruled 1905–1957) returned to Norway from exile in Britain and called on Social Democrat Einar Gerhardsen to form a government. One immediate task was to investigate wartime collaboration with the Germans. Some 93,000 Norwegians were investigated. Twenty-five were executed, the most prominent being Vidkun Quisling, the Nazi puppet ruler of Norway during the war. Seventeen thousand others received lesser sentences.

The ruling Social Democratic Labor Party (DNA), which held power during 1945–1961, initially hoped for the restoration of Norwegian neutrality through great power cooperation within the context of the United Nations (UN), but the advent of the Cold War shattered this. Norwegian leaders attempted a balancing act between East and West but soon gave that up in the face of a growing Soviet threat.

Many Norwegians had admired Soviet economic progress in the years before World War II. Norwegians were also grateful for the Red Army's liberation of northern Norway toward the end of the war, and they were pleased that the Soviet Union supported the candidacy of Norwegian Foreign Minister Trygve Lie as UN secretary-general. Nonetheless, Norwegians harbored a general distrust of the Soviet Union.

Skepticism of the capitalist West and the fear of provoking the Soviets made a firm alignment with the West difficult, but strong wartime ties with Britain, the failure of efforts at creating a defensive alliance among Norway, Sweden, and Denmark in early 1949, and fears that the Western powers might not come to its defense without a firm security arrangement all led to a decision by the DNA leadership to opt for a defensive arrangement with the West. Thus, Norway formally abandoned its traditional neutrality in signing the North Atlantic Treaty on 4 April 1949. Finland had been forced to sign a treaty aligning it to some degree with the Soviet Union in 1948, while Sweden remained neutral. The constellation of Norwegian and Danish NATO membership, Swedish nonalignment, and Finnish ties to the Soviet Union has frequently been termed "the Nordic balance."

In order to minimize tensions with the Soviets, Norway imposed limitations on its NATO membership and objected to specific NATO policies. Thus, the allies were not allowed to establish permanent bases in Norway during peacetime and were not permitted to hold military exercises in close proximity to the Soviet border. Oslo also opposed U.S. attempts to bring Francisco Franco's fascist Spain into NATO and resisted Turkey's and Greece's accession as members because of their undemocratic governments. Norway also had reservations over the Federal Republic of Germany (FRG, West Germany) joining NATO in 1955.

Norwegian territory played a key role in the polar strategy of the Cold War. The Arctic provided the shortest flight path for long-range bombers and intercontinental ballistic missiles (ICBMs) between North America and the Soviet Union. The Soviets' naval buildup in the Kola region following the 1962 Cuban Missile Crisis and U.S.-Norwegian operations to track Soviet submarines also demonstrated the growing strategic importance of the region.

The Federal Republic of Germany (FRG, West Germany) Leopard I main battle tanks taking part in the NATO military exercise ALLOY EXPRESS in Norway in March 1982. (U.S. Department of Defense)

Domestically, Norway reached considerable national prosperity in the Cold War period. Wartime damage had been relatively modest. The main priorities of 1945 were economic reconstruction and the creation of a modern welfare state. Economic planning was heavily influenced by Keynesian economics. Norway participated in the Marshall Plan, which proved a major boost to the nation's postwar economic rehabilitation. After 1949, a consensus over foreign policy existed between the DNA and center-rightist political parties. However, the DNA itself was divided. Its left-wing faction opposed NATO membership and broke away from the DNA in 1961 to form the Socialist People's Party (SF), later renamed the Socialist Left Party (SV). It had close ties to the international peace movement. The Norwegian Communist Party remained small.

The DNA and the largest right-wing party, the Conservative Party, wanted Norway to join the European Community (EC). However, an alliance of the SF, the left-wing of the DNA, and center-rightist parties based in rural Norway mobilized the electorate to defeat membership in a 1972 referendum (repeated in 1994). These same political forces have, since World War II, sought to prevent the depopulation of rural Norway by securing heavy government subsidies and the regulation of major industries.

Shipping, fisheries, and industrial raw materials such as aluminum had been traditional Norwegian sources of income. After 1970, however, oil rev-

enues from newly developed North Sea fields contributed substantially to the expansion of the public sector and governmental welfare programs. The developing welfare state helped to preserve Norway as an egalitarian society with few socioeconomic divisions. Since the mid-1970s, the Samí ethnic minority, living mostly in the far northern region of Norway, has received growing recognition and cultural autonomy. By 1991, Norway ranked among the world's five wealthiest countries, and the public sector remains dominant despite reforms during the 1980s and 1990s.

Norway imposed compulsory military service throughout the Cold War period, with the armed forces divided into a navy, an army, and an air force. Based on the experience of the 1940 German surprise attack, a ready reserve force, the Home Guard, also came into being to secure the vital infrastructure. Through the reorganization of Free Norwegian Forces in Britain during World War II, unit structures, equipment, and training had closely mirrored British models. From the 1950s, however, Norway adopted U.S. equipment, routines, and unit structures as a consequence of its participation in the Mutual Defense Assistance Program and bilateral programs. From the 1950s, the Norwegian Air Force has been equipped with American-built fighters, while small arms used by the armed forces have mostly been German models. Norway's principal contribution to NATO weaponry was in the Penguin antishipping missile and small arms ammunition.

The main role for Norway's armed forces in the event of a shooting war between NATO and the Warsaw Pact was to delay Soviet advances sufficiently to allow allied assistance to arrive. Supplies for units earmarked for this task were stored in facilities deep in the Norwegian mountains. With the strengthening of NATO's Central European defenses by West Germany's membership in 1955 and the Soviet buildup on the Kola Peninsula, the Norwegian Army was increasingly concentrated in the northern part of the country.

Despite the end of the Cold War, Soviet-Norwegian territorial disputes in the Barents Sea remain unsolved. Neither economic aid nor political encouragement from Norway and other Western nations has succeeded in removing the environmental hazards resulting from the decaying bases of the former Soviet Northern Fleet. These continue to pose great risks to Norway's shoreline and important fishing grounds, which are perilously close to potential radioactive and chemical leaks.

Nosek, Václav
(1892–1955)

Czechoslovak communist official, minister of the interior (1945–1953), and minister of labor (1953–1955). Born on 26 September 1892 in Velká Dobrá (in the Kladno Region), Gustav Nosek was by training a miner. Active early in Social Democratic Party politics, he joined the Communist Party of Czechoslovakia (CPCz) at its inception in 1921. During 1924–1938, he served as secretary of the communist unions and was a member of the CPCz Central Committee during 1929–1936. During World War II, he was one of the party's leaders in exile, serving in London as vice chairman of the government-in-exile during 1942–1945.

Upon his return to Czechoslovakia, Nosek became a member of both parliament and the CPCz Central Committee, posts he held until his death. He is perhaps best known for his activities as interior minister during 1945–1953 and especially during the struggle for power in early 1948. As interior minister, he controlled the Czechoslovak police forces. In February 1948, he used his authority to remove eight noncommunists from leading positions in the Prague police force and replaced them with CPCz members.

When a government decree demanding the reinstatement of the dismissed officers went unheeded, noncommunist government officials submitted their resignations in protest. This signaled the beginning of the government crisis that ended on 25 February 1948, when the CPCz essentially took control of the state. In the following years Nosek's influence waned, particularly after 1950, when the new ministry of national security assumed responsibility for the police forces. Nosek left his post in 1953. He died on 22 July 1955 in Prague.

Novotný, Antonín
(1904–1975)

Czech communist politician, deputy prime minister (1953–1957), and president of Czechoslovakia (1957–1968). Born in Letňany, now part of Prague, Bohemia, on 10 December 1904 to a working-class family, Antonín Novotný

had little formal education and became a locksmith. He joined the Social Democratic Party and became a founding member of the Communist Party of Czechoslovakia (CPCz) in 1921. Rising through the party ranks, in 1928 he became the leader of the communist sports organization and the next year leader of the CPCz in the Karlín district of Prague. Following the German occupation, he became a leader of the underground CPCz. Arrested in September 1941, he was sent to the Mauthausen concentration camp for the duration of the war.

Novotný became regional CPCz secretary of Prague and joined the CPCz Central Committee in 1946, playing an important role in the 1948 February communist coup. In May 1948 he was elected to the National Assembly. As a Stalinist, Novotný profited handsomely from the CPCz purges during 1951–1954, becoming a Politburo member in 1951 and deputy prime minister in 1953. Also in 1953, he replaced Rudolf Slánský as first secretary of the CPCz. In November 1957, upon the death of Antonín Zápotocký, Novotný, while maintaining control of the CPCz, was elected president of Czechoslovakia. He was reelected to a second five-year term in 1964.

Novotný steadfastly resisted calls for de-Stalinization following Soviet leader Nikita Khrushchev's speech of February 1956 in which he denounced Stalin. Novotný also opposed political and cultural liberalization while at the same time increasing party control over the country by purging CPCz members who advocated reform. Nonetheless, he allowed some economic reforms in an attempt to raise living standards. In spite of this, by the 1960s the Czechoslovak economy began to falter, and criticism of Novotný increased. He responded by firing many of his supporters and permitting investigation into and condemnation of the 1950s Stalinist show trials. In the process, many of its victims were rehabilitated. Despite these token gestures, Novotný's lack of education and political savvy limited his ability to move forward with additional reforms.

At the end of 1967 during a Central Committee meeting, Alexander Dubček, leader of the Slovak Communist Party, denounced the economic stagnation and repressive nature of the Novotný regime. When Soviet leader Leonid Brezhnev refused to intercede, Novotný was forced to resign as first secretary of the CPCz on 5 January 1968. He was replaced by Dubček, who began the 1968 Prague Spring reforms.

During the liberalization process, Novotný resigned the presidency to General Ludvík Svoboda in March 1968, lost his remaining party positions, was purged from the CPCz, and retired from public life. Novotný's CPCz membership was restored in 1971, and he died in Prague on 28 January 1975.

Antonín Novotný, Czechoslovakia's president during 1964–1968 and Communist Party leader during 1953–1968. The Stalinist Novotný was forced from office as a consequence of the reform period known as the Prague Spring. (Miroslav Zajíč/Corbis)

Nuclear Arms Race

General term for the undeclared Cold War contest in which the United States and the Soviet Union developed, tested, and deployed increasingly advanced nuclear weapons and delivery systems. The strategic motivation behind the arms race was each nation's drive to ensure that its adversary not gain any measurable advantage in nuclear-strike capability. Also at play was the evolving concept of nuclear deterrence, which held that a nation must retain adequate nuclear capabilities to deter the enemy from launching a preemptive nuclear attack. This concept became known as mutual assured destruction (MAD) and held that any preemptive attack would result in an overwhelming and catastrophic retaliatory strike.

The nuclear arms race traces its origins to World War II, when the United States learned that Germany had the capacity and the desire to build an atomic bomb. Spurred by this threat, the Americans raced the Germans to build the first nuclear weapon, although it was hardly a competitive endeavor. The Germans paid less attention to atomic weapons development than the Americans, and as America poured considerable sums into its Manhattan Project, Germany focused on what seemed to be more pragmatic weapons systems.

The race continued beyond World War II. With its first test explosion in July 1945, the United States possessed an atomic monopoly, and the Soviet Union, with which the Americans found themselves increasingly at odds, understandably feared the American nuclear threat, especially given the demonstrated ability of the United States to conduct long-range strategic bombing. Thus, the Soviets pursued their own atomic bomb with great vigor. Soviet spies who had infiltrated the Manhattan Project and a skilled scientific community allowed the Soviet Union to detonate its first nuclear weapon in September 1949.

The United States sought to retain its nuclear lead and, in an action-reaction cycle that would typify the arms race, pursued the next nuclear

development—in this case, a thermonuclear (or hydrogen) bomb. America's success in developing the hydrogen bomb in 1952 was followed by Soviet success in 1955. The nuclear arms race now entered its most recognizable form wherein the superpowers pursued weapons that were smaller in size, more powerful, and increasingly accurate. In the same vein, delivery systems became faster, more accurate, and more difficult to locate.

During the late 1940s and early 1950s, the primary delivery vehicle for nuclear weapons was strategic bombers. More advanced aircraft were needed to carry more than one nuclear weapon, and indeed, nuclear weapons needed to be smaller so that they could be carried by a variety of aircraft. The American B-29 was matched by the Soviet TU-4, but neither proved sufficient. Developments led ultimately to the B-52 and the TU-20, both intercontinental bombers capable of delivering large payloads to multiple targets.

The next step in the nuclear arms race was missile development. Advances in rocketry led to the development of ballistic missiles in both the United States and the Soviet Union. The first U.S. intercontinental ballistic missile (ICBM), the Atlas D, was deployed on 31 October 1959. The Soviets followed suit with their own ICBM, the SS-6 Sapwood of North Atlantic Treaty Organization (NATO) designation, on 20 January 1960. ICBMs were a step up from their cousins, medium-range ballistic missiles (MRBMs) and intermediate-range ballistic missiles (IRBMs), and became the most popular delivery system because of their range and relative invulnerability to enemy air defenses. ICBMs had a maximum range of 10,000 miles and could be stationed on the other side of the world from their targets.

In the 1950s, both superpowers came to rely on nuclear weapons as the primary weapon for any major Cold War engagement. The nuclear arms race created ever-larger arsenals and increasingly effective delivery systems. As a result, both sides became vulnerable to an enemy attack. It was this vulnerability that perpetuated the arms race during the decade and beyond. Neither side was willing to give up its weapons, and the newer weapons now meant that the nation that launched a first strike might be able to avoid a retaliatory strike if its nuclear advantage were enough to allow it to destroy most of the enemy's nuclear forces in the first blow. Any large gap in nuclear arms made one nation vulnerable, and nuclear stability could only be ensured by nuclear parity. As a result, scientific advances by one nation had to be matched by the other, or else a gap would result and one side would gain advantage.

This situation was aggravated in the 1960s with the evolution of the counterforce (or no cities) doctrine. Advocates of the doctrine suggested a

Inspection of an LGM-30G Minuteman III missile inside a silo about 60 miles from Grand Forks Air Force Base, North Dakota, 1989. (U.S. Department of Defense)

NUCLEAR ARMS RACE, 1945 – 1985

general agreement between the superpowers to use nuclear weapons only against military installations, sparing population centers. Adopting this policy meant accepting the reality that in order to sustain the ability to launch an effective counterstrike, a nation must deploy enough weapons to ensure that the enemy could not destroy them all in a preemptive strike. Thus, more and better weapons were needed.

The alleged existence first of a bomber gap, then a missile gap, later an antiballistic missile gap, and later still a missile throw-weight gap kept arms manufacturers in perpetual development. In the United States, the military-industrial complex also contributed to the arms race as defense industries fought for lucrative military contracts by driving forward to the next level of weaponry and delivery systems. In November 1960, the United States deployed the world's first nuclear-powered ballistic missile submarine (SSBN), the *George Washington*, capable of launching sixteen Polaris missiles. The Soviets followed in 1968 with their own SSBN. These weapons increased the danger of the arms race and were potentially even more deadly than ICBMs, as they were capable of avoiding retaliatory strikes because of their ability to hide deep beneath the ocean.

Changes in computer technology also advanced the nuclear arms race. Advances were made on both sides in ICBMs, bombers, and submarines, but the United States maintained strategic superiority. In the late 1960s and into the 1970s, however, the Soviet Union took the lead in ICBM production and in the development of antiballistic missile (ABM) technology. Soviet ABMs were designed primarily to protect major cities, such as Moscow, and were less effective against a full attack against Soviet military installations. Multiple independently targeted reentry vehicles (MIRVs) complicated matters. MIRVs meant that each ICBM could deploy a dozen or more warheads, each

programmed for a separate target. MIRVs promised to overcome any ABM system.

Arms control talks and treaties during the 1970s and arms reduction agreements during the 1980s slowed but did not stop the nuclear arms race. When the Cold War ended, so did the nuclear arms race in its original form. Because nuclear weapons remain a strategic force for some nations, a new and different nuclear arms race seems likely to develop.

Nuclear-Free Zones

Nuclear-free zones are areas of the world where nuclear weapons are prohibited. The most prominent example of these is in Latin America and the Caribbean basin. In February 1967 the Tlatelolco Treaty (Treaty for the Prohibition of Nuclear Weapons in Latin America) was signed in Mexico City. Subsequently endorsed by the United Nations (UN), it obligates signatory states not to acquire or possess nuclear weapons or to permit the storage or deployment of nuclear weapons on their territory. Amended to include the Caribbean basin states, it then became formally known as the Treaty for the Prohibition of Nuclear Weapons in Latin America and the Caribbean and was ultimately signed by all thirty-three eligible states.

Other examples of self-proclaimed nuclear-free zones are the states of Finland and Sweden. When New Zealand proclaimed itself a nuclear-free zone and refused to allow U.S. ships carrying nuclear weapons into its ports, it led to the breakup of the Australian–New Zealand–United States (ANZUS) Pact.

Nuclear Non-Proliferation Treaty (1 July 1968)

Treaty signed by Great Britain, the United States, and the Soviet Union on 1 July 1968, entered into force on 1 March 1970, to prevent the sale or proliferation of nuclear weapons. The Nuclear Non-Proliferation Treaty (NPT) divided the signatories in two categories: the nuclear nations (the United States, Soviet Union, France, Britain, and the People's Republic of China) and the nonnuclear nations. The nuclear states pledged not to provide nuclear weapons to nonnuclear states (Article I) and to pursue nuclear disarmament (Article IV). The nonnuclear states pledged not to acquire or develop nuclear weapons of their own (Article II).

The treaty marked a watershed in the history of arms control and paved the road to détente between the superpowers. Although the idea of the NPT had been discussed as early as 1961, it was only in 1965, after the first Chinese nuclear test caught the attention of President Lyndon Johnson's administration, that it was seriously debated in Geneva by the Eighteen-Nation Disarmament Conference (EDC), a committee created in 1962 by the United Nations (UN) to promote general disarmament.

The main stumbling block to the conclusion of the treaty had been the U.S. pledge to share its nuclear arsenal with its North Atlantic Treaty Organization (NATO) allies, particularly those that had no nuclear weapons of their own, such as the Federal Republic of Germany (FRG, West Germany) and Italy. This commitment had been established via the NATO Multilateral Force (MLF). The Soviets regarded the MLF as a step toward proliferation and blocked the Geneva negotiations as long as the Americans refused to abandon the MLF. Eventually the Johnson administration gave up the idea behind the MLF and decided to share with its allies only the plans about the use of its atomic arsenal, in particular the targeting of ballistic missiles.

By late 1966, the U.S.-Soviet rapprochement had gone so far that the two superpowers tabled a joint NPT draft to write a new one. Some NATO allies, however, were not particularly pleased by this turn of events and criticized the new draft, which clearly prohibited the MLF. Draft modifications concerning inspections and the duration of the treaty partly deflected this criticism, however, and the treaty was concluded by early summer of 1968. The August 1968 Warsaw Pact invasion of Czechoslovakia delayed its ratification, but the necessary number of signatures was gathered by March 1970, when the treaty came into effect.

With 188 signatories, the NPT has the widest scope of any arms control agreement. Yet India, Israel, the Democratic People's Republic of Korea (DPRK, North Korea), and Pakistan—all now either confirmed or suspected nuclear powers—remain outside the treaty, so doubts about the NPT's efficacy have increased since the 1990s.

Nuclear Tests

Beginning with the first successful test of a nuclear weapon by the United States in July 1945, nuclear-armed nations have built and tested nuclear devices in a continuing effort to improve the design and increase the yield of fission (atomic bomb) and fusion (hydrogen bomb) weapons. Nuclear tests have been conducted in the atmosphere, underground, and underwater and have contributed to remarkable progress in nuclear weapons research. Nuclear tests serve both military and scientific purposes as well as diplomatic goals. Often, nations have used nuclear tests to convey a variety of diplomatic messages.

The first test of a fission weapon took place near Alamogordo, New Mexico, on 16 July 1945 under the auspices of the Manhattan Project, the top secret U.S. program aimed at building an atomic bomb. Named Trinity, the test successfully detonated at 5:29 A.M. and yielded the equivalent of 20,000 tons, or 20 kilotons (kt), of TNT.

In the years that followed the Trinity test, other nations pursued first fission weapons and later fusion, or thermonuclear, weapons. Successful tests were key markers of progress for these nations as they sought to be included in the elite “nuclear club.” Indeed, until the advent of supercomputers in the late 1980s, nuclear tests were the only way of determining readiness of a nation’s nuclear forces.

The United States conducted two additional nuclear tests after Trinity before the Soviet Union became the second nuclear nation, testing a fission bomb yielding 22 kt on 29 August 1949. The successful Soviet test convinced American policymakers to pursue the next level in nuclear weapons, the fusion bomb, which was first tested by the United States on 3 October 1952. That weapon yielded the equivalent of 10 million tons, or 10 megatons (mt), of TNT. The Soviets followed with their own thermonuclear test on 22 November 1955, a device that yielded 1.6 mt. The Soviets claimed that a 12 August 1953 explosion was a thermonuclear test, but it was in fact a fission weapon boosted in yield by the use of tritium in the nuclear reaction. The United States had tested a similar device in 1951.

Crater at the Nevada Test Site in Mercury, Nevada. It was formed when a 100 kiloton explosive buried under 635 feet of desert alluvium was fired at the site on 6 July 1962. The crater is 320 feet deep and 1,280 feet in diameter. (U.S. Department of Energy)

Three more nations—Britain, France, and the People’s Republic of China (PRC)—all tested fission weapons during 1953–1964. Great Britain tested its first nuclear weapon on 3 October 1953, France on 13 February 1960, and China on 16 October 1964. These nations later successfully tested fusion weapons. Great Britain was first among the three with a thermonuclear test on 11 November 1957, followed by China on 17 June 1967 and France on 24 August 1968. These five nations constituted the five declared nuclear nations. However, two other nations—India and Pakistan—have also tested nuclear weapons. India did so first on 18 May 1974 and then tested three more times in 1998 before Pakistan tested its first weapon on 28 May 1998 and its second on 30 May 1998. On 9 October 2006, the Democratic People’s Republic of Korea (DPRK, North Korea) announced its first nuclear detonation. Western intelligence confirmed that a large underground explosion had occurred and emitted radioactivity, but it is believed that the detonation was a misfire because of its small yield (under one kiloton). North Korea admitted that the yield was less than expected but insisted that it was a full-fledged detonation. Scientists and scholars continue to debate the specifics of these tests.

During 1945–1998, the five officially declared nuclear nations plus India and Pakistan conducted 2,051 nuclear weapons tests, 528 (26 percent) of which have been atmospheric. The Soviet Union and the United States have accounted for 1,745 (85 percent) of the total number of tests. The British have tested 45 weapons and the French 210. The biggest year for nuclear tests was 1962, when 178 tests were conducted.

In the largest nuclear test ever recorded, the Soviet Union conducted an atmospheric test on 30 October 1961 that yielded 50 mt. The weapon was not suitable for deployment, however, as no delivery system has been constructed to carry such a large device. The largest underground test yielded 5 mt and was conducted by the United States on 6 November 1971. Of the 2,051 nuclear tests, 935 have been conducted in Nevada and 496 in Kazakhstan. In the United States, Alaska, Mississippi, and Colorado have also been hosts to nuclear tests. Tests have been conducted in North America, Asia, Africa, and Australia.

The goals of such tests vary but generally include a desire to improve the design, increase the yield, or shrink the size of nuclear weapons. Nations also utilized such tests to prepare for possible battlefield uses. After a test, troops would march into the area, simulating an actual engagement and testing their ability to operate in such an environment. Nuclear blasts were also detonated to test the survivability of various infrastructures, civilian homes, and even ships at sea.

During the Cold War, nuclear tests served as a means of communication between superpowers and regional powers, as in the case of India and Pakistan. The Soviet nuclear test of 1949 announced to the world that the American atomic monopoly had ended, a development that dramatically affected the course of the Cold War. Now possessing atomic weapons, the Soviets quickly regained a military advantage because the United States could never match man-for-man the Soviet Red Army.

In 1963, the United States and the Soviet Union signed the Partial Test Ban Treaty (PTBT), which halted nuclear testing in the atmosphere, underwater, and in space.

An even better example might be the Soviet test in November 1961. Soviet Premier Nikita Khrushchev took every opportunity to test the new American president, John F. Kennedy. In Cuba, Laos, and Berlin, Khrushchev attempted to bully Kennedy. As part of this strategy, Khrushchev broke the three-year-long nuclear testing moratorium with a series of tests that concluded with the world's largest nuclear test, of 50 mt. This weapon was 3,000 times more powerful than the atomic bomb dropped on Hiroshima, and it forced Kennedy to resume nuclear testing in the United States. The Cold War grew increasingly tense in the months that followed.

In the United States, in particular, nuclear tests became a controversial political issue. Dangerous radioactive fallout resulted from every atmospheric test conducted, and those conducted in Nevada and New Mexico impacted those Americans living downwind of the nuclear fallout. Radioactive dust settled back to the earth, where it entered the food chain. Americans who lived close to the test sites suffered lasting and debilitating health effects. Increased cancer rates and genetic birth defects were just some of the deadly results of America's nuclear testing program.

In 1963, the United States and the Soviet Union signed the Partial Test Ban Treaty (PTBT), which halted nuclear testing in the atmosphere, underwater, and in space. With negotiations beginning in 1993, the Comprehensive Test Ban Treaty is a more inclusive treaty that would all but eliminate nuclear tests. Failure on the part of major nations to sign or ratify the treaty has hindered its utility. Neither India nor Pakistan has signed the treaty, and neither the United States nor China has ratified it. Israel is widely believed to have nuclear weapons, even though it has conducted no nuclear tests.

Nuclear Weapons, Tactical

Small, low-yield nuclear warheads designed to be used against targets within a theater of war and in support of military operations by field forces, in contrast to strategic nuclear weapons designed for planned use against targets in

the adversary's homeland. Tactical nuclear weapons provided additional options for military commanders in accomplishing their assigned missions. The size, destructiveness, and limited numbers of early atomic weapons led to their assignment primarily to strategic targets, initially enemy economic centers (generally city targets), as well as key military facilities, such as command and control centers; strategic offensive capabilities, such as bomber bases; and major logistical facilities. However, the power of nuclear weapons caused military planners to prize their potential impact on the battlefield. Even in the last stages of World War II, U.S. military planners considered the option of employing atomic bombs in the tactical role of supporting an invasion of the Japanese mainland rather than against the urban targets of Hiroshima and Nagasaki.

In the early 1950s, as America's nuclear weapons inventory increased and technology improvements created smaller weapons, military planners began to incorporate nuclear weapons into theater of war plans and the development of doctrine, tactics, and force structures. The technological advances were especially important in creating weapons that could be delivered by smaller tactical aircraft—fighters and light bombers—as well as artillery pieces and short- and medium-range missile systems. The smaller warheads were also refined for specialized functions such as surface-to-air missiles, antiship missiles, antisubmarine depth charges, and air-to-air missiles and rockets. Small nuclear weapons even led to the development of backpack weapons that could be emplaced as atomic demolition munitions for blocking lines of advance, channeling enemy movements, or destroying high-value targets. The Soviet Union and eventually other nuclear-capable states also developed smaller nuclear weapons that were optimized for tactical employment.

The U.S. military's development of tactical nuclear weapons was stimulated by the practical challenge of countering the large Soviet military that was retained after World War II. Concern over fighting against numerically superior forces was amplified by the experience of engaging Chinese “volunteer” forces during the Korean War (1950–1953). The technological advance of firepower provided by nuclear weapons offered a solution to the threat that would also be more cost-effective than building large conventional forces. President Dwight Eisenhower's administration quickly formalized a commitment to nuclear weapons as the foundation of national security planning in the New Look defense posture, which emphasized both strategic and tactical nuclear weapons. The strategic and theater components of the U.S. Air Force were optimized for nuclear delivery, and even the U.S. Army developed a new organizational structure (known as the Pentomic Division) designed for the more fluid environment of theater nuclear operations.

The U.S. Army's Davy Crockett, a hand or jeep portable tactical nuclear recoilless rifle system deployed by the United States during the Cold War in support of the army's frontline pentomic battle groups, 1960. (Bettmann/Corbis)

The U.S. Navy also developed extensive nuclear capabilities for battles at sea and for strikes against shore targets. In 1957, the North Atlantic Treaty Organization (NATO) adopted the U.S. style of doctrine and force structure, making nuclear firepower the key element of its ability to deter and potentially defeat aggression by the numerically superior Soviet Army. The Soviet military responded to the NATO move by expanding its own theater nuclear forces.

In the 1960s, President John F. Kennedy's administration moved away from Eisenhower's New Look by developing a stronger conventional capability and a broader range of options for military scenarios in a security policy known as flexible response. American and NATO military forces developed conventional operational concepts and supporting force structures and doctrines. NATO's conventional capability provided flexibility and was also a response to concerns over the extensive damage that nuclear operations would inflict on European territory and the challenges that this would present to postwar recovery. This expanded range of options also continued to include tactical nuclear forces, which played an important role in NATO plans and force structure throughout the rest of the Cold War, enhancing deterrence and providing an option for escalation if conventional defensive efforts failed.

Some options were developed to minimize the impact of nuclear conflict on friendly territory, such as revised delivery procedures, smaller-yield warheads, and proposals for specialized warheads that would minimize radioactive fallout and maximize immediate radiation that would kill soldiers and damage equipment with limited harm to civilian infrastructure and restricted residual radiation—the so-called neutron bomb. The United States maintained an extensive inventory of aircraft, artillery, and missile-delivered nuclear weapons in Europe throughout the Cold War. Additionally, allied forces were trained and prepared to deliver nuclear weapons that were controlled and released by U.S. military personnel. The British and French military also developed nuclear weapons that they controlled for tactical roles.

The Soviet military also developed an extensive tactical nuclear capability, with an apparent emphasis on preempting NATO nuclear forces in any initial use, with follow-on use as necessary to gain success in rapid, offensive armored operations. Soviet and Warsaw Pact forces also developed conventional options in the 1970s and 1980s that could be used at the start of any theater conflict in an effort to gain a rapid, decisive advantage before nuclear weapons were used.

By the end of the Cold War, both Soviet and Western forces were developing concepts for using advanced, highly accurate conventional weapons—combined with enhanced reconnaissance and communications capabilities—in combat roles that had once been only possible with nuclear warheads. But even with improved conventional systems, sizable tactical nuclear forces remained available to both sides of the Cold War deterrence structure as tensions drew down.

African nationalist, chief minister (1961–1962), and president (1962–1985) of Tanganyika (later the United Republic of Tanzania). Born in Butiama in the British colony of Tanganyika on 13 April 1922, Julius Nyerere was educated in Great Britain and graduated from Edinburgh University with an MA degree in history and economics in 1952. He returned to Tanganyika and in 1954 formed the Tanganyika African National Union (TANU), an organization seeking to win independence from Britain.

On 1 September 1960, Nyerere won the national elections and became Tanganyika's first chief minister. In March 1961, Tanganyika gained its independence from Britain. Nyerere was elected prime minister, but he resigned on 22 January 1962. In December 1962 Tanganyika became a republic, and Nyerere was elected president on 9 December 1962.

Nyerere was one of the founders of the Organization of African Unity (OAU) in 1963. In April 1964, Tanganyika formed a union with the Republic of Zanzibar, establishing the United Republic of Tanzania. Because Zanzibar had been receiving military aid from the People's Republic of China (PRC) and the Soviet Union, this created Cold War tensions in the region. By 1965, as Tanzania's relations with Britain and the United States deteriorated, both countries curtailed their foreign aid to Tanzania.

Even before Tanzania's relations with the West had begun to decline, Nyerere had begun to cultivate a closer relationship with the Soviet bloc and the PRC. Since the communist bloc had been providing weapons and training for liberation movements supported by Tanzania in southern Africa, it

Kambarage**
(1922–1999)

Julius Nyerere, the first president of Tanzania, helped form the Organization of African Unity. (National Archives and Records Administration)

was natural for Tanzania to establish closer contacts with these nations. In August 1964, Nyerere signed an agreement inviting PRC military advisors to Tanzania. In February 1965 Nyerere visited China, and four months later PRC leader Zhou Enlai visited Tanzania. Despite his close relations with the communist bloc, Nyerere had no intention of relying on any single country for support, and he pursued a pragmatic foreign policy benefiting Tanzania.

On 5 February 1967, Nyerere announced in the Arusha Declaration that Tanzania was a socialist nation, and a day later he proclaimed the nationalization of all banks. On 6 January 1968, he admitted that Tanzania had allied with the communist powers in supporting liberation movements in southern Africa, but he argued that this did not affect Tanzania's other foreign policies.

Although Nyerere instituted a number of socialist programs, he was first and foremost an African nationalist. He based his program of collectivization of the nation's agricultural system, Ujamaa ("familyhood"), on the extended family of traditional Africa before the coming of the Europeans. The system of collectivization failed, however. By 1976 Tanzania had gone from Africa's largest exporter of agricultural products to its greatest importer.

Nyerere resigned the presidency on 31 July 1985. In a candor unusual in a politician, he admitted frankly, "I failed." He remained chairman of the Revolutionary Party of Tanzania until 1990, however. Nyerere died in London on 14 October 1999.

O

Ugandan prime minister (1962–1966) and president (1966–1971, 1980–1985). Born on 28 December 1924 in Akokoro, northern Uganda, Milton Obote studied at Busoga College during 1945–1947 and at Makerere University College beginning in 1948. Makerere officials expelled him in 1950 for political activity, and he went to Kenya to work a number of menial jobs.

On his return to Uganda in 1957, Obote organized the Lango branch of the Uganda National Congress (UNC). He was elected to membership in the Uganda Legislative Council and in 1958 was elected to represent the Lango district in the country's first popular election. When the UNC split in 1959, he formed the Uganda People's Congress (UPC). He formed a coalition with the Baganda and three other kingdoms, and when the national elections were held on 27 April 1962, the UPC majority made him prime minister.

On 9 October 1962 Uganda ended sixty-eight years as a British protectorate and gained its independence. Obote sought national unity, economic reform, and better relations with Western nations. But in 1966 he was implicated in a gold-smuggling plot along with his protégé Idi Amin, the deputy commander of the Ugandan armed forces. In retaliation, Obote suspended the constitution, staged a coup, and declared Uganda a republic, naming himself as president on 2 March 1966.

Although not despotic in his economic or political outlook, Obote's lack of charisma, his authoritarian manner, and his widespread unpopularity doomed his first presidency. His attempts to move his country to the Left, coupled with several economic crises and scandals, further hamstrung his rule. On 25 January 1971, while on a state trip to Singapore, Amin deposed Obote and immediately set up a military regime.

Obote spent nine years in exile in the Sudan and Tanzania. With the help of Tanzanian President Julius Nyerere, Obote defeated Amin in April 1979 and regained the presidency. Amin fled to Libya.

The election that followed in 1980 was not accepted by a large portion of the electorate because Obote, who was not chosen on the first ballot, used his loyal troops to recount the votes and suppress any opposition. Several factions rose up against him, and the army, which he had always used to his benefit, now

Obote, Apollo Milton
(1924–2005)

turned against him. He was deposed in 1985 by General Bazilio Okello. Obote fled to Zambia, and died in Johannesburg, South Africa, on 10 October 2005.

Office of Strategic Services

World War II U.S. foreign intelligence agency and forerunner of the Central Intelligence Agency (CIA). Created by order of President Franklin D. Roosevelt on 13 June 1942 at the suggestion of Colonel William J. Donovan, the Office of Strategic Services (OSS) was the principal U.S. foreign intelligence agency during World War II. This civilian-run intelligence agency reported to the Joint Chiefs of Staff (JCS). Roosevelt appointed Donovan to head the OSS. A prominent lawyer and former U.S. assistant attorney general, Donovan had fought in World War I and won the Medal of Honor.

The OSS was the equivalent of the British Secret Intelligence Service (MI6) and Special Operations Executive (SOE), with which it developed a close relationship during the war. Employing several thousand people, the OSS undertook a variety of covert activities, including intelligence gathering and counterintelligence work in both the European and Pacific theaters of war. Despite some successes, the OSS attracted fierce criticism from the U.S. military and the Department of State. Donovan's brash leadership style did little to reduce tensions with other intelligence agencies, and there were growing concerns about maintaining a covert intelligence agency in peacetime. OSS support for resistance movements such as Ho Chi Minh's Viet Minh in Indochina also tainted the agency with a leftist aura.

On 20 September 1945 President Harry S. Truman signed Executive Order 9620, which disbanded the OSS ten days later, despite Donovan's appeal for establishing a centralized U.S. intelligence agency. Within a few months, however, the growing Cold War caused Truman to reverse course. The OSS was the direct precursor of the CIA, established in 1946 and formally confirmed by act of Congress in the National Security Act of 1947. Many key figures in the CIA, including directors Allen W. Dulles, Richard Helms, and William S. Colby, began their intelligence careers as OSS agents.

Territorial conflict between Ethiopia and Somalia fought during 1977–1978. The Ogaden War was a localized dispute between Ethiopia and Somalia, but the dynamics of Cold War geopolitics endowed this conflict with global implications. With communist bloc nations providing support to the Ethiopians and with the Somalis seeking accommodation with the Americans, the possibility existed that the Cold War would be fought out in the Horn of Africa through proxies. The United States, however, remained neutral, and in March 1978 Ethiopia triumphed in the war, a victory directly resulting from Soviet and Cuban aid. For many in the West, this provided yet another example of communist expansion, and American neutrality was seen as weakness that would only spur further Soviet aggression. Such a perception led U.S.

Ogaden War (1977–1978)

Young Somali recruits training at a Mogadishu army barracks following General Mohammed Siyad Barre's mobilization announcement of imminent combat with Ethiopia, February 1978. (Henri Bureau/Sygma/Corbis)

National Security Advisor Zbigniew Brzezinski to later claim that “SALT lies buried in the sands of the Ogaden.”

The Ogaden region, although inhabited mainly by ethnic Somalis, was territorially part of Ethiopia and had long been a source of contention between the two nations. In August 1977, border skirmishes erupted into full-scale war, with some 30,000 troops fighting on each side. Initially, the Somali incursion into Ethiopia met with success, and by October the Somali insurgents controlled all of the Ogaden except for the strategic towns of Harar and Diredawa. As the year progressed, however, the situation began to improve for the Ethiopians, mostly because of increasing aid from the communist bloc.

During the first few months of the war, the Soviet Union had also provided military aid to Somalia. However, Ethiopia was considered the greater prize in the African Horn region, and Somali leader Mohammed Siyad Barre feared Soviet abandonment. In October 1977 his fears were realized when the Soviet Union halted all military support to Somalia while greatly increasing supplies and troops to Ethiopia. In the Cold War context, Barre took the logical step. He officially broke ties with the Soviets and Cubans in November and expelled all their military personnel. He then approached the United States for help.

Although the American president, Jimmy Carter, was anxious to improve relations with Somalia, his reorientation of American foreign policy in January 1977 had led to a de-emphasis of traditional Cold War concerns in favor of such issues as regionalism and human rights. Instead of responding to the perceived Soviet threat, Carter insisted that the United States remain neutral and applied a policy that was based on these new principles rather than on traditional Cold War considerations.

Carter cited Barre's violations of human rights and pointed out that by invading Ethiopia he had violated both international law and the Cairo Resolution of 1964, which stated that the borders of African nations would be honored and maintained. Carter therefore refused to provide Barre with military aid, called for a peaceful resolution of the conflict, and, following his policy that “African problems should have African solutions,” suggested that the Organization of African Unity (OAU) should host peace talks.

Although the OAU attempted to negotiate a peace agreement, it met with little success. Indeed, all the warring parties seemed dedicated to a military solution to the Ogaden conflict, but the extent of communist bloc support for Ethiopia combined with the lack of support for Somalia meant that Barre's territorial ambitions were doomed to failure. On 9 March 1978 he announced that all Somali forces were being withdrawn from Ethiopia.

Even though the war ended with Ethiopia maintaining its territory, the implications of the conflict for the Cold War were far-reaching. Brzezinski would later claim that American reluctance to actively oppose communist bloc involvement in the war demonstrated American weakness and encouraged Soviet aggression. Such a perception, he believed, led to the collapse of the Strategic Arms Limitation Talks (SALT) II Treaty, the 1979 Soviet invasion of Afghanistan, and ultimately the failure of détente.

During the Cold War, the Olympic Games became a prominent tool in the propaganda war between East and West. Each side believed that Olympic victories would demonstrate the superiority of its social and political system, and each side used diplomacy, boycotts, and other political measures to seek prestige and influence at the Olympics, especially as the event grew into an enormously popular global festival.

In the United States, Olympic participation was largely funded by private sources, and athletes adhered to the amateur ideal (at least in principle) until that went by the wayside in the 1980s. In contrast, the Soviet Union’s highly successful “big red sports machine” was entirely state-sponsored, and the Soviet government poured substantial resources into training and nurturing athletes who were amateur in name only.

The Soviet Union entered the Olympics for the first time at the 1952 Helsinki Games as part of a drive to bolster its new superpower status through demonstrations of athletic prowess. Winning was a high priority indeed for the Soviet regime, and the first Soviet victory in the unofficial medal count came at the 1956 Melbourne Olympic Games. With the two superpowers and their allies competing directly against one another, international sports events inevitably became highly politicized. The extraordinary growth of

The East German sports system achieved impressive successes that undoubtedly aided the country's campaign for worldwide political recognition.

television coverage after 1956 and increasing levels of public interest in the Olympics meant that the Games became a highly visible element of the struggle for the hearts and minds of the rest of the world. For many Americans, Soviet bloc athletic successes fed fears that communism was gaining ground in the Cold War, while American victories provided reassurance that freedom would ultimately triumph over tyranny.

The International Olympic Committee (IOC), the international body that oversees the Games, claimed to eschew politics but could not avoid confronting many thorny political issues during the Cold War. Although the IOC tried to steer a middle course, it often deferred to the wishes of the West, and its president during 1952–1972 was an American, Avery Brundage.

One of the most contentious of these issues was the German question. According to IOC rules, only one committee could be recognized from a country. In 1950, when the division of Germany was still uncertain, the IOC provisionally recognized the Olympic committee of the Federal Republic of Germany (FRG, West Germany) as representing all of Germany. The German Democratic Republic (GDR, East Germany) also pressed for recognition, hoping that participation in the Olympics would bring international recognition. Both West Germany and the United States blocked the East German bid, however. In 1955 the IOC provisionally recognized East Germany but insisted that East Germans compete jointly with the West German team. At the 1968 Games, with the division of Germany firmly established, the IOC finally permitted a separate East German team. The East German sports system, which was highly regimented and relied heavily on the use of illegal drugs, achieved impressive successes that undoubtedly aided the country's campaign for worldwide political recognition.

The IOC faced a similarly protracted political debate over China. After the communists established the People's Republic of China (PRC) on the mainland in 1949, the IOC debated whether to recognize the PRC, the Nationalists in Taiwan, or both. At the 1952 Games, the Nationalists refused to come and the PRC athletes arrived too late to participate. In 1958 the PRC withdrew from the Olympic movement in protest against Taiwan's continuing participation. In 1971, when the United Nations (UN) expelled Taiwan and recognized communist China, the IOC haltingly began to make overtures to the PRC. In 1976 the Canadian government, which had adopted a one-China policy, set off a political firestorm when it refused to allow the Taiwan team to enter the Montreal Olympics under the name Republic of China (ROC). Many Americans were outraged and called for a boycott. Taiwan's athletes ultimately withdrew, and a few years later a compromise was reached whereby the IOC admitted the PRC as China's representative, while Taiwan remained a member under the name Taipei. The PRC's first Olympic appearance came at the 1980 Winter Games in Lake Placid. The PRC boycotted the 1980 Moscow Summer Games.

Despite security precautions, there was a bloody terrorist incident during the 1972 Summer Olympics in Munich. On 5 September 1972, eight members of Yasir Arafat's al-Fatah faction of the Palestine Liberation Organization (PLO) gained entrance to the Olympic Village, five of them

by scaling a fence. They then killed two Israeli athletes and took nine others hostage.

The terrorists called themselves Black September in order to mask their al-Fatah identity, but Arafat had ordered the operation. The terrorists demanded that Israel free 234 Arab prisoners and that West Germany release two German terrorist leaders imprisoned in Frankfurt. Following several hours of negotiations, the German government and the terrorists reached a deal providing for a plane to Cairo. Meanwhile, German sharpshooters took up position with orders to open fire simultaneously and kill all the terrorists without harming the hostages.

The Germans then transported the terrorists, hostages, and several German officials by three helicopters to a nearby military airfield where a Lufthansa jet was waiting. The German rescue attempt there went awry, and in the bloody shootout that followed at 3:00 A.M. on 6 September, the Palestinians set off a grenade in one of two helicopters, killing all aboard, while the terrorists in the remaining helicopter killed all the remaining blindfolded Israeli hostages. The firefight claimed eleven Israelis, five terrorists, and one German policeman. Three of the terrorists were captured alive.

The next month other terrorists hijacked a Lufthansa jet, and in order to secure the release of the passengers, the German government agreed to free the three imprisoned terrorists, who were flown to freedom in Libya.

The most far-reaching episode of East-West conflict involving the Olympic Games erupted after the Soviet Union invaded Afghanistan in 1979. To protest the Soviets' action, President Jimmy Carter pressured the U.S. Olympic Committee to withdraw the American team from the 1980 Olympics in Moscow. Under American pressure, a number of U.S. allies, including West Germany and Japan, also withdrew. Others, such as France, participated as a way of asserting independence from U.S. policy.

Only a few weeks before Los Angeles opened the next Olympic Games in 1984, the Soviet Union announced that it would not participate. The Soviet government cited concerns over a hostile environment in the United States, but most commentators saw the move as retaliation for the 1980 boycott. Despite the withdrawal of seventeen other nations, including East Germany, Poland, Bulgaria, Cuba, and Hungary, the Games proved popular and—thanks to unprecedented commercialization—were financially successful. As a result of the Soviet boycott, the Olympics attracted intense nationalistic fervor in the United States.

Cold War rivalries also spawned some of the best-known Olympic sporting moments. In 1956, in the aftermath of the brutal Soviet suppression of the Hungarian Revolution, a Hungarian-Soviet water polo match turned into a bloody fistfight. In 1972 the unbeaten American basketball team

In a scene of wild jubilation, U.S. Olympic hockey players celebrate their upset 4–3 victory over the Soviet Union in the semifinal game of the Lake Placid Winter Olympics, New York, 22 February 1980. (Bettmann/Corbis)

lost to the Soviets after a controversial decision in the last seconds of the gold-medal match. The American ice hockey team's improbable victory over the heavily favored Soviet team at the 1980 Winter Games in Lake Placid, New York, was credited with helping to revive American patriotism after a decade of economic and political gloom.

The lead in the unofficial medal count at the Games was held more often by the Soviet Union than the United States. In 1988 in Seoul, the Soviets and East Germans won a decisive victory in this. These Olympics also saw the last appearance of athletes from the USSR, although they continued to represent their new nations.

Open Skies Proposal

(21 July 1955)

Plan proposed by U.S. President Dwight D. Eisenhower on 21 July 1955 at the Geneva Conference that called for mutual inspection of Western and Eastern bloc military establishments through aerial reconnaissance, thereby diminishing the likelihood of surprise attacks by either side. The Open Skies Proposal was the American response to Soviet leader Nikita Khrushchev's 10 May 1955 proposal calling for deep and mutual cuts in nuclear weapons.

While Khrushchev accepted planned U.S. reconnaissance flights over Eastern Europe, he refused to allow such flights over the Soviet Union because they would expose Soviet weaknesses and provide the United States with verification of Soviet targets. Khrushchev's refusal to accept the proposal gave Eisenhower an advantage in the propaganda war, as it belied his contention that the Soviet Union wanted peace.

Historians are divided over the sincerity of the Open Skies Proposal. Some, citing various administration studies such as Operation CANDOR, the Killian Report, and the report of the Nelson Rockefeller working group (which called for, respectively, explaining the danger of nuclear weapons, a nuclear test ban, and the exchange of atomic information between the two blocs as a means to prevent accidental nuclear war), consider the proposal

sincere. Others argue that because the United States enjoyed a clear technological advantage, Eisenhower knew that his proposal would never be accepted. They argue that the proposal represented an easy way for Eisenhower to claim moral superiority over the Soviet Union without committing to any concrete measures.

U.S. scientist. Born in New York City on 22 April 1904, Julius Robert Oppenheimer attended the Ethical Culture School of New York and Harvard University, graduating from the latter after three years in 1925 with honors and a degree in chemistry. Turning to physics, he spent a year pursuing graduate work at the Cavendish Laboratory and then switched to the University of Göttingen, Germany, and the new field of theoretical quantum physics, receiving his doctorate in March 1927. He pursued postdoctoral studies for two years in the United States, Holland, and Switzerland before accepting a joint appointment at the California Institute of Technology (Caltech) and the University of California, Berkeley. An inspiring teacher, he quickly attracted a generation of enthusiastic graduate students to Caltech and Berkeley, which became leading international centers of quantum physics. Although Oppenheimer published extensively on spectra, particles, neutron stars, and black holes, his personal scientific contribution was less outstanding, and he was never a serious contender for a Nobel Prize.

In October 1941 Oppenheimer began fast-neutron research for the U.S. government in connection with atomic bomb development. One year later he became director of the central laboratory for bomb design and development at Los Alamos, New Mexico, supervising the Manhattan Project. In this enormously demanding position he displayed new self-discipline, and his skillful intellectual leadership, capacity to absorb and process information, concern for the team of 1,500 working under him, and ability to negotiate the often-difficult relationship between individualistic scientists and governmental demands for conformity became legendary. After the 1945 atomic explosions over Hiroshima and Nagasaki, the exhausted Oppenheimer, who told President

**Oppenheimer, Julius
Robert**
(1904–1967)

Most famous for his involvement with the development of the atomic bomb, J. Robert Oppenheimer also had a major influence on the study of quantum physics. For two decades he directed the prestigious Institute for Advanced Study at Princeton. Oppenheimer's brilliant career was marred by allegations regarding his patriotic loyalty, and he was stripped of his security clearance. (National Archives and Records Administration)

Harry S. Truman that "I feel we have blood on our hands," hoped that the bomb's destructiveness might eventually force nations to abandon war.

Leaving Los Alamos in late 1945, Oppenheimer became director of the Institute for Advanced Study at Princeton two years later and quickly transformed it into the world's leading center for theoretical physics while simultaneously enhancing its existing reputation in humanist studies. As the most prestigious American advisor to the 1945–1946 Acheson-Lilienthal Committee on Nuclear Power and the United States Atomic Energy Commission (AEC), he advocated international control of atomic energy and lectured extensively, seeking to enhance popular scientific understanding.

In 1953 growing domestic McCarthyist, anticommunist sentiment and resentment by some colleagues—notably Edward Teller—of Oppenheimer's earlier reluctance to develop a thermonuclear bomb led the American government to withdraw his security clearance. This was done on the grounds that his wartime evasiveness over potential security problems and prewar left-wing and communist associates, including his brother, a former fiancée, and his wife, had permanently compromised his status. A full-scale inquiry held in 1954 at Oppenheimer's insistence confirmed this verdict. Later evidence revealed that the Federal Bureau of Investigation (FBI) blatantly infringed Oppenheimer's civil rights by tapping his telephone and providing transcripts of his legal consultations to the inquiry's members. In 1994 retired Soviet spy General Pavel A. Sudoplatov claimed in his memoirs that Oppenheimer had passed atomic secrets to Soviet agents, but major errors in his account led most in the scientific community to doubt this. Although excluded from govern-

mental counsels, Oppenheimer retained his academic position at Princeton until June 1966, publishing several books on science for the educated general reader. He died in Princeton, New Jersey, on 18 February 1967.

Multinational West European economic recovery and integration program. In order to continue the work of the European Recovery Program (also known as the Marshall Plan) on a more permanent basis, the Conference for European Economic Cooperation (also known as the Conference of Sixteen) established the Organization for European Economic Cooperation (OEEC) on 16 April 1948. Headquartered in Paris, the OEEC had eighteen founding members: Austria, Belgium, Denmark, France, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Sweden, Switzerland, Turkey, the United Kingdom, and the western zones of occupation in Germany. The Free Territory of Trieste participated until it again became a part of Italy in 1954. Many leading European figures played a role in the OEEC, including Belgium's Paul-Henri Spaak and Britain's Sir Anthony Eden.

The OEEC played a central role in the allocation of Marshall Plan funds until 1952, when that program ended. The early efforts of the OEEC, however, were plagued by crises of currency valuation, distribution, and convertibility. These problems were particularly difficult to resolve, as decisions in the OEEC Council could be made only with unanimity. Under a plan devised by the OEEC's so-called Committee of Wise Men in August 1949, nearly \$12 billion in American and Canadian aid to Europe eventually was meted out through the Marshall Plan. The United Kingdom received nearly one-quarter of the aid, with France getting one-fifth. Italy and the new Federal Republic of Germany (FRG, West Germany) received just over 11 percent each.

As the Marshall Plan shifted its emphasis from issuing credits to promoting economic integration in August 1949, the OEEC once again played a critical role. The OEEC negotiated limited freedom of trade in foodstuffs, manufactured products, and raw materials that accounted for nearly 60 percent of intra-European trade by the end of 1950. To prevent further problems and ease the movement of currencies, the OEEC created the European Payments Union (EPU) in September 1950. The EPU was dissolved in 1958 when all member currencies became convertible.

Although the OEEC was also involved in early discussions aimed at creating a single European market, the end of the Marshall Plan in 1952 and British pressure gave the leading role in these developments to the North

Organization for European Economic Cooperation

Atlantic Treaty Organization (NATO). The OEEC continued to work in the background, however, establishing the European Productivity Agency (1952) and the European Nuclear Energy Agency (1957). The OEEC also provided the institutional framework for negotiations leading to the European Free Trade Area and eventually to the 1957 Treaty of Rome.

In September 1961, the OEEC was subsumed into the Organization for Economic Cooperation and Development (OECD), a global body that seeks to facilitate trade. Today, the OECD comprises member thirty nations and is active in more than one hundred countries.

Organization of African Unity

Pan-African organization formed in October 1963. Early in the twentieth century, American scholar-activist W. E. B. Du Bois began to organize a Pan-African movement. When decolonization was under way in earnest in the early 1960s, Du Bois' vision was realized when newly independent African nations gathered in Ethiopia in 1963 to form the Organization of African Unity (OAU). The history of the organization has been a stormy one, as it was often drawn into the midst of Cold War conflicts and geopolitics.

Preliminary discussions involving the organization of the OAU precipitated a rift between the Monrovia Group, consisting of medium and small African states, and the rival Casablanca Group, headed by Ghana's leader, Kwame Nkrumah. Generally speaking, the Monrovia Group sought a loose confederation of African states, while the Casablanca Group proposed a tighter union. On the surface, Nkrumah seemed the natural choice to lead a Pan-African movement, given his long dedication to nationalism and the hopes that Ghana would become a role model for economic development in Africa. But Nkrumah was also a man with vast personal ambition and dictatorial tendencies. Many people feared that his vision for the OAU was of an instrument to project his political influence far beyond the borders of Ghana.

The tension between the two factions might have left the OAU still-born, but during the spring and summer of 1963, Ethiopian officials unsuccessfully mediated between the two groups. By October 1963, the delegates

Heads of state from thirty independent African nations meet in Addis Ababa, Ethiopia, in May 1963 with the intent to form what would become the Organization of African Unity (OAU). (Bettmann/Corbis)

had finished the OAU charter and officially registered it with the United Nations (UN).

Still, its member nations were reluctant to delegate authority to the OAU to resolve African conflicts. As the shameful record of superpower meddling and proxy wars in Africa became public in the 1960s and 1970s, the OAU states resolved not to take sides in the internal affairs of other nations.

On the other hand, from its inception the OAU pledged assistance to the liberation movements in Angola, Mozambique, Rhodesia, and South Africa, and a Liberation Committee was established to offer support to other African liberation movements that might arise. Comprised of Algeria, Egypt, Guinea, Nigeria, Senegal, Tanzania, and Uganda, the Liberation Committee announced that it would adopt a variety of tactics, including economic boycotts and diplomatic campaigns, to assist liberation movements throughout Africa. The most controversial actions in this regard were direct monetary payments to liberation movements and the construction of military training camps. The available monetary funds were not substantial, standing at less than \$2 million in 1964. And despite public pledges to make aid to liberation movements a top priority, the committee's budget was still less than \$4 million in 1972.

Even though the OAU's monetary assistance was meager and had a negligible effect on the outcome of liberation movements, many Western nations

The OAU record on refugee assistance has also been consistently dismal. In 1969, there were 500,000 refugees in Africa. By 1994, that number had skyrocketed to 6 million.

disapproved of such support. They viewed many of the liberation efforts as anticapitalist and procommunist. The role of the OAU in leading many developing-world nations to sever ties with Israel in 1973 also created consternation throughout the West. Within the OAU, debates ensued about how to deal with the emergence of rival liberation movements in Angola, Rhodesia, and South Africa. The OAU offered to mediate between the rival groups, but its assistance was ineffective. The OAU also came under fire for failing to object to the arrival of Cuban forces in Angola during the 1970s. The OAU's silence on this controversial issue indeed suggested a double standard.

The human rights record of the OAU has been a topic of worldwide concern. During 1963–1982, the OAU received 6,800 complaints of human rights violations but only acted on 127 of those. In response to international criticism and pressure, the OAU approved a human rights charter in 1986, but enforcement remained sporadic at best.

The OAU record on refugee assistance has also been consistently dismal. In 1969, there were 500,000 refugees in Africa. By 1994, that number had skyrocketed to 6 million. Yet the OAU did little to intervene or mitigate the effects of what was clearly a humanitarian crisis, stating that refugee assistance would be akin to interfering in the internal affairs of its member states.

In 2003 the OAU, with great fanfare, announced a name change. It is now known as the African Union. Whether the organization can bring about positive change in Africa still remains to be seen.

Organization of American States

Multinational institution established in 1948 by the U.S. and Latin American governments to promote international cooperation within the Western Hemisphere. The concept of an organization to encourage cooperation among Western Hemispheric nations originated in the early nineteenth century, when the South American revolutionary war hero Simón Bolívar unsuccessfully proposed a league of Latin American republics. Decades later, the United States revived the idea with more success and with a different agenda: the promotion of trade. At a conference in Washington, D.C., during 1889–1890, eighteen Western Hemispheric nations founded the Commercial

Bureau of the American Republics (later transformed into the Pan-American Union), with headquarters in Washington, D.C.

After 1945 various pressures, many related to the Cold War, led the U.S. and Latin American governments to seek closer cooperation through new institutions. Latin American leaders worried about declining U.S. economic engagement following World War II and sought to open new channels for encouraging U.S. aid and investment. President Harry Truman's administration, anxious about worsening Cold War tensions, hoped to consolidate U.S. authority in the hemisphere.

In 1947, the United States and nineteen Latin American governments signed the Rio Pact, a mutual defense treaty that advanced the long-standing U.S. effort to make enforcement of the 1823 Monroe Doctrine a multilateral responsibility. A year later, twenty-one Western Hemispheric nations gathered in Bogotá, Colombia, to discuss economic and political relations. On 30 April 1948, the attending nations signed the Charter of the Organization of American States (OAS).

The OAS called for efforts to promote peace, prosperity, and democracy in the hemisphere and established mechanisms for resolving disputes among member states. At the insistence of Latin American governments keenly aware of the long record of U.S. intervention in their nations, the OAS also declared the principle of nonintervention. Adopted over U.S. objections, Article 15 of the OAS Charter asserted that "no State or group of States has the right to intervene, directly or indirectly, for any reason whatever, in the internal or external affairs of any other State."

In the decades that followed, Washington repeatedly overcame this limitation by using the OAS as a means to attain U.S. geopolitical objectives behind a façade of regional solidarity. President Dwight Eisenhower's administration established this pattern in 1954 when it used the OAS to help oust the left-leaning government of Jacobo Arbenz in Guatemala. The administration had calculated that an OAS resolution condemning Arbenz would give a veneer of legitimacy to U.S. action against the regime. Washington told Latin American governments that the episode was a "test case" of the OAS's ability to defend the hemisphere and threatened to act alone if the organization failed to take a stand. With only Guatemala in opposition, sixteen Latin American governments grudgingly supported the United States. In June 1954, as a military operation sponsored by the Central Intelligence Agency (CIA) overthrew Arbenz, U.S. leaders claimed to be acting in the interests of the OAS.

The OAS performed a similar function when the United States sought to apply pressure on Cuba during the early 1960s. When Cuban leaders complained to the United Nations (UN) about U.S. hostility, Washington convinced the UN Security Council that the OAS, not the UN, was the appropriate body to consider the issue. Under the guise of regional cooperation, the United States then maneuvered to exclude Cuba from the OAS. At a ministerial meeting in Punta del Este, Uruguay, in January 1962, President John Kennedy's administration won OAS approval—by a one-vote margin—of a statement declaring "Marxism-Leninism incompatible with the American system."

When the United States was on the losing end of OAS votes, U.S. officials sometimes ignored the organization and simply acted unilaterally. Before the 1982 Falklands War, for example, the OAS voted 17–0, with the United States abstaining, to back Argentina’s claim to the disputed islands. Washington then imposed economic sanctions against Argentina and sent military aid to Britain. In 1989, the United States ignored a 20–1 vote in the OAS condemning its December 1989 invasion of Panama.

Organization of Petroleum Exporting Countries

Oil cartel founded on 14 September 1960 at the Baghdad Conference to give oil-exporting countries leverage in negotiations with foreign oil companies that, at the time, controlled production and dictated prices and the share of profits going to producing nations. In the late 1960s and early 1970s, the Arab member nations of the Organization of Petroleum Exporting Countries (OPEC) enacted embargoes against supporters of Israel in the 1967 and 1973 wars in an effort to influence Middle East policy. Since the 1980s, OPEC has acted largely apolitically, seeking to stabilize oil production and prices to maximize members’ profits while guaranteeing a reliable oil supply to the world economy.

As early as 1945, oil-producing nations recognized that a unified stance on pricing and output would improve their effectiveness in bargaining with the major oil companies. The oil companies’ enactment of a series of unilateral price cuts in 1959 and 1960 finally provided the impetus for the world’s five largest oil exporters—Saudi Arabia, Iran, Iraq, Kuwait, and Venezuela—to band together with the express purpose of reversing these price cuts. Over its first two decades of operations, OPEC expanded its membership to include Qatar, Indonesia, Libya, the United Arab Emirates, Algeria, Nigeria, Ecuador, and Gabon. It negotiated with oil companies but with little success in eroding the oil companies’ power. In the early 1970s, however, OPEC finally succeeded in wresting pricing power from the oil companies, which were increasingly vulnerable to political decisions made in the oil-producing states that housed their operations. On 16 October 1973, in reaction to the Yom Kippur War, OPEC quadrupled the price of oil, beginning a series of

OPEC headquarters in Vienna, Austria. (Barbara Gindl/EPA/Corbis)

unilateral price hikes that effectively ended the companies' control over all but the technical side of oil production.

As Arab nations' production made up an increasing share of the world oil market, they began to use their power politically, applying oil embargoes against Britain and France during the 1956 Suez Crisis and against the United States, Britain, and the Federal Republic of Germany (FRG, West Germany) during the 1967 Six-Day War. However, these embargoes failed, in large part because of U.S. willingness to make up the oil shortfalls to its allies.

Arab oil producers' attempts to use the oil weapon to influence the Arab-Israeli conflict reached a peak in October 1973 during the Yom Kippur War, precipitated by Egypt and Syria's surprise attack on Israel. On 17 October, one day after OPEC initiated its sharp price increase, the Organization of Arab Petroleum Exporting Countries (OAPEC) decreased oil production and initiated a five-month oil embargo against the United States and the Netherlands to protest their support for Israel. The oil price shock combined with the embargo caused severe economic disruptions in much of the world, producing a worldwide recession.

The Soviet Union, itself an oil exporter, had little to risk from the Arab states' use of the oil weapon and encouraged the oil embargo because it

weakened the West economically. At the same time, the Soviet Union took advantage of decreased Arab production and higher prices, significantly increasing its oil exports to the United States during the embargo—a fact that neither nation publicized.

The oil embargo caught Americans largely unprepared. As a result, the U.S. government instituted gasoline rationing that resulted in long lines at gasoline stations and national anxiety over energy supplies. In response to the price increases and the embargo, the United States sought to establish a cartel of oil-consuming nations to confront OPEC directly, but major importers' diverse oil needs and political positions on the Arab-Israeli conflict stymied this plan. In 1975, the U.S. Congress did pass legislation to establish a Strategic Petroleum Reserve (SPR) to protect against future supply disruptions.

Although the Arab states ended the oil embargo soon after hostilities ceased and without securing the desired Israeli withdrawal from territories occupied in 1967, this unprecedented assertion of Arab power transformed the position of oil-producing states and fueled Arab nationalism. Both the United States and the Soviet Union devoted increasing attention to the Middle East as a strategic battleground, while the Arab world endeavored to exercise political influence independent of the superpowers.

OPEC's achievement of higher oil prices in 1973 ultimately damaged the oil producers' economies by the late 1970s, when the resulting worldwide recession produced inflation and falling demand for oil. Oil prices spiked again during 1979–1980, the result not of OPEC strategy but of two political crises: the Iranian Revolution and the start of the Iran-Iraq War. Since the 1980s, OPEC has pursued a policy of price control, ensuring substantial profits without adversely affecting the world economy. Today, OPEC has eleven member states. Ecuador and Gabon left OPEC prior to the 1990s.

Orwell, George
(1903–1950)

Influential novelist, journalist, and social critic. Born Eric Arthur Blair in Motihari, India, on 25 June 1903, he adopted the pen name George Orwell in

1933. He attended the elite Eton College on scholarship but failed to earn entrance to a university. He instead joined the Indian Imperial Police in Burma, working there during 1922–1927 before resigning, having witnessed firsthand the sordidness of imperialism.

On returning to England, Orwell attempted to become a writer but initially earned little for his effort. His first substantial published work, *Down and Out in Paris and London* (1933), was a documentary account of life at the bottom of the social order. This was followed by his 1934 novel *Burmese Days*, a sharp condemnation of imperialism. More novels followed, mainly chronicling the frustrations of lower–middle-class life in interwar England. In 1936 he traveled to the north of England to live with the industrial working class, subsequently describing their downtrodden, wretched lives in *The Road to Wigan Pier* (1937).

At about the same time, Orwell formally became a socialist, although he remained for only a few years in the Independent Labour Party. His socialism was of a vaguely egalitarian, fraternalistic cast, in part a simple reaction to the snobbery of the British class system and in part fired by a belief in social justice. He fought in the Spanish Civil War (1936–1939) in support of the Republicans on the political Left and barely survived a bullet wound to the neck. He wrote of his time there in *Homage to Catalonia* (1938). He was left with an enduring hatred of Soviet leader Josef Stalin and the Stalinist political modus operandi that, Orwell felt, had undermined the Left's struggle against the Nationalists led by General Francisco Franco. During World War II, Orwell broadcast war reports for the British Broadcasting Company (BBC) and wrote for the left-wing newspaper *Tribune*.

In 1945 Orwell published *Animal Farm*, a knowing parody-novella of the Russian Revolution and its subsequent betrayals of Marxism. In 1949 he produced his last book, *Nineteen Eighty-Four*, a dystopian, nightmarish analysis of life in a bureaucratic, totalitarian society. Directed at neither Stalinism nor fascism but drawing lessons from both systems, this famous work was a warning with a touch of prophecy. In this final work, which gave us “Big Brother,” the “Ministry of Truth,” “Newspeak,” and the oxymorons “War Is Peace, Freedom Is Slavery, Ignorance Is Strength,” Orwell expresses most vividly his hatred of political oppression in all its forms.

Orwell's legacy has been clouded in recent years by the revelation, rather heavily overinterpreted, that toward the end of his life he provided a list of crypto-communists, or fellow travelers, to a semisecret department of the British Foreign Office. Orwell died in London on 21 January 1950.

Ostpolitik

Federal Republic of Germany (FRG, West Germany) foreign policy initiative that sought rapprochement with the Soviet Union and the Warsaw Pact beginning in 1969, generally coinciding with the beginning of U.S.-Soviet détente. During 1949–1963, West Germany, under the leadership of Chancellor Konrad Adenauer, pursued Westpolitik (Western Policy). Westpolitik involved, among other things, membership in the North Atlantic Treaty organization (NATO), the rearmament of West Germany, and participation in the European Coal and Steel Community (ECSC) and the European Common Market. Westpolitik also dictated a relatively uncompromising attitude toward the Soviet Union and its East European satellites, the German Democratic Republic (GDR, East Germany) in particular. Epitomizing this attitude were Bonn's refusal to open relations with the Soviets until forced to do so by Moscow's threat not to release thousands of German prisoners of war still held in captivity and the Hallstein Doctrine, which held that West Germany would not enter into relations with any country, the Soviet Union excepted, that recognized East Germany.

Beginning with Ludwig Erhard's chancellorship (1963–1966) and continuing with that of Kurt Kiesinger (1966–1969), West Germany's leadership began to modify its approach toward the Soviet bloc, sending trade missions to Poland, Hungary, and Romania in hopes that economic agreements would lead to political dialogue. This transformation served as a prelude to the more radical Ostpolitik (Eastern Policy) implemented by Chancellor Willy Brandt's government during 1969–1974.

Mayor of West Berlin during 1957–1966 and foreign minister in the Kiesinger government, Brandt became West Germany's first Social Democratic chancellor in October 1969, heading a coalition cabinet that included Walter Scheel, leader of the Free Democratic Party, as foreign minister. Seeking to reduce tensions in Central Europe, hoping to ameliorate conditions for Germans living in East Germany, and recognizing that a hard-line approach had brought German reunification no closer, Brandt as foreign minister had already set out to improve relations, via negotiations and diplomatic agreements, between West Germany and the Warsaw Pact. As chancellor, he and Scheel worked aggressively to expand this process.

Brandt's Ostpolitik encountered substantial obstacles, both internationally and domestically. President Richard M. Nixon's administration, itself seeking détente, proved reluctant to surrender the initiative in East-West relations to Bonn. At the same time, East Germany, led by Walter Ulbricht, made negotiations with West Germany dependent upon Bonn's willingness to recognize East Germany diplomatically, a condition unacceptable to the Brandt cabinet. In addition, the Christian Democratic Union/Christian Socialist Union (CDU/CSU) opposition in the Bundestag made repeated attempts to stymie Brandt's initiatives.

Fortunately for Brandt, the Soviet Union had ample reason to embrace Ostpolitik. Concerned over growing hostilities with communist China, desirous of increasing economic ties with the West, and sensing an opportunity

West German Chancellor Willy Brandt paying tribute to the Jewish insurgents killed by the Germans during the uprising in the Jewish ghetto in Warsaw in 1943, the Ghetto Heroes' Memorial, Warsaw, 7 December 1970. (Bettmann/Corbis)

to possibly split NATO, the Kremlin welcomed Ostpolitik, agreeing to discuss relations with West Germany in early 1970. Talks between the Soviet Union and West Germany culminated in the Treaty of Moscow on 12 August 1970, whereby both sides renounced the use of force against each other and acknowledged as inviolable existing European frontiers. Moscow even added a supplemental declaration affirming Germany's right to reunify by peaceful means, thereby undercutting one of the CDU/CSU's chief criticisms of Ostpolitik. The Soviets also agreed to discuss Berlin with the United States, Great Britain, and France, with the objective of redressing the divided city's status.

West Germany's willingness to recognize existing European frontiers paved the way for an agreement with Poland via the Treaty of Warsaw, signed on 7 December 1970. In so doing, Bonn acknowledged the disputed Oder-Neisse Line (although stipulating that it remained subject to change in a final peace settlement), while Warsaw agreed to allow Germans residing in Poland to relocate to either East or West Germany provided they conformed with Polish emigration laws. Moscow's decision to discuss Berlin's status led to

the Quadripartite Agreement of 3 September 1971, which saw Britain, France, the United States, and the Soviet Union acknowledge that West Berlin was not part of West Germany, recognize West Germany's right to represent West Berlin internationally, and offer diplomatic protection to its citizens. Additionally, the agreement promised Soviet facilitation in the movement of traffic from West Germany to West Berlin and pledged the signatories to resolve by negotiation any future problems concerning Berlin.

Eight months later, in May 1972, East Germany, now headed by Erich Honecker, and West Germany signed a transit agreement guaranteeing West Berliners access rights to East Germany—all but forbidden since the construction of the Berlin Wall in 1961—and granting East Germans the right to visit West Germany in cases of family emergency. This agreement set the stage for the West German–East German Basic Treaty, signed on 21 December 1972, in which the two Germanies renounced the use of force in their relations, agreed to recognize and respect each other's authority and independence, renounced any claim to represent the other internationally, agreed to respect human rights principles as enumerated in the United Nations (UN) Charter, and consented to an exchange of permanent missions but not of ambassadors.

Brandt followed up the Basic Treaty by entering discussions with Czechoslovakia that led to a concrete agreement similar to the 1970 Treaty of Moscow in December 1973. That same month, West Germany exchanged ambassadors with both Hungary and Bulgaria, meaning that by the time Brandt left office in May 1974, West Germany enjoyed relations with every East European communist regime except Albania.

Ostpolitik greatly reduced Cold War tensions in Central Europe and thereby contributed to the success of détente in the 1970s. It essentially eliminated Berlin as a Cold War issue, opened the door for the entry of both Germanies into the UN in September 1973, and improved conditions for Berliners. It also marked West Germany's emergence as a state willing to act independently on the international stage. Finally, Ostpolitik earned Brandt acclaim both in Germany and abroad, symbolized by his selection as the winner of the 1971 Nobel Peace Prize.

International treaty establishing legal rules for the exploration of space and creating select limits on military activities in outer space. The formal title of the Outer Space Treaty is the Treaty on Principles Governing the Activities of States in the Exploration and Use of Outer Space, Including the Moon and Other Celestial Bodies. The treaty developed from discussions in the United Nations (UN) that began in the late 1950s concerning the peaceful use of outer space and two 1963 UN resolutions on the peaceful use of space and open access to space for all states. The 1963 Partial Test Ban Treaty (PTBT) also provided a foundation for the Outer Space Treaty by forbidding nuclear testing in space. The Outer Space Treaty was approved by the UN General Assembly on 19 December 1966, was quickly signed by the key states, and formally went into force in 10 October 1967.

The Outer Space Treaty establishes space and all celestial bodies as open to exploration by all states, with no legal basis for claiming national sovereignty and in accordance with established international law. The treaty holds that although countries are free to operate in space, they also bear responsibility for the consequences of their actions. Further, they have an obligation to act responsibly, to not interfere with the space activities of others, and to cooperate and provide assistance to others if needed. The treaty forbids the placement of nuclear weapons or other forms of weapons of mass destruction in orbit as well as stationing these weapons on the moon or anywhere else in outer space. Additionally, the treaty language specifically prohibits the building of bases, the testing of weapons, or military exercises on the moon or other celestial bodies.

Although the treaty emphasizes the peaceful use of space, its specific limitation on weapons of mass destruction has been interpreted by military planners as allowing the development of other types of weapons for use in space unless precluded by other treaties or arms control measures, such as the Anti-Ballistic Missile (ABM) Treaty. However, some analysts interpret the Outer Space Treaty more broadly and argue that all weapons are banned from space under the peaceful use concept. In spite of these opposing views, both the United States and the Soviet Union studied and tested various types of weapons systems that could be used in space, especially for anti-ballistic missile and antisatellite purposes.

Owen, David (1938–)

British Labour Party politician, cofounder of the Social Democratic Party, and secretary of foreign and Commonwealth affairs (1977–1979). Born in Plympton, Devon, England, on 2 July 1938, David Owen studied medicine at Sidney Sussex College, Cambridge University, from which he received his undergraduate degree in 1959. He began his clinical medical studies at St. Thomas' Hospital, London, in October 1959 and qualified as a medical doctor in 1962.

Joining the Labour Party in 1960, Owen was elected to Parliament in 1966 and rose rapidly through the ranks. He served as navy minister during 1968–1970 and as shadow junior defense spokesman during 1970–1972. He resigned from the shadow cabinet in 1972 when his party rejected British membership in the European Economic Community (EEC).

When Labour returned to power in February 1974, Owen became minister of health and served until September 1976, when he was appointed deputy to the secretary of state for foreign and commonwealth affairs. In February 1977, he was named secretary of state for foreign and Commonwealth affairs, a post he held until May 1979. A consistent champion of European integration and a dedicated Atlanticist, he worked closely with U.S. Secretary of State Cyrus R. Vance in 1977 over the independence of Rhodesia. In October 1978 Owen helped persuade South Africa to accept a United Nations (UN) resolution to oversee elections in Namibia. He supported British troop deployments to the Falkland Islands to forestall Argentinean claims and was criticized by members of his own party for his pro-American position during the Iranian Revolution of 1979.

After May 1979, and now in opposition, the Labour Party became increasingly anti-European and hostile to nuclear weapons. Having already resigned from the shadow cabinet in November 1980, Owen and three other parliamentarians left Labour and formed the Social Democratic Party in March 1981. During 1983–1987 Owen headed that party. He left Parliament in 1992, later working with Vance again in an attempt to establish peace in the former Yugoslavia.

Özal, Turgut (1927–1993)

Turkish politician, premier, and the eighth president of the Turkish Republic. Born in Malatya, Turkey, on 13 October 1927, Turgut Özal received his bachelor's and master's degrees in electrical engineering from Istanbul Technical University and went on to study economics in the United States from 1952 to 1953. Upon his return to Turkey, he served as an advisor to the Defense Ministry, the State Planning Organization, the World Bank, and Premier Süleyman Demirel. Özal proved to be a solid, pro-Western Cold War ally.

After Turkey's 1980 military coup d'état, Özal was appointed deputy prime minister. He was forced to resign after a banking scandal in 1982. In 1983, his center-rightist Motherland Party gathered a majority of the votes in national elections, making him Turkey's forty-fifth prime minister. Although the party lost popular support as a result of its economic austerity program, it maintained its parliamentary majority in the 1987 elections, and Özal secured a second full term as prime minister. Two years later, the Turkish parliament elected him the first civilian president of the republic since 1960.

As premier, Özal implemented extensive economic liberalization reforms, including the lifting of exchange controls and privatization of state economic enterprises. His liberalism did not, however, extend equally to the political sphere. He campaigned for the ban on the pre-1980 politicians' political rights, favored strict controls over the press, and turned a blind eye toward widespread human rights violations. He was at best a pragmatic democrat. He proposed greater rights for the Kurdish minorities mainly to curtail the military conflict in southeastern Anatolia. In foreign affairs, he pursued pro-Western Turkish policies, including integration with the European Union (EU), active involvement in the North Atlantic Treaty Organization (NATO), and political partnership with the United States. After the breakup of the Soviet Union, he began to establish cultural and economic ties with the new Central Asian republics. Özal died unexpectedly on 17 April 1993 in Ankara, Turkey.

Turkish Prime Minister Turgut Özal, February 1989.
(David Rubinger/Corbis)

P

Finnish politician, prime minister (1918, 1944–1946), and president (1946–1956). Born to a merchant family in Tampere, Finland (then Russia), on 27 November 1870, Juho Paasikivi earned degrees in Russian language, history, and law from the University of Helsinki and a doctorate in law there in 1901. He held positions in academia (1899–1903), served as director of the State Financial Office (1903–1914), and worked in a private banking institution (1914–1934).

Paasikivi joined the conservative Old Finnish Party, later renamed the National Coalition Party, and was elected to parliament in 1907. He served briefly as prime minister of the newly independent Finland in 1918, at which point he supported a monarchy and left government service.

As World War II loomed, Paasikivi returned to government work, serving as ambassador to Sweden during 1936–1940 and then ambassador to the Soviet Union during 1940–1941. He adopted a more compliant attitude toward the Soviets than his government in general demonstrated. After the end of the Continuation War (1941–1944) with the Soviet Union, Paasikivi was one of the few Finnish politicians who continued to enjoy his country's confidence. He was appointed prime minister in November 1944, serving under President Carl Mannerheim, and in March 1946 was elected president of Finland upon Mannerheim's resignation. Paasikivi was elected to office in his own right in February 1950. In the February 1956 election, in spite of his advanced age, he reluctantly offered himself as a candidate in the second ballot and was ultimately elected because of a split vote among competing parties.

As president, Paasikivi stood generally aloof from party politics and became a true champion of his country. Guided by what he viewed as “small state realism,” he deserves credit for protecting Finnish democracy during the Cold War in spite of its recognized geopolitical position in the Soviet sphere of influence. He was successful in maintaining Finnish independence by means of an accommodating policy toward the Soviet Union, insisting that Finland was a “capitalist friend.”

Paasikivi, Juho
(1870–1956)

In his capacity as the leading Finnish politician in the immediate post–World War II years, Paasikivi developed the so-called Paasikivi Line, aimed at inspiring trust in Moscow on the assumption that Soviet interest in Finland was of a strategic nature and not ideologically driven. Thanks to his pragmatic realism and tactical skills, he carefully balanced the need to be obliging in questions of vital concern to the Soviet Union while remaining uncompromising on Finnish essentials, most importantly its autonomy and democracy. Paasikivi died in Helsinki on 14 December 1956, only months after his reelection.

Paisley, Ian

(1926–)

Northern Irish church leader, politician, founder of the Democratic Unionist Party (DUP), and representative of radical political unionism in the Northern Ireland conflict. Born on 6 April 1926 in Ballymena, Northern Ireland, Ian Richard Kyle Paisley received theological training at the Theological Hall of the Reformed Presbyterian Church in Belfast and was ordained to the ministry in 1946. As a Presbyterian minister, he helped to establish the first free Presbyterian Church of Ulster in 1951, which he has led since its inception.

Paisley's political career began during the Irish civil rights movement in the 1960s. During 1964–1971 he headed the Protestant Unionist Party, and in 1971 he founded and has since led the DUP. He has consistently fought any attempt to politically reconcile the Republic of Ireland and Northern Irish Republicans. He has pursued his irredentist goals as a member of the British Parliament (since 1970), a member of the Northern Ireland assembly (1973–1974 and again since 1998), and as a member of the European Parliament (1979–2004). Paisley and his supporters helped to bring down the 1973 Sunningdale Agreement and, together with the other major Unionist leaders, opposed the 1985 Anglo-Irish Agreement. His party took a similar stance toward the 1993 Downing Street Declaration. Although initially supportive of the talks that preceded the 1998 Good Friday Agreement, the DUP soon ended its cooperation when Sinn Féin was allowed to join in the arrangement. Paisley is a controversial figure and doubtless one of the most radical and aggressive Unionist politicians, but he is also described as a committed

representative of his constituency members, regardless of their religious affiliations.

South Asian nation with an area of 310,401 square miles, slightly less than twice the size of the U.S. state of California. The Islamic Republic of Pakistan, with a 1947 population of approximately 60 million, is bordered to the east by India, to the west by Iran and Afghanistan, to the north by the People's Republic of China (PRC), and to the south by the Arabian Sea.

European explorers first arrived in the area late in the fifteenth century. By the 1800s, the British had become the dominant European presence on the subcontinent. In 1857 the British took over the administration of India, ruling it through a mixed system of direct control and indirect rule.

Muslim nationalists in India established the All-India Muslim League in 1906. As agitation for independence grew, Muslim leaders became increasingly concerned about ensuring the political rights of the Muslims in a Hindu-dominated state. Arguing that India was both a Hindu and a Muslim state, Mohamed Ali Jinnah, leader of the Muslim League political party, believed that Muslim rights would be endangered in a Hindu-majority nation. The solution, therefore, was a separate state for the Muslim population.

Consequently, Pakistan was carved out of British India and became a state on 14 August 1947. It originally consisted of two sections—West Pakistan, which is the current state of Pakistan, and East Pakistan, which is now Bangladesh—separated by roughly 1,000 miles of Indian territory. Leaders of the fledgling nation confronted many internal challenges. The partition had left Pakistan with a shortage of trained personnel and resources to engage in the nation-building process. This dilemma was compounded by the dislocation and communal violence that accompanied partition, which had left between 500,000 and 1 million dead. Soon after independence, Pakistan fought its first war with India over the disputed Jammu-Kashmir territory

Pakistan

This dilemma was compounded by the dislocation and communal violence that accompanied partition, which had left between 500,000 and 1 million dead.

The last British viceroy of India, Lord Louis Mountbatten (in uniform), officially hands over power to Mohamed Ali Jinnah (to left of Mountbatten), leader of the new nation of Pakistan, on 14 August 1947. (Library of Congress)

(commonly known as Kashmir). Hostilities came to an end in 1948 with a cease-fire supervised by the United Nations (UN).

The transfer of power established Pakistan as a parliamentary democracy, with Jinnah as the first governor-general. The Constituent Assembly (a vestige of the prepartition Indian Constituent Assembly) was charged with drafting a new constitution. Political instability was common in this first phase of Pakistani political history, which lasted from 1947 to 1958. Seven prime ministers served during this period. Pakistan also lost its two preeminent leaders: Jinnah, who died in August 1948, and Prime Minister Liaquat Ali Khan, who was assassinated in 1951. In 1954, Governor-General Ghulam Mohammad dissolved the Constituent Assembly and placed the government in the hands of a Cabinet of Talent comprised of powerful civil and military officials.

In 1956 Pakistan finally promulgated its first constitution, which established the country as an Islamic Republic, created the office of the president, and subordinated the office of the prime minister to the presidency. Those who had hoped for a more thorough Islamization of the republic were disappointed. The struggle over the role of Islam in the nation would continue to be an issue, however.

From independence onward, ethnic unrest and provincial challenges to central authority complicated the nation-building process. For example, in 1956 Pakhtun leaders in the Northwest Frontier Province threatened to agitate for a separate Pakhtun homeland. Military force had to be used against the khan of Kalat in Balochistan, who declared his independence from Pakistani control.

The period of parliamentary democracy ended with the imposition of martial law in 1958 by President Iskandar Mirza (1955–1958). Just weeks later, Muhammad Ayub Khan overthrew Mirza. This second phase of Pakistani political history, from 1958 to 1971, witnessed military rule under Presidents Ayub Khan (1958–1969) and Agha Mohammad Yahya Khan (1969–1971).

Ayub Khan, who considered himself a reformer, changed family and marriage laws and brought marriage and divorce under government control. To encourage industrial development, the government introduced tax incentives and made credit more available. Rapid population growth and crop failures, however, caused recurrent food shortages. Ayub Khan introduced land reform to further limit the size of single holdings and instituted price controls. The government also began a Green Revolution by introducing high-yield seeds and selling public land to individual farmers. By the late 1960s, the Green Revolution had yielded positive results in the Punjab. Ayub Khan also introduced Basic Democracy, a five-tier system of representative institutions ranging from union councils at the village level to a provincial development council for each province. Elected members of the village councils were charged with drafting a new constitution, which was promulgated in 1962.

Ayub Khan continued Pakistan's close relationship with the United States and benefited from U.S. economic and military assistance. At the same time, he astutely pursued cordial relations with the People's Republic of China (PRC), which resulted in cultural and trade exchanges as well as Chinese aid to Pakistan.

In 1965, hostilities again broke out between Pakistan and India over the issues of Kashmir and water distribution from the Indus River. In 1969, as opposition to his rule grew, an ailing Ayub Khan resigned in favor of General Agha Mohammad Yahya Khan. The opposition had been fueled in part by the failure to liberate Kashmir. But there was also a growing desire to restore democratic rule.

Yahya Khan scrapped the Basic Democracy introduced by his predecessor, abolished indirect elections for president, introduced a representation system based on population, and promised a return to constitutional government. In December 1970 the Awami League posted a stunning electoral victory in East Pakistan and won a majority in the National Assembly. In the West, Zulfikar Ali Bhutto's Pakistan People's Party (PPP) won a majority. Neither Yahya Khan nor Bhutto wished to have Mujib ur-Rahman of the Awami League as prime minister, and both acted to prevent the National Assembly from convening. This obstructionism enraged Bengalis in East Pakistan, who were already unhappy with what they perceived as West Pakistani governmental callousness toward the suffering caused by recent floods in the East. Bengalis also objected to the imposition of Urdu as the official

language. Yahya Khan responded to the street agitation by ordering a military crackdown in the East. Developments careened toward civil war as Easterners demanded secession.

Unrest in the East soon brought Pakistan into another war with India. Refugees from East Pakistan, both Hindus and Muslims, fled to the neighboring Indian state of Bengal. In early December 1971, Indira Gandhi ordered an invasion of East Pakistan, and Pakistani forces quickly surrendered. What had been East Pakistan now became the independent state of Bangladesh.

Military defeat and national humiliation triggered Yahya Khan's resignation, ushering in the next period of Pakistani history that promised a respite from military rule. Bhutto became president (1971–1977) and restored civilian rule for the first time since 1958. In 1973 Bhutto introduced a new constitution, which established a parliamentary government that divided responsibilities between a largely ceremonial president and a powerful prime minister. Bhutto himself now assumed the role of prime minister. The constitution established Islam as a state religion and aligned all civil laws accordingly.

In the 1970s Bhutto pursued a far more socialist developmental strategy than what had persisted since independence. The government nationalized entities in the agricultural, industrial, and financial sectors. Sluggish growth and Bhutto's failure—and perhaps reluctance—to break the grip of the powerful landowning community meant that his economic and social promises remained unrealized, however.

Popular agitation and suspicion of voter fraud after the 1977 elections sparked widespread unrest. This opened the door to yet another period of martial law. General Mohammad Zia ul-Haq and his fellow military officers ousted Bhutto and dissolved the government. Bhutto was executed in 1979.

Zia, who held power during 1977–1988, furthered the transformation of Pakistan into an Islamic state. He created an Islamic judicial system and banned political parties, having found no reference to them in Islamic teachings. He also passed ordinances discriminating against women. In part, he hoped to unify the nation by having people rally behind the protection of their Islamic heritage. The Soviet invasion of Afghanistan in 1979 helped strengthen Zia's message of endangered Islam, so Pakistan began to provide aid to resistance fighters in Afghanistan. Other countries, principally the United States and China, also used Pakistan as a conduit for funneling weapons and aid to the mujahideen (freedom fighters) in Afghanistan.

Martial law was ended in 1985, with Zia becoming president. But he amended the constitution to shift the balance of power to that office. He could now dismiss the prime minister, the provincial governors, and the national and provincial legislatures. Zia died in 1988 in an airplane crash. During the 1980s, he and his military advisors began to reverse some of the nationalization policies of the 1970s. Government deregulation and economic liberalization policies encouraged greater private investments. This process continued through the 1990s to the present. In December 1988, Benazir Bhutto, daughter of Zulfikar Ali Bhutto, became prime minister, the first woman leader of a Muslim nation.

The current Pakistani president, General Pervez Musharraf, came to power through a military coup in 1999 and returned the country to military rule. In the post–Cold War period, Pakistan has garnered attention as a close U.S. ally in the war on terror. This has made the country a beneficiary of generous U.S. economic and military aid.

The partition of India in August 1947 into an independent Pakistan and India split the military as well as other institutions. The partition agreement awarded two-thirds of the former Indian assets to India, although the bulk of preindependence Indian Navy sailors were Muslims, and Pakistan secured a majority of the naval vessels, including three frigates.

A domestic security crisis coupled with a lack of qualified personnel and supplies burdened the fledgling Pakistani military from the onset of independence. Pakistan's geographical position also presented a security nightmare. The new nation was split into East and West Pakistan, with a hostile India between the two. The navy had perhaps the most impossible task, as it would have to operate while divided by 3,500 miles of Indian coastline.

Pakistan fought three wars with India, chiefly over Kashmir, during 1947–1949 and in 1965 and 1971. The secession in 1971 of East Pakistan, which became independent as Bangladesh, at least rendered Pakistan's defense against India easier. Problems remained with a long, common, ill-defined border and the fact that Pakistan's major population centers were close to the Indian frontier.

Most of Pakistani defense spending was centered on the army and air force. The navy came in a poor third, although it did receive some warships from the Royal Navy. In 1964, the Pakistani Navy acquired the first submarine of the subcontinent's navies in an ex-U.S. Tench-class boat.

For most of the Cold War period, Pakistan allied itself with the United States, although this relationship was not a constant one. Pakistan also received some military assistance from the People's Republic of China (PRC), France, and other nations. The Pakistani military continually intervened in politics, and although nominally a democracy, Pakistan was under martial law for much of the Cold War period.

Following the 1971 defeat by India, Pakistani leader Zulfikar Bhutto (president during 1971–1973 and prime minister during 1973–1977) devoted considerable resources to rebuilding the military, attempting to move it toward a more professional, capable force but under strict civilian control. Bhutto also created the 18,000-member Federal Security Force, in essence his own private army. His reforms included development of new military production facilities and the addition of a naval air wing. The PRC provided a number of naval patrol craft. The United States furnished destroyers, and Pakistan secured submarines from France and midget submarines from Italy.

The 1979 Iranian Revolution and the overthrow of Shah Mohammad Reza Pahlavi, one of Pakistan's closest allies, was a serious blow, as was the Soviet invasion of neighboring Afghanistan that December. The latter event, however, led to closer ties with the United States. Pakistan secured U.S. F-16 aircraft, Harpoon antiship missiles, heli-

copters, and upgraded M-48 tanks. The military also increased in size, with a large portion of the costs borne by the United States and Muslim Persian Gulf nations. In 1994 the active army numbered 520,000 men, with 300,000 in the reserves. The navy had 22,000 personnel and the air force had 45,000, with 8,000 in the reserves. In that year Pakistan also possessed some 2,000 tanks, 430 combat aircraft, 3 destroyers, 10 frigates (4 of them guided missile types), and 6 submarines.

Sparked by continued security threats, including a nuclear test by India in 1974, Pakistan developed its own nuclear capability and conducted its own nuclear test in 1998. After 1989, with the breakup of the Soviet bloc and the withdrawal of Soviet troops from Afghanistan, Pakistan's strategic importance to the United States declined. This was rekindled with the terrorist attacks on the United States on 11 September 2001 and the onset of the U.S.-led war on terror.

Political organization dedicated ostensibly to the creation of an independent state for Palestinian Arabs in Palestine. The Palestine Liberation Organization (PLO) was founded in 1964 by the Arab League and Egypt. The PLO has had many component parts and affiliated groups since its inception. Its leading bodies have been the Palestine National Council (PNC), the Central Council, and the Executive Committee (which holds the PLO's real political and executive power). The Palestine Revolutionary Forces served as the armed branch of the PLO.

In its early years the PLO was dominated by Egyptians. By the late 1960s, however, other groups dedicated to Israel's demise became ancillary organizations to the PLO. They included the Popular Front for the Liberation of Palestine (PFLP) and the Palestine Liberation Front (PLF). These groups used guerrilla warfare to resist Israeli efforts to crack down on Palestinian extremists.

The PLO entered a new phase in 1968 when Yasir Arafat and his guerrilla group, al-Fatah, took control of the movement. By 1972 Arafat had consolidated his power and moved the PLO's base of operations to Jordan. By 1970, however, increasing tension and skirmishes between PLO forces and Jordan's police and military forces led King Hussein to evict Arafat and his movement from Jordan. After several months of violence—including an assassination attempt against Hussein—the PLO left Jordan in autumn 1970.

The PLO relocated to Beirut, Lebanon, as hundreds of Palestinian refugees settled in Palestinian camps there. The Lebanese government put few restraints on the PLO's activities, which now included periodic raids across the Israeli border. During the 1970s, Arafat believed that diplomacy was more helpful than violence alone (although he did not disavow violence) in achieving Palestinian statehood. Other PLO groups did not agree. The PFLP engaged in a spate of airliner hijackings and terrorist-style attacks even outside of the Middle East, including the terrorist attack during the 1972 Munich Olympics. Arafat condemned attacks overseas because these brought international condemnation of the PLO. After 1974, he ordered PLO groups to limit their attacks to Israel, the Gaza Strip, and the West Bank.

In 1974 Arafat spoke for the first time to the United Nations (UN), passionately calling for an end to Zionism. He also stated that he intended to continue the fight to achieve a Palestinian state. His speech apparently struck a sympathetic cord, and the PLO became an official UN observer in November 1974.

Palestine Liberation Organization

Palestine Liberation Organization (PLO) Chairman Yasir Arafat gives directions to his followers during fighting with Israeli forces in Beirut in 1982. (Bettmann/Corbis)

In 1975 civil war erupted in Lebanon between the Maronite Christians and Muslims. In the ensuing chaos that killed several thousand people, Arafat seized southern Lebanon and western Beirut. By 1976 the PLO had increased its clout enough that it was allowed to participate in UN Security Council debates. The PLO also used its position in Lebanon to escalate the frequency and ferocity of attacks against Israel. Israel retaliated in kind. In June 1982 Israel began bombing Beirut to root out the PLO. In August 1982, Arafat agreed to vacate Lebanon. The PLO then relocated to Tunisia, where it spent much of the 1980s rebuilding its organization, which had been severely damaged by the Beirut fighting.

In November 1988 the PLO formally declared the State of Palestine, which it claimed covered the entire old British mandate of Palestine. That same year Arafat vowed to end terrorism and recognize Israel. This was a new tack, as the PLO had never before been willing to recognize Israeli sovereignty. In return, the PLO asked the Israelis to abandon the occupied territories in the West Bank and Gaza. In 1991 the PLO and Israel began negotiations in order to reach a settlement, which resulted in the 1993 Oslo Accords. The Oslo Accords promised the Palestinians self-rule in the West Bank and the Gaza Strip, while Arafat formally recognized Israel. By 1996, however, the peace process began to unravel as militant Islamic groups began

launching terrorist attacks against Israeli civilians. Neither Arafat nor the PLO claimed responsibility for the attacks, but Israeli leaders were quick to place the blame on the Palestinians.

While many of the attacks were the work of radical groups such as Hamas and Islamic Jihad, the perception was that Arafat was tacitly encouraging the bloodshed and that he had not, in fact, disavowed violence as a political weapon. Whether this was true or not, Israel had little choice but to respond to the violence and protect its citizens. At the time of Arafat's death in 2004, the Oslo peace process was in tatters, and the future prospects of the PLO and Palestinian statehood remained as murky as ever.

Swedish politician, chairman of the Social Democratic Workers' Party (SAP) during 1969–1986, and prime minister during 1969–1976 and 1982–1986. Born on 30 January 1927 to an upper-class family in Stockholm, Sven Olof Joachim Palme earned a bachelor's degree in political science from Kenyon College, Ohio, in 1948 and a law degree from the University of Stockholm in 1951. He joined SAP in 1949. In 1953 he was employed by Prime Minister Tage Erlander as his personal secretary and in 1958 was elected to parliament. In 1963 Palme entered government as minister without portfolio. Two years later he became minister of communication and in 1967 became minister of education, a post he held until 1969.

In October 1969 Palme succeeded his patron Erlander as prime minister and chairman of SAP. Palme was a charismatic and often controversial politician, with a keen interest in foreign affairs. He became internationally renowned for his provocations of the United States and sympathies for the developing world, although in spite of his sometimes-polarizing foreign policy he acted in a generally pragmatic vein.

As the leader of a neutral country in the Cold War, Palme was a leading propagandist against the Vietnam War, which he opposed as a colonial legacy and imprudent effort to contain communism. His appearance in a demonstration alongside the North Vietnamese ambassador to Moscow in February 1968, his comparison of the Christmas 1972 U.S. bombing of Hanoi with fascism, and his welcoming of U.S. military deserters to Sweden precipitated a

Palme, Olof
(1927–1986)

Olof Palme, answering questions in his capacity as United Nations (UN) special envoy during a press conference at UN headquarters in New York, 26 November 1980. Palme, a staunch critic of U.S. involvement in Vietnam, served as premier of Sweden during 1969–1976 and 1982–1986. He was assassinated in 1986. (Bettmann/Corbis)

significant diplomatic falling out with Washington. Palme's positions regarding South Africa's apartheid regime, the Palestine Liberation Organization (PLO), Cuba, Nicaragua, and nuclear disarmament only caused further irritation. Many U.S. officials were sharply critical of Palme, but others saw him as the apotheosis of a statesman wedded to his principles who did not submit to the bipolar logic of the Cold War. In spite of his dovish image, he nevertheless maintained a strong defense as well as military contacts with the West.

Palme initiated and chaired the Independent Commission on Disarmament and Security Issues, active during September 1980–April 1982, that advocated the concept of global common security. Palme was assassinated on a downtown Stockholm street on 28 February 1986 after he and his wife left a theater. His murder stunned the Swedes, who are known for their civility and nonviolence. The man accused and convicted of assassinating Palme was later acquitted for lack of evidence, and ever since, conspiracy theories have proliferated concerning Palme's untimely death.

Panama

Central American Spanish-speaking nation bordered by Colombia to the southeast, Costa Rica to the northwest, the Caribbean Sea to the north, and the Pacific Ocean to the south. Roughly the size of the U.S. state of South Carolina, Panama is 30,193 square miles in area and had a 1945 population of 703,000 people. During the Cold War, Panama's economics and politics were shaped overwhelmingly by its relationship to the United States. Washington propped up reliable, mainly authoritarian governments in Panama City, while American firms, through direct investment as well as the sheer weight of their activities in the Panama Canal Zone, controlled much of the Panamanian economy.

The United States sought a high degree of influence over Panama largely because of the crucial importance of the Panama Canal, a major economic, military, and geostrategic asset. Despite much tension and controversy, Washington succeeded in protecting its interests through a mix of force, pressure, and concession that shaped Panama's history during the Cold War.

Panama assumed geostrategic importance in the late nineteenth century, when a waterway across the Central American isthmus became technically feasible. In 1903, in a ploy to construct and control a canal, President Theodore Roosevelt's administration facilitated a secessionist rebellion in the Colombian province of Panama and then signed a treaty with the new Panamanian government. Besides assuring the new government's dependence on Washington, the deal awarded the United States the right to operate the canal in perpetuity while also ceding total control over a 10-mile band of territory surrounding the waterway to the United States.

The asymmetry of the treaty and the colonial mentality of Americans who settled in the Canal Zone proved to be major irritants during the decades that followed. Panamanians demanded that the United States end discrimination against local workers, share its revenues more evenly, and respect Panamanian sovereignty.

U.S.-Panamanian tensions became more significant during the Cold War. Americans feared that the Soviet Union or its allies might be able to exploit widespread anti-Americanism and glaring economic inequalities exacerbated by a post-World War II depression. In 1947, mounting resentment against the United States clearly manifested itself when Panama's National Assembly unanimously rejected American plans to build new military bases around the canal. Riding a wave of nationalism that united Panama's highly stratified society, the Panamanian government insisted in 1953 that Washington agree to revise the canal treaties.

The United States responded to Panamanian discontent in various ways during the 1950s and 1960s. Washington sought to blunt unrest by increasing economic aid to Panama. In the early 1960s, for example, the country became a major recipient of U.S. assistance under President John F. Kennedy's Alliance for Progress.

In addition, Washington sought to head off further radicalization of Panamanian opinion by offering concessions to the relatively reliable conservatives who still dominated Panamanian politics. In 1955, President Dwight Eisenhower's administration agreed to increase and equalize pay for Panamanian canal workers and to increase the canal annuity paid to Panama. New explosions of anti-American agitation occurred in 1958–1959 and early 1964, the latter prompting President Lyndon B. Johnson to agree to write new treaties recognizing Panamanian sovereignty over the Canal Zone.

Johnson's pledge resulted in neither quick agreements nor political stability. Panama remained wracked by poverty and political turbulence despite an impressive 6.4 percent average annual gross national product (GNP) growth rate during 1950–1970. In 1968, a group of National Guard officers overthrew the oligarchy that had controlled Panamanian politics for decades, and

Gas-masked national guardsmen, some on horseback, move to restrain opposition demonstrators following the impeachment of President Marco A. Robles by the National Assembly, 25 March 1968. (Bettmann/Corbis)

charismatic National Guard Colonel Omar Torrijos took power the following year. Stressing nationalist and populist themes, Torrijos made stiff new demands of the United States when canal talks reopened in the early 1970s. After fitful progress, on 7 September 1977 the two sides signed new treaties, which provided for the gradual return of the canal to Panamanian control by the end of the century.

The 1977 treaties created new U.S. anxieties about the security of the canal and pushed Panama toward yet another political crisis. With violence and leftist movements sweeping across Central America in the early 1980s, the Pentagon poured money into the Panamanian military, known as the Panama Defense Force, and facilitated the rise to power of Manuel Noriega, the Defense Force's corrupt and brutally repressive leader. In 1986, however, the United States reversed course and began pressing for his removal. As the need for a reliable strongman declined, Noriega's critics pointed to evidence of drug trafficking, gun running, and other illegal activities. Meanwhile, opposition groups within Panama demanded the restoration of democracy and civil liberties.

When Noriega repeatedly refused to step down, and with increasing violence against Americans in the Panama Canal Zone, President George H. W. Bush ordered an invasion of Panama on 20 December 1989. U.S. forces put down resistance in four days of fighting and took Noriega into custody in Jan-

uary 1990. As the Cold War came to an end, democratic rule returned to Panama, but the United States once again dictated Panama’s destiny.

In an action known as Operation JUST CAUSE, U.S. armed forces invaded Panama on 20 December 1989 to overthrow Panamanian leader Manuel Noriega, disrupt Panamanian involvement in drug trafficking, and reduce potential threats to American interests in the region. Operation JUST CAUSE was the culmination of tensions that had been building between the United States and the Noriega regime since 1981. Although Noriega had established ties to the U.S. military and the Central Intelligence Agency (CIA), he was also connected to Cuban leader Fidel Castro. Noriega’s increasing involvement in international drug trafficking, including links to major drug cartel figures, and his use of anti-American rhetoric elevated concerns in Washington.

Panama,
U.S. Invasion of
(20 December 1989)

U.S. INVASION OF PANAMA, 1989

During 1987 the United States increased pressure to remove Noriega, but this produced a backlash in Panama and other Latin American states. In 1988, two American federal grand juries indicted Noriega on drug charges, and the U.S. government further pressured the Panamanians to force him out. Based on the deteriorating situation, the U.S. military began to develop plans that would provide a range of options to deal with Panama.

The situation deteriorated further when Noriega overturned the results of a national election on 7 May 1989 and strengthened his personal hold on power in Panama. Although the Organization of American States (OAS) criticized Noriega, the regional body took no significant action to stop him. A Panamanian coup attempt on 3 October 1989 led Noriega to purge the Panamanian Defense Forces (PDF), further solidifying his control. Subsequently, Panamanian police and security forces increased their harassment of U.S. military personnel and other foreign citizens. This harassment and Noriega's increasing hostility toward the United States caused American leaders to refine the established plan to deal with the Panamanian strongman. The plan, code-named BLUE SPOON, envisioned a joint invasion task force of 22,000 soldiers, complemented by another 5,000 personnel from the U.S. Marines, Navy, and Air Force. Approximately 12,000 personnel would begin the operation from the Panama Canal Zone. Significant special operations forces would also be involved in the invasion. The invasion force would face a PDF of 4,000 combat troops and another 8,000 personnel of Noriega supporters, known as the Dignity Battalions, who were basically armed thugs.

Violence against U.S. citizens escalated after the Panamanian National Assembly proclaimed on 15 December 1989 the existence of a state of war with the United States. Most troubling were the Panamanian security forces' murder of a U.S. Marine and the abuse of a navy officer and his wife. President George H. W. Bush and his advisors decided that the time to act had arrived. Bush ordered the military to proceed with a full-scale operation that had the highest probability of success through the application of overwhelming force. The overarching objectives of the operation were to protect U.S. citizens living in Panama, secure the Panama Canal and U.S. military installations, help the Panamanian people restore democracy, and arrest Noriega and bring him to the United States for trial.

Operation JUST CAUSE began on 19 December 1989 with an airlift of Army Rangers and elements of the 82nd Airborne Division. A portion of the aircraft carrying the 82nd Airborne troops was delayed by a winter storm. This slowed the buildup of combat forces in Panama but had little effect on the operation's outcome. Combat operations commenced shortly before 1:00 A.M. local time on 20 December, when it had become clear that the PDF knew an attack was imminent. The first moves were by special operations units assigned to capture key facilities, block escape routes, and capture Noriega.

U.S. Marines stand guard with their LAV-25 light armored vehicles outside a destroyed Panamanian Defense Force building on 20 December 1989, the first day of the U.S. invasion of Panama, Operation JUST CAUSE. (U.S. Department of Defense)

Noriega avoided initial capture and went into hiding, a major concern of military planners who feared that he would establish a guerrilla resistance against U.S. forces. Meanwhile, Army Rangers conducted successful drops on a series of targets around Panama City, with rapid reinforcement from the 82nd Airborne. Although some of the initial fighting was intense, the U.S. assault forces overcame the resistance and quickly established control. Air-drops were complemented by ground forces moving out of the Panama Canal Zone. These forces also encountered initially strong resistance but were able to rapidly overcome the Panamanian forces and gain their objectives. The key objective, capturing Noriega, was delayed until he sought refuge in the Vatican's embassy on 24 December. After his location was known, Panamanian resistance faded rapidly.

Diplomatic negotiations and a variety of pressure tactics eventually forced Noriega to surrender to U.S. authorities on 3 January 1990. He was then flown to the United States, where he would stand trial and be convicted on drug trafficking charges. After he had been isolated and then captured, U.S. efforts shifted to civil affairs—establishing stability and security—along with returning to power those government officials who had been elected in May 1989.

The use of overwhelming force allowed rapid victory and resulted in low casualties on both sides: 23 U.S. killed and 332 wounded in action; 297 Panamanian deaths, 123 wounded, and 468 captured. The rapid return by the Bush administration of control of the country to the Panamanians minimized Latin American opposition to the U.S. invasion.

Panama Canal Treaties (1977)

Controversial 1977 agreements between the United States and Panama that transferred the Panama Canal to full Panamanian control effective in 1999. While many Americans hailed the treaties as a bold act of statesmanship to remedy historical injustices, others condemned them as a shameful giveaway of American prerogatives.

U.S. President Jimmy Carter and Panamanian leader Omar Torrijos sign the Panama Canal Treaties. The 1977 treaties ceded control of the canal to Panama in December 1999. (Bettmann/Corbis)

Tension over ownership and management of the Panama Canal dated from early in the twentieth century. In 1903, American eagerness to construct a waterway through the Central American isthmus led President Theodore Roosevelt's administration to sponsor a secessionist rebellion in the Colombian province of Panama. Once the rebellion had succeeded, Washington then signed the highly advantageous Hay–Bunau-Varilla Treaty with the new Panamanian government. The deal gave the United States not only the right to operate the canal in perpetuity but also a protectorate over Panama and control over a 10-mile ribbon of territory (569 square miles) surrounding the canal. In return, the United States paid the Panamanian government \$10 million and promised annual payments of \$250,000.

Panamanians protested that this deal conceded too much to the United States and soon began demanding revisions. Above all, they objected to discriminatory labor practices in the Panama Canal Zone, the paltry sum paid to Panama, and American infringements on local sovereignty. In the 1930s, President Franklin D. Roosevelt took note of these complaints and, invoking his Good Neighbor policy toward Latin America, agreed to revise the treaty. Under accords signed in 1936, the United States ended its protectorate over Panama, increased its annual payments, and promised more evenhanded treatment of Panamanian employees in the Canal Zone. The arrangement

did not alter basic inequities in the U.S.-Panamanian relationship, however, and serious tensions erupted again during the early Cold War.

Renewed Panamanian agitation presented U.S. leaders with conflicting priorities. On the one hand, the canal remained a potent symbol of U.S. power and ingenuity. No president could bargain away U.S. control without serious political risks. On the other hand, continued Panamanian resentment against the United States seemed to invite political instability that might benefit the Soviet Union or, after 1959, Fidel Castro's Cuba. In 1955, President Dwight D. Eisenhower's administration sought to split the difference by agreeing to minor treaty revisions connected mainly to financial and labor aspects of canal operations.

Such tinkering proved to be too little, too late. Anti-American demonstrations and riots, provoked partly by confrontational U.S. residents of the Canal Zone, exploded in 1958 and 1959. When another round of deadly rioting broke out in early 1964, President Lyndon B. Johnson's administration feared serious damage to the U.S. image across the Western Hemisphere and worried that Panamanian leftists might capitalize on the chaos to take charge of the country. Convinced of the need to deprive the radicals of such a potent grievance, Johnson delivered a landmark speech in December 1964 promising to negotiate an entirely new relationship with Panama.

In June 1967, the two sides appeared poised to reach a deal calling for joint administration of the canal and the abolition of the Canal Zone. The agreement unraveled, however, when the Panamanian government, under attack for achieving too little, withheld the accord from the Panamanian legislature. Political turbulence in Panama, including a military coup in 1968, prevented any new progress until the early 1970s. By then, charismatic Panamanian dictator and colonel of the National Guard Omar Torrijos had consolidated sufficient power to make another attempt at gaining control over the canal.

In 1973, the Panamanian government took its case to the United Nations (UN) and won a moral victory when the UN Security Council voted overwhelmingly to demand major U.S. concessions. Washington vetoed the measure but, recognizing its worsening position in international opinion, agreed in 1974 on a series of principles that met key Panamanian desires. U.S. National Security Advisor Henry Kissinger and Panamanian Foreign Minister Juan Antonio Tack declared that their countries would work toward a treaty providing for the gradual turnover of both the canal and the Canal Zone to Panamanian control. Most importantly, they agreed to set a termination date after which Panama would exercise full sovereignty.

Solutions slowly fell into place to numerous remaining disagreements. Above all, Torrijos grudgingly accepted President Jimmy Carter's insistence in early 1977 that the United States must retain the right to intervene unilaterally if it judged that the canal was under threat, a key demand of the Pentagon and conservatives in Congress. Finally, on 11 August 1977, thirteen years after the process had begun, the two sides met in Panama City and signed new treaties with a termination date of 31 December 1999.

The deal won overwhelming Panamanian and international approval but encountered fierce American resistance during the ratification process. Oppo-

nents in the United States had already begun organizing for a fight in previous years, especially during the 1976 presidential campaign when Ronald Reagan denounced the emerging deal as a humiliating surrender of American rights. Public opinion polls in 1977 showed that many Americans shared Reagan's skepticism, but careful maneuvering by the treaties' supporters kept the agreements alive. Most importantly, backers in the Senate eased some of the criticism by adding a proviso strengthening the U.S. right to intervene in Panama to protect the canal. The Senate ratified the last of the treaties on 18 April 1978.

U.S.-Panamanian relations suffered a major setback in the 1980s when the United States first encouraged the rise of military strongman Manuel Noriega and then pressured him to step down, a process that culminated in a U.S. invasion of Panama in December 1989. Despite this disruption, however, both sides have adhered to the treaties, with Panamanians gradually taking responsibilities for maintaining, operating, and defending the canal during the 1980s and 1990s. On 31 December 1999, Panama took full control of the waterway. President Bill Clinton, apparently anxious about the lingering political explosiveness of the canal issue, avoided the handover ceremonies.

Indian nationalist and diplomat, sister of Indian Prime Minister Jawaharlal Nehru, and one of the world's leading women in public life. Vijaya Lakshmi Pandit was born Swraup Rani Nehru in Allahabad, India, on 18 August 1900. Her father, Motilal Nehru, was a wealthy lawyer and well-known political figure. Educated at home by English tutors, she became active in India's freedom movement at a young age and was imprisoned on three separate occasions by the colonial British government. In 1921 she married Ranjit Sitaram Pandit and changed her name after her marriage to Vijaya Lakshmi Pandit. Her husband died in 1944.

During 1937–1939 and again in 1946–1947, Pandit became a member of the Legislative Assembly and minister for local self-government and public

**Pandit, Vijaya
Lakshmi**
(1900–1990)

health in the United Provinces, the first Indian woman to hold a cabinet post. She was also a member of the Indian parliament from 1964 to 1968.

Pandit's career as a diplomat began when she canvassed international support for India's independence at the 1945 San Francisco organizing conference for the United Nations (UN). She led the Indian delegation during the 1946–1948 and 1952 UN General Assembly sessions and in 1953 was elected president of the General Assembly's eighth session, the first woman to hold that position. Pandit's successful effort during the 1946 UN session to pass a resolution condemning apartheid in South Africa led the United States to suspect India of pro-Soviet leanings, coloring U.S. perceptions of India during the Cold War. Pandit served as India's ambassador to the Soviet Union (1947–1949) and concurrently to the United States and Mexico (1949–1951). She was also Indian high commissioner to the United Kingdom and to Ireland (1954–1961).

Returning to domestic politics in India, Pandit served as governor of the state of Maharashtra during 1962–1964 and later as a member of the Lok Sabha, the lower house of the Indian parliament. She retired from active public life in 1968 but returned in 1977 to campaign against the undemocratic rule of Prime Minister Indira Gandhi, her niece. Pandit died in Dehra Dun on 1 December 1990.

Papadopoulos, Georgios (1919–1999)

Greek military leader and prime minister (1967–1973), regent (1972–1973), and president (1973–1974) of the Greek military junta, otherwise known as the Greek Revolutionary Junta. Born in Eleochoirion, Greece, on 5 May 1919, the eldest son of a village teacher, Georgios Papadopoulos graduated from the Greek Military Academy in 1940, saw combat duty in World War II during 1940–1941 and in the final stages of the Greek Civil War in 1949, and was promoted to the rank of colonel in 1960. During 1959–1964 he served in the clandestine Service of Information (KYP), an arm of the Ministry of Defense. He went on to become a key advisor to Greek Prime Minister Georgios Papandreou.

A rabid anticommunist and right-wing extremist, Papadopoulos joined a group of officers who, fearing another victory of Papandreou's Center Union Party in the May 1967 elections, overthrew the government in a bloodless coup on 21 April 1967. The junta rationalized the ouster as an effort to stamp out communist subversion in the government. Papadopoulos became one of three officers of the military junta. It is alleged that the junta was supported by the U.S. Central Intelligence Agency (CIA), for whom he had long worked. He was the preponderant force of the junta, holding the positions of prime minister (1967–1973), regent (1972–1973), and president (1973–1974). The military regime relentlessly cracked down on dissidents and suspended basic civil liberties. After the failed 1974 attempt to formally annex Cyprus, after which the Turks counterattacked and partitioned the island, the junta collapsed in July 1974. Papadopoulos was sentenced to death for high treason and insurrection in 1975. However, his sentence was commuted to life imprisonment. He died on 27 June 1999 in Athens.

Georgios Papadopoulos, Greek general, politician, and leader of the military dictatorship of 1967–1974. (Hulton-Deutsch Collection/Corbis)

Greek soldier and prime minister of Greece (1952–1955). Born in Athens on 9 December 1883, Alexander Papagos completed his military studies in Belgium at the Military Academy in Brussels and the Cavalry School in Ypres, Belgium. He was commissioned in the Greek Army in 1906 and saw his first combat duty in the Balkan Wars (1912–1913). In 1917 he was dismissed for opposing Greek Prime Minister Eleutherios Venizelos but was rehabilitated upon the restoration of King Constantine in 1920. Papagos participated in the Greek invasion of Turkey during 1919–1922 but was purged from the army in 1923 for aiding the Leonardopoulos-Gargalidis group. In 1926 Papagos was reinstated in the army and in 1927 was promoted to major general. In October 1935 he was one of the officers who forced the resignation of Prime Minister Panagis Tsaldaris. Papagos later held the positions of corps

Papagos, Alexander
(1883–1955)

commander and minister of war. In 1936, during the dictatorial regime of General Ioannis Metaxas, Papagos became chief of the army General Staff and from 1937 chaired the National Defense Council.

During the Italian attack on Greece on 28 October 1940, Papagos's troops managed to repulse the invasion and drive the Italian forces back to Albania. Papagos was appointed commander in chief of the army during the German offensive. However, he was taken prisoner in April 1941. From 1943 he was held in German POW camps until he was liberated in 1945. In January 1949, during the final stages of the Greek Civil War, he was appointed commander in chief of the government army, fighting against the communist guerrillas. After the defeat of the communists in the summer of 1949, he was promoted to marshal, the first Greek officer to hold that rank.

In May 1951 Papagos retired from the army and promptly formed a new political party, the Greek Rally, that became a powerful force in Greek politics. After electoral changes that dispensed with proportional voting in favor of majority voting, his party won the November 1952 elections with 49 percent of the vote, and he became prime minister. He immediately set about the process of reconstructing Greece after years of war and civil strife. After Greece joined the North Atlantic Treaty Organization (NATO) in 1952, he agreed in 1953 to a treaty permitting U.S. military bases in Greece. Papagos died in office on 4 October 1955 in Athens.

Papandreou, Andreas Georgios

(1919–1996)

Greek statesman and prime minister (1981–1989, 1993–1996). Born in Chios, Greece, on 5 February 1919, the son of Georgios Papandreou, Andreas Papandreou attended the American College in Athens and obtained a law degree from the University of Athens in 1940. After being arrested twice as a Trotskyist activist during the regime of dictator Ioannis Metaxas, Papandreou fled to the United States, where he earned a PhD in economics from Harvard University in 1943 and became an American citizen in 1944. He

then served as a U.S. Navy officer for two years. During 1955–1959 he taught at Harvard and several other American universities.

Papandreou returned to Greece in 1959, and Prime Minister Konstantinos Karamanlis appointed him head of the Center of Economic Research and Planning. After his father Georgios was appointed prime minister in 1963, Papandreou gave up his U.S. citizenship, won a seat in parliament in February 1964, and became deputy minister for economic policy in his father's cabinet. In November 1965 he was forced to resign from office over allegations of favoritism, but a mere six months later he again took up his old post. After the military coup in April 1967, he was jailed for eight months and was released under a general amnesty order. In exile he taught in Stockholm and then Toronto, becoming the leader of the Panhellenic Liberation Movement (PAK).

Following the downfall of the military dictatorship in 1974, Papandreou returned to Greece and founded the left-wing Panhellenic Socialist Movement (PASOK). PASOK's popularity steadily increased, and in 1981 it captured a convincing parliamentary victory. Papandreou became prime minister.

Papandreou's party won the 1985 elections with 46 percent of the vote. During his second term, his government was plagued by a financial scandal that ultimately led to the resignation of three ministers. In addition, the crisis extended to Papandreou's personal life, when the Greek media publicized his affair with a young former airline stewardess before he had divorced his second wife. PASOK lost the elections of June 1989, and Papandreou resigned. In 1992 he was charged with bribery and corruption but was later acquitted. In October 1993 PASOK again captured an electoral plurality, with Papandreou becoming prime minister until he retired in January 1996 because of health problems. He died on 23 June 1996 in Ekali, near Athens.

Greek politician Andreas Papandreou survived an early self-imposed exile to the United States and later imprisonment, torture, and forced exile by a military government to become the first socialist prime minister of Greece in 1981. (Embassy of Greece)

Papandreou, Georgios

(1888–1968)

Greek politician and prime minister (1944, 1963, 1964–1967). Born in Kalentzi, Achaia, Greece, on 13 February 1888, Georgios Papandreou graduated from the Law Faculty of the University of Athens in 1911 and briefly pursued postgraduate studies in Germany. He became one of the closest supporters of Prime Minister Eleutherios Venizelos, who appointed him governor of the Aegean Islands during 1917–1920. Papandreou was elected to parliament in 1923 and held various ministerial positions during 1924–1935. After abandoning the Liberal Party, he founded his own small Republican Socialist Party in 1935. He was exiled in 1936 during the dictatorship of Ioannis Metaxas and was imprisoned by the Germans during 1942–1944.

After his escape, Papandreou joined the royalist government and was appointed prime minister in exile in April 1944. He returned to Athens on 18 October 1944 after the German departure. In December 1944, at the beginning of the Greek Civil War, he resigned and was replaced by General Nikolaos Plastiras. During 1946–1952 Papandreou held ministerial positions in several governments. In 1950 he founded the Georgios Papandreou Party, and after joint leadership of the Liberal Party in the late 1950s, he organized a new center-leftist coalition, the Center Union, in 1961.

Securing a narrow victory in the elections of November 1963 over Konstantinos Karamanlis's National Radical Union, Papandreou was appointed prime minister but immediately resigned in an attempt to achieve an absolute majority in the elections of February 1964. He won these elections with an unprecedented 53 percent of the vote and was appointed prime minister. In 1965 he managed to survive an internal crisis that saw his son Andreas Papandreou, a member of his cabinet, accused of belonging to the left-wing organization Aspida. In July 1965, King Constantine II dismissed Papandreou as prime minister over clashes regarding control of the Ministry of Defense.

In 1967 a group of young officers, in a coup that came to be known as the Revolution of 21 April 1967, overthrew the government. Papandreou was held under house arrest until his death on 1 November 1968 in Athens.

Secret U.S. plan to spirit German scientists out of Nazi Germany after World War II. Based on an earlier operation code-named OVERCAST, Operation PAPERCLIP was signed into policy by President Harry S. Truman on 6 September 1946. PAPERCLIP was so-named for the individual dossiers and immigration papers joined together by paperclips. OVERCAST was originally designed to exploit the knowledge of German scientists, technicians, and engineers in the war against Japan and to prevent the use of their expertise in any future attempt to remilitarize Germany. PAPERCLIP kept the German scientists out of Soviet hands. The United States was thus able to use them to advance American military and scientific capabilities.

Truman's directive specifically forbade the entry of prominent Nazi Party members or active supporters of the party into the United States, as the State Department was particularly sensitive to the immigration of high-level Nazis into the country. The War Department, however, was unhappy that the State Department had rejected entry visas for certain leading scientists with active ties to the Nazi Party. The Joint Intelligence Objectives Agency (JIOA), in charge of PAPERCLIP for the Joint Chiefs of Staff, had used the Office of Military Government, United States (OMGUS), to summarize the war crimes investigations of the desired scientists. Discovering that the State Department would not approve immigration of those with negative OMGUS reports, JIOA began to cleanse certain dossiers. The War Department considered this necessary because the growing threat of communism had become a greater perceived danger than the morality of individual scientists. Expunging Nazi Party connections seemed a fair price to pay for keeping critical scientific information from the Soviets, as scientists involved in PAPERCLIP had participated in the wartime development of the deadly V-1 and V-2 rockets.

The top secret operation remained classified until 1973. Declassified information has proven that the scope of the project far exceeded what was previously known. Once thought to have involved as many as 750 scientists, PAPERCLIP actually brought more than 1,600 former Nazis with valuable scientific skills to the United States. Many had extensive Nazi Party backgrounds, and others had direct connections to Nazi war crimes, including bizarre pseudoscientific testing on humans. PAPERCLIP officially ended in 1957 at the request of the Federal Republic of Germany (FRG, West Germany), which protested the loss of so many valuable scientists and engineers.

PAPERCLIP was an essential Cold War program in that it greatly enhanced American knowledge of rocketry and missile technology. Perhaps the best known of all PAPERCLIP scientists who transferred their allegiance to the United States was famed rocket scientist Werner von Braun, credited with developing the Saturn 5 moon rocket that landed Americans on the surface of the moon.

Paraguay

Landlocked South American nation bordered by Brazil to the north and east, Bolivia to the northwest, and Argentina to the south. Paraguay, roughly the size of the U.S. state of California, comprises 157,046 square miles and had a 1945 population of 1.247 million people. Its population is made up of people of European background, people of mixed Native American and European descent, and a significant indigenous population, mainly Guaraní Indians.

The first half of the twentieth century proved to be a time of great upheaval in Paraguay. During 1900–1954 the country had thirty-four different presidents. Although there were fleeting experiments in democracy in the late 1930s, during 1940–1947 General Higinio Morínigo's one-man rule prevailed. Challenging his autocratic rule, the Colorado Party drove him from power in 1947. The Colorados then split into three factions, with the populist Federico Chaves finally prevailing in September 1949. Faced with a plethora of economic and political problems, he tried to strengthen his position by building up the police force to counterbalance a restive army. This controversial move alienated many, and in May 1954 General Alfredo Stroessner, with the backing of the military and Paraguayan elites, toppled the Chaves government.

Stroessner had long been preparing for his coup. He proved his loyalty, temporarily at least, by thwarting a coup attempt in September 1949. By October 1951 he commanded the armed forces. The Stroessner dictatorship lasted until February 1989, the longest-lasting government in Paraguayan history and one of the longest-running regimes of the Cold War. By restructuring the Colorado Party to make it an instrument of his rule, Stroessner effectively controlled all aspects of civil society. He also maintained good relations with his powerful neighbors, Argentina and Brazil.

Stroessner enjoyed warm relations with the United States. A year before taking power, he toured the U.S. Pentagon and major military installations in the United States and the Panama Canal Zone. Not surprisingly, Washington quickly granted recognition to his regime in 1954. As a reward for his staunch anticommunism, a few months after his rise to power the United

Although there was virtually no threat of internal subversion, between 1947 and the mid-1970s, U.S. military assistance averaged about \$750,000 annually.

States granted his government a 50 percent increase in development assistance. During 1961–1963, at the beginning of President John F. Kennedy's Alliance for Progress, Stroessner received \$27.9 million in aid. He used foreign assistance to co-opt segments of the population with colonization programs and government jobs. Although there was virtually no threat of internal subversion, between 1947 and the mid-1970s U.S. military assistance averaged about \$750,000 annually.

American assistance helped ensure that Stroessner remained a loyal U.S. Cold War ally, and Paraguay under his regime consistently supported Washington's position in international institutions. During the latter part of the 1970s Paraguay also participated in Operation CONDOR, an alliance of South American intelligence agencies developed to fight communist subversion in the region.

Until the late 1970s, Stroessner's popularity had risen along with Paraguay's economy, but his support waned as economic problems began to plague the small nation in the 1980s. The military became disenchanted with his rule, and the Colorado Party broke into squabbling factions. As democratization swept Latin America in the 1980s, Paraguay also got caught up in the wave. General Andres Rodríguez ousted the aging Stroessner in a coup on 3 February 1989, becoming the standard-bearer of the Colorado Party and handily winning the 1 May 1989 elections. Since then, Paraguay has moved toward full democracy, and a multiparty system has replaced Stroessner's one-man rule. After the Cold War, U.S. policy toward Paraguay focused on democracy and stemming the flow of illicit drugs and pirated (counterfeited) items to the United States.

President Alfredo Stroessner of Paraguay ruled for twenty-five years before being overthrown by that country's military in 1989. No other Latin American leader in the twentieth century, democratic or dictatorial, had remained in office for so long. (Horacio Villalobos/Corbis)

Paris Conference

(May 1960)

Aborted East-West summit meeting. After U.S. President Dwight D. Eisenhower and Soviet leader Nikita S. Khrushchev met at Camp David in September 1959, a thaw in East-West relations began to take form. Eisenhower and Khrushchev appeared ready to discuss outstanding East-West issues at a four-power (United States, Soviet Union, France, Great Britain) summit, the first such meeting since the Geneva Conference of July 1955.

Within the Western camp, opposition arose against the personalized bilateralism of Camp David. Federal Republic of Germany (FRG, West Germany) Chancellor Konrad Adenauer feared that German reunification might be sacrificed on the altar of a U.S.-Soviet détente. French President Charles de Gaulle postponed the date of the Paris Conference until mid-May 1960, after the explosion of the first French atomic bomb and after Khrushchev's state visit to France.

In early 1960, Eisenhower hoped to negotiate a nuclear test-ban treaty by offering concessions on Berlin. He was inclined to recognize the German Democratic Republic (GDR, East Germany), to accept the Oder-Neisse Line as Poland's western border, and to offer West German nuclear abstention to stabilize the status quo in Berlin. In March 1960, when Khrushchev for the first time agreed to allow international inspections to verify a nuclear test-ban treaty, Eisenhower, against the advice of the U.S. defense establishment, decided to accept a partially unverified test ban. Several Soviet moves after Camp David convinced Eisenhower that Khrushchev genuinely wished to solve East-West problems. First, Khrushchev publicly withdrew his Berlin ultimatum in October 1959. Second, in December 1959 the Soviet Union signed the Antarctica Treaty, providing for, among other things, a demilitarized zone in the Arctic. Third, Khrushchev announced a unilateral cut in the Soviet Army by 1.2 million men in January 1960. With British Prime Minister Harold Macmillan also calling for a test-ban treaty, the chances appeared bright for an international agreement on the eve of the Paris Conference.

Following the Soviet downing of an American U-2 reconnaissance plane on 1 May 1960, however, Khrushchev publicly attacked the U.S. action. Washington at first refused to acknowledge overflights of the Soviet Union and produced a press release stating that a weather plane over southeastern Turkey had inadvertently strayed into Soviet airspace. But on 7 May 1960, when Khrushchev disclosed that the U.S. pilot was still alive and that the plane's wreckage was clearly identifiable, the United States had no choice but to own up to the incident. In an attempt to save the summit, Eisenhower decided to deny personal responsibility, which proved disastrous. On 7 May, the U.S. government announced that Eisenhower had not authorized the U-2 flight of 1 May. Soon, however, news stories reported that Eisenhower was either lying or was no longer in control of his own government. To counter this public relations imbroglio, on 9 May 1960 he reversed course and accepted full responsibility for the incident, hoping to defuse the situation once and for all.

Eisenhower realized that Khrushchev would use the U-2 affair as a bargaining chip but hoped that he would still be interested in serious negotiations with the West. On 15 May 1960, Khrushchev delivered to de Gaulle and Macmillan several conditions for his participation in the summit. Eisenhower had to apologize for the U-2 flights, promise to discontinue the U-2 program, and punish the persons responsible for the overflights. Despite such unpalatable conditions, Eisenhower continued to believe that he could come to terms with Khrushchev once they met in person. On 16 May, however, at the first official session of the four-power meeting, Khrushchev delivered a forty-five-minute tirade against U.S. policies and publicly repeated his conditions for continuing the summit talks. Eisenhower replied with restraint but refused to apologize, although he did hint that he might discontinue the U-2 flights. This was a vague and empty commitment, however, as the U-2 was soon to be eclipsed by the first orbiting U.S. spy satellites. Khrushchev left the preliminary conference meetings, and the Paris Conference was officially declared over on 17 May 1960.

The failure of the conference provided Berlin with a respite of about a year. But when Khrushchev met with Eisenhower's successor John F. Kennedy in Vienna in early June 1961, the Soviet leader reenergized the Berlin Crisis and ultimately erected the Berlin Wall in August 1961. On 1 September 1961, the Soviets resumed atmospheric nuclear tests, breaking a three-year mutual moratorium. The United States and Britain also resumed nuclear testing before finally concluding a Limited Test Ban Treaty with the Soviet Union on 25 July 1963, only months after the Cuban Missile Crisis. The Paris Conference's failure resulted not only in a significant blemish on Eisenhower's reputation and legacy but also represented a lost opportunity to downgrade—or perhaps even end—the titanic Cold War struggle of the preceding fifteen years.

treaties with the Axis powers. Their discussions produced increasingly bitter exchanges that reflected the arrival of the Cold War.

On 29 July 1946 representatives of twenty-two states met at Paris in the faded magnificence of the Luxembourg Palace to discuss and draft peace treaties with Italy, Romania, Hungary, Bulgaria, and Finland. This Plenary Conference continued preliminary work completed the previous spring by experts. Strong disagreements resulted in deadlock and the end of the conference on 15 October. Informal discussions continued, however, culminating in a gathering of the Council of Foreign Ministers in New York from 4 November to 6 December 1947 that ratified the agreements. The treaties were formally signed on 10 February 1947 at the French Foreign Ministry in Paris, in the same room where the plenary sessions of the Paris Peace Conference following World War I had taken place.

Each of the treaties with the five states contained provisions recognizing the inviolability of human rights and fundamental freedoms. The treaties ratified the Soviet annexation of Bessarabia and northern Bukovina from Roma-

nia, which, however, regained all of Transylvania from Hungary. Romania was required to pay the Soviet Union \$300 million in reparations and to limit its armed forces to 138,000 men. Hungary returned to its 1938 borders, with the exception of a small territorial loss in favor of Czechoslovakia. Hungary was forced to pay an indemnity of \$200 million and restrict its armed forces to 70,000 men. Bulgaria retained southern Dobrudja and was forced to pay an indemnity of \$70 million. Its military was restricted to 65,500 men. Finland ceded to the Soviet Union the Karelian Isthmus and the Arctic seaport of Petsamo (now Pechenga), which provided the Soviet Union a frontier with Norway. The USSR also secured a fifty-year lease on a naval base at Porkkala. Finland's armed forces were restricted to 41,500 men, and it was forced to pay \$300 million in reparations to the Soviet Union.

In other developments, Italy's frontiers were slightly redrawn to reflect more closely lines of nationality. Yugoslavia was determined to secure not only Venezia Giulia, which was largely Slavic in population, but also the port of Trieste, which was heavily Italian. Initially declared a free territory, Trieste was incorporated into Italy in 1954. Italy also lost the Tenda and Briga border areas to France, its Adriatic islands to Yugoslavia, and the Dodecanese Islands to Greece. In addition, Italy lost sovereignty over its African colonies of Libya, Ethiopia, Eritrea, and Italian Somaliland. The Italian military was reduced to 300,000 men, and Italy was forced to pay \$360 million in reparations.

In the meantime, without a formal treaty, the Soviet Union annexed the Baltic states of Estonia, Latvia, and Lithuania. By 1947 Romania, Hungary, and Bulgaria were all Soviet satellites.

South Korean Army general and president of the Republic of Korea (ROK, South Korea) during 1961–1979. Born at Kumi, near Taegu, on 14 November 1917, Park Chung Hee graduated from the Taegu Teacher's College and entered the Military Officer Training Academy of the Manchurian Imperial Army in Changchun, China, in April 1940. He attended the Japanese Military Academy during 1942–1944, was commissioned a lieutenant, and then served in Japan's Kwantung Army until the end of World War II.

Park Chung Hee
(1917–1979)

Park returned to southern Korea in May 1946 and became an officer in the Constabulary Army during the U.S. occupation of Korea. The newly established South Korean government, under the leadership of Syngman Rhee, arrested Park in November 1948 on charges that he led a communist cell in the Constabulary Army. Park was subsequently sentenced to death by a military court, but his sentence was commuted by Rhee at the urging of several high-ranking Korean military officers.

On 30 June 1950, immediately after the Korean War began, Park returned to active service as a major. He was promoted to lieutenant colonel that September and to colonel in April 1951. As a colonel, he became the artillery commander of II Corps in February 1953 and of III Corps in May 1953. Advanced to brigadier general in November 1953, he became commander of the 5th Division in July 1955 and of the 7th Division in September 1957. Promoted to major general in March 1958, that June he became chief of staff of the First Army. In July 1959 he headed the 6th District Command, which had responsibility for the defense of Seoul. He then commanded in succession the Quartermaster Base and the 1st District Command. In September 1960 he became chief of the Operations Staff of the South Korean Army and, that September, deputy commander of the Second Army.

In April 1960, mass antigovernment demonstrations forced the aging Rhee from power. That July, national elections brought a coalition government to power with Yun Po Sun as president and Chang Myon (John W. Chang) as premier. Despite their attempts to initiate needed reforms, their efforts largely failed, and antigovernment violence increased. Taking advantage of the situation, a group of young officers helped Park seize power in a military coup on 16 May 1961.

Park was promoted to lieutenant general in August 1961 and to general in November 1961. Following the coup, he was consecutively elected president in 1963, 1967, 1971, 1972, and 1978. Initially, he embarked on a generally successful economic modernization program that brought stability and increased prosperity to his country. During 1965–1973, he dispatched more than 47,000 South Korean troops to Vietnam at the request of the United States. From the early 1970s, however, public resistance against his authoritarian regime increased. The once-flourishing South Korean economy was on the skids by the mid-1970s. Park's iron-fisted rule ended abruptly when he was assassinated in Seoul by his director of the Korean Central Intelligence Agency, Kim Chae Gyu, on 26 October 1979.

Treaty banning all nuclear tests, except underground trials. The Partial Test Ban Treaty (PTBT), also known as the Limited Test Ban Treaty (LTBT), was signed in Moscow on 5 August 1963 by representatives of Great Britain, the United States, and the Soviet Union and was entered into force on 10 October 1963 with unlimited duration. The PTBT was the result of five years of intense negotiations concerning the limiting of nuclear weapons tests. Some 125 nations have since signed the document, although France and the People's Republic of China (PRC) refused to sign, arguing that the test ban was a means of preserving the superiority of the three initial nuclear powers.

The PTBT was clearly an attempt to make nuclear weapons programs more difficult to sustain, thus limiting nuclear proliferation. The signatories to the treaty agreed that they would no longer carry out any nuclear test explosion in the atmosphere, underwater, in outer space, or in any other environment that would allow the spread of radioactive fallout beyond the territorial borders of the state conducting the test. There was a precedent for an agreement of this kind, namely, the 1959 Antarctic Treaty, the first major international arms control treaty following World War II. Its goal was to prevent the use of Antarctica for military purposes in the belief that it was in humankind's interest to keep the continent pristine and open to scientific research.

World public opinion was already attuned to the dangers of atmospheric nuclear testing as a result of the 1954 *Castle Bravo* incident, when a thermonuclear weapons test at Bikini Island in the Pacific unwittingly exposed to nuclear fallout 28 Americans, 236 Marshall Islanders, and 23 crew members of the Japanese fishing boat *Castle Bravo*. Public opinion was further inflamed by France's decision to conduct atmospheric tests in Polynesia in 1962.

Furthermore, in the United States there was increasing support for a test ban throughout the summer of 1963. In early July of that year, 52 percent of Americans signaled unqualified support for a test ban. After the treaty had been signed, 81 percent of those polled approved the ban. During the early 1960s, two developments were influential in pushing forward a test ban. Considerable radioactive materials were being poured into the atmosphere as a result of atmospheric nuclear testing, and the world's nuclear states had advanced their nuclear technology to the point where a combination of underground tests and physical calculations gave them sufficient information to design and test their strategic weapons without the risk of radioactive fallout.

In 1962, the newly established Eighteen-Nation Disarmament Committee (ENDC) within the United Nations (UN) became the principal forum for discussions concerning a test ban. After protracted negotiations, an agreement emerged on the use of seismic stations and on-site inspections for

Partial Test Ban Treaty (5 August 1963)

U.S. President John F. Kennedy signs the Partial Test Ban Treaty on 5 August 1963. The treaty prohibited several types of nuclear tests. (Robert Knudsen, White House/John F. Kennedy Presidential Library, Boston)

verification purposes, but disagreement on the acceptable number of inspections continued. In July 1963 the United States, Britain, and the Soviet Union initiated tripartite talks on the cessation of nuclear tests in the atmosphere, in outer space, and underwater. The agreement on a partial test-ban treaty came out of those discussions after about three weeks of talks.

The PTBT seemed to offer hope for future disarmament agreements. Following the PTBT negotiations, worldwide concern over nuclear testing and the nuclear arms race in general declined dramatically. In 1968 the Nuclear Non-Proliferation Treaty (NPT) was signed, restricting the flow of weapons, technical knowledge, and fissile materials to states that did not already have nuclear weapons. The United States and the Soviet Union went a step further in 1974 when they signed the Threshold Test Ban Treaty (TTBT). It limited underground testing, which was allowed by the PTBT, to a maximum weapons yield of 150 kilotons, and only at declared testing

sites. It also allowed on-site inspection by the other state for any test expected to exceed 35 kilotons. The TTBT did not enter into force until 1990. It had a duration of five years, with five-year extensions, and remains in force today. The Comprehensive Test Ban Treaty (CTBT) was called for in the preamble of the PTBT but was not signed until 1996. As of 2007, the United States had refused to ratify the CTBT, despite being one of the original signatories. Nonetheless, the United States, Great Britain, and Russia have observed unilateral nuclear testing moratoriums since 1992, and the last French test took place in 1995.

Russian poet and novelist whose work earned him the 1958 Nobel Prize in Literature, which the author declined because of political pressures in the Soviet Union. Boris Pasternak was born into an upper-class Jewish family in Moscow on 10 February 1890. His father was a painter and art professor, his mother a celebrated concert pianist. In his early years, Pasternak was keenly interested in music, showing considerable talent in music composition. By 1910, however, he had abandoned his musical aspirations and instead went to Germany's University of Marburg in 1912 to study philosophy. His stay in Germany lasted just a few months. He traveled to Italy and returned to Russia in 1914 to embark on a career as a writer.

Pasternak's first attempts at poetry were not commercial successes, although he did publish a number of books of poetry. During World War I he worked and taught in a chemical plant in the Ural Mountains, a grim locale that may have provided grist for his later work, including his famous novel *Dr. Zhivago* (1957). By the mid-1920s, the writer had earned a considerable reputation in Russia for his rather bleak but compelling poems, many of which dealt with the Russian Revolution of 1905. He also wrote of the 1917 Bolshevik Revolution and, in the early 1930s, began to tailor his writings to fit the standards of the Soviet regime. Soviet dictator Josef Stalin's infamous

**Pasternak, Boris
Leonidovich**
(1890–1960)

purges of the 1930s horrified Pasternak and soured him on communism. Thereafter, he turned to translating into Russian the works of other writers (such as William Shakespeare and Johann Wolfgang von Goethe), perhaps as a way to avoid controversy in his own writing and to pander to Stalin's personal tastes.

Pasternak and his wife relocated to Peredelkino, a haven for Soviet writers just outside Moscow, several years prior to the outbreak of World War II. There Pasternak enjoyed a comfortable life where he was permitted to work, relatively uninterrupted, on his many poetic and prose compositions. Because many of the themes and passages in *Dr. Zhivago* were considered anti-Soviet, Pasternak was unable to get his first (and only) novel published behind the Iron Curtain. Nevertheless, the manuscript was smuggled out of the Soviet Union and published in Italy in 1957. It was an immediate hit, both with critics and general readers.

The publication of *Dr. Zhivago* had serious consequences for Pasternak, however. He was hounded and persecuted by Soviet authorities. In 1958 he was named the recipient of the Nobel Prize in Literature due in large part to *Dr. Zhivago*, which was officially banned by the Soviet government. Old and in poor health, Pasternak turned down the honor after initially seeming to accept it. It is quite clear that the writer changed his mind because he feared that a trip to Stockholm to receive the award would have resulted in his banishment from the USSR.

The Swedish Academy, which had bestowed the honor on Pasternak, respectfully stated that the award was still valid, whether Pasternak personally received it or not. *Dr. Zhivago* was not published in the Soviet Union until 1987, thirty years after it debuted in the West. Pasternak spent the last few years of his life under a pall of government suspicion. He died in Peredelkino on 30 May 1960.

**Pauker, Ana
Rabinsohn**
(1893–1960)

Romanian communist leader and foreign minister (1947–1952). Born into an orthodox Jewish family in the village of Codăești, Vaslui County, in central Moldova on 13 February 1893, Ana Rabinsohn received a Hebrew education and became a teacher. In 1915 she joined the Social Democrat Party and later its pro-Bolshevik faction. Married in 1921 to Marcel Pauker, a prominent communist leader (and victim of Soviet leader Josef Stalin's purges in

the late 1930s), she became a member of the Romanian Communist Party (RCP), created in May 1921 and banned in 1924.

As secretary of the Women's Central Commission, Pauker was a leader in the trade union movement. As a member of the RCP's General Council, she traveled to Moscow in 1922 for the Communist International (Comintern) congress. Arrested for her political activities in 1923, she was soon released and went into exile in Switzerland and the Soviet Union before being involved with Comintern activities in France and the Balkans (1931–1935).

Returning to Romania in 1935, Pauker was again arrested and sentenced to ten years' imprisonment, but in May 1941 she was exchanged for a Romanian Bessarabian leader held by the Soviet Union. In Moscow she served on the Executive Bureau of the Comintern and headed the External Bureau of the RCP. During World War II, she was the undisputed leader of Romanian communist exiles. In 1943 she helped organize Romanian Army prisoners held by the Soviets into a division to fight against the Germans, becoming its political commissar with the rank of colonel.

Returning to Romania in September 1944 after the Soviet armies had entered the country, Pauker became secretary of the RCP Central Committee. Known as the "Red Iron Lady," she played a major role in the establishment of communist rule. Associated with party excesses of the 1948–1951 period and slavish devotion to Stalin's policies, she did oppose a number of policies, including the widespread party purges (1948–1952).

As vice premier from April 1949 to September 1952 and minister of foreign affairs during November 1947–June 1952, Pauker was the first woman to hold such powerful positions within the Soviet bloc. *Time* magazine in February 1948 called her "the most powerful woman alive." During 1948–1949, she arranged treaties of friendship and mutual assistance with the Soviet Union and other people's democracies as well as Romanian diplomatic recognition of Israel (June 1948) and the immigration to Israel of 118,000 Romanian Jews.

Beginning in 1952, Premier Gheorghe Gheorghiu-Dej, a strong Stalinist, angry at Pauker's opposition to his purge directives as well as her handling of Romania's economic crisis, purged the Jewish leader from her posts, with Stalin's blessing. Arrested in February 1953, Pauker was freed following Stalin's death the next month, although she remained under house arrest and never regained a position of leadership. Later she was permitted to work as a translator of French and German for the party publishing house. Retiring on a pension, Pauker died from breast cancer in Bucharest on 14 June 1960.

Romanian communist leader Ana Rabinsohn Pauker was foreign minister of her country during 1947–1952. (Corbis)

Paul VI, Pope (1897–1978)

Pope Paul VI, 1970. (National Archives and Records Administration)

Roman Catholic prelate and pope (1963–1978). Pope Paul VI was born Giovanni Battista Enrico Antonio Maria Montini on 26 September 1897 in Concesio, Italy, to a wealthy family of local nobility. He entered the seminary in 1916, was ordained in 1920, and subsequently studied at the Gregorian University and the University of Rome. He was first assigned to Poland in 1922.

However, poor health forced his return to Rome. He then entered the Vatican Secretariat of State in 1923, where he remained for thirty-two years.

After 1944, with Pope Pius XII acting as both pope and secretary of state, Montini became especially influential. As archbishop of Milan (1954–1963) he involved himself deeply in social problems, often mediating between workers and employers. He became a cardinal in 1958.

Elected pope in June 1963, he took the name of Paul VI and continued the reforms of his predecessor, John XXIII, including Vatican Council II. In 1964, Paul VI was the first pope in more than 150 years to leave Italy, making a pilgrimage to the Holy Land. That journey was followed by pastoral visits to five continents.

Paul also improved relations with communist countries, often receiving their leaders in the Vatican. In 1971 he succeeded in peacefully ending Cardinal József Mindszenty's fifteen-year exile in the U.S. embassy in Budapest, bringing him to Rome.

The pope frequently met with the leaders of other churches and in 1969 addressed the World Council of Churches. He was also committed to implementing Vatican Council II reforms and ecumenism. However, he clung to tradition on such Church dogma as papal infallibility and artificial contraception, which he reaffirmed in his 1968 encyclical *Humanae Vitae*. In 1971, the synod of bishops supported Paul's stand on retaining priestly celibacy, although a sizable minority was said to have had qualms

over the issue. Pope Paul VI died in Rome on 6 August 1978. His successor was John Paul I.

In 1964, Paul VI was the first pope in over 150 years to leave Italy, making a pilgrimage to the Holy Land.

U.S. organization established by executive order in 1961 by President John F. Kennedy. The Peace Corps was inspired by fears current in the 1950s that U.S. officials were overly remote from the day-to-day concerns and lives of ordinary people in developing countries, anxieties well expressed in the influential best-selling novel by Eugene Burdick and William Lederer, *The Ugly American* (1958). Alarmed that emphasis on military rather than economic aid and American support for elites risked losing for the United States third world support for the Cold War, in the 1960 presidential campaign Kennedy called on Americans, particularly though not exclusively the young, to spend two years working in education, community development, or technological assistance programs in such countries. They would receive relatively low salaries and share their hosts' living and working conditions. Such efforts were intended to restore the original goals of President Harry S. Truman's Point Four Program of assistance to underdeveloped areas.

Headed for its first five years by Sargent Shriver, Kennedy's brother-in-law, the Peace Corps rapidly sent thousands of volunteers each year to what would eventually be more than 138 countries throughout Asia, Africa, Latin America and, with the ending of the Cold War, the former Soviet Union and Eastern Europe. Numbers of volunteers peaked at 15,000 in 1966, fell rapidly during the 1970s, and throughout the 1980s were somewhere below 5,000 annually. By 2005, 178,000 Americans had served as Peace Corps volunteers. The majority of volunteers provided educational services, but agriculture, food production, health, environmental, conservation, and community development services were also well represented. Initially an independent agency created by the Peace Corps Act of 1961, in 1971 the organization was placed under the umbrella federal agency ACTION, established to coordinate both domestic and overseas volunteer programs, before regaining its independence in 1981. Winning over initially skeptical congressmen, the Peace Corps quickly succeeded in attracting strong bipartisan support for its relatively modest and unassuming programs and appropriations, which has continued to the present.

Peace Corps
(1961–)

Although the Peace Corps' inception owed much to Cold War preoccupations and although both American radicals and host countries on occasion characterized it as an agent of U.S. cultural imperialism, the agency made strenuous efforts to remain apolitical. Volunteers, the majority recent college graduates, were sent only to countries that specifically requested their services and were strictly forbidden to become involved in local politics or to have any contact with the Central Intelligence Agency (CIA). The emphasis was on people-to-people contact. Volunteers did not bring expensive equipment with them but brought only their own skills and abilities. Even so, potential host countries sometimes viewed the Peace Corps as an agent of cultural imperialism.

Complicated political conditions significantly limited Peace Corps activities in certain areas of the world. In 1965 President Sukarno of Indonesia ended all Peace Corps programs as a nationalist gesture of protest against American neoimperialism, a move imitated in 1983 by Malaysia. A deliberate policy of refusing to send volunteers to any country where U.S. troops were engaged in combat precluded their service in Vietnam, Laos, or Cambodia during the Vietnam War, despite pressure from officials in President Lyndon Johnson's administration, and even after the resumption of relations with the United States in later years those countries did not welcome the Peace Corps. In 1981 fears for volunteers' safety brought the closing of the Peace Corps program in Colombia. Japan declined to use Peace Corps vol-

unteers in English literacy programs, while China did not accept volunteers until 1995, when they began to train Chinese English-language teachers under the label “U.S.-China Friendship Volunteers.” As a matter of national pride, India, Brazil, Russia, and Nigeria, each of which at times accepted Peace Corps volunteers, subsequently chose to withdraw from the program.

By the early twenty-first century, Peace Corps volunteers were on average older and more experienced than in the past and were serving in seventy-two countries in Eastern Europe, the former Soviet Union, Africa, the Middle East, Asia, the Pacific, and Latin America, while the agency’s 2004 budget amounted to \$325 million. In 2003 President George W. Bush’s administration, anxious to burnish the American image in the developing world, especially the Middle East, proposed doubling the number of Peace Corps volunteers from the existing 7,000 to 14,000 by 2007.

Peace Movements

The Cold War was perhaps unique with regard to the amount of dissent it created in both the East and West. During 1945–1990, three significant peace movements stand out. The first was sparked by the 1954 U.S. testing of the hydrogen bomb on the South Pacific island of Bikini that led to the rise of a large-scale international nuclear disarmament movement. The late 1960s and early 1970s saw a global rebellion against the Vietnam War. In 1979, the North Atlantic Treaty Organization’s (NATO) double-track decision to station intermediate-range ballistic missiles (IRBMs) in Western Europe led to large-scale antiwar and antinuclear protest demonstrations that culminated during 1982–1983.

Defined as autonomous, nongovernmental, generally nonpartisan, and nonviolent organizations, peace movements range from strict opposition to all wars (pacifism), to opposition against a specific type of weapon (such as

nuclear bombs), to opposition against a particular conflict. The late nineteenth century saw the growth of worldwide peace activities leading to the 1907 Hague Convention. World War I also generated a rising peace sentiment. During the interwar years, pacifist activism was most prominent in Britain yet proved difficult to uphold as Germany, Italy, and Japan pursued increasingly more aggressive policies. After World War II, peace movements were overwhelmingly concerned with the banning of the production, testing, deployment, and use of nuclear weapons.

In the United States, uneasiness over the use of nuclear weapons was voiced only days after the atomic bombings of Hiroshima and Nagasaki in August 1945. Church groups were joined by scientists and politicians in promoting international controls over nuclear energy. As the Cold War intensified during the late 1940s, antinuclear activists—including prominent scientists Albert Einstein and Leo Szilard—were clearly fighting an uphill battle. At the time, the antinuclear movement found little support among an American public focused on combating the communist threat. During the early 1950s, McCarthyism further pushed peace activists onto the defensive.

On 1 March 1954, the U.S. testing of the most powerful hydrogen bomb to date on the Bikini Atoll in the South Pacific led to rising public concern over the long-term health effects of nuclear fallout. When 28 Americans, 236 Marshall Islanders, and 23 crew members of a Japanese fishing boat were contaminated by nuclear fallout from the blast, the Bikini tests made international headlines. This led to renewed demands for nuclear disarmament by international peace organizations such as the War Resisters' International (WRI), the International Fellowship of Reconciliation (IFR), and the Women's International League for Peace and Freedom (WILPF). Mainstream publications as well as period novels and films greatly alarmed the American public, while scientific studies on radioactivity further stirred pacifist sentiment.

By no means were these concerns limited to the United States, however. Japanese reaction to the Bikini tests had been furious, whereas in Britain scientists had already urged their government not to develop the hydrogen bomb as early as 1950. In the Federal Republic of Germany (FRG, West Germany) the stationing of the first U.S. nuclear weapons in 1953 as well as the news of NATO military exercises that simulated the dropping of 335 atomic bombs gave overwhelming appeal to banning the bomb. There was rising concern in Scandinavia, Italy, and France as well. In the mid-1950s, polls all over Western Europe showed that between 80 and 90 percent of the population supported a test-ban treaty as well as a ban on nuclear weapons altogether.

Early on, scientists themselves played a prominent role in the struggle against the bomb. A key figure was British mathematician and philosopher Bertrand Russell, whose 23 December 1953 BBC radio address attracted considerable international attention and led to the creation of the Pugwash Movement, supported by a number of leading physicists on both sides of the Iron Curtain. Influenced by their Western colleagues, some Soviet physicists, most notably Andrei Sakharov, warned their government of the dangers of nuclear weapons.

Dressed as H-bombs, demonstrators in London march to Hyde Park in a “Ban the Bomb” protest staged by Britain’s Communist Party, 6 May 1957. (Bettmann/Corbis)

When nuclear testing programs accelerated during the late 1950s, a first wave of mass protests to ban the bomb erupted. Britain took the lead with the formation of the Campaign for Nuclear Disarmament (CND). The first march from London to Aldermaston on Easter 1958 adopted the symbol that has become the emblem of peace movements ever since: a circle encompassing a broken cross. In West Germany, the CND was copied by the Easter March Movement that originally grew out of opposition to NATO’s decision to equip West German forces with nuclear weapons. Other countries such as Sweden and Switzerland followed suit, although French leftists were more concerned with the Algerian War than antinuclear issues.

In the United States, the National Committee for a Sane Nuclear Policy (SANE) came into existence in 1957. Like the CND, it began by demanding a halt to nuclear testing but evolved into a broader nuclear disarmament movement. Unlike its European counterparts, however, SANE was unable to achieve the same kind of mass mobilization. At about the same time, European peace activists began to coordinate their efforts. In 1959, for example, British, Dutch, Swedish, Swiss, and West German nuclear disarmament organizations set up the European Federation Against Nuclear Arms.

Although the 1963 Partial Test Ban Treaty (PTBT) fell short of peace activists’ demands, protesters could claim that they had helped pressure the Americans and Soviets to achieve a breakthrough at the negotiating table. Reaching its zenith in 1964 with the tally of Easter Marchers numbering 500,000 in twenty nations, the antinuclear campaign waned during the late 1960s as Cold War tensions eased. By politicizing a generation of young people, cooperating across national borders, and developing new forms of political action, however, it had set the stage for the coming protests against the Vietnam War.

By the mid-1960s, the Vietnam War had already replaced the antinuclear movement as the main focus of peace-related activities. In the United States, worries over the Vietnam War mounted even before President Lyndon Johnson began to dispatch large numbers of combat troops in 1965. In Britain, the CND staged large demonstrations against the war in 1966 and 1967. At its antiwar rally in February 1966, groups from West Germany, Austria, France, Sweden, Norway, Italy, and the Netherlands declared their solidarity with American student protesters. In October 1967, the march on the Pentagon was echoed by closely coordinated solidarity demonstrations against American military installations in West Berlin and by antiwar rallies in Amsterdam, London, Oslo, Paris, Rome, and Tokyo.

Throughout the world, Vietnam War protests stimulated the growth and expansion of student movements, which saw their culmination in 1968. In

Britain and West Germany, student protests that had originally organized over issues of college discipline and curriculum were transformed into mass demonstrations with more than 100,000 participants in 1968. In France, student protests snowballed into mass demonstrations involving organized labor and other groups, nearly toppling the government of Charles de Gaulle. The greatest mobilization was in Japan, where Vietnam War protests rallied almost 800,000 people in 1970. There is much evidence from many other Western as well as developing countries that opposition to the American engagement in Vietnam led to the radicalization of students worldwide.

As with the antinuclear protests that preceded it, the Vietnam War protests witnessed the emergence of global networks of rebellion. The close ties among American and West German and other European protesters formed a striking parallel with their governments' Cold War cooperation. Important figures of the German New Left had become acquainted with their American counterparts as exchange students during the early 1960s. After their return to Germany, they helped organize protests against the American war in Vietnam using methods that they copied from the U.S. civil rights movements, such as mass sit-ins.

Whereas the nuclear disarmament activists of the 1950s had by and large accepted the established institutional framework, Vietnam War protests developed into a more systematic anti-imperialist and anticapitalist ideological critique of Western democracy. European and American activists identified with developing-world revolutionaries such as Che Guevara, Ho Chi Minh, and Mao Zedong. However, their revolutionary rhetoric and violent methods often alienated even those middle-class voters who had been broadly sympathetic to the antinuclear cause.

Because of significant steps made toward nuclear arms control and superpower détente during the late 1960s and early 1970s and the focus on Vietnam, the antinuclear campaign had largely disintegrated. It returned, however, during the late 1970s and early 1980s, when NATO's 1979 double-track decision to deploy land-based cruise missiles and Pershing II missiles in Western Europe led to new fears of nuclear Armageddon. This second-wave anti-nuclear movement achieved an even larger protest mobilization than the first. Like its predecessor, it was transnational and was often built on the experiences of earlier protest efforts.

The antinuclear campaign of the early 1980s took place within the framework of renewed Cold War tensions and hostilities. Soviet efforts to achieve military superiority in Europe and the 1979 invasion of Afghanistan as well as Ronald Reagan's election as president in 1980 ended the long phase of détente between the superpowers. Yet despite the Soviet military buildup, a

Vietnam War protesters march on the Pentagon on 21 October 1967. In one of the first and most significant anti-Vietnam War demonstrations, more than 100,000 people rallied at the Lincoln Memorial in Washington, D.C., and then marched across the Arlington Memorial Bridge to the Pentagon. (Lyndon B. Johnson Library)

majority of West Europeans did not fear an impending invasion. Because of growing public dissent to nuclear armaments in Eastern Europe as well, West European activists perceived themselves as part of a Pan-European movement battling against the dangers of the nuclear arms race.

President Jimmy Carter's Neutron Bomb Campaign had already raised antinuclear fears in Western Europe during 1977–1978. It was not until December 1979, however, when a NATO summit decided to deploy IRBMs if the Soviet Union did not withdraw its forward-basing of SS-20 missiles, that large-scale protests in several countries emerged. Campaigns achieved the most domestic support in Belgium and the Netherlands, where the peace movement was successful in coaxing the governments to delay the NATO deployment schedule. In Britain, where the CND was rejuvenated, nuclear weapons became an important political issue as well. In October 1980, 80,000 people marched to Trafalgar Square. In West Germany, protest demonstrations involved upwards of 100,000 people in the same year. The high point occurred in December 1983, just before the deployment of the IRBMs began. As many as a million demonstrators protested throughout West Germany, in addition to 600,000 in Rome and 400,000 in London.

The transnational protest networks of the 1980s had their roots in the ecological and feminist movements that had sprung up during the 1970s. They also enjoyed the backing of a substantial number of churches and labor unions. Despite considerable support in Western Europe and among the media, the peace movement of the early 1980s was unable to build upon the same kind of nuclear anxiety that lent the 1950s' movement such resonance. Because of its association with leftist and liberal causes, the 1980s' anti-nuclear campaign came to enjoy only limited support among mainstream political parties. This led to the founding of new political groups such as the West German Green Party.

The 1980s' peace movement did not originate in the United States. Despite considerable support from American peace groups (such as the National Freeze Campaign), the European peace movement developed independently from American influences. The stationing of Pershing II and cruise missiles affected the balance of power in Europe. In addition, it had been European governments, above all West German Chancellor Helmut Schmidt's government, that had taken the lead in pushing NATO toward the double-track decision. Finally, there was a strong sense of a European solidarity vis-à-vis the superpowers because East European antinuclear activists shared many concerns with their West European counterparts.

The Cold War-era peace movements did not produce immediate results in terms of disarmament or the lessening of tensions between East and West. Yet they had palpable effects on Western public opinion and to a lesser degree on East European governments. Beginning in the 1950s, they forced governments to address widespread fears of the destructive force of nuclear weapons. In addition, the Cold War, with its strong elite cooperation across national borders, provided a unique international framework for the unprecedented growth of transnational peace activity. Thus, antiwar activism during

the 1945–1990 period paved the way for more recent peace, environmental, and antiglobalization movements.

Soviet foreign policy doctrine of the immediate post-Stalin era that contributed to a brief thaw in Cold War tensions during the late 1950s and early 1960s. On 14 February 1956, at the opening session of the Twentieth Congress of the Communist Party of the Soviet Union (CPSU), Soviet First Secretary Nikita Khrushchev, in his report to the attending delegates, rejected the fatal inevitability of war between the communist and capitalist worlds and declared that the two competing socioeconomic systems could coexist peacefully. His assertion, made eleven days before his famous “secret speech” of 25 February in which he condemned Soviet dictator Josef Stalin’s cult of personality and the crimes committed under his rule, marked the official adoption of the doctrine of peaceful coexistence. This stance would guide Soviet foreign policy toward the West, the United States in particular, until Khrushchev’s fall from power in October 1964.

Although Khrushchev characterized peaceful coexistence as a Leninist principle that had always been the general line of Soviet foreign policy, he was referring to the period from 1922 to 1929, when the Soviet regime, for practical reasons, practiced a policy of accommodation toward the capitalist world. In fact, peaceful coexistence represented a sharp break with the

Peaceful Coexistence

Stalinist era (1929–1953), during which the dictator consistently portrayed the Soviet Union as a socialist island surrounded by a capitalist sea and preached the inevitability of conflict between communism and capitalism.

The road to peaceful coexistence actually began more than a year before the Twentieth Party Congress. On 1 January 1955, Khrushchev's colleague Prime Minister Georgy Malenkov stated that the Soviet Union's recent development of the hydrogen bomb made coexistence with the West both necessary and possible. Over the next nine months, the Kremlin followed up the Malenkov statement with a series of concrete steps clearly indicative of a new foreign policy paradigm. In May 1955, the Soviet Union, the United States, Great Britain, and France signed the Austrian State Treaty, which provided for the withdrawal of Soviet forces from Austria. The treaty ended a decade of four-power occupation and restored Austria's political independence. In July, Khrushchev traveled to Geneva and met with U.S. President Dwight D. Eisenhower, British Prime Minister Anthony Eden, and French Prime Minister Edgar-Jean Faure in the first summit meeting of the Cold War. Although this Geneva Summit failed to resolve the most pressing Cold War issues, it did allow for the establishment of a personal rapport between the leaders of the two superpowers. Finally, in September 1955, Moscow established diplomatic relations with the Federal Republic of Germany (FRG, West Germany).

Multiple motives lay behind the Soviet's quest for peaceful coexistence. Khrushchev certainly believed it essential for the cause of world peace, arguing in his 14 February 1956 report to the Twentieth Party Congress that only two choices existed: either peaceful coexistence or the most devastating war in history. Furthermore, he recognized that better relations with the West would allow for cuts in defense spending and the reallocation of funds to domestic programs to improve the living conditions of Soviet citizens who had known little else but hardship since the early 1930s.

Peaceful coexistence did not represent the end of the Soviet commitment to international communism or the loss of faith in the ultimate victory of communism over capitalism. Khrushchev remained convinced that the future belonged to communism. Yet unlike Stalin, who saw communism's preordained triumph as the by-product of an inevitable clash with capitalism, Khrushchev believed that the noncommunist world would voluntarily convert to communism once the Soviets had demonstrated the superiority of the Soviet socialist system.

Peaceful coexistence neither ended the U.S.-Soviet nuclear arms race nor produced a settlement of outstanding Cold War issues. Moscow and Washington continued to add to their nuclear arsenals, both quantitatively and qualitatively, while the status of Berlin produced a series of crises during 1958–1961. Furthermore, peaceful coexistence could not prevent new crises. For example, the U-2 Crisis of May 1960 short-circuited the heralded Paris Conference that same month, and the October 1962 Cuban Missile Crisis arguably brought the Soviet Union and the United States closer to a nuclear showdown than any other event during the Cold War.

The Soviet Union's new foreign policy paradigm also played a part in exacerbating the Sino-Soviet split, as the leadership of the People's Repub-

lic of China (PRC) lambasted the policy as revisionist and a betrayal of true Leninist ideology. Nonetheless, peaceful coexistence did change the tenor of Soviet-American relations for the better during the 1950s and early 1960s, producing a welcome relaxation of tensions that ultimately paved the way toward the era of détente during the 1970s.

Canadian diplomat, Liberal Party politician, and prime minister (1963–1968). Born on 23 April 1897 in Toronto, Ontario, Lester “Mike” Pearson graduated from the University of Toronto in 1919. In 1928 he was invited to join the staff of the new Department of External Affairs. He served as first secretary of the Canadian High Commission in Britain during 1935–1941. In 1942 he moved to the Canadian embassy in Washington, D.C., and was promoted to ambassador to the United States in 1945.

In 1946, Pearson became deputy minister of external affairs. In this position, he played a leading role in the creation of the North Atlantic Treaty Organization (NATO). He entered the political arena in 1948, was elected to the Canadian Parliament, and became secretary of state for external affairs in September 1948, serving in that post until June 1957 when the Liberal Party lost its majority.

Pearson served as president of the United Nations (UN) General Assembly in 1952. In this position, he tried unsuccessfully to resolve the Korean War. In 1957 he was awarded the Nobel Peace Prize for his role in mediating an end to the 1956 Suez Crisis by sending UN peacekeeping forces to the region.

In January 1958, Pearson was elected leader of the Liberal Party following the retirement of Louis Stephen St. Laurent. From 1958, Pearson clashed with Progressive Conservative Prime Minister John G. Diefenbaker. Pearson became prime minister in April 1963 following the Canadian national elections and held that post until his retirement in April 1968, when he was

replaced by Pierre Trudeau. The Liberal Party never enjoyed a majority during Pearson's tenure as prime minister.

Pearson resisted U.S. efforts to involve Canada in the Vietnam War. In a 1965 speech at Temple University, he suggested that a break in the American bombing of the Democratic Republic of Vietnam (DRV, North Vietnam) might lead to negotiations. Meeting with President Lyndon B. Johnson following the speech, aides were shocked to observe Pearson being grabbed by the lapels by a frustrated Johnson.

Upon retirement, Pearson taught at Carleton University in Ottawa and worked on his memoirs. He died in Ottawa on 27 December 1972.

Peng Dehuai

(1898–1974)

Defense minister of the People's Republic of China (PRC) during 1954–1959. Born in Xiangtan, Hunan Province, on 24 October 1898, Peng Dehuai graduated from the Hunan Military Academy in 1923. In 1928 he joined the Chinese Communist Party (CCP) and served in the Red Army, later the People's Liberation Army (PLA). He ranked second in military importance only to the Chinese military leader Zhu De.

During both the Sino-Japanese War (1937–1945) and the Chinese Civil War (1947–1949), Peng served in northwestern China commanding communist military forces. In 1948 he became commander of the First Field Army, a post he held until 1954. After the PRC's birth in October 1949,

Peng was also appointed chairman of the Northwest Military and Administrative Committee, responsible for reorganizing the Northwest. In October 1950 he became both commander and political commissar of the Chinese People's Volunteers, who participated in the Korean War (1950–1953). On 27 July 1953 he signed the armistice agreement at Panmunjom. He returned to China in August 1953 and resumed his former posts until September 1954, when he was appointed vice premier, vice chairman of the National Defense Council, and defense minister.

Given Zhu's increased passivity because of old age, Peng became more influential in military matters. He was responsible for national defense, army training and reorganization, and the construction of defense infrastructure. He was also largely responsible for preparing for the Second Taiwan Strait Crisis of August 1958. As both vice premier and defense minister, he frequently traveled abroad. His last official assignment was to lead a military delegation to Eastern Europe during April–June 1959.

Shortly after returning, in September 1959, Peng was relieved of his two posts on charges that his military policy contained anti-CCP and bourgeois elements. Thereafter, he disappeared from public life until December 1966, when he was sentenced to imprisonment by the leaders of the ultraleftist Cultural Revolution (1966–1976). Peng died on 29 November 1974 in Beijing.

Soviet spy and double agent. Born in Ordzhonikidze in the Caucasus on 23 April 1919, the only son of a military officer, Oleg Penkovsky attended Soviet artillery school and was commissioned in 1939. His World War II record was exemplary, and in 1945 he was sent to the Frunze Military Academy and after that to the Military-Diplomatic Academy. In 1955 he was assigned as a military attaché to the Soviet embassy in Ankara, Turkey. In

**Penkovsky, Oleg
Vladimirovich**
(1919–1967)

1956 he returned to Moscow to study the science surrounding rockets and missiles. In 1960 he was appointed to the State Committee for the Coordination of Scientific Research. By this time he had become disillusioned with communism and fearful that Soviet Premier Nikita Khrushchev would precipitate a nuclear disaster. Penkovsky was also informed that because of his father's past as a loyal soldier, he would never be promoted to the rank of general.

Penkovsky first offered his services as a double agent to the U.S. Central Intelligence Agency (CIA) in August 1960 but received a less-than-enthusiastic response. He then turned to Britain. An initial contact with Greville Wynne, a British businessman with a tangential relationship with MI6, led to Penkovsky's delivery of a packet of secret Soviet material in April 1961, the contents of which were shared with the CIA. The CIA and MI6 then agreed to jointly approach Penkovsky when he arrived in London on 20 April 1961 as head of a Soviet trade delegation. From that point on, he provided secret material either via Wynne, when visiting the West as a member of a Soviet trade group, or on park benches in Moscow to Janet Chisholm, wife of undercover MI6 officer Rodrick Chisholm. Soon Penkovsky was passing on a large amount of highly classified information.

Data on Soviet missile production provided by Penkovsky gave the West a realistic evaluation of the true strength of Soviet missile forces and revealed as illusory the so-called missile gap between the United States and the Soviet Union. The information was unambiguous; the United States was far ahead. Information provided by Penkovsky assisted greatly in verification in September 1962 when U-2 reconnaissance aircraft detected missile site construction in Cuba. Penkovsky's material helped President John F. Kennedy in dealing with Khrushchev and bringing about the removal of Soviet missiles from Cuba.

On 22 October 1962 Penkovsky was arrested by the Komitet Gosudarstvennoi Bezopasnosti (KGB) and confessed to his spying activities. He was tried, found guilty, and executed in Moscow on 16 May 1963. Wynne was seized a few weeks later. Imprisoned, he was exchanged in April 1964 for Gordon Lonsdale, a Soviet double agent then being held in a British prison. How Penkovsky was detected remains a mystery. He may have been discovered with Janet Chisholm during routine surveillance. He may have been betrayed by a double agent. Some have also suggested that Penkovsky was simply too careless. Nevertheless, most espionage experts consider him the most important Soviet spy for the West in the Cold War era.

Perestroika, meaning “restructuring” in Russian, was an important aspect of Soviet leader Mikhail Gorbachev’s reform agenda, designed in conjunction with glasnost (“openness”) and demokratizatsiia (“democratization”) to renew socialism and end the political and economic stagnation that had plagued the Soviet state for nearly two decades. At the Twenty-Seventh Party Congress in 1986, Gorbachev first promoted his ideas of perestroika, which included reduced centralization and bureaucratization, a de-emphasis on state economic planning, and modest moves toward private ownership of commercial enterprises. In 1987, in an attempt to further promote his reform ideas, Gorbachev published *Perestroika: New Thinking for Our Country and the World*. In doing so, he propounded new economic concepts, novel ideas on foreign policy, and his thoughts on socialist ethics.

Perestroika

Gorbachev’s lack of detailed expertise on economic matters combined with great resistance among staunch defenders of the ancien régime made significant changes in the Soviet Union exceedingly difficult to enact. In the end, his commitment to reforming communism rather than abolishing it meant that his reforms were too limited to satisfy those individuals and groups calling for more dramatic change. Although some parts of his reform agenda were successfully implemented, continued sociopolitical problems and a failed coup attempt in August 1991 led to the collapse of the Soviet Union and the simultaneous resignation of Gorbachev in December 1991. Perestroika may not have been successful domestically, but it was definitely influential on the international scene, allowing the Soviets and Americans to engage in revolutionary nuclear and conventional arms reduction agreements.

**Pérez de Cuéllar,
Javier**
(1920–)

United Nations (UN) secretary-general (1982–1991). Javier Pérez de Cuéllar was born in Lima, Peru, on 19 January 1920 into a Roman Catholic family of aristocratic Spanish descent. He studied law at Catholic University, Lima, and entered his country's diplomatic service in 1940, serving in France, the United Kingdom, Bolivia, and Brazil and attending the first UN General Assembly session in New York in 1946.

From 1964 to 1966 Pérez de Cuéllar was Peruvian ambassador to Switzerland, and in 1969 he became his country's first ambassador to the Soviet Union. From 1971 to 1977 he was Peru's permanent representative to the

UN. He chaired the UN Security Council in 1974, where he helped to mediate the protracted dispute over Cyprus between Greece and Turkey. After two years as ambassador to Venezuela, in 1979 he became UN undersecretary-general for special political affairs. As Secretary-General Kurt Waldheim's special representative, from April 1981 Pérez de Cuéllar attempted to defuse tensions between Afghanistan and Pakistan.

Elected secretary-general in December 1981 as a candidate acceptable to both the Western and Soviet blocs, Pérez de Cuéllar served two five-year terms, which coincided neatly with the ending of the Cold War. He encouraged the relaxation of Soviet-American tensions that began once Mikhail Gorbachev became Soviet general secretary in 1985. Pérez de Cuéllar believed that the new international climate gave new scope for the expansion of UN activities, ambitions largely stymied by the determination of the United States, under conservative Republican President Ronald Reagan, to cut rather than expand American contributions and dues to the UN on the grounds that the organization was plagued by waste, inefficiency, and a bloated bureaucracy.

Early in his tenure, Pérez de Cuéllar's efforts to mediate disputes between Argentina and Great Britain failed to prevent the 1982 Falklands (Malvinas) War. A staunch and widely respected advocate of negotiation, conciliation, and peacekeeping, he launched personal and ultimately successful initiatives, which Cold War de-escalation facilitated, to alleviate and end hostilities in Afghanistan, Namibia,

Peruvian diplomat Javier Pérez de Cuéllar was the fifth secretary-general of the United Nations. He played a significant role during the Persian Gulf crisis. (Corel)

and Lebanon and to relieve famine in Ethiopia. He also consistently emphasized refugee resettlement and human rights.

During 1987–1988, Pérez de Cuéllar took the lead in obtaining and implementing UN Resolution 598, which called for the cessation of hostilities in the lengthy and brutal Iran-Iraq War. Iraq's invasion of Kuwait in 1990 brought new challenges. UN Security Council Resolution 678 provided the legal basis for the coalition that ultimately drove Iraqi President Saddam Hussein's forces from Kuwait. Under Pérez de Cuéllar's leadership, the UN condemned Iraq's subsequent spring 1991 attacks on Kurdish rebels in northern Iraq, established a protective no-fly zone in that area, and ultimately took over control of Kurdish refugee camps there. Throughout his tenure as secretary-general, Pérez de Cuéllar displayed deft diplomatic skills and exhibited well-honed leadership in international crises.

Leaving office at the end of 1991, Pérez de Cuéllar accepted a visiting appointment at Yale University, where he wrote his memoirs. Looking ahead to the post-Cold War era, he urged the UN to move beyond international mediation and peacekeeping and focus on addressing social and economic problems and human rights abuses. In 1995 he ran unsuccessfully for president of Peru, losing to Alberto Fujimori. After Fujimori resigned on corruption charges, Pérez de Cuéllar served from November 2000 to July 2001 as foreign minister and president of Peru's Council of Ministers. He then became Peru's ambassador to France, where he remained after his final retirement in September 2004.

Charismatic wife of Argentine dictator Juan Perón. Born on 7 May 1919 in the small town of Los Toldos, Argentina, to a desperately poor family, María Eva Duarte at age fifteen went to Buenos Aires and soon became a popular radio personality, well known for her romantic involvement with a number of influential men.

Perón, Eva
(1919–1952)

Eva Perón was arguably one of the most powerful women in the Americas during the mid-twentieth century. The wife of Argentine President Juan Domingo Perón, she exercised an unofficial yet powerful influence in that country. (Library of Congress)

On 18 October 1945, Duarte married Colonel Juan Perón, a member of the fascist-leaning General Officers Union (GOU) that two years before had overthrown the Argentine government. Historians are still in disagreement over the amount of political influence that Eva Perón wielded upon her husband. Some depict her as the power behind the throne, while others view her in a more traditionally supportive role.

Following Juan Perón's 1946 election as president of Argentina, Eva Perón became an increasingly important public symbol of the regime, most notably during her 1947 Rainbow Tour of Europe. She was an ardent champion of the poor, and through her Social Aid Foundation she worked tirelessly to build hundreds of schools and hospitals throughout Argentina. Her charitable work and championing of women's rights earned her notoriety throughout Latin America and the world. The Social Aid Foundation provided her with a lavish lifestyle and great political power but also cemented her reputation for generosity among Argentina's poor, who referred to her as "Santa Evita." Her untimely death from cancer on 26 July 1952 in Buenos Aires triggered a tremendous outpouring of grief, and to this day Eva Perón remains a mythical figure in Argentine history.

Perón, Juan Domingo (1895–1974)

Argentine Army general, politician, and president of Argentina (1946–1955, 1973–1974). Born in Lobos, Buenos Aires Province, on 8 October 1895, Juan Perón was educated at the Colégio Militar (Military College) during 1911–1913 and the Escuela Superior de Guerra during 1926–1929.

During the late 1930s, Perón served as a military observer in Italy, where he became enamored with Italian fascism. Having risen to the rank of colonel by 1943, he was a key participant in the military coup that ousted Ramón Castillo's government in May 1943. In November of that year Perón

became secretary of labor and welfare, and in February 1944 he was named vice president and secretary of war. Forced to resign his posts by political opponents in October 1945, he was briefly jailed but was released a few days later after labor unionists staged mass demonstrations and demanded his release.

Challenged by a coalition of established political parties, Perón was overwhelmingly elected president in February 1946. As president, Perón, who has been accused of having fascist tendencies, courted organized labor and the urban poor and promoted industrialism through populist policies that transformed the state into a sponsor of economic modernization and social welfare, an ideology dubbed Perónism. He also became a champion of an independent Argentina that would forge a middle way between capitalism and communism. Perón's so-called third position advanced central economic planning, higher living standards, and an autonomous foreign policy that would help Argentina stand apart in the bipolar Cold War world. Perón was reelected in 1951, but corruption, inefficiency, a deteriorating economy, and disagreements with the Roman Catholic Church resulted in his removal from power via a military coup in September 1955. He went into exile and eventually settled in Madrid.

Perón remained active in Argentine politics even during his exile and prevented rivals from gaining authority over his still-viable political movement. During the late 1950s and 1960s, Argentina was plagued by a stagnant economy, civil unrest, and revolving-door governments. As Argentina became more polarized and as politically motivated terrorism increased in the early 1970s, Perón began to engineer his comeback. In the March 1973 elections, Argentineans elected Perón's handpicked stand-in, who promptly resigned, triggering another election. Perón was elected president for a second time in October 1973.

Perón's second term was doomed by an abominable economy and an acrimonious split between his leftist and rightist supporters. He instinctively turned to the Right and began governing by decree. Perón died on 1 July 1974 in Buenos Aires, leaving the government in the inept hands of his third wife, Isabel, who was overthrown in March 1976 by a military junta.

Persian Gulf War

(17 January–
28 February 1991)

The Persian Gulf War resulted from the Iraqi invasion of neighboring Kuwait. In July 1990 U.S. intelligence detected an Iraqi military buildup along the Kuwaiti border. On 17 July Iraqi dictator Saddam Hussein threatened military action against Kuwait for its violation of Organization of Petroleum Exporting Countries (OPEC) oil caps. Overproduction had driven down the price of oil. Because of Iraq's recently completed eight-year war with Iran (1980–1988), it had accumulated a war debt of some \$80 billion, and Baghdad was anxious to keep oil prices high. There was also an ongoing Iraqi border dispute with Kuwait over charges of Kuwaiti slant-drilling into Iraqi-controlled oil fields. Finally, Iraq had long claimed Kuwait as a province.

Washington had been increasingly concerned over Iraq's expanding nuclear industry and its chemical and biological weapons, some of which Hussein had used in the war against Iran and even against his own people, the Kurds. But U.S. policy was ambiguous, and Iraqis knew that Washington had tacitly supported them in the war with Iran, providing satellite intelligence information on Iran. U.S. Ambassador to Baghdad April Glaspie delivered mixed messages on behalf of the George H. W. Bush administration that seemed to allow Hussein free rein in the Persian Gulf. Hussein thus believed that Washington would probably not challenge a move against Kuwait. On its part, the State Department did not believe that Hussein would actually mount a full-scale invasion. If military action occurred, Washington expected only a limited offensive to force the Kuwaitis to accede to Iraqi oil production demands. Clearly, Washington underestimated Hussein's ambitions.

On 2 August 1990 Iraqi forces invaded Kuwait and speedily overran the country. The United States demanded that Hussein recall his troops from Kuwait. When he refused, the Bush administration took action. Washington feared that an unchecked Iraq would threaten Saudi Arabia, which possessed the world's largest oil reserves, and thus would be able to control both the price and flow of oil to the West. Bush also saw Hussein as a new Adolf Hitler and was determined that there would be no Munich-like appeasement of aggression.

On paper Iraq appeared formidable. Its army numbered more than 950,000 men, and it had some 5,500 main

Burning Kuwaiti oil wells and a destroyed Iraqi tank in the aftermath of the 1991 Persian Gulf War. (Corel)

DISPOSITION OF FORCES IN THE GULF WAR, 1991

GROUND OPERATIONS IN THE GULF WAR, 1991

This map illustrates the ground operations during the Gulf War in 1991. It shows the military positions and movements of Allied forces, Iraqi troops, and the Iraqi Republican Guard (RGFC) units. The map covers Iraq, Kuwait, and Saudi Arabia, with a focus on the Persian Gulf region. Key locations include Samawa, Gold Base, Nasiriyah, Suq ash Shuyukh, Qurna, Basra, Abadan, Salman, Busayya, Cobra Base, Rafha, and Kuwait City. The map also shows the positions of various military units, including the U.S. 1st, 2nd, 3rd, 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22nd, 23rd, 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 32nd, 33rd, 34th, 35th, 36th, 37th, 38th, 39th, 40th, 41st, 42nd, 43rd, 44th, 45th, 46th, 47th, 48th, 49th, 50th, 51st, 52nd, 53rd, 54th, 55th, 56th, 57th, 58th, 59th, 60th, 61st, 62nd, 63rd, 64th, 65th, 66th, 67th, 68th, 69th, 70th, 71st, 72nd, 73rd, 74th, 75th, 76th, 77th, 78th, 79th, 80th, 81st, 82nd, 83rd, 84th, 85th, 86th, 87th, 88th, 89th, 90th, 91st, 92nd, 93rd, 94th, 95th, 96th, 97th, 98th, 99th, 100th, 101st, 102nd, 103rd, 104th, 105th, 106th, 107th, 108th, 109th, 110th, 111th, 112th, 113th, 114th, 115th, 116th, 117th, 118th, 119th, 120th, 121st, 122nd, 123rd, 124th, 125th, 126th, 127th, 128th, 129th, 130th, 131st, 132nd, 133rd, 134th, 135th, 136th, 137th, 138th, 139th, 140th, 141st, 142nd, 143rd, 144th, 145th, 146th, 147th, 148th, 149th, 150th, 151st, 152nd, 153rd, 154th, 155th, 156th, 157th, 158th, 159th, 160th, 161st, 162nd, 163rd, 164th, 165th, 166th, 167th, 168th, 169th, 170th, 171st, 172nd, 173rd, 174th, 175th, 176th, 177th, 178th, 179th, 180th, 181st, 182nd, 183rd, 184th, 185th, 186th, 187th, 188th, 189th, 190th, 191st, 192nd, 193rd, 194th, 195th, 196th, 197th, 198th, 199th, 200th, 201st, 202nd, 203rd, 204th, 205th, 206th, 207th, 208th, 209th, 210th, 211th, 212th, 213th, 214th, 215th, 216th, 217th, 218th, 219th, 220th, 221st, 222nd, 223rd, 224th, 225th, 226th, 227th, 228th, 229th, 230th, 231st, 232nd, 233rd, 234th, 235th, 236th, 237th, 238th, 239th, 240th, 241st, 242nd, 243rd, 244th, 245th, 246th, 247th, 248th, 249th, 250th, 251st, 252nd, 253rd, 254th, 255th, 256th, 257th, 258th, 259th, 260th, 261st, 262nd, 263rd, 264th, 265th, 266th, 267th, 268th, 269th, 270th, 271st, 272nd, 273rd, 274th, 275th, 276th, 277th, 278th, 279th, 280th, 281st, 282nd, 283rd, 284th, 285th, 286th, 287th, 288th, 289th, 290th, 291st, 292nd, 293rd, 294th, 295th, 296th, 297th, 298th, 299th, 300th, 301st, 302nd, 303rd, 304th, 305th, 306th, 307th, 308th, 309th, 310th, 311th, 312th, 313th, 314th, 315th, 316th, 317th, 318th, 319th, 320th, 321st, 322nd, 323rd, 324th, 325th, 326th, 327th, 328th, 329th, 330th, 331st, 332nd, 333rd, 334th, 335th, 336th, 337th, 338th, 339th, 340th, 341st, 342nd, 343rd, 344th, 345th, 346th, 347th, 348th, 349th, 350th, 351st, 352nd, 353rd, 354th, 355th, 356th, 357th, 358th, 359th, 360th, 361st, 362nd, 363rd, 364th, 365th, 366th, 367th, 368th, 369th, 370th, 371st, 372nd, 373rd, 374th, 375th, 376th, 377th, 378th, 379th, 380th, 381st, 382nd, 383rd, 384th, 385th, 386th, 387th, 388th, 389th, 390th, 391st, 392nd, 393rd, 394th, 395th, 396th, 397th, 398th, 399th, 400th, 401st, 402nd, 403rd, 404th, 405th, 406th, 407th, 408th, 409th, 410th, 411th, 412th, 413th, 414th, 415th, 416th, 417th, 418th, 419th, 420th, 421st, 422nd, 423rd, 424th, 425th, 426th, 427th, 428th, 429th, 430th, 431st, 432nd, 433rd, 434th, 435th, 436th, 437th, 438th, 439th, 440th, 441st, 442nd, 443rd, 444th, 445th, 446th, 447th, 448th, 449th, 450th, 451st, 452nd, 453rd, 454th, 455th, 456th, 457th, 458th, 459th, 460th, 461st, 462nd, 463rd, 464th, 465th, 466th, 467th, 468th, 469th, 470th, 471st, 472nd, 473rd, 474th, 475th, 476th, 477th, 478th, 479th, 480th, 481st, 482nd, 483rd, 484th, 485th, 486th, 487th, 488th, 489th, 490th, 491st, 492nd, 493rd, 494th, 495th, 496th, 497th, 498th, 499th, 500th, 501st, 502nd, 503rd, 504th, 505th, 506th, 507th, 508th, 509th, 510th, 511th, 512th, 513th, 514th, 515th, 516th, 517th, 518th, 519th, 520th, 521st, 522nd, 523rd, 524th, 525th, 526th, 527th, 528th, 529th, 530th, 531st, 532nd, 533rd, 534th, 535th, 536th, 537th, 538th, 539th, 540th, 541st, 542nd, 543rd, 544th, 545th, 546th, 547th, 548th, 549th, 550th, 551st, 552nd, 553rd, 554th, 555th, 556th, 557th, 558th, 559th, 560th, 561st, 562nd, 563rd, 564th, 565th, 566th, 567th, 568th, 569th, 570th, 571st, 572nd, 573rd, 574th, 575th, 576th, 577th, 578th, 579th, 580th, 581st, 582nd, 583rd, 584th, 585th, 586th, 587th, 588th, 589th, 590th, 591st, 592nd, 593rd, 594th, 595th, 596th, 597th, 598th, 599th, 600th, 601st, 602nd, 603rd, 604th, 605th, 606th, 607th, 608th, 609th, 610th, 611th, 612th, 613th, 614th, 615th, 616th, 617th, 618th, 619th, 620th, 621st, 622nd, 623rd, 624th, 625th, 626th, 627th, 628th, 629th, 630th, 631st, 632nd, 633rd, 634th, 635th, 636th, 637th, 638th, 639th, 640th, 641st, 642nd, 643rd, 644th, 645th, 646th, 647th, 648th, 649th, 650th, 651st, 652nd, 653rd, 654th, 655th, 656th, 657th, 658th, 659th, 660th, 661st, 662nd, 663rd, 664th, 665th, 666th, 667th, 668th, 669th, 670th, 67

In Operation DESERT SHIELD, designed to protect Saudi Arabia and prepare for the liberation of Kuwait, the United States put together an impressive coalition that included Syria, Egypt, and Saudi Arabia as well as Britain, France, and many other states. Altogether, coalition assets grew to 665,000 men, 3,600 tanks, and substantial air and naval assets.

Hussein remained intransigent but also quiescent, allowing the buildup of coalition forces in Saudi Arabia to proceed unimpeded. When the deadline for Hussein to withdraw from Kuwait passed on 15 January 1991, coalition commander U.S. Army General H. Norman Schwarzkopf unleashed Operation DESERT STORM on 16 January. It began with a massive air offensive, striking targets in Kuwait and throughout Iraq, including Baghdad. In only a few days the coalition had established absolute air supremacy over the battlefield. Iraq possessed nearly 800 combat aircraft and an integrated air defense system controlling 3,000 antiaircraft missiles, but it was unable to win a single air-to-air engagement, and coalition aircraft soon destroyed the bulk of the Iraqi Air Force. Air superiority assured success on the ground.

1622 Persian Gulf War

mounted an elaborate deception to convince the Iraqis that the coalition was planning an amphibious assault against Kuwait. This feint pinned down a number of Iraqi divisions. In reality, Schwarzkopf had planned a return to large-scale maneuver warfare, which tested the U.S. Army's new AirLand Battle concept.

Schwarzkopf's campaign involved three thrusts. On the far left, 200 miles from the coast, XVIII Airborne Corps of the 82nd Airborne Division and the 101st Airborne Division (Airmobile), supplemented by the French 6th Light Armored Division and the U.S. 24th Infantry Division (Mechanized) and 3rd Armored Cavalry Regiment, were to swing wide and cut off the Iraqis on the Euphrates River, preventing resupply or retreat. The center assault, the mailed fist of VII Corps, was to be mounted some 100 miles inland from the coast. It consisted of the heavily armored coalition divisions: the U.S. 1st and 3rd Armored Divisions, the 1st Cavalry Division, the 1st Infantry (Mechanized) Division, and the British 1st Armored Division. VII Corps's mission was to thrust deep, engage, and then destroy the elite Iraqi Republican Guard divisions. The third and final thrust was to occur on the coast. It consisted of the U.S. 1st Marine Expeditionary force of two divisions, a brigade from the U.S. 2nd Armored Division, and allied Arab units and was to drive on Kuwait City.

On 24 February Allied forces executed simultaneous drives along the coast, while the 101st Airborne Division established a position 50 miles behind the border. As the Marines moved up the coast toward Kuwait City, they were hit in the flank by Iraqi armor. In the largest tank battle in the history of the U.S. Marine Corps, the Marines, supported by coalition airpower, easily defeated the Iraqis. The battle was fought in a surrealist day-into-night atmosphere caused by the smoke of oil wells set afire by the retreating Iraqis.

As the Marines, preceded by a light Arab force, prepared to enter Kuwait City, Iraqi forces fled north with whatever they could steal. Thousands of vehicles and personnel were caught in the open on the highway from Kuwait City and were pummeled by air and artillery along what became known as the "highway of death." The Allies now came up against an Iraqi rear guard of 300 tanks covering the withdrawal north toward Basra of four Republican Guard divisions. In perhaps the most lopsided tank battle in history, the Iraqi force was defeated at a cost of only one American death.

Lieutenant General Frederick Franks Jr., commander of VII Corps to the west, angered Schwarzkopf by insisting on halting on the night of 24 February and concentrating his forces rather than risk an advance through a battlefield littered with debris and unexploded ordnance and subject to the possibility of casualties from friendly fire. When VII Corps resumed the advance early on 25 February, its problem was not the Iraqis but the supply of fuel; because of the speed of the advance, the M1s needed to be refueled every eight to nine hours.

The afternoon of 27 February saw VII Corps engaged in some of its most intense combat. Hoping to delay the coalition, an armored brigade of the Medina Republican Guard Division established a 6-mile-long skirmish line

Thousands of vehicles and personnel were caught in the open on the highway from Kuwait City and were pummeled by air and artillery along what became known as the "highway of death."

Estimated Human and Equipment Losses in the Gulf War

	<i>Human Casualties</i>	<i>Tanks</i>	<i>Other Vehicles</i>	<i>Artillery</i>
Coalition	500	4	9	1
Iraq	220,000	3,700	1,000	3,000

on the reverse slope of a low hill, digging in their T-55 and T-72 tanks. The advancing 2nd Brigade of the 1st Armored Division came over a ridge, spotted the Iraqis, and took them under fire from 2,500 yards. The American tankers used sabot rounds to blow the turrets off the dug-in Iraqi tanks. The battle was the largest single armor engagement of the war. In only forty-five minutes, U.S. tanks and aircraft destroyed sixty T-72, nine T-55 tanks, and thirty-eight Iraqi armored personnel carriers.

Allied tanks, especially the M1A1 Abrams and the British Challenger, had proved their great superiority over their Soviet counterparts, especially in night fighting. Of 600 M1A1 Abrams that saw combat, not one was penetrated by an enemy round. Conversely, the M1A1's 120mm gun proved lethal to Iraqi MBTs. It could engage the Iraqi armor at 3,000 meters (1.86 miles), twice the Iraqis' effective range, and its superior fire control system could deliver a first-round hit while on the move. Overall, the coalition maneuver strategy bound up in the AirLand Battle worked to perfection. As VII Corps closed to the sea, XVIII Corps to its left, with a much larger distance to travel, raced to reach the fleeing Republican Guards' divisions before they could escape to Baghdad.

In only one hundred hours of ground combat, Allied forces had liberated Kuwait. On 28 February President Bush stopped the war. He feared the cost of an assault on Baghdad and was also concerned that Iraq might then break up into a Kurdish north, a Sunni Muslim center, and a Shiite Muslim south. Bush wanted to keep Iraq intact to counter a resurgent Iran.

The war was among the most lopsided in history. Iraq lost 3,700 tanks, more than 1,000 other armored vehicles, and 3,000 artillery pieces. In contrast, the coalition lost 4 tanks, 9 other combat vehicles, and 1 artillery piece. In human terms, the Allies sustained 500 casualties (150 dead), many of these from accidents and friendly fire. Iraqi casualties totaled between 25,000 and 100,000 dead, with the best estimates being around 60,000. The coalition also took 80,000 Iraqis prisoner. Perhaps an equal number simply deserted.

Following the cease-fire, Hussein reestablished his authority. He put down, at great cost to the civilian population, revolts by the Shiites and Kurds. He also defied United Nations (UN) inspection teams by failing to account for all of his biological and chemical weapons, the so-called weapons of mass destruction (WMD). Ultimately, President George W. Bush would use the alleged presence of WMD as an excuse to send U.S. and allied forces to invade and occupy Iraq in another war in 2003.

Peru

South American nation covering 496,233 square miles. Peru, with a 1945 population of approximately 7.5 million, borders Brazil and Bolivia to the east, Ecuador and Colombia to the north, Chile to the south, and the Pacific Ocean to the west. Peru contains a number of ethnic groups, with indigenous and mestizo people its greatest majority. Located in the Andean region of South America, Peru's varied geography includes coastal plains, Andean highlands, and tropical jungles. Ninety percent of its population is Roman Catholic.

During World War II, Peru broke relations with the Axis powers once the United States entered the war and deported Japanese living in Peru to the United States. Mineral exports greatly benefited the Peruvian economy during the war. Peru's foreign policy after World War II shifted from a traditional anti-imperialist mind-set to a pro-Western outlook in which free market policies became a priority.

By 1950 foreign investments in mining, sugar refineries, and fishing further revitalized the Peruvian economy. The nation became the first world exporter of fish meal, and a mining law passed in 1950 granted tax exemptions to foreign investors. Following the outbreak of the Korean War, Peru solidified its ties to the United States by signing a Mutual Defense Assistance Pact. Peru did not, however, send troops to the conflict.

While the Peruvian government distanced itself from the new government of Fidel Castro in Cuba in 1959, the ideology of the Castro revolution soon extended into Latin America, and Peru was no exception. Indeed, the 1960s witnessed the emergence of revolutionary groups with pro-Castro sympathies. This revolutionary fervor was particularly prevalent among the *campesino* movement, students, and intellectuals. However, these groups were unable to gain power or significant influence in Peru's decision-making processes. Nevertheless, they tilled the ground for future guerrilla movements that became notorious in the 1980s: Sendero Luminoso (Shining Path) and the Túpac Amaru Revolutionary Movement. The latter was the precursor of the Movimiento de Izquierda Revolucionario (MLR, Left Revolutionary

Juan Velasco Alvarado, president of Peru (1968–1975), shown here in 1968. (Getty Images)

Movement). Not until the early 1980s, however, did the Shining Path become publicly known for its terrorist attacks.

U.S.-Peruvian relations changed in 1968 when General Juan Velasco Alvarado took power via a coup that overthrew President Fernando Belaúnde Terry. Alvarado's regime sought a more independent foreign policy aimed at strengthening the country internationally and inviting more economic development. Alvarado initiated relations with communist nations, restored relations with Cuba, and joined the Non-Aligned Movement in 1974. Peru signed trade agreements with the Soviet Union in 1969 and with the People's Republic of China (PRC) in 1971.

Alvarado's strong advocacy of developing-world nations was combined with economic nationalism at home. His regime nationalized the American International Petroleum Company (IPC), industrial plants, and sugar refineries. It also undertook long-delayed agrarian reform and nationalized the press as well. This so-called revolution from above brought modest benefits to Peruvian population, but by 1975, with mounting foreign debts and a paucity of foreign credit, Velasco's reforms all but ended.

During the 1980s, popularly elected President Belaúnde continued a nonaligned foreign policy, although his sympathy for the Sandinistas in Nicaragua put him at odds with U.S. President Ronald Reagan's administration.

Belaúnde became an important mediator in the 1982 Falklands (Malvinas) War, offering not only military support to Argentina but also a peace proposal for Argentina and Great Britain, which the British rejected. This diplomatic approach was also supported by the Peruvian Javier Pérez de Cuéllar, who was secretary-general of the United Nations (UN) at the time.

Domestically, Belaúnde's neoliberal market-oriented economic policies did not gain the support of the population but instead contributed to significant social discontent. The growing presence of Shining Path and Túpac Amaru presented another obstacle for Belaúnde's regime, which was accused of committing human rights abuses against civilians during 1983–1985.

Peru's diplomacy was nonetheless vital in Central American conflicts. In 1985 Peru, Argentina, Brazil, and Uruguay created the Contadora Support Group in an effort to negotiate a peace agreement for Central America. Despite its active diplomacy toward Central America, Alan García's government during 1985–1990 was unsuccessful in bringing economic improvement to the country. Toward the end of the Cold War, Peru's economy was in chaos, the drug business had grown rapidly, and guerrilla movements continued to challenge the government. With the presidency of Alberto Fujimori (1990–2000), Peru's relations with the United States improved, especially in the area of drug enforcement and the implementation of new economic programs.

Soviet spy and defector. Born of peasant origins in the Siberian village of Larikha on 15 February 1907, Vladimir Petrov established a local Komsomol (Communist Youth) cell in 1923 and became a full-time Komsomol organizer and Communist Party member in 1927. He was recruited by Soviet intelligence (NKVD) in 1933. He survived Soviet dictator Josef Stalin's purges of the 1930s, was posted to Stockholm during World War II, and was dispatched to Australia in February 1951. Ostensibly third secretary to the Soviet embassy in Canberra, Petrov was in fact a colonel in the Ministry of State Security (MGB).

On 3 April 1954, Petrov defected in Sydney. He was the most senior-ranking Soviet spy to defect to the West since the 1930s. Two weeks later his wife, Evdokia, an embassy cipher clerk and MGB officer, also defected after dramatically being freed from armed Soviet couriers by Australian security police at the Darwin airport. Not surprisingly, the Petrov defections caught the interest of the Western counterintelligence community, resulting in the closing of the Soviet embassy in Canberra and the withdrawal of the Australian embassy staff from Moscow.

Australian Prime Minister Robert Menzies promptly established the Royal Commission on Espionage, which convened for 126 days, examined 119 witnesses, received more than 500 exhibits, and published almost 3,000 pages of transcripts. The exhibits included the controversial Petrov Papers handed over at the time of Petrov's defection. Although many on the Left alleged these to be forgeries and that the defection itself was a political conspiracy, the declassified Venona decrypts confirmed the authenticity of the documents in 1996. The royal commission uncovered evidence of successful Soviet espionage in Australia during 1945–1948 but could not initiate prosecutions without compromising the Venona operation. Petrov's revelations caused an uproar not only in Australia but also in Great Britain, as he provided new material, leaked to the British press by MI5 officers, concerning the flight, defection, and whereabouts of the missing British spies Guy Burgess and Donald Maclean.

**Petrov, Vladimir
Mikhailovich**
(1907–1991)

Petrov received a new identity, Sven Allyson, and lived in a safe house in the Melbourne suburb of East Bentleigh, where he died in a nursing home on 14 June 1991.

Pflimlin, Pierre
(1907–2000)

French politician and last president of the French Fourth Republic (1958). Born in Roubaix, France, on 5 February 1907, Pierre Pflimlin studied law at Strasbourg University and the Catholic Institute in Paris. A member of the Popular Republican Movement (MRP), he was elected to the Municipal Council of Strasbourg in 1945. He also served in the post–World War II constituent assemblies and was first elected to the National Assembly, as a deputy from Bas-Rhin, in 1946. He was reelected in 1951 and 1956. A close friend of Robert Schuman, Pflimlin actively promoted Franco-German reconciliation and European integration.

During the government crisis precipitated by the Algerian War, on 9 May 1958 Pflimlin was asked to form a new government. Violence flared in Algiers over concerns that Pflimlin was about to grant Algerian independence. On 26 May General Charles de Gaulle met with Pflimlin to discuss the latter's resignation, but talks broke down. Nonetheless, Pflimlin resigned the next day. This paved the way for de Gaulle to return to power as the last premier of the Fourth Republic on 1 June and later to establish the Fifth Republic.

During 1958–1959, Pflimlin was one of four ministers of state in de Gaulle's first cabinet. During 1959–1983 Pflimlin served as mayor of Strasbourg, and during 1962–1965 he was also the president of the parliamentary assembly of the Council of Europe. Dedicated to European integration, in 1979 he won election to the European Parliament and served as its president during 1984–1987. Pflimlin retired in 1987 and died in Strasbourg on 27 June 2000.

Vietnamese nationalist revolutionary, founder of the Viet Minh, premier of the Democratic Republic of Vietnam (DRV, North Vietnam) during 1950–1975, and prime minister of the Socialist Republic of Vietnam (SRV) during 1975–1987. Born in Quang Ngai Province on 1 March 1906, Pham Van Dong became active in nationalist and communist politics as a teenager. Like many other Vietnamese revolutionaries, he spent eight years in prison for his anti-French stance. In 1930 he helped found the Indochinese Communist Party.

Pham Dong was one of the primary leaders of the nationalist Viet Minh in its long struggle against French colonialism and during the Indochina War (1946–1954). Following the decisive Vietnamese victory over the French in the Battle of Dien Bien Phu in 1954, the French agreed to negotiate a peace settlement. Pham Dong served as the Viet Minh's chief negotiator in Geneva, insisting upon immediate Vietnamese independence and elections to reunify the country. He failed to win the support of the Soviet and Chinese delegates to achieve these goals. The resultant Geneva Accords recognized the independence of North Vietnam but temporarily divided Vietnam at the 17th Parallel and postponed elections to reunify the country until 1956. For Pham Dong, the peace talks were a Pyrrhic victory, and he believed with some justification that the Viet Minh had gained less at the peace table than they had won on the battlefield.

Pham Dong served as premier of North Vietnam during 1950–1975. Despite the fact that he was one of the staunchest Cold War opponents of the United States, many within the U.S. government and in the Republic of Vietnam (RVN, South Vietnam) admired his consistent attitude and dealings with the United States. He never wavered in his desire for complete Vietnamese autonomy and a united Vietnam. He also refused to negotiate with Washington until the bombings of North Vietnam ended.

After the death of Ho Chi Minh in 1969, Pham Dong became the most visible public figure in Vietnam. Beginning in 1970 he played a key role, along with Le Duc Tho, at the Paris peace talks. Employing tactics that went back to previous negotiations with France and the United States, Pham Dong demanded an immediate cease-fire and the removal of South Vietnam's President Nguyen Van Thieu.

Pham Van Dong (1906–2000)

Prime Minister of the Socialist Republic of Vietnam Pham Van Dong, shown here during a state visit to France on 25 April 1977. (Richard Melloul/Sygma/Corbis)

When Le Duc softened North Vietnam's stance in 1972 to allow Thieu to remain in office, many believed that it was Pham Dong who had pushed for such an accommodation. Pham Dong eventually advocated a coalition government that would represent officials from both North Vietnam and the SRV. But the SRV and the Provisional Revolutionary Government resisted such an arrangement, ultimately delaying the signing of the peace accords. The final agreement, which ended the war and led to the withdrawal of the last U.S. troops, was signed in January 1973.

Pham Dong continued to play a central role in Vietnam after the U.S. withdrawal. He became prime minister of a united Vietnam (the SRV) after communist forces conquered South Vietnam in April 1975. He was replaced as prime minister in 1987 after Vietnam suffered a series of severe economic dislocations. Nevertheless, he remained an important advisor and revolutionary figure. He wrote several histories of the Vietnam War as well as a biography of Ho Chi Minh. Pham Dong died in Hanoi on 29 April 2000, one day before the twenty-fifth anniversary of the fall of Saigon.

Philby, Harold Adrian Russell (1912–1988)

British spy and member of the Cambridge Five espionage ring. Born on 1 January 1912 in Ambala, India, the son of John Philby, famed British explorer, author, and diplomat, Harold Adrian Russell “Kim” Philby attended Westminster School and in 1928 went on to Trinity College, Cambridge University, where he met Guy Burgess, Donald Maclean, and Anthony Blunt, all of whom were influenced by the communist economist Maurice Dobb.

In 1932, Philby left Cambridge as a dedicated Marxist with an economics degree. Having been approached by Soviet intelligence while still a student, he became a Soviet agent in 1933. He joined the staff of the London *Times* and covered the Spanish Civil War (1936–1939) for the newspaper. In 1940 he joined the British Secret Intelligence Service (MI6), where he remained until 1951. His work for both MI6 and the Soviet Komitet Gosudarstvennoi Bezopasnosti (KGB) was excellent.

In 1949, Philby was sent to Washington as an MI6 liaison with the U.S. Central Intelligence Agency (CIA) and the Federal Bureau of Investigation (FBI). There he became involved with the Burgess-Maclean defection in 1951. In fact, it was suspected that through Burgess, Philby had warned fel-

low spy Maclean of his impending interrogation. Philby was recalled to London and came under Security Service (MI5) suspicion as a double agent. In 1956 he went to Beirut as a journalist but continued in partial MI6 employment. Additional damaging information about him came to MI5, some from Soviet defectors. Finally, Philby was offered a guarantee of immunity in return for a detailed confession. He chose to flee to Moscow on 23 January 1963.

Philby was received as a hero in the Soviet Union and became a consultant to the KGB. In 1968 he published his memoirs, *My Silent War*. Philby died in Moscow on 11 May 1988.

Southeast Asian nation. The Republic of the Philippines covers 186,000 square miles, somewhat larger than the U.S. state of California. An archipelago of 7,108 islands (with 90 percent of the population on just ten of them), it is located between the Philippine Sea and the South China Sea. South of Taiwan and north of Indonesia and eastern Malaysia, the Philippines lies 750 miles east of Vietnam. In 1945, the Philippines' population was approximately 18 million people.

The Philippine Revolution of 1896 was interrupted by the Spanish-American War (1898) and terminated by the Philippine-American War (1899–1902). Attaining domestic self-government, the Commonwealth of the Philippines (1935–1946) was interrupted by World War II in 1941 and the Japan-sponsored Second Republic (1943–1944). On 4 July 1946, the Philippines gained independence.

Prior to constitutional independence in 1946, nationwide elections were held. Socialists and communists generally supported candidates who favored expropriation of landed estates and redistribution of land to rural laborers.

Philippines

Leftist candidates with these views did not favor continuing military links with the United States. After the election, leftist candidates were illegally denied seats in Congress and, in response, the pro-Moscow Partido Komunista ng Pilipinas (PKP, Communist Party of the Philippines) drew on the traditions of rural resistance to lead a rebellion against the central government. Indeed, land reform and relations with the United States remained contentious political issues in the Philippines throughout the Cold War.

The landed Filipino elite sought to suppress labor union organization by radicalized farmers. Well represented in the Senate of the Philippines by 1947, this elite accommodated the United States by providing military bases, including ground storage and communications facilities, airfields, and harbors, in exchange for financial aid. The American bases were seen as a means to discourage radicals and leftists from seizing power. The 1947 Military Bases Agreement facilitated U.S. aerial surveillance of other parts of Asia as well as bombing missions and troop deployments during the Vietnam War. Also in 1947, a Military Assistance Agreement established the Joint U.S. Military Assistance Group (JUSMAG), which facilitated contacts and dialogue between Filipino military officers and their American counterparts.

At the United Nations (UN), Carlos P. Romulo was the first Asian to preside over the UN General Assembly (1949–1950). Romulo and other Filipino representatives championed decolonization during the Cold War, although they later supported the United States in the Vietnam War, which they viewed in Cold War terms.

After the Philippines sent forces to assist in the Korean War (1950–1953), a Mutual Defense Treaty with the United States was signed and ratified in 1951. However, the Philippines resisted American pressure and delayed cosigning the 1951 San Francisco Peace Treaty with Japan. This reluctance stemmed from the brutal Japanese occupation during World War II.

In the meantime, the PKP-led rebellion continued. Utilizing U.S. military and economic assistance and his own popularity, President Ramon Magsaysay (1953–1957) defeated the PKP by capturing its entire top leadership and offering amnesty and relocation to rank-and-file rebels. The PKP never recovered from this blow.

In 1958, Senator Claro M. Recto criticized the Philippines' position as a Cold War "magnet for nuclear attack." Thereafter, until the collapse of the Soviet Union in 1991, that phrase galvanized successive generations of Filipino activists opposed to nuclear weapons.

Inspired by the Vatican Council II (1962–1965), Filipino Catholics began applying Liberation Theology's "preferential option for the poor" in the late 1960s. They formed Christian base communities whose purpose was to alleviate extreme poverty. This religious-political movement aggravated divisions within the Catholic Church, and some ecclesiastical leaders dismissively labeled calls for fundamental social change as communist. Meanwhile, student protests against shootings of Filipinos near military bases and against the Vietnam War became increasingly militant. On the birthday of People's Republic of China (PRC) leader Mao Zedong in 1968, leaders of the Kaba-

taang Makabayan (Nationalist Youth) and former PKP members formed the new Communist Party of the Philippines (CPP). Initially, the CPP was impressed with Mao's Cultural Revolution and its verbal anti-imperialism.

Facing sustained challenges from broad sectors of society as his second term drew to a close, President Ferdinand Marcos (1965–1986) imposed martial law on 21 September 1972. In the process, three major daily newspapers critical of Marcos were closed. Although the CPP was unable to undertake effective action against the regime, political opponents were labeled as Communists and were arrested and imprisoned without trial. Many were tortured and even executed extrajudicially, and Congress was shut down. U.S. President Richard M. Nixon approved the imposition of martial law. Without voting scrutinized at public meetings, Marcos then imposed an authoritarian constitution.

Marcos's law-and-order theme was initially popular in urban areas. However, opposition to the regime and its policies grew. Founded in 1973, the best-known anti-martial law coalition was the National Democratic Front (NDF). Along with the CPP and its New People's Army, the NDF also included Christians for National Liberation, with priests, nuns, and laity as members. Complicating Marcos's hold on power was a civil war with Moros (Filipino Muslims) in Mindanao. Until the mid-1970s, in fact, the Moro National Liberation Front was a much greater military threat than the CPP to the regime.

Following the example of Nixon's historic 1972 visit to China as part of a broader strategy to offset the global influence of the Soviet Union, Marcos himself met with Mao in June 1975. Marcos also extended diplomatic recognition to the PRC, three and a half years before the United States. In return, Mao agreed not to support the CPP.

No elections were held until 1978. The Filipino economy began a downward spiral in the late 1970s, especially after the 1979–1980 oil price shocks. By this time, widespread government corruption, political persecution, and the opulent lifestyle of Marcos and his political cronies outraged growing sections of the population. Also, by the late 1970s, the CPP and its New People's Army were becoming a major threat to the Marcos regime. For a short period, communist and Muslim rebellions coordinated military tactics at the field commander level. Although martial law was formally lifted in 1981, rule by presidential decree continued.

The unsolved 1983 assassination of former senator and opposition leader Benigno S. Aquino at Manila International Airport was widely believed to have been planned by Imelda Marcos, the president's spouse, and General Fabian Ver. This did little to weaken the personal loyalty of President Ronald Reagan to Marcos, but fearing that reaction to the assassination was swelling the NDF's ranks, key Republicans and Democrats in the United States made overtures to the noncommunist wing of the anti-martial law coalition. Among them was Aquino's widow, Corazon Cojuangco Aquino.

Under pressure from the U.S. media, members of the U.S. Congress, and the international community, President Marcos announced a snap election in 1985. Corazon Aquino ran against Marcos. Her campaign temporarily unified

much of the anti-Marcos opposition. Despite her pro-American inclinations, her vague open-options policy on the future of the Military Bases Agreement attracted left-wing activists. Nonetheless, the 2 February 1986 election failed, as 25 percent of the vote was never counted. Indifferent to widespread documented voting fraud, the Batasang Pambansa (National Legislature) declared Marcos the winner. Meanwhile, the Reagan administration feared that continued rule by Marcos would increase the CPP's popularity, estimated at 20 percent.

As street demonstrations and boycotts erupted to protest the compromised election, former Marcos loyalists led a small army revolt in the National Capital Region. Hundreds of thousands of Filipinos (including nuns and priests in their religious garb) protectively surrounded the rebels, blocking Marcos's tanks in a four-day televised event. Military defections continued.

On 25 February 1986 Marcos fled the Philippines for the United States, and Aquino became president. Astonishing all observers, the CPP had failed to participate in the protests that terminated the Marcos regime. This self-inflicted political faux pas led to multiple splits within the CPP, weakening it for the remainder of the Cold War. Aquino survived a full term (1986–

1992) in spite of military coup attempts led by officers eager for a more vigorous fight against the CPP.

As the Philippines returned to democracy, U.S. embassy staff underestimated how intensely opposed crucial constituencies were to renewing the Military Bases Agreement. Women's groups and the Nuclear-Free Philippines Coalition urged President Aquino's appointed Constitutional Commissioners to limit her power to renew the Military Bases Agreement. Ratified by the voters in 1987, the new constitution advocated "an independent foreign policy," opposed nuclear weapons, and required Senate ratification of future military base agreements.

Three months before the Soviet Union collapsed, the Philippines Senate voted against renewing the treaty on 16 September 1991. The Senate majority thereby also rebuffed the private preferences of Indonesian and Malaysian leaders, who wanted U.S. bases to remain. Although the decision ended U.S. military bases, the JUSMAG survived the Cold War. So too did the CPP. In 1992 legislation provided that communist organizations would no longer be classified as "subversive." Before President Joseph "Erap" Estrada (1998–2001) was forced from office for corruption, the basis for closer U.S.-Philippines military cooperation was laid in the Visiting Forces Agreement of 1999.

Picasso, Pablo

(1881–1973)

Spanish-born painter and sculptor, credited (with Georges Braque) for having cocreated Cubism, and one of the most influential artists of the twentieth century. Pablo Picasso was born Pablo Ruiz in Málaga, Spain, on 25 October 1881. He showed artistic genius at a very young age and began signing his works “Pablo Picasso” in his late teens (Picasso was his mother’s maiden name). From his father, José Ruiz Blasco, who was an artist himself, Picasso learned the essential elements of his trade. He attended several prominent art schools in his youth but never earned a degree. When he was barely twenty years old, he ventured to France and fell in love with Paris, which was arguably the artistic center of the world. He would become a virtual permanent resident of France, although he never became a French citizen. Art historians have categorized Picasso’s works by placing them into several different categories. The Blue Period (1901–1904) featured dark and gloomy blue-tinted works that often depicted various street people such as acrobats, prostitutes, beggars, and harlequins. The Rose Period (1905–1908) was more uplifting than the previous one and utilized soft reds, pinks, and orange-colored paintings. Picasso’s brief African Period (1909–1910) was so named because he used African objets d’art as his focus. The most famous painting in this genre is *Les Femmes d’Alger* (O.J. No. 1) (The Young Ladies from Algiers). From 1909 to 1912 Picasso, along with his close collaborator Braque, pioneered Cubism, which essentially deconstructed objects, broke them down into their component shapes, and then reconstructed them. The results were often unforgettable if not controversial. Picasso evolved Cubism over the years to include a more synthetic Cubism that employed collage, lending it legitimacy among serious artists for the first time. As he moved into sculpture, he utilized Cubism to endow his works with an almost other-worldly dimension. He has often been said to have flirted with surrealism, although the artist flatly denied any connection to the movement made famous by Salvador Dalí.

Picasso’s personal life was punctuated by torrid love affairs, marriage, separation, extramarital affairs, and at least one illegitimate child. He was a self-avowed pacifist and rather apolitical, except for his joining the Communist Party in the early 1940s. This he did mainly to show his displeasure with the quasi-fascist government in power in his native Spain. He refused to fight in the Spanish Civil War (1936–1939). However, perhaps his most famous painting, *Guernica*, was a visual protest of the barbaric bombing of a Basque village (Guernica) by fascist allies of Generalissimo Francisco Franco in 1938. During World War II, Picasso stayed on the political sidelines and again did not take up arms. He made France his home, spending much of his time in the south of France, and continued to produce both sculpture and paintings, although his work now tended to be less politicized than it had been in the 1930s and 1940s.

Picasso did become involved in the postwar peace movement and took strong exception to U.S. involvement in Korea and the Soviet invasion of Hungary in 1956. For the remainder of his life, he continued to confound and astound his critics. Although some attempted to categorize him as a mod-

ernist, Picasso's work usually defied such categorization. And Picasso himself dismissed such labeling. Without doubt, he was one of the most famous and celebrated artists of the twentieth century and influenced countless other artists. Picasso died in Mougins, France, on 8 April 1973.

First president of the German Democratic Republic (GDR, East Germany) during 1949–1960. Born in Guben on 3 January 1876, Wilhelm Pieck was

Pieck, Wilhelm
(1876–1960)

German Communist leader Wilhelm Pieck, shown here on his election as the first president of the German Democratic Republic (GDR, East Germany) in 1949. (AP/Wide World Photos)

initially affiliated with the German social democratic movement. He joined the woodworkers' union in 1894 and the German Social Democratic Party (SPD) in 1895. Like many socialists, Pieck became disillusioned when the SPD failed to oppose World War I. He became a member of the radical Spartacus League and eventually helped found the German Communist Party (KPD). When Adolf Hitler came to power in 1933, Pieck fled to Moscow, where he joined Walter Ulbricht and other German communist leaders being groomed for a government-in-exile.

Pieck returned to Germany with the Soviet Red Army in 1945. While Ulbricht worked to entrench Soviet policies, Pieck became a figure of conciliation. It was Pieck and Otto Grotewohl, the leader of the SPD in the Soviet zone of Germany, who symbolically shook hands and founded the Socialist Unity Party (SED). In October 1949, Pieck was elected as the first president of the newly founded East Germany. His role was largely ceremonial, particularly as the East German government failed to gain widespread diplomatic recognition. Ulbricht exercised the real power.

Pieck died in Berlin on 7 September 1960. His legacy as a true communist who brought German socialism to its logical conclusion was commemorated in the names of streets and factories across East Germany. His hometown of Güben was renamed Wilhelm-Pieck-Stadt in 1961.

Pinochet Ugarte, Augusto

(1915–2006)

Chilean general and dictator (1973 to 1990). Born in Valparaíso on 15 November 1915, Augusto Pinochet graduated in 1937 from the Chilean Escuela Militar (Military School) and was commissioned a second lieutenant in the infantry. He spent his entire adult life in military service, during which time he served as a military attaché in Washington and as a faculty member at the Military School and the Chilean War College. In 1968 he attained the rank of brigadier general and in 1971 assumed the rank of division general. In 1972

he became chief of staff of the army. Then in August 1973, amid growing civil unrest, President Salvador Allende Gossens named Pinochet army commander in chief.

Along with most of Chile's high command, Pinochet was known for his conservative, anticommunist views. On 11 September 1973, he led the coup that brought down Allende's socialist government. Allende was killed during the struggle. In the wake of the coup, Pinochet directed a merciless military-style campaign against enemies of the new regime. Security and military officials arrested, detained, tortured, and executed thousands of Chileans.

The coup represented the final step in a carefully planned campaign that had received significant support from the U.S. government against the Allende government. Intelligence and monetary support funneled through the U.S. embassy, the Central Intelligence Agency (CIA), military contacts, and cooperative private organizations had helped Chilean opposition groups challenge the Allende government during 1970–1973.

Under Pinochet's authoritarian rule, the Chilean government promptly reversed its social and economic policies and promoted neoliberal, export-oriented reforms aimed at modernizing the country. Mixed results and mounting social problems generated a strong but cautious opposition movement in Chile during the 1980s. Despite public revelations of gross human rights violations during the 1970s that culminated in international trials against various officers who had served the dictatorship, Pinochet clung to power.

Confident that he would prevail, Pinochet held a plebiscite in 1988 in which Chileans were given a choice between a return to civilian rule or the continuation of the Pinochet presidency until 1997. Chileans voted against the dictator, and he was ultimately forced to relinquish the presidency on 11 March 1990, although he retained his position as army commander in chief until 1998.

Pinochet was arrested in London in October 1998 via an international warrant issued by a Spanish judge. International courts hounded Pinochet, intent on bringing him to trial for his various and sundry crimes as Chile's dictator. He avoided trial in Spain because of alleged ill health, was forced to return to Chile in March 2000, and was tried and convicted there. His convictions were overturned in late 2000 because his mental state was in question during the trial. In 2004, investigators discovered efforts by Pinochet to transfer financial assets out of the country illegally. This move undermined his credibility, and the government stripped him of legal immunity. In November 2005, he was charged with tax evasion for having concealed some \$27 million in secret bank accounts and was ordered placed under house arrest. Never forced to stand trial and unrepentant to the end, Pinochet died in Santiago on 10 December

Security and military officials arrested, detained, tortured, and executed thousands of Chileans.

Augusto Pinochet came to power in Chile in a 1973 coup and remained the nation's military dictator until his defeat in a free election in 1990. He would spend much of his remaining years evading prosecution for human rights crimes. (Embassy of Chile)

2006. He was accorded a military but not a state funeral. Many Chileans chose to remember him not for the abuses and atrocities of his regime but as a staunch anticommunist whose free-market policies made rapid Chilean economic growth possible.

See Small Arms

Pius XII, Pope (1876–1958)

Roman Catholic prelate and pope (1939–1958). Pius XII was born Maria Giuseppe Giovanni Eugenio Pacelli in Rome on 2 March 1876 to an influential Italian noble family. In 1894 he entered the seminary and enrolled at the Gregorian University, completing higher studies at the Sapienza School and the Papal Atheneum of St. Apollinaris. He was ordained in 1899. In 1904 he was named a monsignor, and a year later he became a domestic prelate. Soon thereafter, he began a nearly forty-year career as a Vatican diplomat. In 1917, he was first consecrated bishop, then archbishop, and was named nuncio to German Bavaria. He became apostolic nuncio to Germany in 1920. During his time in Germany, he negotiated concordats with Bavaria (1924) and Prussia (1929) before returning to Rome, where he was named a cardinal in 1929 and Vatican secretary of state in 1930. Disgusted and disheartened by Nazi ideology, he sought to protect German Catholics from Nazi persecution by negotiating a 1933 concordat with Adolf Hitler's Germany.

Pacelli was elected pope on 2 March 1939, taking the name Pius XII. His actions during the Jewish Holocaust are controversial and still subject to debate today. There is irrefutable evidence that Pius XII was a vocal critic of anti-Semitism, however, even if he did not act sufficiently forcefully early on to stanch Nazi atrocities. The pope did much to protect Rome and many other ancient cities from damage during the war, and his founding of the Papal

Welfare Organization after the conflict helped thousands of refugees, repatriates, and former servicemen.

Pius became a vociferous opponent of communism during the Cold War, having publicly and bitterly denounced it as early as 1942. Yet the pope was also cognizant of the shortcomings of capitalism, and he openly called on all nations to commit to the eradication of poverty and inequality. In terms of doctrine and church governance, he established the dogma of the Assumption of the Virgin Mary in 1950, and he significantly expanded the number of archbishops and bishops, particularly in the developing world. His papal legacy is still subject to fierce debate by scholars over his conduct during the Nazi era and the Holocaust. Pope Pius XII died on 9 October 1958 at Castel Gandolfo, Italy. He was succeeded by John XXIII.

Pius XII was pope from 1939 to 1958. A staunch anticommunist, Pius came under severe criticism for not speaking out against Adolf Hitler and the Holocaust. (Library of Congress)

French politician, minister of finance (1944–1946), minister of national defense (1949, 1952–1954), minister of justice (1969–1973), and premier (1950–1951, 1951–1952). Born in Rennes on 15 April 1901, René Pleven studied law and political science in Paris, receiving a doctorate in law from the University of Paris. During 1929–1939 he served as the Automatic Telephone Company's director general for Europe.

During the German occupation of France (1940–1944), Pleven served in the Resistance and as a diplomat for General Charles de Gaulle. Pleven also played a central role in the general's London Committee, which advocated an approach to postwar economic growth combining free enterprise with central planning by elite civil servants trained in France's finest schools. During 1944–1946 Pleven served as finance minister in de Gaulle's postwar provisional government. During 1945–1973 Pleven represented a district in his native Brittany in the Chamber of Deputies.

Pleven led the Democratic and Socialist Union of the Resistance (USDR) from 1946 to 1953, when François Mitterrand succeeded him. During the

politically volatile Fourth Republic (1944–1958), Pleven served as premier twice, first during July 1950–March 1951 and then during August 1951–January 1952. He also served in several other ministerial posts, most notably as minister of national defense, first in 1949 and then during 1952–1954. Just as the 1950 Schuman Plan sought to restrain a resurgent Germany through the integration of Western Europe's coal and steel industries, Pleven, to achieve a similar aim in the military sphere, gave his name to an October 1950 plan to develop a European army made up of supranational military units under the command of a European defense minister accountable to a European parliament. The so-called Pleven Plan evolved into discussions of the European Defense Community (EDC), but by excluding the United States, it chiefly complicated the organization of the 1949 North Atlantic Treaty Organization (NATO).

While European efforts at economic integration enjoyed the blessing of the United States, the stakes in the realm of security were too high in the dark days of the Cold War. Although the question of rearming Germany was extremely important for Pleven and France, more immediately pressing was the war against nationalist forces in Indochina, which failed decisively in 1954 with the defeat at Dien Bien Phu. Although Pleven would remain politically active for decades to come, his most influential period was over, and his plan never came to fruition, instead eventually being subsumed by NATO and the Federal Republic of Germany's (FRG, West Germany) entrance into the alliance. During 1969–1973 Pleven served as justice minister but lost his Chamber of Deputies seat in 1973. He retired from national politics and died in Paris on 13 January 1993.

Plan proposed by French Prime Minister René Pleven in October 1950 to build an integrated, supranational West European defense force to repel potential Soviet threats. The plan was a natural successor to the Schuman Plan, which sought to integrate the economy of the Federal Republic of Germany (FRG, West Germany) into the larger European economy, ultimately resulting in the European Coal and Steel Community (ECSC). The Pleven Plan was also a response to the deteriorating international situation, exacerbated by the September 1949 Soviet atomic bomb testing, the October 1949 victory of communist forces in the Chinese Civil War, and the outbreak of the Korean War in June 1950 and the large-scale commitment of U.S. forces to that theater. The French plan sought to integrate West Germany into a European defense structure without allowing Bonn to rearm unilaterally. French leaders also did not relish the idea of West German admittance to the North Atlantic Treaty Organization (NATO). Thus, the Pleven Plan would effectively bypass such a scenario.

In 1949 the United States, Great Britain, and France agreed that to defend Germany properly would mean the restoration of its autonomy. Most American and European policymakers were convinced that only a fully integrated Germany could stanch the threat of internal communist subversion or, worse still, a military invasion from the East. They did not agree, however, on the means by which to achieve this.

The defense of Germany and the restoration of its role as an equal partner caused the Western governments to realize that rearming Germany would require a German military contribution, but not one in which Germany did so unilaterally. The Americans, British, and French thought that the best way to achieve such a goal would be in establishing an integrated European force.

In September 1950, at the New York conference of foreign ministers, the Americans proposed an integrated European army under the aegis of NATO in which German military units would have no capacity for independent action. This would be led by a NATO commander—Supreme Allied Commander Europe (SACEUR)—with a sizable American military contribution. French concerns about a rehabilitated Germany caused Paris initially to balk at this plan.

On 24 October 1950, Pleven announced a plan of his own for a European army. Worked out by Jean Monnet, the French architect of West European integration, this project aimed at avoiding any autonomous German control over its troops. According to the Pleven Plan, German troops were to be recruited and trained not by the German government but rather by a supranational European army integrated within the existing NATO military structures, alongside NATO troops. The plan would include a European defense minister responsible to the control and supervision of a European assembly. German armed forces would exist only within an integrated European military arrangement.

Both the British and the Germans opposed the Pleven Plan. The British believed that instead of leading to the creation of an Atlantic community, such an arrangement would dilute Atlanticism by excluding direct American involvement. It would also, they pointed out, complicate—or even duplicate—the organizational structures of NATO. Bonn rejected the plan because German troops would clearly be in a subservient role. Moreover, it was a project that would have required member nations to relinquish a certain degree of national sovereignty, which did not sit well.

Soon the plan evolved into the abortive European Defense Community (EDC), debated at length by the Western alliance and finally defeated, rather ironically, by the French themselves in 1954. By then, with American reassurances of protection and with British troops to be stationed in Germany, many of France's fears concerning a resurgent belligerent Germany were allayed, and the Pleven Plan and the EDC were subsumed by the admission of West Germany into NATO.

Podgorny, Nikolai Viktorovich

(1903–1983)

Soviet political leader and head of state. Born in Karlovka, Ukraine, on 18 February 1903, Nikolai Podgorny worked in a factory beginning at age fifteen. A Komsomol (Young Communist League) activist in the early 1920s, he joined the Communist Party of the Soviet Union (CPSU) in 1927 and graduated from the Kiev Technological Institute for the Food Industry in 1931. He was an administrator in sugar plants during the 1930s. During the 1940s, he held a succession of senior posts in the administration of the food industry in the Ukraine and at the national level.

Beginning in 1950, Podgorny's career shifted to the party apparatus in the Ukraine, where he rose rapidly during the next several years. In 1956 he was elected to the CPSU Central Committee and served as first secretary of the Ukrainian Communist Party during 1957–1963. He became a candidate member of the CPSU Presidium in 1958 and a full member in 1960. In 1963, he was appointed a secretary of the Central Committee. Accounts differ as to his role in the ouster of Nikita Khrushchev in October 1964, but Podgorny

quickly lent his support to new First Secretary Leonid Brezhnev, becoming part of the collective leadership along with Premier Alexei Kosygin.

On 9 December 1965, Podgorny became chairman of the Presidium of the Supreme Soviet, thus becoming the ceremonial head of state, but his influence in the government soon declined as Brezhnev sought to consolidate his power. In April 1966, Podgorny was removed from the Central Committee secretariat. Although he was still politically prominent, his influence was nonetheless waning. In 1977 Brezhnev engineered Podgorny's removal from the Politburo and then from the chairmanship of the Supreme Soviet. Brezhnev assumed the chairmanship himself while remaining first secretary, thus gaining diplomatic status as head of state while also maintaining the real power that came as leader of the CPSU. Podgorny lived in quiet retirement until his death in Moscow on 11 January 1983.

Nikolai Viktorovich Podgorny, chairman of the Presidium of the Supreme Soviet and thus ceremonial head of state of the Soviet Union during 1965–1977. (Bettmann/Corbis)

Foreign aid program of President Harry S. Truman, announced in January 1949 and first funded beginning in 1950. As the Cold War deepened in 1947–1948, the Truman administration sought ways to keep communist influences out of the developing world. A major part of this effort would become direct and indirect assistance to nations of the developing world in the form of technical assistance, loans, investments, and the like. The Point Four Program marked an attempt to fulfill those goals and acted as a sort of Marshall Plan to poorer nations. Point Four, however, was on a scale far less grand than that of the Marshall Plan. The program received its name because it was the fourth point of Truman's foreign policy initiatives enunciated in his 20 January 1949 inaugural address.

The Point Four Program began in earnest in early 1950. As policy-makers weighed their options as to what types of aid should be emphasized,

Point Four Program (1949)

a consensus soon emerged that saw technical assistance to the developing world as the single best way to effect change there. The focal point of such aid would be in the areas of education, agriculture, public health, and medical care. The U.S. government relied principally on the private sector to plan and build necessary infrastructure, which it would reimburse in cash, tax credits, or other types of incentives. All but a small amount of the aid that went to the Point Four Program was administered bilaterally—between the United States and recipient nations—through the U.S. Department of State’s Technical Cooperation Administration.

The Point Four Program was, in the end, rather limited in scope. It had no sooner gotten off the ground when the Korean War began in June 1950. The war shifted the focus from international aid programs such as Point Four to rearmament and military readiness. What’s more, a good deal of Point Four assistance tended to be funneled into military and military support programs in recipient nations rather than to education, health care, or agriculture.

The advent of Dwight D. Eisenhower’s presidency in 1953 marked the practical end of the Point Four Program as a stand-alone entity. Eisenhower, who eschewed handing out large amounts of foreign aid (at least in his first term), ordered the Point Four Program absorbed into general foreign assistance programs. Although Point Four’s immediate legacy was quite modest, it did set the stage for future programs such as the International Finance Corporation (1956), the Inter-American Development Bank (1961), and the Alliance for Progress (1961).

Pol Pot

(1928–1998)

Head of the Cambodian communist Khmer Rouge and prime minister of the Democratic Republic of Kampuchea (Cambodia) from 1976 to 1978. Born Saloth Sar in the village of Prek Sbau near the provincial capital of Kompong Thom Saloth Sar, Cambodia, on 19 May 1928, Pol Pot adopted his revolutionary name only in 1976. His parents were landowners with royal connections. He was sent to Phnom Penh at the age of six to join his brother Loth Suong, who worked in the palace as an administrator. Saloth Sar was briefly a novice in a monastery and studied radio engineering in France during 1949–1953. While there, he joined the French Communist Party.

Saloth Sar returned to Cambodia in January 1953 and began to rise within the Cambodian communist movement, becoming party leader in 1963. Rejecting an offer from Prince Sihanouk to form a coalition government, Saloth Sar fled into the jungle and organized the Khmer Rouge, a communist guerrilla army. On 13 May 1976, after defeating Lon Nol, the U.S.-backed general who had overthrown Sihanouk in a 1970 coup, Pol Pot became Cambodian prime minister and declared “Year Zero.” He and the Khmer Rouge leadership renamed the country Kampuchea and immediately set out to transform Cambodia into a rural collectivist society. He emptied the city of Phnom Penh, ordered millions of Cambodians into forced labor, and imposed other brutal policies that resulted in a holocaust against his own countrymen. It is estimated that some 1.5 million Cambodians died during Pol Pot’s blood-thirsty reign.

To return Kampuchea to its “rightful” position in Indochina, Pol Pot saw the need to regain “lost” territories, launching raids on Laos, Thailand, and Vietnam beginning in 1977. In retaliation, in late 1978 forces of the Socialist Republic of Vietnam invaded Kampuchea and ousted Pol Pot from power, although he continued to wage guerrilla warfare from bases in Thailand and western Cambodia, launching raids against the Vietnamese-installed Phnom Penh government and later sabotaging the peace plan and elections sponsored by the United Nations (UN). In 1985, it was announced that Pol Pot was relinquishing command of the Khmer Rouge. He then disappeared from public view but resurfaced in 1997 when Khmer Rouge leaders in western Cambodia conducted a trial and convicted him of murdering other Khmer Rouge. Pol Pot was sentenced to house arrest but died on 15 April 1998 in Anlong Ven while being held prisoner, supposedly from a heart attack, although there is some speculation that he may have been murdered by one of his former subordinates.

Poland

Central European state. Strategically located between Germany and Russia, Poland saw its flat, open country serve for many centuries as an invasion route for both East and West. Bordered on the north by the Baltic Sea, to the northeast by Russia and Lithuania, to the east by Belarus and Ukraine, to the south by the Czech Republic and Slovakia, and to the west by Germany, today's Poland has an area of 121,196 square miles, about the size of the U.S. state of New Mexico. Its 1945 population was approximately 24 million people.

Moscow regarded Poland as vital for the security of the Soviet Union. In both world wars, armies had invaded Russia from this direction. For that reason alone, Moscow sought to control Poland. This would not be easy, for Poles had a long-standing hatred of the Russians, an entrenched Roman Catholicism, and a strong Peasant Party.

For a time in the Middle Ages, Poland had been the largest nation in Europe, but a fractious nobility unwilling to yield power to the central government led to its dismemberment in the late eighteenth century by Russia, Prussia, and Austria. Modern Poland reappeared as a consequence of World War I, created by the victorious Allies to serve as a buffer against a resurgent Germany but also to contain Bolshevik Russia, both of which sought to bring about its demise.

The new Polish state pursued an expansionist foreign policy to recover former Polish territory, alienating powers that might have helped defend it. Domestically, Poland suffered from too many small and unproductive farms, widespread illiteracy, a political system that led to numerous small parties and cabinet instability, divisions between the urban and rural segments of the population, and endemic anti-Semitism. In 1926, with Poland teetering on the edge of chaos, General Józef Piłsudski seized power with the intention of reforming the state. He held power as dictator until his death in 1935. Piłsudski at least had Polish interests at heart; his successors were simply inept.

On 1 September 1939, German forces invaded Poland, touching off World War II. Two weeks later, in accordance with secret provisions of the August 1939 German-Soviet Nonaggression Pact, Soviet forces attacked from the east. Poland was absorbed within a month and was divided between Germany and the Soviet Union. More fighting occurred when the Germans struck east in June 1941. Then in 1944 the Soviet armies drove the Germans west. Poland suffered terribly in the war, with more than 6 million dead.

Poles were not grateful to the Soviets for their liberation. Indeed, Poles held the Soviets responsible for the massacre of up to 15,000 Polish officers in the Katyń Forest near Smolensk in 1941 (which the Kremlin blamed on the Germans and for which it did not formally acknowledge responsibility until 1989). In London, the legally constituted Polish government-in-exile represented the nation, and under its direction, an underground state survived within Poland that included the secret Home Army. The exiled government also commanded a 200,000-man army-in-being. Led by Lieutenant

General Władysław Anders, it fought gallantly on the Allied side in Italy and in other campaigns, ending the war as the fourth-largest Allied force in Europe. Geography prohibited these men from liberating their homeland, and ultimately most chose to live in the West rather than return to a communist Poland.

At the end of July 1944 the Soviet Army approached the Vistula, encouraging the Home Army to rise up. It did so on 1 August, driving the Germans from the city. For the next sixty-three days the embattled forces of General Tadeusz Bór-Komorowski fought the Germans, while Soviet Army forces did nothing to help. Some 260,000 Poles died in the abortive revolt, during which the Germans razed large areas of Warsaw. The Soviets maintained that the pause in their offensive was necessary, but foreign observers noted that the Germans smashed the core of national resistance, which greatly assisted in the imposition of a communist regime later.

The Soviets finally resumed their advance and took Warsaw in January 1945. By early February, most of Poland had been cleared of the Germans. The Soviets installed a provisional liberation government, the *Polski Komitet Wyzwolenia Narodowego* (PKWN, Polish Committee of National Liberation)—also known as the Lublin Committee—in Lublin in eastern Poland on 22 July 1944. This was the date subsequently observed by communist Poland for the establishment of the Polish state. After they took Warsaw, the Soviets moved the PKWN to Warsaw and recognized it as the provisional government of Poland.

In the fall of 1944, Prime Minister Stanisław Mikołajczyk of the London government traveled to Moscow with British Prime Minister Winston Churchill in what proved to be a final opportunity for reconciliation. But Churchill's obstinate colleagues in London rejected the concessions he made there, whereupon Mikołajczyk resigned and Moscow broke off relations with the London-based Polish government. Probably no genuinely representative government would have met Soviet requirements.

Postwar Poland was about four-fifths its prewar size. There was, however, no problem concerning minorities. Virtually all of Poland's prewar population of 3.5 million Jews had died during the war, a number of these with Polish complicity. Some 4 million Germans had also fled the Soviet Army advance at the end of the war. Agreement at Potsdam over the expulsion of Germans from former East Prussia led to the departure of an additional 2.5 million Germans during 1945–1947.

Allied agreements at the July 1945 Potsdam Conference assigned to Polish administration the former German territories east of the Elbe and Vistula Rivers, along with Gdańsk (former German Danzig) and southern East Prussia. The Soviet Union took the major city of Königsberg, which became Kaliningrad, as well as eastern Poland to approximately the Curzon Line (set by the Allied powers in 1920 after World War I as Poland's eastern border). In effect, Poland had been moved westward by about 150 miles. In its acquisition of Silesia from Germany, Poland secured a strong industrial base and a more balanced economy. Instead of the former narrow corridor to the Baltic, Poland now possessed about 250 miles of seashore. Although the Western

powers at Potsdam accepted Polish administration of these regained territories, no peace treaty legalized the annexation. Domestically, the PKWN carried out a program of repression, especially in the new territories, eliminating centers of resistance and either killing, arresting, or sending to Soviet labor camps thousands of people.

On 21 June 1945, Bolesław Bierut established in Warsaw the Provisional Government of National Unity. Strong British and American pressure induced the communists to admit Mikołajczyk as deputy premier, along with three other representatives, and the West then reluctantly recognized it as the legal government of Poland. The Yalta agreement had called for “free and democratic” elections, but not until January 1947 did the regime feel confident enough to call elections, which hardly met the Yalta criteria. The old Peasant Party had been so completely infiltrated by the communists that Mikołajczyk formed a new opposition peasant organization known as the Polish People’s Party, which became an immediate target of the government. No one was surprised when the government bloc, which included nominal participation of several captive parties, won 394 out of 444 seats in the first parliament. Later that year Mikołajczyk fled abroad. Poland was now completely dominated by the communists. At the end of 1948, the Polish Workers’ Party absorbed the Polish Socialist Party to form the Polska Zjednoczona Partia Robotnicza (PZPR, Polish United Workers’ Party).

Socialist Józef Cyrankiewicz was premier after 1947, but Bierut was the leading figure in the state. Elected by the parliament as president, he served in that post from 1945 to 1952, when a new constitution abolished that office. He then became premier. After Bierut’s death in Moscow of a cerebral hemorrhage early in 1956, Edward Ochab became the new strongman. Nevertheless, ultimate power rested in the minister of defense, Soviet Marshal Konstantin Rokossovsky. Born in Poland, on the Kremlin’s orders he became a Polish citizen and de facto Soviet viceroy.

The PZPR dominated Polish life. Opposition politicians were either eliminated or jailed. Control was assured by the secret police and Soviet occupation forces. The government also proceeded against the Catholic Church, leading to the trials of priests and bishops and even the arrest of the primate of Poland, Cardinal Stefan Wyszyński, in 1953.

The de-Stalinization campaign that followed the death of Soviet dictator Josef Stalin in March 1953 and especially Soviet leader Nikita Khrushchev’s denunciation of him at the Twentieth Party Congress of the Communist Party in 1956 produced shockwaves throughout the Soviet bloc. The initial impetus for events in 1956 in both Poland and Hungary came from intellectuals and youth pointing out the failures of the regimes to follow the communist ideal.

Restiveness in Poland became direct action on 28–29 June 1956 in Poznań (Posen) with a large demonstration in which industrial workers demanded redress of grievances. A mob attacked the headquarters of the security police. Army troops, rushed to the scene, refused to fire upon the crowds. Order was restored only by the dispatch of large numbers of security police.

A tank surrounded by civilians in front of a bank during antigovernment rioting in Poznań, Poland, in 1956. (Library of Congress)

The government sought to blame the rioting on foreign agents and provocateurs but was soon forced to admit the justice of the complaints. It dared bring to trial in September only a dozen young men, ages eighteen to twenty-two, none of whom were charged with political crimes. Their testimony evoked considerable public sympathy.

The Poznań riots led to Berman's resignation and brought Władysław Gomułka to power in October. He had served as party secretary after the postwar government had come to power, but he had placed Polish national interests ahead of those of the Soviet Union and had been dismissed from his posts and imprisoned until late 1954. The Kremlin was sufficiently worried about this transfer of power that Khrushchev invited himself to Warsaw, arriving there with a number of key Soviet leaders and generals, including commander of Warsaw Pact armies Marshal Ivan Konev. With talk of Soviet military intervention, factory workers and students mobilized.

Khrushchev eventually agreed that Gomułka might assume power. The agreement that was worked out allowed the Poles control of their own internal affairs in return for the maintenance of communism and adherence to the Warsaw Pact. One immediate sign of the new relationship was the departure for the Soviet Union of Marshal Rokossovsky.

Gomułka, now PZPR secretary, ended forced agricultural collectivization, and the number of collective farms soon fell from more than 10,000 to fewer than 2,000. Indeed, by 1985, 80 percent of Poland's farms were privately owned. Gomułka also moved to change the relationship of the state with the

Catholic Church. Cardinal Stefan Wyszyński was released from detention and allowed to assume his post. The Catholic Church was permitted freedom of worship, the right to build churches and maintain its own publications, and the opportunity to advance religious education in the schools. In return, Wyszyński and the Church supported the new regime and provided it with a popular base.

In May 1956, Gomułka worked out an agreement with the Soviet Union for the repatriation to eastern Poland of some 250,000 Poles living in the Soviet Union. He proved a loyal supporter of Soviet foreign policy, and Polish troops participated in the Warsaw Pact invasion of Czechoslovakia in 1968. Gomułka was not a liberal, and the PZPR retained strict control.

Economic problems led to severe rioting in 1970 and 1976. In December 1970, Gomułka was replaced as the regime's strongman following food riots after the government announced sharp increases in the price of basic foodstuffs. Troops fired on workers at Gdynia. Edward Gierek, the PZPR secretary, was from Silesia, where he had been hardened by work in the mines from age thirteen. In an effort to build support, he immediately reversed the price increases. He also opened Poland to foreigners and allowed more Poles to travel abroad. In addition, he devoted attention to more consumer goods, made possible by massive foreign loans, chiefly from the Federal Republic of Germany (FRG, West Germany) as part of German Foreign Minister Willy Brandt's Ostpolitik. Poland's foreign aid debt swelled to more than \$20 billion by the 1980s, which was badly handled and was used largely to industrialize. There was also rampant corruption. Sharp increases in prices in 1976 led to strikes, and once more riot police had to be called in.

In October 1978 Archbishop Karol Wojtyła was elected pope as John Paul II. The news of his elevation electrified Poland. He was the first Polish pope and, for that matter, the first from behind the Iron Curtain. In June 1979, John Paul II paid a tumultuous nine-day visit to his homeland.

In the summer of 1980 a spate of chaotic strikes occurred, triggered by a sharp rise in meat prices announced by the Gierek government in July. The strikes were centered in two areas that were vital for the Polish economy: the Baltic ports, especially Gdańsk, and the coal fields of Silesia. Coal was the country's chief commodity export and was vital for the economy. The unrest began in August at the Lenin Shipyard in Gdańsk. There, 16,000 workers went on strike, demanding free trade unions and the right to strike. Gierek was forced to resign in September, ostensibly for health reasons. In a surprise move, Stanisław Kania replaced him.

The unrest at Gdańsk led to strikes in Silesia, where 200,000 miners demanded safety improvements and the same rights won by the Baltic workers. The government made the same concessions in Silesia. Kania took a conciliatory stance toward the strikers and tried to placate both the Soviets and the Poles. The strike leader turned union chief was electrician Lech Wałęsa. This was the beginning of Solidarność (Solidarity), the first non-communist trade union of the Eastern bloc.

With workers threatening a general strike throughout the country, the government gave in, granting free unions and the right to strike but also

Workers pray during the Lenin Shipyard strike in Gdańsk, Poland, in August 1980. (Alain Keler/Sygma/Corbis)

agreeing to loosen press censorship and grant freedom to jailed dissidents and access to the state press and broadcast services by the Catholic Church. In return, the workers recognized the supremacy of the Communist Party in the country (although not over the unions), paid homage to the Soviet alliance, and promised not to form a political party. Ultimately, Solidarity claimed 10 million members, more than half the Polish workforce.

Soviet leader Leonid Brezhnev hoped to contain these problems peacefully, approving a loan of about \$100 million to Poland—a small sum compared to the massive foreign debt. The other side of the coin, however, was the largest Warsaw Pact military maneuvers in a decade, dubbed “Brotherhood in Arms, 1980,” held in September along the German Democratic Republic (GDR, East Germany) border with Poland. These seemed to many highly reminiscent of the 1968 Warsaw Pact maneuvers along the Czech border, just before tanks rolled into Prague.

The Kremlin could not allow the Gdańsk settlement to stand. Free trade unions in Poland raised the unacceptable risk of labor unrest throughout the Soviet Empire, where the economies of all of the satellites faced similar difficulties. There was even a danger of such worker unrest permeating the Soviet Union itself. The Soviet leadership hoped to avoid armed intervention. Poland had an army of 210,000 troops in 15 divisions, with 650 first-line aircraft. The Polish Navy was the largest non-Soviet fleet in the Warsaw Pact. No one was certain what the Polish armed forces might do. Western analysts

were calculating that the Soviets might need an invasion force of a million men. But Soviet leaders were prepared to intervene if necessary, even at this risk and the end to détente with the United States.

Soviet leaders hoped that Kania could roll back the reforms. His failure to accomplish this led to the February 1981 appointment of General Wojciech Jaruzelski as premier, replacing Jozef Pinkowski. With Brezhnev issuing thinly veiled warnings that “the pillars of the socialist state” were in jeopardy, Jaruzelski called for a moratorium on strikes. Solidarity ignored this and, in March and April 1981, staged a warning strike to dramatize their newest demands of the right for Polish farmers to form their own union and a call for punishment of officials who had harassed Solidarity members. Jaruzelski accused Solidarity of abusing its right to strike and again appealed for a moratorium on strikes. Meanwhile, there were new Warsaw Pact maneuvers in and around Poland.

In July and August the Communist Party, voting for the first time via secret ballot, reelected Kania as first secretary, but Silesian coal miners went out on strike in protest against dwindling food supplies and government meat rationing. In September, Solidarity held its first national congress and passed resolutions calling for free elections in Poland and the right of workers to manage the factories.

The Soviets bluntly condemned these Solidarity actions, leading Jaruzelski to order a sweeping law-and-order crackdown. In October, Kania was abruptly ousted as PZPR chief by the Polish Central Committee, and Jaruzelski took charge as the first military man to rule Poland since World War II. He called for an immediate end to strikes. In November, Wałęsa, Jaruzelski, and Cardinal Josef Glemp, the head of the Catholic Church in Poland, met in a domestic summit, but talks between Solidarity and the government broke down. In December 1981, Solidarity called for mass demonstrations and urged the formation of workers’ guards to protect unionists. It also called for a national referendum on establishing a noncommunist government.

Jaruzelski’s response came on 13 December with a declaration of a state of national emergency and martial law and the arrest of some 6,000 people, including Solidarity leaders. Massive military presence in the streets prevented unrest. Key factories came under military control. These moves, along with the knowledge that the Soviets would have intervened had Jaruzelski not taken such drastic steps, prevented violence. To many outside observers, it seemed obvious that Solidarity had gone too far.

U.S. President Ronald Reagan retaliated by imposing economic sanctions on Poland. Gradually, the Jaruzelski regime eased up considerably. In 1987 it released Solidarity leaders from prison. Martial law restrictions were also ultimately ended. In an unprecedented move, the government also put on public trial four officers of the security police who murdered the popular Solidarity supporter Father Jerzy Popiełuszko. The fundamental problems continued, however, and Poland remained an economic basket case.

Jaruzelski spent the next few years trying to hold off pro-Moscow hardliners and Westernizing liberals in his own party, bring to an end the eco-

Polish Solidarity leader Lech Wałęsa gives the peace sign during a visit to Washington, D.C., on 15 November 1989. (Reuters/Corbis)

conomic boycott by the West, and preserve some role for the Communist Party. With the emergence of Mikhail Gorbachev as Soviet leader, Jaruzelski moved toward reform and accommodation with Solidarity. Roundtable talks in 1988 led to the legalization of Solidarity. Under Jaruzelski's leadership, the party accepted democratization and entered into discussions that it assumed might lead to power-sharing but would stop short of a surrender of power. This proved impossible, and in the June 1989 national parliamentary elections, Solidarity candidates swept into power. Jaruzelski resigned as premier but won election the next month as president by a narrow margin. Tadeusz Mazowiecki became the first noncommunist premier in the Soviet bloc since 1945.

Poland made the transition to democratic government and, in January 1990, opted for the more difficult—in the short term—economic policy of complete free enterprise. The next month, the Polish United Workers' Party dissolved itself. At the end of 1990, the first fully free elections in postwar Poland took place, and Wałęsa was elected president.

Poland remained the major beneficiary of Western investment from among the former Eastern bloc countries. Prewar problems continued for

some time, however. A staggering foreign debt crippled economic growth, although in 1994 finance ministers of the leading Western powers agreed to a plan whereby Western banks slashed half of the \$13 billion commercial debt, a great boost to what was by then Europe's fastest-growing economy.

Poland, Armed Forces

During World War II, Soviet leader Josef Stalin sought to create a Polish army under his control as an alternative to the Polish armed forces that had been fighting alongside the Allies since September 1939. In May 1943, near Moscow, the Tadeusz Kościuszko 1st Infantry Division was founded and later grew into the I Polish Corps and then, in 1944, the Polish Army. Recruits came principally from among Polish deportees in the Soviet Union, and the officers were primarily drawn from the Red Army. Political oversight came in the form of commissars drawn from the Polish Communist Party.

The Polish Army participated in the liberation of Warsaw as well as the subsequent Pomeranian and Berlin campaigns. When World War II ended, the army numbered 335,000 men in two field armies, an armored corps, and air units.

After the war, the size of the Polish military was gradually reduced. In 1949, it reached its lowest postwar level of only 130,000 men. As the Cold War intensified, the army was significantly increased beginning in 1950, reaching 382,000 men at its peak in 1954. This expansion was accompanied by an enormous increase in military equipment. Thus, during 1949–1956 the number of tanks increased from 225 to 2,188, while military aircraft grew from 272 to 1,110. In order to provide this equipment, the armaments industry also expanded significantly. This imposed a major burden on the already-

strained Polish economy and was one of the reasons for the failure of the Six-Year Plan of 1950–1955.

During the Stalinist period, numerous purges were carried out in the Polish military, with the counterintelligence service arresting hundreds of officers who were falsely accused of espionage. Twenty were executed. After the death of Stalin in March 1953, the growth of the military slowed, and beginning in 1955 its size was gradually reduced.

The Warsaw Pact, created in 1955, did not represent a major change, since the Polish Army had already been made fully subordinate to the General Staff of the Soviet Army in the early 1950s. All key command positions in the Polish Army were held by Soviet officers.

In October 1956, Marshal Marian Spychalski, who had been repressed during the Stalinist period, was appointed minister of defense. Soviet officers were then recalled, and their functions were assumed by Polish officers. According to Warsaw Pact planning of the early 1960s, in the event of war Poland was to commence military action in northern Europe toward Denmark and Belgium. Poland would commit to the attack three field armies, an air army, and its navy. In all, 380,000 men would be engaged of a total of 712,000 available, with the recall of reserves, in time of war. In the early 1970s, the army underwent expansion and modernization, including the introduction of rocket forces. In the early 1970s it numbered 418,000 men, a level that remained largely unchanged until the end of the Cold War. Following the 1967 Arab-Israeli War, purges in the officer corps resulted in the dismissal of 1,500 officers of Jewish descent. General Wojciech Jaruzelski also replaced Spychalski as minister of national defense.

Approximately 30,000 soldiers from Poland's Second Army participated in the occupation of Czechoslovakia in 1968 that crushed the Prague Spring. The army was also used to quash social unrest at home. During 1945–1948, it had fought against the anticommunist underground and Ukrainian separatists. It was also the main tool in crushing worker unrest in Poznań in 1956 as well as in Gdańsk, Gdynia, and Szczecin in 1970. The Polish Army's largest military operation after World War II came with the imposition of martial law on 13 December 1981 and involved some 70,000 soldiers. Army detachments ended strikes and broke up demonstrations, and those arrested were tried in military courts. Military commissars also appeared in factories and state institutions.

In the 1980s, the military underwent additional modernization, which was halted only in 1988 by a growing economic crisis. At the end of the Cold War, the lessening of tensions led to a significant reduction in the size of the military and a shift to defensive capabilities. By early 1992, the Polish Army had decreased from some 295,000 men in 1986 to just over 199,000 men. Tanks had been reduced from 3,400 to 2,800. Combat aircraft had fallen from a 1986 total of 675 to 500 in 1992. The navy also operated fewer ships.

With the collapse of the Soviet Union and the end of the Cold War, Poland moved closer to the West, which was reflected in increasing arms transfers from the West and more operational contacts with North Atlantic Treaty Organization (NATO) member states. Poland joined with NATO in

July 1994 in the first Partnership for Peace (PFP) participating state from the former Soviet bloc. Poland became a full member of NATO in March 1999.

Pompidou, Georges (1911–1974)

Leading French politician, Fifth Republic premier (1962–1968), and president (1969–1974). Born in Montboudif in the Auvergne region of south-central France on 1 July 1911, Georges Pompidou attended several lycées before enrolling in the École Normale Supérieure in Paris, where he graduated first in his class in 1934. He then pursued advanced studies at the École Libre des Sciences Politiques, earning a degree in political science (administration).

Upon fulfilling his required military service, in 1935 Pompidou taught at lycées, first in Marseille and then in Paris. With the advent of war, in 1939 Pompidou was mobilized as an infantry lieutenant. Following the armistice the next year, he returned to teach in Paris. He did not join the Resistance.

General Charles de Gaulle returned to Paris following the liberation of the city in August 1944 and set up his provisional government. A friend helped Pompidou secure a modest post on de Gaulle's staff. In January 1946 when de Gaulle abruptly resigned as provisional president, Pompidou remained in his service. He arranged for publication of the general's wartime memoirs and headed a charity established by the general and his wife for the mentally retarded. Pompidou also became an executive in the Gaullist

Georges Pompidou, president of the Fifth Republic of France during 1969–1974. (Henri Bureau/Sygma/Corbis)

Rassemblement du Peuple Français (RPF, Rally of the French People), but in 1953 he advised de Gaulle to disown the movement and remain aloof from politics.

In 1954 Pompidou assumed a post with the Rothschild Bank, becoming a general director two years later. He continued to make himself indispensable to de Gaulle, however. When the political upheaval of May 1958 returned the general to power, Pompidou became his chief of cabinet. Once the transition to the Fifth Republic was completed, Pompidou returned to the Rothschild Bank, but in 1961 de Gaulle charged Pompidou with establishing ties with representatives of the Algerian National Liberation Front (FLN) in Switzerland. Secret talks there led in 1962 to a settlement of the Algerian War.

In April 1962 de Gaulle named Pompidou premier of France with jurisdiction over domestic affairs. There was much criticism of this appointment, for Pompidou had never held elective office. Readily accepting the primacy of the president in the new constitutional system, he proved to be an effective administrator and speaker.

The student unrest of May 1968 followed by widespread worker strikes gave Pompidou the chance to demonstrate his political skills. De Gaulle appeared stunned by events, and it was Pompidou who came up with the plan of a wage increase for workers and who managed the new election campaign (dissuading de Gaulle from a referendum) that led to a Gaullist triumph in the subsequent elections.

De Gaulle never forgave Pompidou for his success, and a few days later, in July 1968, asked Pompidou to resign. When he left office, Pompidou had been premier longer than any other Frenchman since François Guizot in the mid-nineteenth century.

At the beginning of 1969, de Gaulle announced a national referendum on a proposal to reorganize France administratively and said that he would regard the referendum as a personal vote of confidence. In April, French voters defeated the proposal by a narrow margin, and de Gaulle promptly resigned. Pompidou ran for the presidency on the Gaullist ticket in the June elections, stressing continuity and openness. Divisions on the Left contributed to his victory.

President Pompidou's leadership style differed greatly from that of de Gaulle. Pompidou proceeded cautiously and deliberately, and he was much more approachable and friendly than his predecessor. There was also great freedom of discussion, and he did not lecture his ministers.

Although he had a solid majority in the National Assembly, Pompidou broadened the government by bringing in non-Gaullists and surrounding himself with competent technocrats. His government devalued the franc and launched an austerity program. It also implemented university reform. The French economy did well until the energy crisis brought on by the Arab oil embargo. This brought high inflation and forced Pompidou to float the franc.

In international affairs, Pompidou believed, like his predecessor, that the president had sole responsibility for foreign policy. He continued de Gaulle's efforts to build relations with China and the Soviet Union and sought to advance French influence in the Middle East. French policy under Pompidou more accurately reflected actual power, and this frequently forced him to compromise. In several areas, he reversed the policies of his predecessor, such as allowing Britain to enter the Common Market and improving relations with the United States.

Pompidou also helped transform the city of Paris. His building projects included an underground shopping center at Les Halles, a new office and shopping complex at La Défense, and the Pompidou Center for contemporary art. (Pompidou was himself a published poet and frequently offered his opinions on art and architecture.) His most controversial building project was the Montparnasse Tower.

Pompidou's last year and a half was marked by economic problems and personal illness. He died of cancer in Paris on 2 April 1974 and was followed in office by his minister of finance, Valéry Giscard d'Éstaing. Pompidou had demonstrated that both Gaullism and the Fifth Republic could continue without the general.

Porkkala

Peninsula projecting into the Gulf of Finland, located some 12 miles from Helsinki. Throughout history the Porkkala Peninsula has been a strategic outpost controlling navigation in the Gulf of Finland and approaches to Helsinki and St. Petersburg (Petrograd, later Leningrad). During World War I, Russia constructed permanent fortifications on Porkkala as protection for Petrograd. During the Finnish-Soviet negotiations of October 1939, Soviet Commissar for Foreign Affairs Vyacheslav Molotov demanded a base at Porkkala as necessary to close off the Gulf of Finland. The Finns rejected the Soviet demand on the grounds that Porkkala was too close to their capital.

During the Finnish-Soviet negotiations ending the Continuation War (1941–1944) between Finland and the Soviet Union, the Soviets renounced their claim to Hanko and instead demanded the right to construct a naval base at Porkkala. The Finns were forced to agree to a fifty-year lease on Porkkala as part of the Moscow Armistice concluded on 19 September 1944. Finnish President Carl Mannerheim regarded this concession as the most troublesome provision of the armistice agreement because Soviet forces could easily occupy Helsinki via Porkkala.

The Finnish handover of Porkkala took place ten days after the armistice was signed, and its 10,000 inhabitants were given eight days to evacuate the peninsula. On 28 September 1944, Soviet troops occupied the area. The lease was confirmed in the Paris Peace Treaty of 10 February 1947. On 24 May 1947, the Soviet Union and Finland signed the Porkkala-Udd Transit Agreement that permitted Soviet forces to transit southeastern Finland in order to supply their recently acquired base.

In the years that followed, the value of the Porkkala Peninsula to the Soviet Union diminished. There was no threat to Soviet control over the southern coast of the Gulf of Finland, and military advances also meant that the Soviet Union could close off the Gulf of Finland from its southern coast. Also, conclusion of the Finnish-Soviet Treaty of Friendship, Cooperation, and Mutual Assistance in April 1948 and the policy of cooperation with the Soviet Union pursued by President Juho Paasikivi (1946–1956) all worked to lessen tensions between the two states.

On 17 February 1955, Soviet Prime Minister Nikolai Bulganin informed President Paasikivi and Prime Minister Urho Kekkonen that Moscow was willing to renounce its fifty-year lease on Porkkala in return for a twenty-year extension of the Treaty of Friendship, Cooperation, and Mutual Assistance with Finland, and a communiqué was subsequently issued to that effect. Porkkala was officially returned to Finland on 26 January 1956.

Portugal

Southwestern European state. The Republic of Portugal lies on the western coast of the Iberian Peninsula, which it shares with Spain. Portugal occupies 35,516 square miles of territory, about the size of the U.S. state of Maine, and had a 1945 population of approximately 8 million. The economy was based largely on tourism, textiles, the cork industry (the world's largest), seafood, wine, and timber and forest products. The country occupies an important geostrategic position, facing west to the New World and south along the great sea routes to Africa. Beginning in the fifteenth century, Portuguese seafarers laid the basis for a widespread empire. As a result, 100 million people currently speak Portuguese as their mother tongue.

The Portuguese Republic began in 1910, but parliamentary chaos caused the military to seize power in 1926. University economics professor António Salazar was briefly minister of finance, charged with restoring financial order. Salazar returned to that same post in 1928 with the full powers he demanded and, for the next forty years, completely dominated Portugal. In 1932 he became premier of an authoritarian regime in which the Catholic Church had considerable influence. Salazar's National Union party was the political voice of the so-called *Estado Novo* (New State). Salazar's system, which combined eighteenth-century despotism with both fascist and democratic trappings, came to be known as clerical fascism and served as a model for the Nationalists in Spain. Portugal was a police state, although Salazar, an austere bachelor who remained largely unknown to his people, endeavored to preserve a democratic façade. Elections occurred on a regular basis, but the opposition was tightly controlled.

Portugal remained officially neutral during World War II. In 1943, however, it leased bases in the Azores to Britain and the United States. After the war, Portugal was readily admitted to the United Nations (UN) and was invited to join the North Atlantic Treaty Organization (NATO) upon its founding in 1949.

Although some families enjoyed great wealth, Portugal as a whole had the lowest standard of living in Western Europe. It also had the highest illiteracy and infant mortality rates. As a result, many Portuguese emigrated, chiefly to Brazil. The government never could deal with pressing financial problems because it routinely spent half of the annual budget trying to retain

Residents of Lisbon demonstrating on 1 May 1974, celebrating the 25 April coup d'état organized by the Movimento das Forças Armadas (MFA), which overthrew the Salazar dictatorship. (Henri Bureau/Sygma/Corbis)

Portugal's overseas colonies. Fighting began in Angola in 1961, in Guinea in 1963, and in Mozambique in 1964. Ultimately, the Portuguese committed 140,000 troops to the struggle.

In 1968 a disabling stroke forced Salazar to yield power. His successor, Marcelo Caetano, relaxed press censorship, gave women the vote, and liberalized other aspects of Portuguese life. The colonial wars continued, however, and on the morning of 25 April 1974 in Lisbon, a group of young army officers with no clear political program overthrew the conservative-authoritarian regime. It was called the *Revolução dos Cravos* (Carnation Revolution) because of the prevalence of red carnations worn by the populace, who convinced the forces of order not to resist. The revolution marked the end of the longest-lived authoritarian regime in Western Europe.

Those responsible for the revolution had fought in the colonies. Poorly compensated, they had also been forced to fight with inferior equipment against guerrillas often armed with modern Soviet weapons. Such factors led the disgruntled officers to form the Movimento das Forças Armadas (MFA, Armed Forces Movement).

The MFA's political views were shaped by contact with disgruntled Portuguese university students forced to serve in the army and by captured African guerrilla leaders. The MFA came to believe in the need for a thorough

change in Portuguese society and leadership. Surprisingly, this was a revolution against the colonial wars, for the MFA was convinced that the army could not win and indeed would be blamed for the defeats.

The Carnation Revolution brought to power General António de Spínola, the recently dismissed deputy chief of staff who had openly proposed a political democratization of Portugal and an end to the costly colonial wars. His book, *Portugal and the Future* (1974)—published without military authorization—provided the theoretical justification for the revolution, although he did not participate in it. The revolution was also unusual in that only five people died in it, two of them accidentally. Certainly, the revolutionaries enjoyed overwhelming national support.

The new Portuguese leaders immediately moved to divest the nation of its overseas empire. By the end of 1975, Portugal had granted independence to its two giant African colonies of Angola and Mozambique as well as to Portuguese Timor in the Indonesian Archipelago. Timor declared its independence on 28 November 1975 but was occupied by Indonesian troops nine days later. Brutal Indonesian repression and human rights violations followed. Of its former colonies, Portugal retained only the Azores in the Atlantic, Madeira southwest of Portugal, and the tiny outpost of Macau (Macao) near Hong Kong. (India had seized Goa and some other smaller enclaves in 1961.)

On 13 April 1987, the People's Republic of China (PRC) and Portugal concluded an agreement under which Macau became the Macau Special Administrative Region of China on 20 December 1999. The PRC guaranteed Macau a free enterprise system and a high degree of autonomy for fifty years. Portugal, the first European power to establish a presence on the Asian mainland, was thus the last to leave it.

Decolonization had reduced the total land area administered by Portugal by 95 percent and its global population by 65 percent. The country was also deluged by a half million *retornados*, refugees of Portuguese or colonial origin who fled the former possessions. With the economy under severe strain, this was a difficult time for Portugal. U.S. aid and loans totaling \$1 billion helped considerably, and in the end the enterprising *retornados* added much to the Portuguese economy.

Postrevolution Portuguese politics were marked by uncertainty and confusion. The Spínola administration of conservative, older officers was to the political Right of those who had carried out the coup. Spínola opposed any communist role in the government, which the MFA favored. When the MFA and the communists forced Spínola to cancel a rally by his supporters in September 1974, believing it to be a possible coup attempt, Spínola resigned. He apparently hoped to return to power when the Right gained strength. At the end of 1975, after communist-leaning General Vasco Gonçalves was removed from power under Western pressure, military units sympathetic to the communists attempted a coup, and the now-moderate Council of the Revolution, the executive authority of the state led by General Francisco Costa de Gomes, retaliated by removing leftist officers from the armed forces.

Military authority declined, the result of ideological differences among its leaders and parliamentary election victories of the Socialist Party, led by

Mario Soares, and the bourgeois parties. The political situation was chaotic. In the first six years, the country had a dozen different governments. Going into the 1975 elections, the first since the revolution, there was real concern that the Portuguese would vote the communists into power. Economic assistance from the United States and Britain helped prevent this. As in Italy, communist strength could be largely explained in economic terms, with high Portuguese inflation, unemployment, and illiteracy rates.

Premier Mario Soares, a moderate socialist, became the dominant figure and was twice premier in the period to 1979. His Socialist Party was supported by the communists and some Social Democrats. With centrist parties demanding new elections, in late 1979 President António Eanes dissolved parliament. The elections brought a shift to the Right, and Maria Pintasilgo, a social activist and devout Catholic, became the first woman premier in Portuguese history. Her government soon fell, and new elections were held in 1980. A center-rightist coalition gained a majority (132 of 250 seats) in the National Assembly, a sign of how far Portugal had moved to the Right since the revolution.

In 1983, Soares and the socialists returned to power in a coalition government, which made it difficult for him to implement his programs. By the mid-1980s there were two major political parties in Portugal: the Social Democrats, led by the charismatic economist Aníbal Cavaco Silva, and the Socialist Party, now led by Vitor Constâncio. In November 1985, Cavaco Silva became premier in a minority government, and in the July 1987 national elections he was reelected with the first single-party parliamentary majority government since the 1974 revolution. A great boost to the establishment of democracy in Portugal was the nation's admission, along with Spain, to the European Economic Community (EEC) in 1986. Improving economic conditions helped build a solid basis for democracy in both Iberian states.

Powers, Francis Gary (1929–1977)

American U-2 reconnaissance pilot shot down and taken captive on 1 May 1960 while on a mission to photograph military installations in the Soviet Union. Born on 17 August 1929 in Burdine, Kentucky, Gary Powers, known as Frank to nearly everyone, was the son of a coal miner. He graduated from Tennessee's Milligan College in 1950, joined the U.S. Air Force, and ultimately became an F-84 fighter pilot.

In 1956, Powers accepted an offer to fly a new type of aircraft on secret missions as a civilian contractor to the Central Intelligence Agency (CIA). The U-2, specially designed by Lockheed to carry cameras and other monitoring devices over the Soviet Union to obtain information not otherwise available, was difficult to fly. Nevertheless, Powers became a proficient pilot, garnering the most flying time in his unit.

U.S. pilot Francis Gary Powers is sentenced to ten years imprisonment on charges of espionage after his U-2 spy plane was shot down over Soviet territory on 1 May 1960. The incident damaged U.S.-Soviet relations, but Powers was returned to the United States in a swap for a Soviet spy after serving twenty-one months. (Bettmann/Corbis)

On 1 May 1960, during the twenty-fourth U-2 overflight of the Soviet Union, Powers was downed by a Soviet anti-aircraft missile, previously believed incapable of reaching the plane's 70,000-foot flying altitude. Unable to activate the destruct mechanism that would destroy the evidence of his espionage activity—the camera and film in the aircraft—Powers bailed out of the U-2 and parachuted to the ground, where he was captured and turned over to the *Komitet Gosudarstvennoi Bezopasnosti* (KGB). The Soviet Union publicly announced his captivity and the existence of the plane's wreckage after the United States denied any knowledge of the flight, greatly embarrassing President Dwight D. Eisenhower and using this as an excuse to cancel a major East-West summit scheduled to be held in Paris. Soviet leader Nikita Khrushchev left the preliminary meetings after Eisenhower refused to apologize for the incident.

After a Soviet show trial that garnered international attention, Powers was sentenced to ten years in prison. He served twenty-one months, and in February 1962 he was exchanged for Soviet master spy Colonel Rudolf Abel. Inquiries by the CIA and the U.S. Senate determined that Powers had behaved properly during the ordeal, despite varying opinions to the contrary. He went on to serve as a Lockheed test pilot for seven years, and in 1970 he published memoirs criticizing the CIA for inadequately preparing for a shoot-down. He then became a helicopter pilot for a California television station. Powers was killed on 1 August 1977 in a Los Angeles helicopter crash. Having previously received the Intelligence Star, in 2000 he was posthumously awarded the Distinguished Flying Cross, the Prisoner of War Medal, and the Director's Medal from then-CIA Director George Tenet.

Brief period of unprecedented liberalization in communist-ruled Czechoslovakia, short-circuited by a Soviet-led Warsaw Pact invasion of the country. On 5 January 1968, the Communist Party leadership of Czechoslovakia ousted Stalinist First Secretary Antonín Novotný. Having been elevated to first secretary in March 1953 and thus enjoying one of the longest tenures among communist leaders in Soviet-dominated Eastern Europe, he fell victim to growing economic, political, and national discontents. Since the early 1960s, he had rejected reform while exhibiting a willingness to use repression against workers, intellectuals, and students who questioned the existing system.

Novotný's replacement as first secretary was forty-six-year-old Alexander Dubček, who as leader of the Slovak Communist Party since 1963 had championed reform in general and the cause of equality for Slovakia in particular. While committed to maintaining Czechoslovakia's relationship with Moscow, he advocated socialism with a human face, sponsoring reforms designed to transform the Czechoslovak system into one in which socialism coexisted with democracy, individual rights, and moderate economic freedoms. The result was a brief era of political, cultural, and economic liberalization known as the Prague Spring.

While Dubček's accession to power brought an immediate change in the political climate in Czechoslovakia, the Prague Spring commenced in earnest on 9 April 1968, when the Czech Communist Party announced the so-called Action Program. This promised, among other things, reduced state economic planning and greater freedom for both industry and agriculture, a commitment to economic equality between Czechoslovakia and the Soviet Union, protection of civil liberties, and autonomy for Dubček's native Slovakia. The party would retain its leadership position, but the program stipulated that henceforth it would be more responsive to the desires of the people.

Over the course of the next several months, with the support of Ludvík Svoboda, who had replaced Novotný as Czechoslovak president in early April, Dubček fulfilled many of the program's promises. He abolished censorship, sanctioned the creation of workers' councils in factories, moved to increase trade with the West, allowed greater freedom to travel abroad, and supported the writing of a new party constitution designed to democratize the party. The Dubček regime even went so far as to enact a Rehabilitation Law in

Prague Spring (1968)

June that provided retrials for individuals previously convicted of political crimes by the communist regime.

The Czechoslovak population responded enthusiastically to the reforms, basking in a freedom it had not enjoyed since before the communist coup of February 1948. The press, radio, and television especially flourished, raising openly for the first time questions about political purges, show trials, and concentration camps. By early summer, the public was pushing for further reforms to include the creation of independent political parties, the establishment of genuine political democracy, and more radical economic reforms.

As the Prague Spring unfolded, anxieties arose in Moscow. Soviet leader Leonid Brezhnev viewed the Czechoslovak reforms as a rejection of the Soviet political and economic model and worried that Prague might unilaterally withdraw from the Warsaw Pact. Similar anxieties took hold among German Democratic Republic (GDR, East Germany) and Polish conservative communist leaders who feared that the Czechoslovak reforms might destabilize their own countries. On 16 July, Soviet, East German, Polish, Hungarian, and Bulgarian leaders sent a joint letter to Prague demanding a halt to the reform movement. Blaming recent developments in Czechoslovakia on “reactionaries” supported by imperialism, the letter explained that the Czechoslovaks appeared headed off the socialist path and that the reforms threatened the entire socialist system. Dubček responded that his reforms should not be construed as anti-Soviet and that Czechoslovakia had no intention of leaving the Warsaw Pact. He also met twice with Brezhnev, in Prague on 22 July and in Cierna on 29 July, apparently to prevent a Soviet military intervention.

Annoyed with Dubček’s refusal to end the reforms and unconvinced of his intentions, the Soviet Union and its Warsaw Pact partners, Romania excepted, decided to act. On the night of 20–21 August 1968, an estimated 500,000 Warsaw Pact troops (primarily Soviet Red Army but including units from East Germany, Poland, Hungary, and Bulgaria) invaded Czechoslovakia, meeting minimal resistance from a stunned population. Arrested and transported to Moscow on 21 August 1968, Dubček surrendered to Soviet demands to end the reforms. On 27 August, he returned to Prague, tearfully informing the Czechoslovak population that the era of liberalization was over. Subsequently, the Prague Spring’s most significant reforms were annulled as the old political and economic system was restored. Ultimately, in April 1969, Dubček was removed as the Communist Party of Czechoslovakia’s first secretary. His replacement, Gustáv Husák, supported by Red Army troops, thereafter presided over one of the most repressive communist regimes in Eastern Europe.

Moscow justified its intervention by formulating what soon became known in the West as the Brezhnev Doctrine, which declared that no individual communist party had the right to make unilateral decisions that might be potentially damaging to socialism. It further stated that because a threat to the socialist system in any given country represented a threat to the socialist system as a whole, it was the duty of other socialist countries to intervene militarily to suppress any potential deviation from prescribed communist policies.

Demonstrators surround Soviet tanks in protesting the Soviet-led Warsaw Pact invasion that crushed the so-called Prague Spring, 21 August 1968. (Libor Hajskey/EPA/Corbis)

While military intervention in Czechoslovakia headed off what Moscow perceived as a dangerous development, it exacerbated the Soviet Union's already precarious relations with the People's Republic of China (PRC), whose leaders publicly compared it to Nazi leader Adolf Hitler's aggression against Czechoslovakia in the 1930s. Equally significant, the intervention elicited public condemnation by the United States and led to the postponement of already-scheduled Strategic Arms Limitation Talks between President Lyndon Johnson and Brezhnev in Moscow.

Present Danger, Committee on the

Bipartisan group of senior U.S. government officials, academics, and opinion leaders organized in 1950, subsequently revived in 1976, to convince the American public and U.S. policymakers of the dangers posed by the Soviet Union's military and foreign policies. Twenty-five years later, the success of this organization spurred the creation of a similar body that bore the same name and had similar goals.

The first Committee on the Present Danger was founded in 1950, shortly after the Korean War began, to campaign for the permanent expansion of U.S. military forces, capabilities, and commitments, especially the deployment of far more substantial U.S. troop contingents in Western Europe to strengthen the infant North Atlantic Treaty Organization (NATO). Similar prescriptions had been made earlier that year in the National Security Council Report 68 (NSC-68), a paper prepared by the Policy Planning Staff (PPS) and largely authored by the second PPS director, Paul H. Nitze. President Harry S. Truman initially rejected its recommendations, which effectively called for a major militarization of the existing policies of containment of the Soviet Union, but accepted most of them once the Korean War erupted in June 1950. Even before the war began, several State and Defense Department officials and consultants who supported NSC-68 hoped to establish a citizens committee to press for major increases in American defense budgets and commitments.

Headed by James B. Conant, president of Harvard University, and largely run by former army undersecretary Tracy S. Voorhees, the committee, although formally a private organization, received strong backing and assistance from leading Truman administration officials, including Secretary of State Dean Acheson and Undersecretary of Defense Robert A. Lovett as well as Nitze. Established in December 1950 after extensive preliminary discussions with administration officials, the committee compared the Soviet menace to the Nazi threat a decade earlier and pressed for the restoration of the military draft, doubling the size of the existing U.S. military, and the deployment of several additional divisions to Western Europe. The committee quickly attracted an array of prominent members, including several college presidents, lawyers, media figures—among them Edward R. Murrow of CBS, Julius Ochs Adler of *The New York Times*, and Screen Actors Guild President Ronald Reagan—and William J. Donovan, former director of the Office of Strategic Services.

The committee worked closely with Central Intelligence Agency (CIA) officials and with the Psychological Strategy Board (PSB) established by Tru-

man in the spring of 1951 to coordinate efforts to win the loyalties of peoples in Soviet-controlled states, especially in Eastern Europe. Committee members campaigned energetically for the policies they favored, speaking and writing extensively, sponsoring films, disseminating cartoons and other publicity, briefing journalists, lobbying congressmen, and writing detailed policy recommendations and briefs for sympathetic administration officials.

The committee's efforts contributed significantly to the Great Debate of 1951 on U.S. foreign policy, the outcome of which decisively oriented the country away from isolationism and toward a militarily assertive position of high defense expenditures, large armed forces, and major overseas alliance commitments. Leading committee officials, including Voorhees, successfully urged the sympathetic General Dwight D. Eisenhower to seek the Republican Party nomination for president in 1952, in the hope that this would check the influence of Republican isolationists and wed that party, like the Democrats, to the militarized internationalism that the committee favored. After Eisenhower's election victory in November 1952 and the Korean War armistice the following summer, the committee members felt that its mission had been accomplished, and by late 1953 it had effectively faded away.

The first committee subsequently served as a model for the second Committee on the Present Danger, founded in the mid-1970s by foreign policy experts—including academics, former officials, and opinion makers—who argued that an expansionist Soviet Union was increasing the size, composition, and capabilities of its military arsenal in spite of arms control agreements and a general warming of superpower relations, known as *détente*. Committee members feared that the Soviets were preparing to wage—and prevail in—a nuclear exchange with the United States, thus giving the Soviet Union enormous leverage in any future confrontation with America or its allies. The committee favored the development of new American weapons and opposed arms control agreements, which it believed bolstered Soviet military dominance. In 1981, when Reagan (an early member of the committee) became president, many of the committee's positions became official government policy.

Veteran U.S. foreign policy advisor and NSC-68 drafter Nitze and Yale Law School Dean Eugene V. Rostow, formerly an undersecretary of state for President Lyndon B. Johnson, conceptualized the organization in late 1975. While they were finalizing plans the following year, Nitze and several other like-minded foreign policy experts were asked to scrutinize the government's recent assessment of the Soviet Union. They ultimately concluded that the United States was systematically underestimating Soviet military capabilities. These findings further spurred the committee's organizational efforts. Eventually, political scientist and future United Nations (UN) ambassador Jeane Kirkpatrick, congressional aide Max Kampelman, labor leader Lane Kirkland, and novelist Saul Bellow joined Rostow, Nitze, and 142 others as founding members of the Committee on the Present Danger.

Although the foreign and defense policies of Republican President Gerald R. Ford and Secretary of State Henry A. Kissinger were the committee's main focus during its formative stages, organizers believed that their efforts

The committee ultimately concluded that the United States was systematically underestimating Soviet military capabilities.

were necessary regardless of who won the 1976 national election. Thus, two days after Ford was defeated by Democrat Jimmy Carter, the committee formally announced its establishment. Over the next several years, the group undertook a high-profile campaign, including disseminating analytical studies, conducting public opinion polling, and offering congressional testimony in support of new nuclear weapons and greater skepticism of détente. The committee vigorously opposed Carter's effort to conclude a Strategic Arms Limitation Treaty with the Soviet Union.

Critics of the committee believed that it was misreading Soviet military developments and foreign policy goals. To these observers, changes in the Soviets' arsenal could be explained benignly as defensive in nature or dismissed as a logical reaction to American actions. They believed that the committee's antagonism toward the Soviet Union and advocacy of new weapons reflected discredited past approaches and only increased the likelihood of a dangerous superpower confrontation. The committee's critique of American policy did not waver, however, and many of its suggestions were implemented by the Reagan administration, particularly during 1981–1985.

Profumo Affair (1963)

Sex and spy scandal that rocked British politics in 1963 and ultimately brought down the government of Prime Minister Harold Macmillan. John Profumo, who had been educated at Harrow and Oxford, was a Conservative Party politician, a member of high society, and the husband of actress Valerie Hobson. At the time the scandal broke, he was secretary of state for war. Showgirl Christine Keeler came from a rough-and-tumble, unhappy back-

ground and eventually had a brief affair with Profumo after the two had met at a party in 1961, organized by fashionable London physician Stephen Ward.

Profumo soon broke off the affair, but rumors nevertheless surfaced in 1962, as did rumors that Keeler had also had an affair with Yevgeny “Eugene” Ivanov, a military attaché at the Soviet embassy on whom the American Federal Bureau of Investigation (FBI) had a dossier. Ivanov was thought to be part of the Soviet spy network. The serious implications of Profumo’s affair were obvious, as he had shared a mistress with a known Soviet intelligence operative.

When the story became the talk of Britain, Profumo appeared before the House of Commons in March 1963 and stated emphatically that there had been “no impropriety whatever” in his relationship with Keeler. But the clamor did not subside, and Profumo’s protestation of innocence convinced few. In June 1963 he again appeared before Parliament and admitted that he had lied in his March testimony and that he had had an affair with Keeler. On 5 June, he resigned from the government. Lord Denning investigated the scandal and issued a damaging report in September 1963, further undermining the Macmillan government by criticizing its slow reaction to the crisis, although the report noted that no breach of national security had occurred. The report also eschewed the titillating details that the public seemed to crave. The government attempted to divert attention by prosecuting both Ward and Keeler. Keeler later spent nine months in jail on a perjury conviction, and Ward committed suicide after being charged with living on immoral earnings.

Ultimately, the scandal brought down the government. In October 1963 Macmillan, already troubled by ill health, resigned as the scandal stories continued to swirl. Alec Douglas-Home took over as prime minister, and the Conservatives lost to the Labour Party in the elections of 1964.

Keeler wrote an autobiography in 2001 in which she detailed her part in the Profumo Affair. Profumo kept a public silence for more than forty years, devoting his time to charity work, although a bipartisan attempt by former colleagues to rehabilitate his reputation began in 2003.

The scandal was also another example of the Cold War treachery that began when spies Guy Burgess and Donald Maclean, of the Cambridge Five, fled to Moscow in the early 1950s. George Blake, another British ex-diplomat, had been convicted of spying in 1961, and in 1963 an Admiralty clerk was caught spying. That same year, Kim Philby was revealed as the third man in the Maclean-Burgess spy ring.

Protest Movements

The late 1960s witnessed a brief but dramatic eruption of radical protest movements. This occurred on a global scale, but particularly in the United States, Eastern and Western Europe, the People's Republic of China (PRC), Japan, and Latin America. The protests were directed not only against the domestic political, socioeconomic, and cultural order but also against the conditioning of domestic society and politics by the international constellation, shaped by the Cold War and decolonization. Common to the protest movements of San Francisco, New York, Chicago, Paris, Mexico City, Prague, and Beijing was the fundamental questioning of domestic as well as international allegiances. As the conditions of the domestic Cold War varied greatly among these diverse societies, however, so too did the protesters' demands.

Cold War themes were evident in the slogans and debates of the late 1960s' protest movements. As far as the Western world was concerned, criticism of U.S. dominance in political, military, economic, and cultural issues was a driving force for many of the leftist protest movements. Opposition to the war in Vietnam and American involvement in it was one of the dominant themes in the protest movements in America, Western Europe, Canada, and Latin America. In the United States, the evolution of the civil rights movement grew out of the understanding of a striking contradiction between the official rhetoric on justice and freedom as justifications of Cold War foreign policy and the domestic system of racial discrimination and segregation.

The protest wave was preconditioned by major changes in the East-West conflict from the late 1950s onward, particularly the strategic changes undertaken by the Soviet Union and the impasse created by strategic parity. These changes impacted domestic society and politics and shaped the conditions in which new, more radical forms of political and cultural critique could express themselves. First, after the 1953 death of Soviet leader Josef Stalin and upon the introduction of dramatic political and strategic changes by his successor Nikita Khrushchev beginning in 1956, the fear of Soviet communism decreased among large portions of the public in the West. Khrushchev's strategy of peaceful coexistence eventually facilitated the development of East-West détente, the first signs of which appeared on the European continent in the early 1960s.

Second, on the European continent the situation of quasi parity in strategic terms between the Warsaw Pact and the North Atlantic Treaty Organization (NATO) brought about the promise of mutual destruction in any future war. Adding to this realization was the fact that young people in the 1960s were of a generation that did not know firsthand the devastation and destruction of war. Despite its other-worldly omnipresence, they were less strongly alarmed by the nuclear threat than were their parents.

As fears of both nuclear war and communist takeover diminished, governments and ruling elites in the West needed new sources of legitimization. Leftist movements and allied student groups protested against the conditions of American hegemony in political, military, economic, and cultural terms. This was most visible in France. The eruption of student radicalism in May 1968 carried with it a fierce denouncement of American imperialism.

In the communist regimes of Eastern Europe and Asia—although in very different ways—domestic and international developments led to a situation in which political protest emerged. Communist governments such as the PRC under Mao Zedong, the Romanian regime under Nicolae Ceaușescu, and the Czechoslovak system under Alexander Dubček all at some point during the 1960s objected to Soviet dominance over the communist world and its strategy vis-à-vis the West. This, in turn, created conditions in which these nations' populations more or less openly came to criticize their own leaders and the communist ideology that underpinned their grasp on power. The interaction between a heterodox domestic communist leadership and the radicalization of criticism of society was most visible in Czechoslovakia, where the Prague Spring (1968) was eventually crushed by a military invasion led by the Soviet Union.

The repression of the Czech reform movement, the normalization (or forceful realignment) of the Soviet-aligned communist world after 1968, the dissolution of the most radical student movements in Western Europe and the United States, and the mediating of their protests through partial domestic reform marked the end of this brief era of global protest. This coincided with the rise of East-West détente on the international level beginning in the early 1970s, as evidenced by the Sino-American rapprochement and the warming of U.S.-Soviet relations. As a result of the pressure that their societies had put on them, governments on both sides of the Iron Curtain began to consider détente an absolute necessity, as it helped to create a new political consensus on the national and international levels.

Pueblo Incident

(23 January 1968)

The *Pueblo* was equipped with the most sophisticated modern intelligence devices, and twenty-seven members of its eighty-two-man crew were cryptographic and intelligence personnel.

Diplomatic and military confrontation between the Democratic People's Republic of Korea (DPRK, North Korea) and the United States. On 23 January 1968, four North Korean naval vessels seized USS *Pueblo*, touching off a major confrontation with the United States.

North Korea's hostility toward the Republic of Korea (ROK, South Korea) and the United States resulted in what can only be labeled as reckless behavior in 1968. On 21 January 1968, a squad of thirty-one North Korean commandos penetrated the demilitarized zone along the 38th Parallel and reached the northern edge of Seoul with the acknowledged mission of assassinating South Korean President Park Chung Hee. When they were within a mile of the Blue House (the South Korean presidential mansion), they were detected by South Korean police. A gun battle ensued, with all but three commandos killed. One was taken prisoner. Amid this atmosphere, the North Koreans seized the *Pueblo* on 23 January, just two days after the attempted assassination of Park.

Captained by Commander Lloyd M. Bucher, the *Pueblo* (SGRT-21) was an American intelligence-gathering ship operating off the eastern coast of North Korea. Built by the U.S. Army in 1944 as a general-purpose supply vessel, it had been transferred to the navy in 1966. Converted and commissioned in 1967 as an auxiliary general environmental research (AGER) ship, the *Pueblo* was actually designed for intelligence gathering. Essentially a small cargo vessel (850 tons and 177 feet in length), the ship was slow (12.5 knots) and only lightly armed, with .50-caliber machine guns. It was also equipped with the most sophisticated modern intelligence devices, and twenty-seven members of its eighty-two-man crew were cryptographic and intelligence personnel. The vessel was in international waters essentially unprotected, supposedly conducting oceanographic research but actually involved in gathering electronic intelligence on North Korea. When the ship was taken, Pyongyang claimed that it had entered North Korean territorial

USS *Pueblo* (SGRT-21) was an American intelligence-gathering ship that was seized by the North Koreans in international waters off the coast of the Democratic People's Republic of Korea (DPRK, North Korea) on 23 January 1968. (U.S. Navy)

waters in Wonsan Bay. Washington insisted that the *Pueblo* had been at least 13 miles beyond the 12-mile limit imposed by North Korea.

During the actual seizure of the ship—the first U.S. warship to be surrendered to a foreign power since the War of 1812—one crewman was killed and several others, including Bucher, were wounded. The ship was then taken into Wonsan harbor under its own power. The North Koreans treated the ship's crew brutally, and on 26 January Japanese television aired a film made by the North Koreans in which Bucher and his crew signed a joint appeal to U.S. President Lyndon B. Johnson to apologize to the North Korean government for the intrusion of the *Pueblo*. Meanwhile, North Korean radio broadcast Bucher's alleged confession, which stated that his ship had deliberately intruded into North Korea's territorial waters.

The seizure of the *Pueblo*, without a shot being fired in its defense, caused great controversy in the United States. Bucher was both condemned and praised, but certainly the responsibility for the ship's capture extended far up the chain of command. The vessel was inadequately protected, and it received no support from any other source when attacked. Capture of the

ship's sophisticated listening devices and cryptographic equipment was a great windfall for the communist intelligence services.

On 24 January, U.S. Secretary of State Dean Rusk described the seizure as "an act of war." The next day, President Johnson called up a number of U.S. Air Force Reserve, Air National Guard, and Navy Reserve units, a total of 14,787 personnel, and declared that American forces in and around South Korea would be strengthened. He also ordered the aircraft carrier *Enterprise* to take up a position off the North Korean coast. In the days and weeks to come, the task force would include three cruisers, five carriers in addition to the *Enterprise*, eighteen destroyers, and the *Pueblo*'s sister ship the *Banner* (AGER-1). But the United States undertook no hostile action against North Korea, and Johnson announced that the U.S. government would seek "a prompt and a peaceful solution to the problem." Already facing an untenable situation in Vietnam, Washington did not wish to settle the *Pueblo* case by military force. Perhaps aware of this, Pyongyang defiantly declared that it was prepared to meet any eventuality and would deal any American attacks an "exterminating blow."

Taking a hint from a statement over Radio Pyongyang that the *Pueblo* case could be solved by direct negotiation, Washington initiated secret talks with the North Korean government at the truce village of Panmunjom in February 1968. By 4 March, the United States and North Korea had met ten times at Panmunjom. The North Koreans insisted that the United States must admit to and apologize for the supposed intrusion. Meanwhile, Radio Pyongyang reported on 12 February that Captain Bucher made a "second confession," and on 4 March Johnson received a letter purported to be from *Pueblo* crewmen asking Washington to admit that the vessel had violated North Korean waters. From 22 March to 2 April, the North Korean government circulated a series of letters allegedly written by the prisoners and warned that a refusal to apologize could cost lives. Then, on 13 September, Japanese newspapers reported a news conference in Pyongyang at which the *Pueblo* crewmen allegedly said that they had been ordered to intrude into the 3-mile limit of North Korea's territorial waters.

Ten months of negotiations finally led to the 22 December 1968 release of Commander Bucher and eighty-one *Pueblo* crew members after the United States issued a statement of apology on 21 December acknowledging that the *Pueblo* "had illegally intruded into [North Korean] territorial waters." Washington also pledged that no U.S. ships would intrude into the territorial waters of North Korea in the future. Although U.S. chief negotiator Major General Gilbert H. Woodward read a statement inserted into the record disavowing the confession before signing the statement prepared by North Koreans, the North Korean government claimed a great moral as well as diplomatic victory. The North Koreans did not return the *Pueblo*.

During 1966–1969, emboldened by America's preoccupation with Vietnam, the North Korean government tested U.S. resolve to defend South Korea by waging what many historians consider a second Korean conflict. During that period in Korea, U.S. casualties numbered 82 killed and 114 wounded. Also, 85 Americans were taken prisoner, including the 82 from the *Pueblo*.

After 1969, when it became clear to the North Koreans that the United States was determined to remain firm in South Korea, the hostile actions diminished.

Q

Libyan military officer and head of state (1970–present). Born the youngest child of a nomadic Bedouin family in the An Nanja community in Fezzan in June 1942, Muammar Qadhafi attended the Sebha preparatory school from 1956 to 1961. He subsequently graduated from the University of Libya in 1963, the same year he entered the Military Academy at Benghazi, where he became part of a cabal of young military officers whose plans included the overthrow of Libya's pro-Western monarchy.

Qadhafi and the secret corps of militant, Pan-Arabist officers seized power in Libya on 1 September 1969, following a bloodless coup that overthrew King Idris. After a brief internal power struggle that consolidated his rule, Qadhafi renamed the country the Libyan Arab Republic and officially ruled as president of the Revolutionary Command Council from 1 January 1970 to 1977. He then switched his title to president of the People's General Congress during 1977–1979. In 1979 he renounced all official titles but remained the unrivaled head of Libya.

Domestically, Qadhafi's reign was based upon Islamic socialism. Loosely following the model of his hero, Egypt's President Gamal Abdel Nasser, Qadhafi promoted the privatization of major corporations, the creation of a social welfare system, and the establishment of state-sponsored education and health care systems. He also outlawed alcohol and gambling. His regime encompassed a dark side, however, including the sometimes violent suppression of dissidents and the sanctioning of state-sponsored assassinations.

In foreign policy, Qadhafi promoted the ideals of both Pan-Africanism and Pan-Arabism. He was a major proponent of the Organization of African Unity (OAU) and supported various anticolonial liberation struggles in

Qadhafi, Muammar (1942–)

Muammar Qadhafi has been the leader of Libya since January 1970 and prime minister since January 1970. For much of that time he was labeled a terrorist by both Western media and governments. (UPI-Bettmann/Corbis)

of civilians.

sub-Saharan Africa, including those in Mozambique and Angola. He also supported Zimbabwe's Robert Mugabe and was a staunch ally of Nelson Mandela and the African National Congress (ANC) in South Africa, stances that annoyed the United States, which had maintained a certain loyalty to European interests in Africa and viewed the South African apartheid regime as a bulwark against communism.

Qadhafi's Middle East policies further alienated him from the West. In many respects, he viewed himself as heir to Nasser's notion of Pan-Arabism, which sought to unify all Arab states into one Arab nation. In 1972 Qadhafi attempted to broker a merger of Libya, Egypt, and Syria into a unified nation, and in 1974 he signed a tentative alliance agreement with Tunisia, although neither scheme worked out. At the same time, he became a strong supporter of the Palestine Liberation Organization (PLO) and is rumored to have been a chief financier of the radical Islamic Black September movement, which most notoriously engineered the killing of Israeli athletes at the 1972 Munich Olympics. He was also linked to other terrorist attacks, including the December 1988 bombing of a Pan Am 747 airline jet over Lockerbie, Scotland.

Qadhafi's ties to Islamic terrorism drove a deep wedge into Libyan-U.S. relations. By the early 1980s, Qadhafi had marginally allied himself with the Soviet Union and had received significant weapons supplies from it. Meanwhile, tensions between Libya and the United States reached fever pitch during the presidency of Ronald Reagan. In 1986 Reagan authorized the U.S. bombing of Tripoli in retaliation for the bombing of a West Berlin discothèque that had been tied directly to Qadhafi. The bombing raid, designed to kill Qadhafi, instead killed his infant daughter and scores of civilians.

The end of the Cold War witnessed an easing of tensions in U.S.-Libyan relations as Qadhafi took a more conciliatory stance toward the West. He publicly apologized for the Lockerbie bombing and offered compensation to victims' families. He also openly condemned the terrorist attacks of 11 September 2001 and has taken a more moderate line in the Palestinian-Israeli conflict. In February 2004, Libya renounced its weapons of mass destruction program, and that June the United States and Libya resumed formal diplomatic relations, after which most economic sanctions against Libya were lifted.

Qian Qichen

(1928–)

Diplomat, vice premier, and foreign minister of the People's Republic of China (PRC). Born in Shanghai, Jiangsu Province, on 5 January 1928, Qian Qichen joined the Chinese Communist Party (CCP) at the age of fourteen, engaging in the student movement and various underground activities. From 1945 until the CCP's victory in the Chinese Civil War in 1949, Qian worked for the leftist newspaper *Dagong Bao* developing his writing and liaison skills.

During 1949–1954, Qian remained in Shanghai as secretary and researcher of the Communist Youth League Committee. In 1954 he went to Moscow, where he studied in the Central Communist Youth League School. Graduating in 1955, he became second secretary in the Chinese ambassadorial delegation to the Soviet Union. In 1962 he became counselor of the Chinese embassy in Moscow. In autumn 1974 he was appointed ambassador to Guinea and Guinea-Bissau.

Qian returned to China in 1977 and assumed the directorship of the Information Department in the Foreign Ministry, a post he held until 1982. During his tenure he led a number of governmental delegations abroad, fostering closer ties with the West after the Sino-American rapprochement and the normalization of relations between the two countries. In 1982 he assumed the post of vice foreign minister and was responsible for restoring Sino-Soviet relations, having led a number of Sino-Soviet summit meetings. In April 1988 he became foreign minister, representing the PRC in the United Nations (UN) while continuing to promote closer Sino-Soviet ties.

In 1991 and 1993, Qian was appointed state councillor and vice premier, respectively, posts he held until 1998. During his tenure in these offices, he helped establish the Hong Kong and Macau Special Administrative Regions, which ensured the successful implementation of Deng Xiaoping's one country, two systems policy. In March 1998 Qian retired from his high-profile positions, taking up membership in the CCP's Central Committee and the Politburo.

Qiao Guanhua

(1913–1983)

Foreign minister of the People's Republic of China (PRC) during 1974–1976. Born in Yancheng, Jiangsu Province, on 28 March 1913, Qiao Guanhua graduated from Germany's University of Tübingen in 1936. After the Sino-Japanese War began in mid-1937, he returned to China and worked in Wuhan, Hubei, as a war correspondent. In 1939 he joined the Chinese Communist Party (CCP), serving in the Propaganda Department. In summer 1949 he left China to head the Hong Kong branch of the New China News Agency.

After the creation of the PRC in October 1949, Qiao became vice chairman of both the Foreign Ministry's Foreign Policy Committee and the Chinese People's Institute of Foreign Affairs, in which capacities he attended the United Nations (UN) Security Council's October 1950 meeting condemning America's Taiwan policy, the 1951–1953 Panmunjom negotiations over the Korean War, and the April 1954 Geneva Conference. These wide-ranging experiences earned him the post of assistant foreign minister in October 1954, then the vice minister position in April 1964, which he held until 1974. Upon the restoration of the PRC's seat in the UN in 1971, he led the Chinese delegation at the annual UN General Assembly meeting until 1976. Another of his major achievements was the drafting of the February 1972 Sino-American Joint Communiqué, which symbolized the Sino-American rapprochement during President Richard M. Nixon's visit to China. In 1974 Qiao became foreign minister but was relieved two years later, branded as a revisionist by the leaders of the ultraleftist Cultural Revolution (1966–1976). He was barred from public life until 1980. In 1982 he was given an advisory post in the Chinese People's Association for Friendship with Foreign Countries. Qiao died on 22 September 1983 in Beijing.

R

Austrian political leader and chancellor (1953–1961). Born on 29 November 1891 in St. Pölten, Lower Austria, Julius Raab studied civil engineering at the Technical University in Vienna. He served in World War I as an engineering officer in the Austro-Hungarian Army. In 1927 he was elected to the National Assembly of the first Austrian Republic, and in 1938 he founded Austria's first trade union congress. At the time of the German annexation of Austria in 1938, he was serving as minister for commerce and transportation. During World War II, he worked in construction.

Raab returned to the National Assembly in 1945 and became a cofounder of the conservative Austrian People's Party (ÖVP). During 1945–1960 he was the party chairman. Elected Austrian chancellor on 12 April 1953, he was able to capitalize on the new leadership in Moscow that followed the death of Soviet leader Josef Stalin a month earlier. Raab readily embraced Moscow's initiative and was the first noncommunist leader to meet officially with Soviet Premier Nikita Khrushchev, negotiating the 1955 Austrian State Treaty that ended the ten-year Allied occupation of Austria and restored its full sovereignty. While very much pro-West, in foreign affairs Raab steered a careful course so as not to alienate the Soviet bloc. His domestic program, based on free enterprise and governmental noninterference, revitalized the economy and kept wage and price increases in check. He resigned because of ill health on 11 April 1961. Raab died in Vienna on 8 January 1964.

Rabin, Yitzhak (1922–1995)

Israeli military hero, minister of labor (1974), minister of defense (1984–1990), and prime minister (1974–1977, 1992–1995). Born on 1 March 1922 in Jerusalem, Yitzhak Rabin graduated from high school in 1940, his last formal education. In 1941 he joined the elite Palmach military force. As a colonel, he commanded a brigade in battles around Jerusalem during the 1948 Israeli War for Independence. Remaining with the army, he was promoted to major general in the Israel Defense Forces (IDF) in December 1954. In December 1964 he was named IDF chief of staff and was promoted to lieutenant general. In June 1967, Arab saber rattling instigated by Egypt's President Gamal Abdel Nasser led Rabin to urge the Israeli government to launch a preemptive military strike against Egypt. Striking first in the Six-Day War, Rabin's IDF achieved a stunning victory, capturing the Sinai Peninsula, the West Bank, and the Golan Heights before a cease-fire was negotiated.

Israeli Prime Minister Yitzhak Rabin, shown here in February 1976. (Alain Dejean/Sygma/Corbis)

Retiring from the IDF as a lieutenant general in January 1968, Rabin served as ambassador to the United States during 1968–1973. In December 1973 he was elected to the Knesset representing the Labor Party and became Prime Minister Golda Meir's minister of labor for a brief time in early 1974. When Meir resigned, Rabin was elected to head of the Labor Party. He became Israeli prime minister on 2 June 1974.

As prime minister, Rabin supported U.S. Secretary of State Henry Kissinger's shuttle diplomacy, which led to military disengagement and reduced tensions between Israel and Egypt in the Sinai. Rabin's government ordered the daring Entebbe Raid in June 1976 to free Jewish hostages in Uganda. A violation of banking laws by his wife led Rabin to resign the prime ministership on 7 April 1977. When Labor lost the national elections that same year, he returned to the Knesset.

In September 1984 a National Unity government was formed with Rabin as defense minister. Rabin oversaw the Israeli military withdrawal from most of Lebanon southward into a security zone and suppressed the 1987 Palestinian Intifada uprising. When that government fell in 1990, Rabin rejoined the Knesset opposition.

Labor's electoral victory in June 1992 made Rabin prime minister once again. In spite of personal reservations,

he agreed to secret peace negotiations with the Palestine Liberation Organization (PLO) in 1993 that led to the signing of the Oslo Accords, beginning a process that would presumably lead to Palestinian self-rule. For his efforts, Rabin won the 1994 Nobel Peace Prize. His willingness to compromise and offer territorial concessions amid continued Palestinian terrorist actions brought him under increasing political attack from hard-line Israelis. On 4 November 1995, Jewish right-wing extremist Yigai Amir assassinated Rabin while he was attending a peace rally in Tel Aviv.

In many ways, the Cold War helped accelerate the civil rights movement in the United States. In the midst of World War II, Gunnar Myrdal noted in his seminal 1944 work *An American Dilemma: The Negro Problem and Modern Democracy* the paradox of fighting for democracy abroad while failing to achieve full democracy at home. In the early Cold War years, President Harry S. Truman did attempt to improve the race issue through the desegregation of the armed forces in 1948 and other civil rights initiatives. Looking abroad, Truman and his advisors hoped to ally with as many countries as possible against the communist bloc. This often meant being friendly to colonial powers, white supremacists in South Africa, and despots in the developing world.

A most striking example of race as a Cold War issue occurred in 1957 in Little Rock, Arkansas. In 1954, the U.S. Supreme Court overturned its 1896 *Plessy v. Ferguson* “separate but equal” ruling that had legalized racial segregation. The 1954 *Brown v. Board of Education* decision ruled that public schools could no longer prohibit black and white children from attending the same school. President Dwight Eisenhower was at best ambivalent about the ruling, advising the nation that change required patience. However, the president was forced to act in 1957 when the Central High School in Little Rock attempted to fulfill the *Brown* ruling by integrating nine black students into the all-white institution. Pandering to the segregationist voters, Arkansas Governor Orval Faubus took actions to prohibit the African American students

Race Relations, United States

One embarrassing situation occurred during the administration of President John F. Kennedy in 1961, when Chad's new ambassador was refused service in a Maryland restaurant.

from entering the school. The nation—and the world—witnessed on television a white mob blocking the students' access to Central High. Faubus and Eisenhower engaged in a showdown that eventually led to the president calling up the National Guard to enforce the court ruling. Eisenhower, in a nationally televised speech on 24 September 1957, justified his action in Cold War terms: "At a time when we face grave situations abroad because of the hatred that communism bears toward a system of government based on human rights, it would be difficult to exaggerate the harm that is being done to the prestige and influence, and indeed to the safety, of our nation and the world." National Guard troops remained in Little Rock for the entire academic year, and the incident served to propel the civil rights movement forward.

At the same time, the anticolonial movement raged on throughout Asia and Africa. The Soviet Union exploited poor race relations in the United States to win support in the developing world. The United States was also trying to win over the newly independent nations while not alienating its Western allies. This led to desegregation in Washington, D.C. One embarrassing situation occurred during the administration of President John F. Kennedy in 1961, when Chad's new ambassador was refused service in a Maryland restaurant. Desegregation was vital for the United States during the Cold War if it wished to solve the American dilemma.

Interestingly, however, some historians have argued that the Cold War was not a war against communism but rather one for the preservation of white supremacy. Labeling anticolonial opponents as communists gave U.S. policymakers a free hand to slow the course against colonialism and, in the words of Gerald Horne, "gave white supremacy a new lease on life." The Council on African Affairs accused the United States of trying to replace European imperialism in Africa, and following the overthrow of Patrice Lumumba in the Congo in 1961, African Americans organized protests in Chicago; Washington, D.C.; and New York. In Africa, as the decades progressed and the civil rights movement achieved great success, it became increasingly difficult for American policymakers to justify their support for colonial Portugal or apartheid-ruled South Africa. In the end, minority white rule in South Africa came to an end, as did Jim Crow in the United States.

Radical Islam may be defined as a militant form of Islamic thought that claims religious validation for a variety of political, military, and paramilitary activities, frequently directed against Israel and the West. A common view in the West, supported to some extent by the popular media, suggests that contemporary terrorism and insurgency proceed from the Islamic notion of jihad, or holy war, articulated in the Koran.

It is certainly true that contemporary Muslim extremists tie their attacks explicitly to jihad and its basis in Islamic tradition. However, such ideas do not represent a continuous, dominant strain in Islamic or Arab thought over the past 1,400 years. While the idea of holy war clearly played a role in the initial Arab conquests of the early Middle Ages, in later medieval conflicts, and in some anticolonial movements of the late nineteenth century, it does not act as the dominant ideological justification for modern Arab unity or for political and military conflict in the period after World War II.

On the contrary, in the twentieth century Arab nationalism in the guise of Baathism or Nasserist Arab socialism served as the primary ideological basis for conflict in the Middle East. Arab political leaders of the mid-twentieth century did not employ the idea of jihad to a great extent, even in their opposition to Israel. The notion of holy war, as it is currently embraced by extremist groups, grew largely in response to a number of late twentieth-century factors: the failure of secular Arab political and military initiatives, the 1979 revolution in Iran, the Soviet invasion of Afghanistan, the Israeli invasion of Lebanon, the end of Soviet support for Arab regimes in the Middle East, the Palestinian Intifada, and the Persian Gulf War.

Radical Islam is sometimes referred to as Islamic fundamentalism or Islamic extremism. Some Muslim writers refer to it as a variant of Islamic revivalism. Radical Islamic beliefs combine an anti-Western political agenda with a set of theological principles. In the mid-twentieth century, radical Islam grew in the Middle East in response to Western imperialism and the spread of Western values in the region. In 1929, Hassan al-Banna, an Egyptian opposed to the growing secularism in the Muslim world, founded the Ikhwan Islamiyya (Muslim Brotherhood). His goal was to transform Egypt into an Islamic state modeled after the ideal days of the Prophet Muhammad and the Companions. The organization began as an Islamic charity but evolved into a more radical group, and in the 1940s it assassinated several prominent Egyptian officials. However, in 1949 al-Banna was killed by one of the Egyptian intelligence services.

At the time of al-Banna's death another Egyptian, Sayyid Qutb, was working toward an education degree at the University of Northern Colorado. He had been sent to the United States in 1948 by the Egyptian government to study the U.S. educational system. However, the more he saw of Western society, the more alienated he became. He returned to Egypt in 1950 and joined the Muslim Brotherhood. Qutb wrote several influential works, including *Social Justice in Islam*, a lengthy commentary on the Koran, and a shorter book, *Ma'alim fi-l-Tariq* (Milestones, or Signposts on the Road). In these he

argued that before the coming of the Prophet Muhammad, the world was in *jahiliyah* (spiritual darkness), a condition dominated by opposition to Allah. For a brief time the Prophet Muhammad and the Companions lived in a pure Islamic society ruled by submission (Islam) to the will of Allah.

According to Qutb, modernity was a time of great danger, as Islam faced a new kind of *jahiliyah*. The new *jahili* societies included the atheistic communists, the corrupted Christian and Jewish societies, Arab nationalist states, and Muslim states that cooperated with the West. All these opponents had to be defeated through jihad for Islam to prevail. Qutb was hanged by Gamal Abdel Nasser's government in 1966, and his fate illustrates the opposition of secular Arab authorities toward Islamic radicalism for much of the twentieth century.

The Muslim Brotherhood and the views of Qutb influenced many radical organizations: the Egyptian Islamic Liberation Movement, the Islamic Group Movement, and, ultimately, the Palestinian group Hamas. It is important to point out that Arab governments largely opposed the growth of Islamic radicalism during the period from World War II to the 1980s. Arab regimes in the mid-twentieth century based their identity and their warfare with Israel primarily in terms of Arab nationalism rather than Islamic unity. Indeed, such regimes, supported by the Soviet Union, often viewed activist Islam

A group of women, members of the Pasdaran-e Inqilab or Iranian Revolutionary Guard Corps, standing in the back of a truck, 18 May 1979. Ayatollah Ruhollah Khomeini established the Pasdaran in May 1979 to help uphold the government's Islamic laws. (Christine Spengler/Sygma/Corbis)

as a threat. Even the Palestine Liberation Organization (PLO) framed its foundational documents in terms of nationalism, Arab socialism, and anti-Zionism. However, this pattern changed in the closing decades of the twentieth century.

In 1979, a theocratic Shiite regime headed by Ayatollah Ruhollah Khomeini took power in Iran and confronted the United States by seizing the U.S. embassy in Tehran and holding its staff hostage. That same year, the Soviet Union invaded the nation of Afghanistan and installed a puppet regime there. Both events would fuel the growth of radical Islamic political activity. The Iranian regime sponsored Islamic fundamentalist political and paramilitary activity against Israel and the West, most particularly the Shiite group Hezbollah, active in Lebanon and Israel.

In Afghanistan, Soviet occupation produced native opposition, creating a generation of mujahideen motivated primarily by radical Islamic ideas and encouraged and supplied by the United States as a counter to Soviet influence. While the Afghani resistance resulted in the withdrawal of the Soviets from the country after nine years of warfare, it also resulted in the establishment of Afghanistan as a haven for radical Islamic activity. Indeed, during the 1980s, thousands of recruits from Arab nations went to Afghanistan to fight the Soviets. Already immersed in Wahhabism, the strict version of Islam prominent in Saudi Arabia, they developed an anti-Western agenda based on the writings of Qutb, among others. One of the Saudi Arabian citizens fighting in Afghanistan, Osama bin Laden, who ultimately went on to found the al-Qaeda organization in 1989.

In the closing decades of the twentieth century, as conventional warfare against Israel fueled by Arab nationalism failed, as receding Soviet power freed former Middle Eastern client states of communist influence and deprived them of military and financial aid, and as the Iranian and Afghani crises produced a generation of anti-Western fighters motivated largely by radical Islam, anti-Israeli and anti-Western activity in the Muslim world adopted a religious character. Such feeling inspired the first Palestinian uprising against Israeli occupation of the West Bank and Gaza, the Intifada, in 1987. Groups such as Hamas played a leading role in the Intifada, as radical Islam came to rival Arab nationalism as the defining ideology behind the struggle against Israel. Such ideas appealed particularly to the powerless and the disenfranchised in Palestinian society. The rhetoric of the PLO is indicative of this change. Whereas once its agenda centered on secular Arab socialism and nationalism, the PLO adopted language of martyrdom and holy war and gave rise to its own radical group, the al-Aqsa Martyr's Brigade. Fundamentalist Islam has remained a potent force in Middle Eastern politics to the present day.

Radio Free Europe and Radio Liberty

U.S. government-sponsored international radio broadcasts transmitted to communist nations and other authoritarian regimes. During the Cold War, Radio Free Europe (RFE) and Radio Liberty (RL) broadcast uncensored news and information to audiences in the Soviet bloc in an attempt to weaken communist control over information and to foster internal opposition. RFE broadcast to Bulgaria, Czechoslovakia, Hungary, Poland, and Romania and, in the 1980s, to Estonia, Latvia, and Lithuania. RL transmitted in Russian and some fifteen other national languages of the Soviet Union.

Unlike other Western broadcasters, RFE and RL concentrated on developments within and about their target countries not covered by state-controlled domestic media. They acted as surrogate home services, reporting on actions of the authorities and relaying views of dissidents and opposition movements. Notwithstanding repeated technical interference (jamming, for example), broadcasts generally reached their intended audiences. Evidence of the impact of the broadcasts on the eventual collapse of the communist regimes has been corroborated in the testimony of leaders such as Czech President Václav Havel after 1989.

RFE and RL were conceived in 1949 by George F. Kennan of the U.S. Department of State and Frank G. Wisner, head of the Central Intelligence Agency (CIA) Office of Policy Coordination, as instruments to utilize Soviet and East European émigrés in support of American foreign policy objectives. Founded as nonprofit corporations ostensibly supported with private funds, RFE and RL were in fact funded by the U.S. government through the CIA until 1972. The first official broadcast took place on 4 July 1950. RFE and RL initially adopted more confrontational editorial policies and used more aggressive language than other Western broadcasters. By the mid-1950s, however, as U.S. foreign policy toward the Soviet bloc became more conciliatory, the networks emphasized the need for liberalization and evolutionary system changes. In so doing, they broadcast news and information about domestic politics and economic issues as well as cultural and historical traditions normally suppressed by commu-

Thubten J. Norbu, the brother of the Dalai Lama, speaks over Radio Free Europe in 1959. (Library of Congress)

nist authorities. Over time, the networks evolved into saturation home services, seeking large audiences by broadcasting almost around the clock and by incorporating programs on Western music, religion, science, sports, youth, and labor issues.

The networks faced the considerable challenge of operating as surrogate home services in information-poor environments. They carefully monitored state-controlled print and electronic media and frequently interviewed travelers and defectors in field bureaus around the world. The networks cultivated ties with Western journalists and other visitors to communist countries and received information from regime opponents, often at great personal risk to the informants, within their target countries. This information was gathered to support broadcasts, but RFE and RL research reports also served many Western observers as their major source of information about the communist bloc.

RFE and RL programs were produced in Munich in the Federal Republic of Germany (FRG, West Germany) and were broadcast via shortwave transmitters operating on multiple frequencies and high power to overcome jamming and other frequency-disruption tactics. The networks enjoyed substantial operational autonomy and were highly decentralized in function. Émigré broadcast service directors with intimate knowledge of their audiences were responsible for most broadcast content, within broad policy guidelines and under American management oversight.

The communist authorities devoted major resources to countering RFE and RL broadcasts. In 1951, Soviet leader Josef Stalin personally ordered the establishment of local and long-distance jamming facilities to block Western broadcasts. Eastern bloc authorities also launched propaganda, diplomatic, and espionage campaigns intended to discredit the broadcasts. In addition, they jailed individuals providing information to either network. Ironically, the same authorities relied on secret transcripts of the broadcasts for information they could not obtain from local media that they themselves controlled.

After 1971, direct CIA involvement in the networks ended, and they were then openly funded by congressional appropriation through the Board for International Broadcasting. The network corporations were merged into a single entity, RFE/RL, Incorporated, in 1976.

The networks established intimate contact with their audiences during the 1970s and 1980s, when new waves of émigrés strengthened broadcast staffs and as dissidents and other regime opponents, emboldened by the Helsinki Final Act (1975), began to challenge the communist system. RFE and RL provided a “megaphone” through which independent figures, denied normal access to local media, could reach millions of their countrymen via uncensored writings. RFE and RL were able to document large audiences and acted as the leading international broadcaster in many target countries. After the Velvet Revolution of 1989, many East European and Russian leaders testified to the importance of RFE and RL broadcasts in ending the Cold War. Operating today from Prague in the Czech Republic, RFE/RL broadcasts to the southern Balkans, most of the former Soviet Union,

Afghanistan, Iran, and Iraq in support of democratic institutions and a transition to democracy.

Rahman, Mujibur (1922–1975)

Founding member and leader of the Awami League, first prime minister (1972–1975), and president (1975) of Bangladesh. Born on 22 March 1922 in Faridpur, India (now Bangladesh), to a middle-class Bengali family, Mujibur Rahman graduated with a degree in political science from Islamia College, Calcutta, in 1947. He then studied at Dhaka University's School of Law but was expelled in 1948 for his support of a university workers' strike. He was an ardent supporter of Bengali nationalism and sought to preserve his people's language and culture, particularly after Indian and Pakistani independence in 1948.

In March 1948 Rahman was arrested for leading a demonstration against Pakistani Governor-General Mohamed Ali Jinnah's attempt to impose Urdu on the Bengali-speaking people of East Pakistan. In June 1949, while still imprisoned, Rahman helped organize the Awami League, a political party dedicated to Bengali nationalism. He was elected several times to the Pakistani national parliament and twice (1954 and 1955) served as a minister in the East Pakistani government. He served as president of the Awami League during 1963–1975.

Arrested and imprisoned many times by the Pakistani government of Muhammad Ayub Khan, Rahman nevertheless fully supported Pakistan in its wars with India. In 1966 he presented his Six-Point Program for building strong relations between East and West Pakistan while establishing greater autonomy for East Pakistan, which would have its own tax system and currency and would also raise its own militia. Ayub Khan had Rahman arrested for destabilizing activity, and tensions between East and West Pakistan increased.

In the December 1970 Pakistani elections, Rahman's Awami League won 160 of the 165 seats allocated to East Pakistan. However, Zulfikar Ali Bhutto, leader of the Pakistan People's Party, and Rahman were unable to compromise to form a coalition government. Pakistani President Agha Mohammad Yahya Khan then attempted to crush political opposition in East Pakistan

with military force. The conflict and resulting refugees produced a new war between Pakistan and India in late 1971.

In January 1972, Rahman became the prime minister of the new state of Bangladesh. In early 1975 he became president of Bangladesh under a new constitution and worked successfully toward reconciliation with Pakistan. On 15 August 1975, however, the Bangladeshi military staged a coup that overthrew the government and resulted in the assassination in Dhaka of Rahman and most of his family.

Prime minister of the Federation of Malaya (1957–1963) and Malaysia (1963–1970). Abdul Rahman was born Abdul Rahman Putra Al-Haj, Prince of Kedah, on 8 February 1903 in Alor Setar, Kedah (then the Malay States). Better known by the honorific title Tunku (Lord), he was considered Malaysia's Bapa Kemerdekaan (Father of Independence). He received his university degree from St. Catherine's College, Cambridge University, in 1925. He claimed that his intense nationalism was motivated by racial discrimination he endured while studying in Britain.

Rahman welcomed World War II as the end of European dominance in Southeast Asia. However, Japanese brutality there shocked him. Rather than push for immediate autonomy, he accepted gradual independence under British rule in the ethnically diverse Federation of Malaya.

In 1949 Rahman became chair of the United Malays National Organization (UMNO) and in 1951 its president. Malaya confronted several secessionist movements, but the greater threat was a communist insurgency. Led predominantly by ethnic Chinese, the insurrection endured from 1948 to 1960. It was better known as the Malayan Emergency. Rahman helped the British fight the insurgency and also forged the anticommunist Alliance Party with Chinese and Indian leaders. In exchange for minority rights, they

supported his campaign for Malay-led independence. This was achieved in August 1957, with Rahman as the first prime minister. He decisively won reelections in 1959, 1964, and 1969.

In 1963 Rahman narrowly averted war with Indonesia over the incorporation of British Sarawak and Singapore into Malaysia. He then handled Singapore's peaceful departure from Malaysia in 1965. He also steered Malaysia to an elected seat on the United Nations (UN) Security Council in 1965 and into the Association of Southeast Asian Nations (ASEAN) in 1967.

Despite these successes, however, many lost faith in Rahman following the 1969 election. Violent race riots quickly shattered political alliances and split parties. Some Malays accused Rahman of favoring minority interests over theirs, and he resigned in 1970. He then ran *The Star* newspaper and headed the Organization of Islamic Conference. Rahman died on 6 December 1990 in Kuala Lumpur.

Rajk, László

(1909–1949)

Hungarian Communist Party politician, minister of the interior (1946–1948), and foreign minister (1948–1949). Born on 8 March 1909 in Székelyudvarhely, László Rajk studied language at the Faculty of Arts of the University of Budapest but was expelled in 1931 for his political activities after he joined the then illegal Hungarian Communist Party. During the Spanish Civil War (1936–1939), he served as party secretary to the Hungarian battalion of the International Brigades. He returned to Hungary in 1941 and became secretary of the Communist Party Central Committee in September 1944. In December 1944, Hungarian Nazi authorities arrested him.

Rajk was released in the spring of 1945 and quickly became involved in politics, acquiring leading positions in the Communist Party. In November 1945 he became deputy general secretary. During March 1946–August 1948 he served as minister of the interior in a coalition government, and in August

1948 he was appointed foreign secretary in the communist government.

Unlike many other Hungarian Communist Party leaders, Rajk was not Moscow-trained and had no special connections there. Politically ambitious and a masterful communicator, he was also an intellectual and was generally popular with the Hungarian people. These attributes were ample cause for Mátyás Rákosi, general secretary of the Communist Party, to view Rajk as his principal rival. On 30 May 1949 the Communist Party leadership ordered Rajk's arrest. With the full support of Moscow, which regarded Rajk as too much the Hungarian nationalist and too independent of the Kremlin's control, he was charged with treason by the People's Tribunal, given an elaborate show trial, and found guilty. Rajk was sentenced to death on 24 September 1949 and was executed on 15 October 1949 in Budapest. In 1955 he was rehabilitated, and his remains were solemnly reburied with state honors on 6 October 1956.

László Rajk, minister of foreign affairs of Hungary, was denounced as a Titoist spy in 1949, tried, and executed. His "crime" was actually being a nationalist who was popular with the people. (Bettmann/Corbis)

General secretary of the Hungarian Communist Party (1945–1956), minister of state and vice prime minister (1945–1952), and Hungarian prime minister (1952–1953). Born on 9 March 1892 in Ada, Hungary (now Serbia), Mátyás Rákosi joined the Communist Party in 1918. During 1918–1925 he undertook various political assignments in Hungary and the Soviet Union, including the secretariat of the Comintern. In 1925 he was imprisoned in Hungary for political activities determined to be unlawful. Upon his release in 1940, he moved to the Soviet Union and then headed the communist émigrés in Moscow during 1941–1944.

In 1945 Rákosi returned to Hungary and was appointed general secretary of the Communist Party. During his service as vice prime minister, beginning in 1949 he introduced a Stalinist-style government in Hungary. After the communist takeover in 1948, Rákosi did everything possible to stay in power, knowing that this depended on maintaining Moscow's support. He was responsible for many illegal trials, executions, and imprisonment of dissidents,

Rákosi, Mátyás
(1892–1971)

while his forced collectivization policies damaged the economy and led to misery among his own people. The 1956 Hungarian Revolution was a response, in part, to his authoritarian rule.

In 1952 Rákosi became prime minister, exercising de facto dictatorial rule and cultivating his own personality cult. Following Soviet dictator Josef Stalin's death in March 1953, Rákosi was summoned to Moscow, where he was found guilty of many illegalities. In June 1953, the new Soviet leadership forced Rákosi to relinquish the premiership to Imre Nagy, although Rákosi retained his position as general secretary of the party. By March 1955, he had regained the support of Moscow and tried to restore a communist dictatorship based on a Stalinist model. After Soviet leader Nikita Khrushchev denounced Stalin's leadership, the leadership of the Hungarian Communist Party relieved Rákosi as general secretary in July 1956. He was then forced to leave Hungary for the Soviet Union, where he remained until his death on 5 February 1971 in Gorkij.

RAND Corporation

Independent, nonprofit think tank founded jointly by the U.S. Army Air Forces and the Douglas Aircraft Company in 1945 to ensure the continuation of technological advancements begun during World War II. Since its foundation, the RAND Corporation (RAND is short for “Research and Development”) has served both the public and private sectors. Although it mostly addressed the defense concerns of the U.S. Air Force during its initial years, it was later expanded to tackle social problems as well. RAND played a significant role in the advancement of technology during the Cold War.

Project RAND, precursor to the RAND Corporation, began in October 1945 as the brainchild of Henry “Hap” Arnold, commanding general of the U.S. Army. He worked in collaboration with a number of influential individuals from both the public and private sectors—including Edward Bowles, Donald Douglas, and Major Generals Lauris Norstad and Curtis LeMay—to establish an institution that could successfully coordinate efforts among the military, government, industry, and academe to promote the development of science and technology.

In March 1946, Project RAND was inaugurated as a division of the Douglas Aircraft Company. RAND reported to the U.S. Army Air Forces' deputy chief of air staff for research and development, which was established in December 1945 and headed by LeMay. The RAND staff grew to include several fields including mathematics, engineering, aerodynamics, physics, chemistry, economics, and psychology. RAND produced its first study in May 1946 and has since produced many volumes of original research.

Project RAND split from Douglas Aircraft in May 1948 and thereafter became the RAND Corporation, a nonpartisan research and design enterprise. Both its goals and purpose are explicitly set forth in its articles of incorporation, which seek "to further and promote scientific, educational and charitable purposes, all for the public welfare and security of the United States."

The exigencies of the Cold War, more than anything else, dictated RAND's research agenda during its first years. Its directors' insistence on cross-fertilization and free inquiry culminated in innovative approaches to defense problems that included systems analysis and game theory. Essential to RAND's innovation was its interdisciplinary approach to problem solving. RAND is also responsible for having created a number of precursors to modern-day technologies that were essential to both the space age and the computer age. These innovations ranged from infrared detection, missile targeting, and reentry technology to video recording, computers, and the Internet.

In the 1960s, RAND began to move beyond defense matters, addressing domestic policy issues as well. This was in part because of a decrease in U.S. Air Force contracts as other research and design organizations emerged. Moreover, the armed forces had learned much about how to conduct their own research from years of collaboration with RAND. Aside from science and technology, RAND began to specialize in education, civil and criminal justice, the environment, population studies, terrorism, and transportation. Despite this shift, however, in the 1990s two-thirds of RAND's research focused on national security issues.

Minister of foreign affairs of the People's Republic of Poland (1956–1968). Born in Lviv on 24 December 1909 into a family of Polish intelligentsia, Adam Rapacki graduated in 1932 from the Main Trade School in Warsaw and

Rapacki, Adam
(1909–1970)

then studied at the Polytechnic Institute in Milan. He was then employed as a scientific worker at the Cooperative Scientific Institute and the Institute of Market Conditions and Prices in Warsaw.

Mobilized for the Polish Army at the beginning of World War II, Rapacki served as an infantry lieutenant until captured by the Germans. He spent the remainder of the war in a German prisoner of war camp. Freed in March 1945, he soon joined the Polish Socialist Party. Upon the establishment of the Polish United Workers' Party (PUWP) in December 1948, he became a member of that party's Political Bureau, a post he held until 1970. During 1947–1969 he was also a deputy in the Sejm (Diet). During 1947–1950 he held the post of minister of navigation, and during 1950–1956 he served as minister of higher education.

In April 1956 Rapacki was appointed minister of foreign affairs. As such, he was regarded as the main architect of Polish foreign policy and enjoyed the trust of Polish First Secretary Władysław Gomułka. Aware of the limitations stemming from Poland's membership in the Warsaw Pact, Rapacki sought to exploit existing opportunities to conduct a more independent foreign policy from that of the Soviet Union while securing Polish interests. Particularly important to him was the so-called German question. Under Rapacki, Polish diplomacy was directed at winning international recognition of the inviolability of Poland's Oder (Odra) and Niesse (Nysa Łużycka) River frontier in the west. He also endeavored to establish diplomatic relations with the Federal Republic of Germany (FRG, West Germany). At the same time, he hoped to forestall West German rearmament.

Rapacki intended to construct a new European security system by creating a nuclear-free zone of the German Democratic Republic (GDR, East Germany), West Germany, Poland, and Czechoslovakia via his 1957 Rapacki Plan, which also sought to create a permanently divided Germany. The plan was endorsed by Moscow mainly for propaganda purposes, but it met stiff opposition from East Germany, West Germany, and the United States and was never enacted.

Moscow saw Poland's refusal to support the Soviet Union in its post-1956 controversy with the People's Republic of China (PRC) as a sign of too much foreign policy independence on the part of the Poles. In fact, during 1956–1970 secret PRC-U.S. talks were held in Warsaw. In 1966 Rapacki mediated talks between the Democratic Republic of Vietnam (DRV, North Vietnam) and the United States. He also tried to cultivate economic relations with capitalist countries, an effort that bore little fruit. In 1968 his policies were vituperatively attacked by the orthodox faction of Polish national-communists. Gomułka defended him, but Rapacki resigned his post in April 1968 (the resignation was formally announced that December). Rapacki died in Warsaw on 10 October 1970.

Proposal announced by Polish Foreign Minister Adam Rapacki at the United Nations (UN) on 2 October 1957 calling for the creation of a nuclear-free zone in the German Democratic Republic (GDR, East Germany), the Federal Republic of Germany (FRG, West Germany), Poland, and Czechoslovakia. The Soviet Union endorsed the plan on 10 December 1957, believing that it would prevent nuclear weapons from being based in West Germany. If implemented, the plan would also allow the Soviet leadership to reduce the costs of stationing troops in Eastern Europe. Finally, eliminating nuclear weapons in Central Europe ostensibly demonstrated Moscow's commitment to reducing international tensions through nuclear nonproliferation.

Ironically, the United States rejected the Rapacki Plan for the same reason, for it would have eliminated the nuclear shield concept from the North Atlantic Treaty Organization's (NATO) defense strategy. Politically, the Rapacki Plan would permanently divide Europe, a concept that President Dwight D. Eisenhower's administration secretly desired but publicly condemned. West German Chancellor Konrad Adenauer also denounced the plan, calling it a "Russian trap" designed to destroy the NATO alliance.

Polish national security interests also influenced Rapacki's initiative. As with the Soviet Union, Polish leaders feared a revival of German military might and refused to believe that NATO could permanently rein in traditional German militarism. Thus, he believed that the division of Germany should be perpetuated and that nuclear weapons should be banned from both Germanies. Nonetheless, Rapacki also believed that the elimination of the German security threat could promote Poland's own commercial and cultural exchanges with Western Europe, especially with West Germany. In addition, the Rapacki Plan might chart a semiautonomous Polish foreign policy, decreasing Polish dependence on Moscow. Lastly, the ongoing Polish–East German rivalry also caused Rapacki to announce his plan. Fearful that East Germany would eclipse Poland within the Warsaw Pact, he recognized that forcing East Germany into a confederation with West Germany would lead to the disintegration of East Germany.

East Germany vehemently opposed the Rapacki Plan, and over the next year the proposal died out as the Western alliance continued to dismiss it out of hand. The failure of the Rapacki Plan was used by Soviet leader Nikita Khrushchev in his Berlin ultimatum of 27 November 1958 in which he

Rapacki Plan (1957)

promised unilateral Soviet recognition of East Germany as a sovereign state, thus setting off a major crisis between East and West.

Reagan, Ronald Wilson

(1911–2004)

U.S. politician and president of the United States (1981–1989). Born on 11 February 1911 in Tampico, Illinois, Ronald Reagan graduated from Eureka College, worked as a sports announcer, and in 1937 won a Hollywood contract with Warner Brothers, eventually appearing in fifty-three movies. As president of the Screen Actors Guild during the late 1940s and early 1950s, the once-liberal Reagan purged alleged communists and veered strongly to the Right. His politics grew increasingly conservative in the late 1950s and early 1960s.

In 1966 the genial Reagan won the first of two terms as the Republican governor of California. During his campaign he supported U.S. intervention in Vietnam and condemned student antiwar protesters. He soon became one of the leading figures of the increasingly powerful Republican Right, supporting deep cuts in taxes and domestic expenditures, high defense budgets, and a strong anticommunist international posture, positions he affirmed while seeking the Republican presidential nomination in 1976 and 1980.

In 1980, when Reagan defeated Democratic incumbent President Jimmy Carter, the United States was suffering from spiraling inflation and high unemployment. In Iran, radical Muslims had overthrown Shah Mohammad Reza Pahlavi in 1979, sending oil prices soaring, and for more than a year held U.S. diplomatic personnel hostage in Tehran. An almost simultaneous Soviet-backed coup in Afghanistan intensified a sense of American impotence, as did communist insurgencies in Central America and Africa. Reagan opposed compromise with communism. Believing firmly in the American way of life and convinced that an American victory in the Cold War was attainable, the ever-optimistic Reagan used blatantly triumphalist, anti-Soviet rhetoric, famously terming the Soviet Union an “evil empire.”

Reagan purposefully engaged the Soviets in an arms race whereby he and his advisors hoped that American technological and economic superiority would strain the Soviet economy. In 1982 and 1983 the president issued directives intended to deny the Soviets Western credits, currency, trade, and technology and to embargo Soviet exports of oil and natural gas to the West. The Reagan administration hiked the defense budget from \$171 billion to \$376 billion between 1981 and 1986, hoping to force the Soviets into bankruptcy and to position the United States better to combat communism around the world. In 1983 Reagan announced that the United States would begin research on an expensive new ballistic missile defense system, the Strategic Defense Initiative (SDI), popularly known as Star Wars, to intercept and destroy incoming nuclear missiles. If successful, this program, which contravened several existing arms control treaties, would have provided the United States with substantial protection against a Soviet nuclear attack, thereby destabilizing the nuclear balance and quite possibly triggering a new arms race.

Breaking with Carter's policies, Reagan also deliberately de-emphasized human rights, consciously supporting dictatorships provided they were pro-American while assailing human rights abuses within the Soviet sphere. Covert operations intensified as the United States offered support to anticommunist forces around the world, providing economic aid to the dissident Polish Solidarity trade union movement and military and economic assistance to antigovernment rebels in Angola, mujahideen guerrillas in Afghanistan, and the anti-Sandinista Contras in Nicaragua. Efforts to overthrow the existing Nicaraguan government included Central Intelligence Agency (CIA) mining of ports and harbors. When Congress responded by passing the Boland Amendment of 1984, forbidding funding for Nicaraguan covert actions, the Reagan administration embroiled itself in an ill-fated secret enterprise to sell arms to Iran—thereby evading its own embargo but, officials suggested, enhancing the political standing of Iranian moderate elements—and using the proceeds to aid the Nicaraguan Contras. Revelations of these illegal activities and his probable complicity in them embarrassed Reagan during his second term.

They did not, however, compromise Reagan's ability to reach unprecedented new understandings with the Soviet Union. Notwithstanding his bellicose rhetoric and a near infatuation with prospective nuclear war according to some Reagan administration officials, in practice Reagan was surprisingly pragmatic and cautious. In potentially difficult guerrilla settings, his administration favored covert operations, preferably undertaken by surrogates such as the Afghan mujahideen or the Nicaraguan Contras, over outright military

Ronald Reagan was president of the United States during 1981–1989. A staunch anticommunist, he carried out the largest peacetime defense buildup in U.S. history and worked to reverse the liberal tradition that had dominated U.S. politics since the Great Depression. (Library of Congress)

intervention. Wars were kept short and easily winnable, as in the small Caribbean island of Grenada in 1983 when American troops liberated the island from Marxist rule. When, almost simultaneously, radical pro-Syrian Druze Muslims bombed the Beirut barracks of an American peacekeeping force in Lebanon, killing 241 American soldiers, the United States quickly withdrew. In 1986, suspected Libyan involvement in terrorist incidents provoked only retaliatory American surgical air strikes on Tripoli.

Despite campaign pledges to the contrary, Reagan did not shun the People's Republic of China (PRC) or restore American relations with the Republic of China (ROC, Taiwan). In 1982 the Reagan administration reached an understanding with China on Taiwan, after which the Chinese gave some support to the Afghan rebels. Sino-American trade increased, and Reagan made a 1984 state visit to Beijing. By 1984, domestic politics suggested that the president moderate his anti-Soviet line. He faced a reelection campaign against a liberal opponent, Walter Mondale, just as his nuclear buildup and the stalemating of inconclusive arms control talks had generated substantial public support in both America and Europe for a nuclear freeze. In September 1984, Reagan proposed combining all major ongoing nuclear weapons talks into one package, and Soviet leaders soon agreed.

Reagan's mellowing coincided with the culmination of long-standing Soviet economic problems. Empire imposed added burdens on the Soviets as military spending rose, diverting funds from domestic programs. Most countries in Eastern Europe still resented Soviet domination. In Poland, the Solidarity movement proved remarkably persistent, undercutting Soviet control. Assertive Soviet policies in Africa and Latin America carried a high price tag too, while the decade-long Afghan intervention embroiled Soviet troops in a costly and unwinnable guerrilla war.

In 1985 the young and energetic Mikhail Gorbachev became the general secretary of the Communist Party of the Soviet Union (CPSU). He immediately sought to address Russia's problems and reform the communist economic and social system, an uphill battle given the immense burdens of the Soviet military. In addition, the costly SDI program that Reagan had recently proposed was likely to demand massive further investment.

American and European leaders were initially wary of Gorbachev's overtures, but even so, he quickly won great popularity. After meeting Gorbachev, Margaret Thatcher, the hard-line British Conservative prime minister whom Reagan had long found to be a political soul mate, urged her colleague to work with the Soviet leader, and Reagan was more willing than many of his advisors to trust Gorbachev. Domestic economic factors may also have impelled Reagan toward rapprochement. Deep tax cuts meant that heavy government budget deficits financed the defense buildup in the 1980s, and in November 1987 an unexpected Wall Street stock market crash suggested that American economic fundamentals might be undesirably weak. Reagan had several summit meetings with Gorbachev, and in 1987 the superpowers signed the Intermediate-Range Nuclear Forces (INF) Treaty, eliminating all medium-range missiles in Europe and imposing strong verification procedures. This marked the beginning of a series of arms reduction agree-

President Ronald Reagan delivers a speech at the Brandenburg Gate in West Berlin on 12 June 1987. During the course of his remarks, Reagan called upon Soviet leader Mikhail Gorbachev to tear down the Berlin Wall. (Ronald Reagan Library)

ments, continued under Reagan's successor George H. W. Bush, and of measures whereby the Soviet Union withdrew from its East European empire and, by 1991, allowed it to collapse. Although Bush's presidency saw the culmination of these developments, it was Reagan who first perceived their potential.

Reagan, the oldest U.S. president in history, left office in 1989. After a decade-long battle with Alzheimer's, he died of pneumonia at his home in Los Angeles, California, on 5 June 2004. Reagan's impressive state funeral in Washington, D.C., paid tribute to him as the American president whose policies effectively helped to end the Cold War on U.S. terms.

Reagan Doctrine

Cornerstone of President Ronald Reagan's foreign policy and a major contributory factor to the administration's greatest scandal, the Iran-Contra Affair. Although best articulated in 1985 by Reagan, the Reagan Doctrine was evident during earlier stages of his presidency. The doctrine proposed U.S. assistance for anticommunist forces who challenged the Soviet Union or its clients. Reagan lauded these freedom fighters and linked their plight to the traditional U.S. mission of promoting self-determination. Policymakers hoped to minimize U.S. casualties and expenses through the use of proxies and small paramilitary units. Soviet leaders perceived the Reagan Doctrine as a signal of a more aggressive prosecution of the Cold War. At best an economic strategy, it carried with it, however, the potential to embroil the United States in civil wars of little relevance to the national interest.

The Central Intelligence Agency (CIA) employed the Reagan Doctrine in such hot spots as Nicaragua, Angola, Afghanistan, Cambodia, and Ethiopia. This policy worked well in Afghanistan, where U.S.-backed mujahideen guerrilla fighters inflicted heavy losses on Soviet forces and the Kremlin experienced a Vietnam-style quagmire of its own. In Angola, the anticommunist rebels became a liability for the Reagan administration as they destroyed U.S. oil facilities and accepted support from South Africa's apartheid regime. Meanwhile, the Angolan government increasingly cooperated with U.S. oil companies and investors.

The Reagan Doctrine received the greatest attention in Central America. The United States helped train and equip a 17,000-man Salvadoran army

to wage a counterinsurgency against a guerrilla force roughly a quarter its size. The slaughtering of political opponents and a rigged election compelled U.S. officials to install a moderate government that ultimately failed to bring peace or democracy to El Salvador.

In Nicaragua, the Reagan White House championed the Contras, who were fighting against the revolutionary socialist Sandinista regime. Reagan likened the Contras to America's "founding fathers" despite reports of atrocities committed in their name. Washington authorized CIA training for Contras and the construction of military bases in neighboring Honduras to facilitate rebel operations. In 1983 the CIA mined Nicaraguan ports and launched clandestine attacks on oil facilities and airports. Congress suspended military aid to the Contras in 1984, which prompted Reagan officials to explore covert avenues of assistance and to solicit private donations.

A preoccupation with applying the Reagan Doctrine to Nicaragua dovetailed with U.S. foreign policy in the Middle East. In 1985, White House officials used Israelis as intermediaries to secretly supply military hardware to the Iranian government in the hope of securing the release of fifteen Americans held hostage in the region. This pipeline operated for fourteen months, during which time a few captives were released and other people were kidnapped. In November 1986 the story of the arms-for-hostages deal broke in the American press. President Reagan was compelled to admit to attempts made to influence those whom he called "moderates" in the Iranian government. The Central American connection emerged three weeks later when U.S. Attorney General Edwin Meese disclosed that the proceeds from the Iranian arms sales had been clandestinely diverted to the Contras in violation of the 1982 Boland Amendment, which had banned any spending for the overthrow of the Sandinista government.

In 1987 Congress held hearings into what the media dubbed the Iran-Contra Affair, with Marine Lieutenant Colonel Oliver North, a National Security Council aide, emerging as the star witness. North vigorously defended the Reagan Doctrine despite having admitted to illegally shredding government documents and misleading Congress. Eleven members of the Reagan administration pled guilty or were convicted of charges stemming from the Iran-Contra Affair. Reagan claimed ignorance of the financial conduit to the Contras. The Reagan Doctrine aimed to avoid another Vietnam but ultimately became associated with the sort of executive branch deception and hubris that had made that war so controversial.

Red Army Faction

The most prominent and persistent of the leftist German terror organizations of the 1970s and 1980s. The Red Army Faction (RAF) was anticapitalist, anti-imperialist, and anti-American (influenced in particular by events in Vietnam). Many of its targets were American or North Atlantic Treaty Organization (NATO) military installations and personnel. It received logistical support from the German Democratic Republic's (GDR, East Germany) secret police (Stasi) and from several Palestinian terrorist groups. The RAF was generally more sophisticated and violent than comparable groups such as the Red Brigades in Italy or the Weathermen in the United States.

The roots of the RAF lay in the student protest movement, factions of which became more radical after the shooting of student Benno Ohnesorg by a Berlin police officer on 2 June 1967. Among those who opted for violence were Andreas Baader, an anarchist drifter, and Gudrun Ensslin, a PhD student. After the 2 April 1968 firebombing of a Frankfurt department store, Baader was arrested and imprisoned. His spectacular liberation on 14 May 1970, during an alleged working session for a social science research project with Ulrike Meinhof, marked the beginning of the RAF as a terrorist organization. One guard was shot and severely wounded, and Meinhof, who had earlier gained some prominence as a journalist, now joined the RAF as an active member. The newly formed group traveled to Jordan in the summer of 1970 to receive military training from the Palestinian al-Fatah terrorist organization.

In April 1971, the RAF published a statement elaborating its concept of an urban guerrilla, which was inspired by Latin American and Italian guerrilla groups. It justified violence as a necessary defense against the alleged brutality of Western, and in particular American, imperialism. Most of the organization's early pamphlets referred to atrocities committed in Vietnam by U.S. troops. In May 1972, the RAF launched its May Offensive, a series of six bomb attacks that included attacks on U.S. military headquarters in Frankfurt and Heidelberg. By June, however, the authorities had rounded up and arrested many of the RAF's leading members, including Baader, Ensslin, Meinhof, and Jan-Carl Raspe. They were later imprisoned in the newly built high-security complex of Stuttgart-Stammheim.

Following legal procedures and a lengthy trial, the leaders were sentenced to life imprisonment in April 1977. Their defense lawyers focused on the conditions of their imprisonment, which included long periods of isolation. While unsuccessful in court, these protests generated considerable sympathy for the RAF among the German radical Left, which also regarded Meinhof's May 1976 suicide as a state-sponsored murder.

The so-called second generation of the RAF aimed at liberating the Baader-Meinhof group and was responsible for the hostage drama at the German embassy in Stockholm in April 1975. Six terrorists stormed the building and demanded the immediate release of the RAF leadership. When the Federal Republic of Germany (FRG, West Germany) declined, the attackers killed two German diplomats and—unintentionally—detonated explosives

that ignited the building. A German-Palestinian plane hijacking that had as one of its demands the release of RAF terrorists ended with even more bloodshed in July 1976 in Entebbe, Uganda. On 5 September 1977 the RAF took hostage Hanns Martin Schleyer, president of the German Employers' Association.

For increased pressure, the Popular Front for the Liberation of Palestine (PFLP) hijacked a German civilian plane in Palma de Mallorca, Spain, on 13 October 1977, also demanding immediate release of the RAF prisoners. West German Chancellor Helmut Schmidt stalled for time but was determined not to negotiate. After four days, the recently created West German antiterror squad GSG-9 stormed the plane at the airport of Mogadishu, Somalia, and rescued the hostages. Upon hearing the news, Baader, Ensslin, and Raspe committed suicide in their prison cells. Schleyer was shot dead by his captors and left in a car trunk near Mulhouse, France.

Most members of the second-generation RAF were arrested, but the terrorism continued. The third-generation RAF again focused on American installations and soldiers, including the attempted murder of NATO Supreme Allied Commander Europe (SACEUR) General Alexander Haig (25 June 1979) and the car-bomb explosion at the U.S. Air Force headquarters in Ramstein (31 August 1981). However, it also hit German politicians and industrialists. During the 1980s, ten RAF members fled to East Germany, where they received new identities. Following their subsequent identification by West German police, the former terrorists were apprehended by the new East German government in June 1990. The last attacks ascribed to the RAF were the murders of bank manager Alfred Herhausen in November 1989 and industrialist and politician Detlev Rohwedder in April 1991 and the bombing of a new high-security prison (Weiterstadt) in March 1993.

In April 1992, the RAF issued a declaration that it was de-escalating its armed struggle. The group disbanded on 20 April 1998. With the end of the Cold War, political support from the radical Left and financial support from East Germany ceased, and the remaining RAF terrorists finally accepted the fact that they had outlived their political relevance.

Red Brigades

Italian leftist terrorist organization begun in 1970. During 1970–1990 the Brigate Rosse (Red Brigades) in Italy mobilized thousands of activists and sympathizers on the Left for what it saw as a struggle against imperialism and capitalist excesses.

The origins of the Red Brigades lay in part in disappointment that the student movements in 1968 and 1969 had failed to produce a revolution. There was also dissatisfaction with the moderation of the Communist Party. Right-wing extremism, which went on the offensive in the summer of 1969, helped produce a terrorist response from the Left. The neofascist groups set out to create an atmosphere of violence that would lead to a military takeover. During 1969–1970, right-wing extremists in Italy were responsible for a hundred or more bombings. In 1970, Renato Curcio and Margherita Cagol, student activists from Trento, founded the Red Brigades to meet what they considered an imminent threat from the Right.

The Red Brigades combined the Italian tradition of resistance to fascism, which its members believed had been left unfinished, with ideas drawn from People's Republic of China's (PRC) leader Mao Zedong and the Viet Cong. In the beginning, the Red Brigades concentrated mainly on sabotage. Soon, however, they turned to violent campaigns against representatives of what they considered to be imperialism, targeting businessmen, right-wing political figures, government officials, and judges. In 1974 the Red Brigades kidnapped Judge Mario Sossi, known for his rightist views. Unable to locate the hideout of the terrorists, the Italian government reluctantly negotiated Sossi's release in exchange for eight prisoners. As soon as Sossi was released, however, the government reneged on its agreement to release the prisoners.

During 1975–1977 the Red Brigades went through a radical phase that included attacks on Fiat automobile plants and the murder of Francesco Coco, the attorney general of Genoa. On 16 March 1978, members of the Red Brigades caused a sensation by kidnapping Aldo Moro, at the time leader of the Christian Democratic Party and a former premier. Periodically, the Red Brigades issued statements declaring that Italy was an integral player in an imperialist coalition led by the United States. They viewed Italy as a good starting point for the revolution to destroy imperialism. Moro wrote letters demanding that the government negotiate his release. The Christian Democratic government of Premier Giulio Andreotti refused to negotiate,

despite intense popular and political pressure. Finally, the Red Brigades murdered Moro on 9 May 1978 and placed his body in the back of a car, which was left on a busy street in Rome.

The government responded to Moro's murder by giving General Carlo Alberto Dall Chiesa unlimited power to wage a relentless campaign against terrorism. The Red Brigades, now into a second generation of activists, responded with thousands of attacks (2,379 in 1978 and 2,513 in 1979). A turning point in the terror campaign came with the 1980 arrest of Patrizio Peci, a Red Brigades leader who gave police information that led to raids on Red Brigades hideouts throughout Italy.

The Red Brigades mounted one more spectacular action, kidnapping U.S. Army Brigadier General James Lee Dozier in December 1981. In this case, Dozier was rescued and his kidnappers arrested. The Red Brigades continued to operate for the balance of the decade. (An offshoot of the Red Brigades claimed responsibility for two murders in 1999 and 2002, and two activists on the run for two decades were arrested in 2004.) Internally, however, the organization split into opposing factions, some of which rejected armed struggle. The Red Brigades, like its counterparts in other countries, tested the commitment of the Italian government to democracy and civil liberties. The government successfully balanced this commitment against the need for severe measures to deal with terrorism.

Seen in the context of the Cold War, the Red Brigades appeared to some observers to be part of an international terrorist movement backed by the Soviet Union. There were connections between the Red Brigades and other terrorist groups, such as the Red Army Faction in Germany. Nevertheless, there was no powerful Euro-terrorist movement capable of mounting a challenge to Western regimes. Each terrorist group pursued its own set of aims, and cooperation was limited and fleeting.

The Red Brigades, now into a second generation of activists, responded with thousands of attacks—2,379 in 1978 and 2,513 in 1979.

Persons displaced from their home countries because of war or other calamities and forced to reside temporarily, and sometimes permanently, in another country usually contiguous to their own. Refugees are common throughout

Refugees

history, but the scale of refugee movement in the twentieth century was unparalleled. The first international effort to deal with refugees occurred in 1921 when the League of Nations created a High Commissioner for Russian refugees in Europe. As the old order crumbled after World War I, the High Commissioner took on responsibility for Armenian and other refugees. In 1933, refugees from Nazi Germany became a concern.

The victorious powers in World War II defined a refugee as a person fleeing his native country out of fear of persecution. The close of the conflict saw the creation of the United Nations Relief and Rehabilitation Administration (UNRRA), which dealt with both displaced persons (DPs) and refugees. The United Nations International Refugee Organization (UNIRO), created in 1946, gave way to the United Nations High Commissioner for Refugees (UNHCR) in 1950. The United Nations Convention Relating to the Status of Refugees, the major legal document of the postwar refugee protection system, was formally enacted in 1951. Fifty years later, the UNHCR had an operating budget of more than \$1 billion to spend on the millions of refugees it serviced.

Refugees usually live in impermanent, makeshift camps, for months if not years. At the end of 1945 there were some 50 million DPs, of whom 1.5 million were refugees. In the year 2000, refugees totaled more than 20 million.

Frightened and alone, a little girl sits on a battered suitcase as she watches for her lost mother, November 1956. The child became separated from her parents in the escape across the Austro-Hungarian border following the Soviet intervention in Hungary. (Bettmann/Corbis)

Ninety to 95 percent of DPs remain in their country of origin, usually in a protected sanctuary, while foreign countries accommodate the remainder. Refugee populations can be quite large. The 1956 Hungarian Revolution created more than 200,000 refugees out of a population of 10 million. Although ill-equipped to handle the influx, Austria bore the brunt of the burden until other European nations and the United Nations (UN) could mobilize resources. France took in 13,000, and Britain 20,000, but most Hungarian refugees wanted to live in the United States. The U.S. government accepted 80,000 Hungarians. Canada set no limit and soon became the second-choice destination. Toronto soon possessed the third-largest Hungarian population of any city in the world.

World War II generated millions of DPs, some of whom refused to return to now-communist countries. The UNIRO was responsible for repatriation, resettlement, and operating refugee camps. The organization resettled 1.3 million refugees during 1947–1950. Nations receiving these refugees included the United States, Australia, Canada, and Israel. In 1950, the UNHCR was created. With a small budget and a restricted mandate, the UNHCR was largely stymied by the U.S. decision to set its own policy on refugees.

The United States initially sought to ease the burden on European nations due to refugee influxes. As part of the reconstruction of war-battered Europe, the United States

provided humanitarian assistance and absorbed a share of the refugees. The U.S. Displaced Persons Act of 1948 authorized the immigration of 205,000 DPs and 17,000 orphans, but the entrants were charged against the immigration quotas of the affected, mostly East European, nations. Various refugee laws enacted during 1945–1965 allowed more than 700,000 refugees into the United States, and American foreign aid helped European states with the costs of further refugee settlements. These actions were undoubtedly powerful propaganda tools for the West against communist regimes.

Meanwhile, in 1951, the UN Convention Relating to the Status of Refugees further defined a refugee as one who “owing to a well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group or political opinion, is outside of the country of his nationality.”

Cold War–era refugees fled from problems other than simply communism, however. Because different regions created disparate conditions for refugees, regional conventions were generated. The 1969 Convention on Refugee Problems in Africa, established by the Organization of African Unity (OAU), and the 1984 Cartagena Declaration in Central America were two such examples. Both incorporated human rights violations as causes for refugee situations. Most Western nations held to the narrower UN definition, however.

By 1960, all West European nations except Spain had ratified the UN Convention Relating to the Status of Refugees. The United States declined to participate, however, as its policies for wartime refugees covered all aspects of the convention. The United States continued to deal with refugee crises on an ad hoc basis through legislation such as the 1953 Refugee Relief Act, the 1957 Refugee-Escapee Act, and the 1958 Hungarian Refugee Act. It is estimated that a quarter of a million refugees took advantage of these laws.

The 1956 Hungarian Revolution generated a refugee crisis in Austria and Germany, and the UNHCR received additional funding for camps and resettlement. Because UNHCR management of the crisis was evenhanded and efficient, both the Western and communist blocs approved of its actions, enhancing the future viability of the organization. The UNHCR expanded from its initial mission of handling postwar refugees when it became the UN’s general refugee agency. After the Hungarian Revolution, refugee-oriented nongovernmental organizations (NGOs), such as the American Friends Committee, also began supplementing the UN effort.

The U.S. government, however, persisted in defining a refugee as an anticommunist. For example, the 1957 Refugee-Escapee Act defined a refugee as a person in flight from communism or Middle Eastern countries. The 1959 Cuban Revolution sent large numbers of refugees directly to America. Initially, the United States defined Cubans as temporary refugees until the 1961 Bay of Pigs failure indicated that the communist government might last for a long time. The U.S. government also came to see the propaganda advantage of sheltering refugees from Cuban leader Fidel Castro’s communism. The United States assumed that domestic costs to local governments, such as those in Florida, were secondary and temporary because these refugees were considered to be Cuba’s best and brightest.

The U.S. Immigration and Nationality Act of 1965 continued the traditional American practice of assisting refugees but on its own terms rather than those of the UN. Although the United States remained mostly outside of the international refugee system, it incorporated refugees into its regular immigration process. Refugees were the seventh preference and received 17,000 annual immigration slots, or 7 percent of the total. The definition remained restrictive and reflective of America's anticommunist foreign policy. Refugees were persons escaping communism or specified countries in the Middle East. By 1965, forty-six nations adhered to the UN Refugee Convention, including all Western countries except Canada and the United States.

In the 1960s, NGOs such as the Lutheran Immigration Service, the American Friends Service Committee, and the National Catholic Welfare Conference became increasingly vocal on behalf of immigration reform and refugee protection. In 1967 a protocol to the UN Refugee Convention applied the 1951 agreement to a broader geographical area and eliminated the time restriction. This change was necessary because before that time,

most Western nations used quotas and accepted refugees from communist nations exclusively. Yet decolonization and civil wars generated increasing refugee flows in Africa, South America, and Asia. Because the UNHCR had been dealing with these crises, the change simply reflected reality. In 1968, President Lyndon Johnson, under pressure for his Vietnam policy, signed the Refugee Convention, which the Senate quickly ratified. There was no enabling legislation, however, so the 1965 act and definition remained in effect for another decade.

After the communist victory in Vietnam in April 1975, hundreds of thousands of Vietnamese, Cambodians, and Laotians fled to Australia, Thailand, Indonesia, and Malaysia. The UNHCR and NGOs helped, but the burden was too great for the host nations. A majority of Americans opposed Indochinese immigration. The Citizens' Commission on Indochinese Refugees, a collection of NGOs, worked with the U.S. State Department to assist in the camps and in relocation efforts. Congressional acts of 1977 and 1978 authorized 300,000 refugees, above the Category Seven (refugees) limit. Australia, Canada, and Japan also assisted in accepting refugees and financing refugee camps, but the United States assumed the major burden.

By 1980, the U.S. Congress was dissatisfied with the refugee resettlement process, especially extensive executive branch control, so it enacted the Refugee Act of 1980, which raised the ceiling, eliminated the charging of refugees against the annual quotas, and defined refugees in accordance with the UN definition. The act also set up streamlined administrative procedures for would-be

A Vietnamese refugee, with his belongings secured between his teeth, climbs a cargo net to the deck of the U.S. combat store ship *White Plains* on 30 July 1979 in the South China Sea. Following the fall of Saigon in 1975, thousands of Vietnamese fled political persecution and economic hardship. Many of the small wooden craft used by the refugees either capsized or were sunk by pirates. (National Archives and Records Administration)

refugees, established social service agencies for them, and gave the president authority to set and adjust annual refugee limits.

With the ending of the Cold War, the refugee process became less discriminatory. Asylum seekers came from the Middle East, the Balkans, and Africa. The primary beneficiaries of the legislation were Iraqis, Somalis, Bosnians, and East Europeans. Despite the change, the United States continued to violate international norms by granting asylum to refugees from communist Nicaragua and Cuba while, at the same time, making asylum more difficult for refugees from El Salvador and Guatemala, whose governments President Ronald Reagan's administration had supported. Haitians were denied entry to the United States and sometimes due process because they were not fleeing from political repression but were merely seeking to escape economic hardship. Local municipalities did not want them, so the U.S. Coast Guard began interdicting Haitian vessels at sea and returning them without inquiry or due process. The American Civil Liberties Union, Amnesty International, the Haitian Refugee Center, and others protested and filed lawsuits. Presidents George H. W. Bush and Bill Clinton continued the interdiction policy, and a 1992 U.S. Supreme Court ruling affirmed the contention by the executive branch that refugees in international waters had no legal rights.

After the Cold War, in the waning years of the twentieth century, formerly hospitable governments facing internal immigrant and economic problems began tightening their borders to control refugees. The conflicting needs to protect refugees and to control immigrants became more evident, leading some to call the 1951 Refugee Convention outdated if not obsolete. The 1996 Illegal Immigration Reform and Immigrant Responsibility Act (IIRIRA) dealt with asylum seekers because of congressional belief that political asylum allowed otherwise inadmissible immigrants to sneak through the U.S. system. The act established a rigid administrative process and allowed detention pending adjudication by immigration officers rather than immigration judges. The Lawyers Committee for Human Rights, the U.S. Committee for Refugees, Amnesty International, and the Cato Institute all decried the violation of international agreements.

In 2000, the UNHCR began Global Consultations on the Refugee Convention. The UNHCR sought an international recommitment to the 1951 convention and a reworking of its coverage to include those refugees outside the old convention. Nations and international organizations began working to determine and deal with the internal conditions that consistently caused refugee movements rather than simply reacting to each refugee crisis. The European Union established a High Level Working Group on Asylum and Migration (HLWG), which attempted to move refugee policy beyond border controls to ameliorating economic and political conditions in the country of origin. By 2001, one in thirty-five people in the world was a migrant, and yet most talks on migration were either bilateral or among a handful of states. In 2001, the Swiss government implemented the Berne Initiative as a forum for all states to meet annually and discuss migration issues. Its goal was to establish communications and discussions between sending and receiving nations

to better manage refugee flows. Also in 2001, the UNHCR and the International Organization for Migration established an Action Group on Asylum and Migration, and in 2003 the Geneva Migration Group came into being. Nonetheless, refugee crises persisted despite all the conferences and reports.

Refuseniks

Unofficial term for Soviet citizens to whom the Soviet Union denied permission to emigrate. The most famous refuseniks included Andrei Sakharov, Yelena Bonner, and Anatoly Sharansky. Refuseniks were often harassed after applying for an emigration visa. Although many Volga Germans, Armenians, Evangelical Christians, Roman Catholics, and other ethnic and religious minorities tried to escape persecution or sought a better life abroad, a great many of the refuseniks were Jewish.

Except for a brief time in the mid-1950s, Soviet Jews were not allowed to practice their religion and faced pervasive anti-Semitism. During the Cold War, especially after Israel emerged as a Western ally and the specter of Zionism raised fears of internal destabilization, Soviet Jews were presumed to be traitors or security risks, and they were treated accordingly. In the 1960s, especially in the period following the 1967 Six-Day War, thousands of Jews, secular as well as religious, requested visas to leave the country.

By so doing, however, Soviet Jews thereby maneuvered themselves even more firmly into the position of outcasts. Some were allowed to leave, but most were refused permission and had to wait for years for exit visas. Entire families had to quit their jobs and were subsequently prosecuted for being "parasites" (a Soviet classification for unemployed persons), and their children were not allowed access to education. Many were arrested, sent to

labor camps, or detained for being “insane.” Frequently, the reason given for the denial of emigration visas was “state security.”

Jews worldwide and sympathetic nations such as the United States and the Netherlands (which had taken over consular matters for Israel during 1967–1991) protested against these violations of basic human rights. Sharan-sky, especially, became a worldwide symbol of Soviet repression. Despite world pressure and strong support for the refuseniks, during 1960–1989 only 320,000 Jews managed to leave the Soviet Union. Roughly 125,000 of them went to Israel. The number of Soviet émigrés to Israel dwindled in the 1980s, however.

The refuseniks distinguished themselves from dissidents and human rights activists, who rose to prominence after the 1975 Helsinki Final Act. Refuseniks did not advocate changes in the Soviet system but instead pleaded for their right to leave the country. Sometimes refuseniks and dissident groups overlapped. Anatoly and Avital Sharansky belonged both to the refuseniks and to the Moscow Helsinki human rights group.

In 1987, Soviet leader Mikhail Gorbachev permitted mass Jewish emigration. This, however, also caused problems. The United States limited the number of immigrants it would accept. Consequently, Israel had to accept an estimated 1 million Soviet Jews. Because Jewish identity in Russia was not determined according to Jewish tradition, anyone who claimed that he or she was a Jew received an identity card indicating Jewish nationality. Some emigrating Soviet Jews thus were actually impostors or criminals who sought to exploit their newfound freedoms. After 1990, Soviet Jewish immigrants continued to pour into Israel at a rate of 1,400 per week. Integrating them into Israeli society and assisting Jews who wanted to remain in Russia therefore became a main focus of the Israeli government.

For the duration of the Cold War, few Americans were more staunchly anti-communist than members of the so-called Religious Right. Grounded in atheism, communism was anathema to conservative Christians, and they vigorously supported policies aimed at curbing the influence of the Soviet

**Religious Right,
United States**

The evangelical Reverend Billy Graham served as a religious advisor to many American presidents. (Library of Congress)

Union and other communist regimes. At the height of the Cold War, numerous individuals and organizations associated with the Religious Right went even further, urging American policymakers to strike a death blow to so-called godless communism by mounting a preemptory military strike against the Soviet Union. Although this advice went unheeded, the Religious Right steadily gained influence in the United States throughout the Cold War, its arguments moving from the fringes of foreign policy debates into the forefront during Ronald Reagan's presidency.

Even in the early years of the Cold War, conservative Christians such as Billy James Hargis took a harder line than most mainstream American anticommunists. Hargis, a fiery fundamentalist preacher, campaigned tirelessly against communism in the 1950s and 1960s, using his *Christian Crusade* as a platform to argue that the United States had to serve as a bulwark for Christianity against the godless doctrines emanating from Moscow. In one memorable effort to combat communism, Hargis masterminded the Bible Balloon Project, in which tens of thousands of balloons bearing Bibles and religious tracts were released from the Federal Republic of Germany (FRG, West Germany) and directed toward Eastern Europe.

Reverend Billy Graham, perhaps the most prominent and well-recognized conservative Christian of his era, loathed communism as well, denouncing it in a 1950 speech as both anti-God and anti-American. As with many members of the Religious Right, Graham viewed the struggle between Christianity and communism in apocalyptic terms, and he repeatedly used his pulpit to urge American leaders to be firm in their resolve against Moscow.

Although the Religious Right tends to be associated with Protestant churches, the Roman Catholic Church also played a role in the politics of anticommunism. Pope Pius XII was rabidly anticommunist, and the Catholic Church openly supported the anticommunist antics of Senator Joseph R. McCarthy, himself a conservative Roman Catholic.

Believing that communism had to be obliterated and not simply contained, members of the Religious Right and other ultraconservatives rallied around Republican Barry Goldwater in the 1964 presidential election. Goldwater spectacularly failed to convince the American electorate that the country needed to adopt a more heavy-handed approach toward the Soviets, but his campaign energized conservative Christians and introduced them to Reagan, perhaps their most important political patron. Throughout his political career, Reagan addressed domestic and foreign policy issues with often simplistic and moralistic approaches that resonated with conservative Christians. After he gained the presidency in 1980, members of the Religious Right generally applauded his willingness to confront communism. Like Reagan,

they believed that the Soviet Union was not simply a rival state but rather an evil empire bent on world domination and the eradication of Christianity.

Conservative Christians saw one of their own—the Pentecostal minister and broadcaster Pat Robertson—make a bid for the presidency in 1988. Articulating the views of many evangelicals, Robertson interpreted world events through the prism of biblical prophecy (particularly the passages in the Book of Revelation that foretell Armageddon). Even as the power of the Soviet Union waned, Robertson and like-minded members of the Religious Right issued apocalyptic warnings that Christendom was under siege by communism, the very same arguments made by their ideological forebears at the dawn of the Cold War.

Austrian socialist theoretician, politician, author of the First Austrian Republic's constitution, and president of the Second Austrian Republic (1945–1950). Born in Unter-Tannowitz in Moravia (present-day Doini Dunajovice in the Czech Republic), Karl Renner earned a law degree at the University of Vienna in 1898 and, along with Otto Bauer, formulated the Austro-Marxist school of thought in his many writings. In 1907, Renner was elected to parliament as a representative of the Austrian Social-Democratic Party (SPÖ). He quickly rose to prominence as a theorist and practitioner of Austrian socialism.

When the Austro-Hungarian Empire collapsed in 1918, Renner emerged as the leader of the interim state chancellery and led the Austrian delegation to the Paris Peace Conference. As head of the Austrian government until June 1920, he was largely responsible for the basic outline of the constitution of the Austrian Republic. He served in parliament until it was dissolved in 1934, which included a term as president of parliament from 1931 to 1933. He was one of the most prominent advocates of Anschluss (union with Germany) in 1938.

In April 1945, Red Army forces entering Austria found Renner and brought him to Vienna to form a provisional government. Fearing that he was a Soviet puppet, the Western Allies refused to recognize the regime. Renner, however, constructed a cleverly balanced cabinet that won Western support.

Renner, Karl
(1870–1950)

The three major political parties—the SPÖ, the Austrian Communists (KPÖ), and the conservative People’s Party (ÖVP)—were represented, but each minister worked with two undersecretaries from the other parties. This along with Renner’s habit of not allowing food or drink in meetings until a consensus was reached helped ensure political balance in postwar Austria.

Renner was chosen as the first president of the Second Republic of Austria following the elections of October 1945. He continued in office until his death in Vienna on 31 December 1950.

Republic of Korea– United States Mutual Defense Treaty (1953)

Defense treaty between the Republic of Korea (ROK, South Korea) and the United States, signed in Washington, D.C., on 1 October 1953 and entered into force on 17 November 1954. Current security arrangements between the two nations continue to be based upon the Republic of Korea–United States Mutual Defense Treaty, which was created in response to the strong demands of South Korean President Syngman Rhee for an American commitment to his nation’s defense after the Korean War (1950–1953).

Consisting of six articles, the treaty affirmed that each signatory would regard an armed attack on the other in the Pacific area as “dangerous to its own peace and safety and declare that it would act to meet the common danger in accordance with its constitutional processes.” With this defense treaty, the United States assumed responsibility for defending the political and territorial integrity of South Korea. Backed by the continued presence of U.S. forces in South Korea and the stark reality of life along the demilitarized zone on the Korean Peninsula’s 38th Parallel, the wisdom of the treaty was initially unquestioned in South Korea and the United States.

Since the late 1990s, however, South Koreans have increasingly criticized the treaty because it provides the legal foundation for U.S. bases and the sta-

tioning of U.S. forces in South Korea. As South Koreans' fear of military attack from the Democratic People's Republic of Korea (DPRK, North Korea) declined, many South Koreans questioned the structure of the South Korean–U.S. military alliance.

Federal Republic of Germany (FRG, West Germany) politician and mayor of Berlin. Born in Apenrade, Germany, on 29 July 1889, Ernst Reuter studied philology, geography, and history at the universities of Marburg, Munich, and Münster during 1907–1912. He joined the Social Democratic Party (SPD) in 1912 but turned to communism in 1918, joining the new German Communist Party (KPD). Because he criticized the dependence of the KPD on the Soviet Union, he was expelled from the KPD in 1922 and returned to the SPD.

During the 1920s Reuter was a member of the Berlin municipal council, becoming councilor for traffic in 1926. He became mayor of Magdeburg in 1931 and entered the Reichstag in July 1932. The Nazi regime stripped him of his office and imprisoned him during 1933–1934. After his release, he fled first to Great Britain and then to Turkey.

In November 1946, Reuter returned to Berlin and was elected councilor for traffic one month later. He soon proved to be a staunch opponent of the merging of the SPD with the KPD. Therefore, when a clear majority elected him mayor of Berlin in June 1947, the Soviet military administration refused to recognize the vote. Only in December 1948, after the municipal administration had been divided into western and eastern zones, did Reuter become the first mayor of West Berlin. During the Berlin Blockade (1948–1949), Reuter, a charismatic speaker, became a symbol of the city's will to resist Soviet and GDR, East German pressure.

Reuter's famous appeal, "People of the world, look on this city," made him well known in all of Germany and abroad. A member of the Parliamentary Council and of the Bundestag during 1949–1953, he tried to promote

Reuter, Ernst
(1889–1953)

closer ties between West Berlin and the Federal Republic of Germany (FRG, West Germany). His last years in office were marked by a growing reputation for honesty and political courage but were somewhat overshadowed by internal struggles in the Berlin SPD, which resulted in its electoral defeat in December 1950. Thanks to his high popularity, however, he remained in office. Reuter died in West Berlin on 29 September 1953.

Revolt of the Admirals (1949)

Episode in the late 1940s involving an acrimonious debate over U.S. defense priorities in which navy leaders sharply disagreed with President Harry S. Truman's allocation of financial resources. The determination of U.S. Navy leaders to fight for their service came to be known as the Revolt of the Admirals. Its leaders were Secretary of the Navy John L. Sullivan and Chief of Naval Operations Admiral Louis E. Denfield.

The revolt had been simmering for some time, as navy leaders believed that their service was being subordinated to both the U.S. Army and the fledgling U.S. Air Force, which was created in 1947. Part of the debate centered on President Truman's plan for unification of the armed forces that would place all the armed services under the new Department of Defense. It also concerned the continuing post–World War II defense drawdown and resulting shortage of funds for new weapons programs.

In the reorganization of the armed forces, army and air force leaders would have preferred to do away with the navy altogether. At the least the army sought to absorb the U.S. Marine Corps (USMC), while the air force wanted to take over naval aviation. The navy did keep its aviation, and the USMC's independence was preserved. However, navy suspicions were nevertheless heightened.

Of great concern to navy leaders was the priority assigned by the Truman administration to the army and air force in terms of funding. Truman questioned spending considerable sums on new ships that might easily be destroyed by atomic weapons. The air force insisted that priority go to strategic bombing and especially the Convair B-36 Peacemaker bomber. The B-36,

The keel for the U.S. aircraft carrier *United States*, 18 April 1949. (U.S. Navy)

the world's first intercontinental bomber and the U.S. Air Force's largest aircraft (popularly called the Aluminum Overcast) entered service in 1948.

Navy leaders sharply disagreed with the air force preoccupation with nuclear war. They believed that limited war was the most likely scenario in the nuclear age. The admirals also insisted that World War II in the Pacific had amply demonstrated the ability of carrier task forces to project force over great distances. The navy called for a new generation of supercarriers with supporting battle groups. These carriers were specifically designed to take the aircraft necessary to carry the multiton nuclear bombs of the period.

Secretary of Defense James V. Forrestal agreed with navy leaders and approved construction of the first supercarrier, the 65,000-ton flush-deck *United States* (CVA-58). Forrestal retired for health reasons at the end of March 1949, however. His replacement, Louis A. Johnson, wanted the air force to have a monopoly on strategic nuclear weapons and toward that end would order additional B-36 bombers. Johnson was also determined to cap defense expenditures, and he believed that the place to make large cuts was in naval programs.

Less than a month after taking office, on 23 April Johnson canceled construction of the *United States*, the keel of which had already been laid. Sullivan resigned in protest. Another Johnson decision, that USMC air assets would be transferred to the air force, was rescinded, but only following sharp congressional opposition.

Johnson promptly replaced Sullivan as secretary of the navy with a personal friend, Francis Matthews, known derisively in the navy as the “row-boat secretary” because of his complete lack of naval experience. Leading officers were outraged, and a research group, Op-23, headed by Captain Arleigh A. Burke, began assembling data critical of the B-36. An anonymous document (later shown to have been written by a civilian assistant, later fired, in the office of the secretary of the navy) then circulated, denigrating the B-36 and characterizing it as a “billion dollar blunder.” The document also charged that Johnson had a personal financial interest in B-36 construction.

Subsequent hearings by the House Armed Services Committee found no evidence that Johnson had any financial interest in B-36 procurement. The committee also held that one service should not question the weapons of another and thus called into question testimony by the army and air force chiefs supporting Johnson’s decision to cancel the *United States*. The committee also criticized the “summary manner” in which Johnson had made his decision, without proper consultation. In addition, the committee condemned the firing of Denfield, whom Johnson had sacked following his congressional testimony.

Gradually the matter died down, especially with the beginning of the Korean War. The onset of that conflict in June 1950 reinforced the important role played by aircraft carriers in the projection of U.S. military power. Under fire from all sides, especially given the lack of preparedness of the U.S. military to fight in Korea, Johnson resigned in September 1950. The Revolt of the Admirals did serve one positive function. It opened national debate on the role of nuclear weapons in the U.S. military establishment. Only after considerable wrangling was a consensus reached that multiple nuclear options would be the best response to the threat posed by the Soviet Union.

Summit meeting held between U.S. President Ronald Reagan and Soviet leader Mikhail Gorbachev in Reykjavík, Iceland, on 11–12 October 1986. The summit marked a failed U.S.-Soviet effort to produce a comprehensive agreement on strategic arms limitations.

Gorbachev, responding to the Reagan administration's intention to abandon Strategic Arms Limitation Treaty (SALT II) and the Anti-Ballistic Missile (ABM) Treaty, offered a series of proposals in early 1986 to jump-start the stalled Intermediate-Range Nuclear Forces (INF) talks, Strategic Arms Reduction Talks (START), and space defense negotiations. Gorbachev called for the elimination of all nuclear weapons, in three stages, over the ensuing fifteen years. He also urged the withdrawal of all U.S. and Soviet intermediate-range missiles in Europe, thus supporting Reagan's earlier zero-option proposal. Gorbachev further proposed major cuts in conventional forces and pushed for a comprehensive ban on all nuclear testing. Moscow had thus seized the initiative in U.S.-Soviet arms talks.

Gorbachev's proposals compelled the Reagan administration to push for another summit meeting. Gorbachev, despite an agreement at Geneva to visit the United States, now refused to go unless there was some progress in arms talks. Eventually he dropped his demand and agreed to meet with Reagan in Reykjavík for preliminary talks.

Although American officials saw Reykjavík as a preparatory meeting for a Washington summit, Gorbachev arrived at the summit with specific proposals, calling for a 50 percent reduction in all strategic arms, the elimination of all intermediate-range missiles from Europe, a total test ban, and a mutual agreement to abide by the 1972 ABM Treaty for another decade. The Americans replied with an offer to abolish all strategic missiles over the next decade. Not to be outdone, Gorbachev pushed a plan to eliminate all nuclear weapons, not just missiles, by 1996. Negotiations collapsed when Reagan refused to confine his Strategic Defense Initiative (SDI) to laboratory testing. The two sides blamed each other for the failure to reach an agreement.

Nevertheless, Reykjavík produced several immediate breakthroughs in U.S.-Soviet arms negotiations. Both Gorbachev and Reagan returned home convinced of a mutually sincere interest in peacefully ending the nuclear standoff. Recognizing that the Soviet Union could not afford to continue the arms race, Gorbachev ordered a major review of U.S.-Soviet relations, causing the Soviets to disconnect INF negotiations from SDI although not SDI from START negotiations. Greater emphasis would now be placed on political accords rather than military power to ensure Soviet security. This change paved the way for the negotiation of the 1987 INF Treaty, which eliminated medium- and short-range missiles. This marked the first time that the two powers had agreed to eliminate an entire class of nuclear weapons. At the same time, both sides worked out a provisional agreement on strategic defense in which they pledged not to withdraw from the ABM Treaty.

Reza Pahlavi, Mohammad (1919–1980)

Mohammad Reza Pahlavi, shah of Iran, shown here on 16 November 1977 preparing to depart after a visit to the United States. (U.S. Department of Defense)

Authoritarian ruler of Iran (1941–1979). Born in Tehran on 26 October 1919, Mohammad Reza Pahlavi was the son of Reza Pahlavi, shah of Iran during 1926–1941. The younger Reza Pahlavi attended L'Institut Le Rosey (an elite Swiss boarding school) and then Iran's Military College at Tehran. During World War II, the British and Soviets forced the elder shah to abdicate because of his pro-German sympathies, making his son shah.

Following the war, Iran was politically unstable, and the shah proved to be highly unpopular. His pro-Western orientation, lavish lifestyle, and efforts to Westernize Iran did not sit well with conservatives and Muslim clergy. In addition, his authoritarian tendencies soon came into conflict with Iran's nationalist factions, the most powerful of which was headed by Mohammed Mossadegh, who became prime minister in 1951. In early 1953, after a power struggle with Mossadegh, the shah was compelled to leave Iran, but he soon returned to power with the support of the American Central Intelligence Agency (CIA) and Britain's MI6 intelligence agency. The shah ousted Mossadegh in a coup and ordered his arrest in August 1953.

The shah subsequently embarked upon the main project of his reign, the creation of a large, technologically advanced military. While his domestic policies did create economic growth—albeit unevenly distributed—he also created a ruthless secret police force (SAVAK) that quashed all opposition. The shah aggressively lobbied the Americans for military assistance and matériel, often citing the importance of Iran as a Cold War ally, specifically as a member of the Baghdad Pact and the Central Treaty Organization (CENTO). The United States was reluctant, however, to grant his request for large weapons purchases because of his heavy-handed rule. Successive American administra-

tions tried to convince the shah to implement internal reforms, and to that end in the early 1960s the shah instituted the so-called White Revolution, which emphasized land reform and expanded suffrage.

Beginning in 1970, President Richard Nixon's administration, in a major policy change, permitted huge weapons sales to Iran. These sales continued until Jimmy Carter became president and scaled back arms sales because of the shah's human rights record. Under increasing internal and external pressure to relax his police state, the shah was forced to flee Iran on 16 January 1979. Following his departure the monarchy was abolished, and Iran became an Islamic theocracy led by the Ayatollah Ruhollah Khomeini. The shah died of cancer on 27 July 1980 in Cairo, Egypt.

Ardent anticommunist Korean nationalist and first president of the Republic of Korea (ROK, South Korea) during 1948–1960. Syngman Rhee was born in Pyongsan, Hwanghae Province, now in the Democratic People's Republic of Korea (DPRK, North Korea), on 26 March 1875. After studying Chinese classics at home, he enrolled in an American Methodist school in Seoul in 1894. When Seo Jai Pil, a reformer and independence fighter, established the Independence Association in 1896, Rhee joined it. In 1898 he was arrested on charges of subversion and imprisoned until 1904, during which time he converted to Christianity.

Upon his release Rhee went to study in the United States, and after attending both George Washington University and Harvard University, he received a PhD from Princeton University in 1910. His return home that year coincided with Japan's annexation of Korea. In 1912, he returned to the United States and remained in exile there until 1945. He established the Korean Commission in Washington, D.C., to lobby on behalf of Korean independence. By the time of Korea's liberation in August 1945, he had become Korea's best-known political figure overseas.

Because of his reputation among Koreans, the Korean People's Republic, a self-proclaimed leftist government, elected Rhee its president in the fall of 1945. Korean conservatives also wanted him to lead the country. But he refused these offers and began organizing his own party. In December

Rhee, Syngman
(1875–1965)

Syngman Rhee, president of the Republic of Korea (ROK, South Korea) during 1948–1960, was a staunch nationalist committed to the reunification of Korea. Rhee assumed near dictatorial powers while presiding over a society facing communist challenges. (Library of Congress)

1945, he mobilized opposition to the Moscow Agreement on Korea that stipulated a Korean trusteeship. Beginning in 1946, he called for the creation of a separate government in southern Korea. Washington, for its own reasons, finally agreed and in the fall of 1947 persuaded the United Nations (UN) to arrange and observe a general election in May 1948.

The South Korean government was established on 15 August 1948, and Rhee was elected president by a wide margin. Soon thereafter, he adopted the March North policy to reunify Korea, then divided at the 38th Parallel, and asked the United States for military aid. Washington demurred for fear of igniting a civil war.

On 25 June 1950, North Korea launched a full-scale invasion of South Korea. Throughout the war, Rhee demanded the unification of all Korea under his leadership and attempted to sabotage any measure that might have undercut this goal. His aim of a unified Korea was increasingly at odds with U.S. policy, which by 1951 was ready to negotiate a settlement that would effectively restore the status quo antebellum. In particular, Rhee's release of some 27,000 North Korean POWs in June 1953 nearly derailed the armistice talks.

After the Korean War, Rhee became increasingly dictatorial and corrupt. He was finally forced out of office in April 1960 by a student-led revolt. The following month, he left Korea for exile in Hawaii, where he died in Honolulu on 19 July 1965.

U.S. Army general and army chief of staff (1953–1955). Born at Fort Monroe, Virginia, on 3 March 1895, Matthew Ridgway graduated in 1917 from the U.S. Military Academy, West Point. During World War II he was promoted to brigadier general in January 1942 and to major general that August. During 1942–1944 he commanded the 82nd Airborne Division in Europe and fought in Italy, France, and Germany. In August 1944 he took command of the new XVIII Airborne Corps and directed it in the Netherlands, in the Battle of the Bulge, and in Germany.

Promoted to lieutenant general in June 1945, Ridgway held a succession of different commands. In December 1950 he took charge of the Eighth Army in Korea following the sudden death of Lieutenant General Walton H. Walker. Restoring the Eighth Army's shattered morale, he drove communist forces back above the 38th Parallel. In April 1951 President Harry S. Truman relieved the insubordinate General Douglas MacArthur as commander of United Nations (UN) forces and replaced him with Ridgway. In July 1951 Ridgway opened truce talks with North Korea and the People's Republic of China (PRC).

Promoted to full general, in May 1952 Ridgway followed General Dwight D. Eisenhower as supreme commander of Allied forces in Europe (SACEUR), where he worked to build up cooperation and military effectiveness within the North Atlantic Treaty Organization (NATO). Soon after becoming president in 1953, Eisenhower appointed Ridgway chairman of the Joint Chiefs of Staff (JCS). Ridgway mistrusted the president's New Look defense doctrine of relying primarily upon atomic weapons rather than conventional military forces and clashed repeatedly with both Eisenhower and Secretary of Defense Charles E. Wilson. In 1954, when French forces were besieged at Dien Bien Phu and the French government sought American military assistance and intervention through air strikes, Ridgway successfully urged restraint and moderation, warning that any such action risked embroiling the United States in a disastrous war.

Retiring in June 1955, Ridgway joined a military contracting firm and wrote extensively on defense and foreign policy matters. President John F. Kennedy's administration proved receptive to Ridgway's ideas that the U.S.

**Ridgway, Matthew
Bunker**
(1895–1993)

Rio Pact (September 1947)

Agreement drawn up in September 1947 and formally known as the Inter-American Treaty of Reciprocal Assistance that created a mutual defense system for the Western Hemisphere. World War II motivated multilateral cooperation in the Americas. After the United States entered the war in December 1941, most American nations supported the United States by declaring war on the Axis nations or by severing relations with them. Encouraged by wartime solidarity, American leaders fashioned an inter-American system of collective security at a series of international conferences. In 1945 foreign secretaries signed the provisional Act of Chapultepec in Mexico City, stating that an attack against any nation in the hemisphere would be considered an act of aggression against all the signatories of the declaration.

The Inter-American Conference for the Maintenance of Continental Peace and Security that produced the Rio Pact met in Rio de Janeiro, Brazil, during 15 August–2 September 1947. Signed by the United States and twenty other American countries including former Axis sympathizer Argentina, the pact made the Act of Chapultepec a permanent treaty. The inter-American system was based on the preexisting principle that an attack against one American nation was to be considered an attack against them all.

The prototype for the formation of the 1949 North Atlantic Treaty, the Rio Pact went into effect on 3 December 1948 after ratification by two-thirds of the signatory nations. It became the principal document regulating mutual security and conflict resolution within the inter-American system. Signatories decided by a two-thirds majority what kind of collective action would be taken, ranging from breaking diplomatic relations to imposing economic sanctions and using armed force, but no state was required to use such force. In addition to being an anticommunist Cold War agreement, the pact was also invoked to resolve many interhemispheric controversies. Signatories pledged to submit all hemispheric disputes for settlement according to the procedures of the inter-American system before bringing cases to the United Nations (UN).

The terms of the Rio Pact became the foundation for the 1948 Act of Bogotá, which established the Organization of American States (OAS), and implementing the Rio Pact became a primary responsibility of that body during the Cold War. U.S. President John F. Kennedy described the 1962 Soviet-Cuban maneuver to introduce nuclear missiles into Cuba as a violation of the Rio Pact. He invoked the authorization for the use of force under the pact (for the first time) against Cuba during the Cuban Missile Crisis.

When U.S. leaders believed that communism threatened their nation's hemispheric interests, they often circumvented the Rio Pact and acted unilaterally, either covertly, as in the 1954 Guatemala intervention by the Central Intelligence Agency (CIA), or overtly, as in the U.S. military's 1983 invasion of Grenada. The pact was invoked numerous times during the Cold War but fell into disuse as Latin Americans became dissatisfied with U.S. domination of the inter-American system and as Cold War threats ceased.

Rochet, Waldeck

(1905–1983)

French political leader and general secretary of the French Communist Party (PCF) during 1964–1972. Born in Sainte-Croix (Saône-et-Loire) on 5 April 1905, Waldeck Rochet joined the PCF in 1924. In 1930 party officials sent him to attend the Comintern school in the Soviet Union. Returning to France, in 1932 he became party secretary for the Lyons region. Two years later he moved to Paris to head the farmers' section of the party's Central Committee. In May 1936, he won election to the Chamber of Deputies from Colombes-Nanterre. The next year he became a voting member of the Central Committee and director of the PCF's farmers' newspaper, *La Terre*.

Arrested when the PCF was outlawed at the beginning of World War II, Rochet was imprisoned first in France and then in Algiers. Freed following the Allied North African landings, he represented the PCF in the London headquarters of the Free French. Resuming his previous party posts in late 1944, in 1950 he became a full member of the PCF Politburo. He also represented the Saône-et-Loire in the two constituent assemblies and the National Assembly during 1946–1956 and in the Department of the Seine from 1956.

French Communist Party leader Waldeck Rochet. (Corbis Sygma)

In 1961 Rochet became deputy general secretary of the PCF and in 1964 its general secretary. Attempting a new course for the party, he led the PCF into the Union de la Gauche (Union of the Left). The high point of this alliance was his decision to support Federation of the Democratic and Socialist Left (FGDS) candidate François Mitterrand in the second round of the 1965 presidential elections.

Rochet also experienced tense relations with Moscow, culminating in 1968 when the PCF publicly expressed its disapproval of the Soviet-led invasion of Czechoslovakia. He then came under heavy pressure from both his more rigid colleagues and Moscow. His health deteriorated, and he was diagnosed as suffering from Parkinson's disease. By 1969 he could no longer function as leader of the PCF but won reelection the next year with Georges Marchais as his deputy and heir apparent. In 1972 Marchais succeeded Rochet, who was elevated to the post of honorary president. Rochet died in Paris on 15 February 1983.

U.S. political leader, governor of New York, and vice president of the United States. Born in Bar Harbor, Maine, on 8 July 1908, Nelson Rockefeller was one of the heirs to the vast Standard Oil fortune of John D. Rockefeller. Nelson Rockefeller was determined to win distinction in the political arena, where his ultimate ambition, never attained, was to become president of the United States. A liberal Republican, he was coordinator of the Office of Inter-American Affairs during 1940–1944; assistant secretary of state for American Republics' Affairs during 1944–1945; chairman of the International Development Advisory Board (Point Four Program) during 1950–1951; undersecretary of Health, Education and Welfare during 1953–1954; and special assistant to the president during 1954–1955. Rockefeller demonstrated particular interest in Latin America, where he and his family possessed enormous property and business holdings. Throughout the 1960s he was a leading but perennially disappointed candidate for the Republican presidential nomination.

A firm anticommunist and leader of the internationalist wing of the Republican Party who believed implicitly in the prevailing Cold War orthodoxy, Rockefeller originally supported the U.S. commitment to Vietnam and the 1965–1967 military escalation. During the 1968 presidential campaign, he announced that he would attack neither Democratic President Lyndon B. Johnson's prosecution of the war nor his turn toward peace negotiations. During that year's Republican convention, both Rockefeller and his rival, Richard M. Nixon, supported and won a platform plank favoring peace negotiations over the opposition of conservative California Governor Ronald Reagan's followers, who urged a more aggressive prosecution of the war.

After Nixon's election, Rockefeller loyally supported the president's Vietnam policies. When the Watergate scandal forced Nixon's resignation in August 1974, his successor, Gerald R. Ford, made Rockefeller his vice president. Conservative opposition to Rockefeller's liberal Republicanism denied him the second place on the presidential ticket in 1976. Rockefeller died in New York City on 27 January 1979.

Rogers, William Pierce (1913–2001)

William Pierce Rogers, U.S. secretary of state during 1969–1973. (National Archives and Records Administration)

U.S. secretary of state (1969–1973). Born in Norfolk, New York, on 23 June 1913, William Rogers was a New York lawyer with impeccable establishment credentials. He graduated from Colgate University in 1934 and from Cornell Law School in 1937. He had a long record of public service beginning with assistant district attorney in New York County (1938–1942, 1946–1947), where he served under Thomas E. Dewey. Rogers was then counsel to the U.S. Senate War Investigating Committee (1947) and chief counsel to the U.S. Senate Investigations Sub-Committee of the Executive Expenditures Committee (1947–1948). At this time he first met the young Congressman Richard M. Nixon, with whom he worked on the Alger Hiss case. During Dwight D. Eisenhower’s presidency, Rogers was appointed assistant attorney general (1953–1958) and then attorney general (1958–1961).

Rogers was a personal friend of Nixon, whom he assisted when the latter set up a legal practice in New York after his defeat in the California gubernatorial election of 1962. Although Rogers served briefly as a U.S. delegate to the United Nations (UN) in the early 1960s, he had little foreign policy background. His appointment as secretary of state reflected Nixon’s desire to retain control of foreign policy. Rogers soon proved no match for the dominating, driven, and intellectually brilliant National Security Advisor Henry A. Kissinger, under whose direction the National Security Council within a few weeks wrested from the Department of State the crucial power to set the agenda for U.S. foreign policy discussions. Throughout his term as secretary of state, Rogers remained a marginal figure, entirely overshadowed by the publicity-hungry Kissinger. Nixon said of his two subordinates: “Henry thinks Bill isn’t very deep, and Bill thinks Henry is power-crazy.”

Nixon and Kissinger often left Rogers ignorant of major foreign policy initiatives, including arms control, secret negotiations to end the Vietnam War, and the opening of trade with China, of which he first learned through newspaper accounts of Kissinger’s 1971 trip to Beijing. Rogers did, however, deal successfully with major issues involv-

ing Middle Eastern policy, Korea, and the Southeast Asia Treaty Organization (SEATO) and supervised routine State Department business adequately.

On Vietnam and Indochina, Rogers favored caution, conciliation, and negotiation over the generally more militant instincts of Nixon and Kissinger, who more often than not ignored his counsel against, for example, the resumption of bombings of the Democratic Republic of Vietnam (DRV, North Vietnam) in 1969, the U.S. invasion of Cambodia in April 1970, and further bombings and the mining of Haiphong Harbor in spring 1972. Unusually, Kissinger briefed the secretary in full on the final version of the Paris Peace Accords, which were signed in January 1973 and of which Rogers became a strong supporter. Equally unusual, Kissinger stayed at home while Rogers went to Paris to initial the accords.

In September 1973 Nixon asked for Rogers's resignation, replacing him with Kissinger. Rogers returned to the practice of law in Washington, D.C., leading the committee that investigated the explosion of the *Challenger* space shuttle in 1986 but playing little role in foreign affairs. He died of heart failure at Bethesda, Maryland, on 2 January 2001.

South Korean general, politician, and president of the Republic of Korea (ROK, South Korea) during 1988–1993. Born in Taegu on 4 December 1932, Roh Tae Woo graduated in 1955 from the Korea Military Academy with his close friend Chun Doo Hwan, future South Korean president. Woo became a lieutenant colonel in June 1968 and went to Vietnam as a battalion commander in September of that year. He was promoted to colonel in November 1971 and brigadier general in October 1974. After advancing to major general in 1978, he took command of the 9th Infantry Division in January 1979.

Roh Tae Woo
(1932–)

When Hwan seized control of the South Korean armed forces in a bloody coup on 12 December 1979, Woo played an essential supporting role in bringing his 9th Infantry Division to Seoul. Advanced to lieutenant general in August 1980, he headed the Defense Security Command, the South Korean military intelligence agency. In July 1981 he retired from active service with the rank of full general.

Woo then plunged into politics and was elected president of South Korea in December 1987, defeating longtime opposition leaders Kim Young Sam and Kim Dae Jung, who split the opposition vote. Woo took office in early 1988. In foreign affairs, he vigorously pursued a Nordpolitik that called for rapprochement with the Democratic People's Republic of Korea (DPRK, North Korea), the Soviet Union, and the People's Republic of China (PRC). This policy led to the normalization of relations with the Soviet Union in 1990, and by 1992 South Korea had established diplomatic ties with all of the East European nations and the PRC.

Meanwhile, in September 1990 South Korean Prime Minister Kang Young Hun met in Seoul with his North Korean counterpart Yon Hyong Muk in the first such meeting of leaders of the two Koreas. It resulted in the December 1991 Basic Agreement on North-South Reconciliation, Non-aggression, Exchange, and Cooperation and the Agreement on the Non-Nuclearization of the Korean Peninsula. Earlier that same year, North and South Korea were admitted simultaneously to the United Nations (UN). Woo retired from the presidency in February 1993.

In 1995 Woo was tried, convicted, and sentenced to seventeen years' imprisonment for his part in the 1979 military mutiny and coup and for corruption while in office. He was released under a special amnesty in December 1997.

Roman Catholic Church

Karl Marx and Friedrich Engels, the original nineteenth-century communist theorists, took a dim view of religion. Marx was born into a liberal Jewish family that converted to Christianity for political and social expediency. Engels, on the other hand, came from a family that practiced a pietistic

Cuzco, once a center of Inca civilization, was conquered in the sixteenth century by the Spanish, who replaced the Incan ruins with their own baroque architecture. (Corel)

Protestant faith against which he revolted as a young man. Both philosophers rejected the supernatural claims of religion and its political and sociological implications. Indeed, Marx famously referred to organized religion as “the opiate of the masses.” Thus, it is not surprising that from the beginning the Roman Catholic Church, with its vast worldwide influence, has been identified as one of the most formidable foes of communism. Indeed, popes were quick to spot the challenge to established faith. During the 1950s, as the Cold War raged, Catholics the world over were instructed to conclude their liturgies with the prayer “Save Russia.” When communism eventually collapsed in Eastern Europe in the late 1980s, a Polish patriot, Pope John Paul II, held the papal office and was widely perceived to have played a central role in its demise.

During the decades in which the Soviet Union ruled its vast empire, all religions were decried. Stately cathedrals were transformed into museums of the history of religion and atheism, where vivid tableaux depicted the atrocities committed throughout history in the name of religion. Severe restrictions were placed on religious instruction, and evangelism was halted. Popular plays and musical dramas were built around scenarios of local comrades who overcame the duplicity of clerics, whether Christian in European Russia or Islamic in the Asiatic republics of the Soviet Union. But special venom was always reserved for Roman Catholicism, which was regarded as both Christian

and alien. While the Eastern Orthodox Church had deep roots in Russia's history and its prelates could be more easily coerced, Catholics were ruled by a foreign bishop and were regarded as reactionary and hostile.

Achille Ratti, who became Pope Pius XI in 1922, was the first pope forced to confront communism directly. Two years before his elevation to the papacy, he had been threatened by Bolshevik troops while on a diplomatic mission to Poland. As he observed atheistic communism in action, with the persecution and murder of priests in Russia and the closing of churches, he became convinced that communism posed the gravest threat that European Christianity had ever faced. Communist influences in Catholic nations such as Mexico and Spain only confirmed his view that Bolsheviks were "missionaries of the Antichrist" intent on conquering the world. Never a proponent of democratic government, his distaste for communism was so great that he initially regarded Italian fascism as a bulwark against this threat from the East. For the same reasons, despite strong suspicions of German racial and religious policies, the Catholic Church negotiated a Concordat with German Nazi leader Adolf Hitler in 1933.

Eugenio Pacelli, a protégé of Ratti, succeeded his mentor in 1939 as Pope Pius XII. Pacelli had served as a Vatican diplomat in Munich in 1919, where he had suffered his own encounter with communist thugs. A lover of German culture, the new pope, like his predecessor, feared communism more than he came to detest the policies of Hitler or Mussolini. Although Pius XII's critics have, with full hindsight, subsequently charged him with indifference to Hitler's genocidal policies, Pius believed that Stalinist atrocities, equally enormous, also required denunciation.

After World War II, communism mounted a serious challenge to Christian Democrats in Italy. Believing his church to be in deadly peril, Pius XII became a Cold War leader, and the Vatican actively supported noncommunist political parties, both spiritually and financially. As the Cold War settled in, Catholics in Russia, Poland, Lithuania, Slovakia, Hungary, Yugoslavia, and Romania came under increasing hardships. In Hungary, Cardinal József Mindszenty was arrested for his resistance to communist rule, becoming a martyr-hero to Protestants as well as Catholics. In the United States, the Catholic Church became a strong supporter of Senator Joseph R. McCarthy and his ill-conceived anticommunist witch-hunt. Catholic relief agencies aided refugees from Eastern Europe. In France, even the innovative and popular Worker Priest Movement, in which priests lived among the people and shared their hardships, was deemed too socialist and was disbanded by the Vatican. In 1949, Pope Pius XII brandished his most potent weapon when he excommunicated Catholics who joined the Communist Party. The communists were equally intolerant, forbidding church membership among party members.

Pius XII, who died in 1958, was replaced by a more populist pope, the much-loved Angelo Roncalli, who became John XXIII. More sympathetic to the stated economic aims of socialism than had been the aristocratic Pius XII, John XXIII softened the Church's anticommunist rhetoric. Indeed, he even made friends of some Cold War antagonists. The Italian Marxist Pier

Paolo Pasolini dedicated his film *The Gospel According to St. Matthew* to the new pope. John held an audience with the daughter and son-in-law of Russian Premier Nikita Khrushchev, even though Khrushchev had renewed some restrictions on religion that had lapsed after Soviet dictator Josef Stalin's death. Pope John even sent presents of stamps and coins to the Khrushchev grandchildren. He also initiated Vatican Council II, which counted among its many missions the opening of the Church to friendlier relations with people of other religious and political persuasions.

John XXIII's successor, Giovanni Battista Montini, who took the name Paul VI, was a pensive, cautious man who hoped to ease the lot of Catholics behind the Iron Curtain with the accommodations of his Ostpolitik. Less confrontational than some of his predecessors, Paul ordered Cardinal Mindszenty, who had been living in publicized sanctuary in the American embassy in Budapest, to leave Hungary, where he had become a diplomatic embarrassment. The pope believed that open Catholic hostility to communist governments only confirmed their view that Christians were unreliable and hostile citizens. However, his actions pleased neither side for very long, and as his papacy neared its end, his critics dubbed him a Hamlet for his indecisiveness.

In 1978, the cardinals of the Roman Catholic Church surprised the world by electing the first non-Italian pope in more than 400 years. He was Karol Wojtyła, archbishop of Kraków, who had lived and conducted much of his ministry under the yoke of Polish communism. Not long into his reign as John Paul II, some Vatican insiders began accusing him of giving more attention to East European politics than to his spiritual duties. It was clear that as a Pole himself, he was able to converse easily with East European leaders. Whatever their political persuasion, they could not help but feel national pride in his election. John Paul's support for the Solidarity movement in his homeland and his papal visits to Poland gave all East Europeans new hope. By the time he established diplomatic ties with Soviet Premier Mikhail Gorbachev in 1989, the end of godless communism in East Europe was near. The pope later met with Vladimir Putin, president of the new Russia, and traveled to Cuba to be welcomed by Fidel Castro.

Although John Paul II was no great admirer of capitalism, he rejected outright the compromises between Catholicism and Marxism advocated by certain Latin American liberation theologians, most notably the Peruvian Jesuit Gustavo Gutiérrez. Obsessed with the poverty and exploitation of the Indian masses, Gutiérrez had stressed a social gospel, with relatively little attention paid to the New Testament Gospel. His ideas and writings had appealed to intellectuals throughout the Americas but exerted little influence on the masses of the Latin American faithful.

At the beginning of the third millennium, the full story of Pope John Paul II's contribution to the collapse of European communism was still not fully known, although both General Wojciech Jaruzelski, the strongman of Poland, and Gorbachev had publicly acknowledged the primacy of his role. Particularly puzzling remains the May 1981 assassination attempt on John Paul II that had taken place in St. Peter's Square. Mehmet Ali Agca, who

In 1978, the cardinals of the Roman Catholic Church surprised the world by electing the first non-Italian pope in over 400 years.

fired the shots, was a Turk variously described as a communist under the control of Bulgaria and, later, as a possible Islamic militant.

Although in fragile health, John Paul II realized his dream of ushering in the third Christian millennium. The Church's old foe, communism, had been largely vanquished, but the Church nonetheless found itself in disarray. Vatican Council II reforms had not only brought a freshness into the staid institution but were also responsible for a loss of unity and discipline among the faithful. Some cardinals were challenging the absolute authority of the pope, while others were accusing him of dereliction or heresy. Presidential candidates in the United States were ignoring Vatican moral directives on abortion, and in some dioceses marriage annulments were handed out as freely as secular courts granted divorce. Catholics everywhere were picking and choosing which doctrines and moral directives they chose to follow. But the West's oldest intact institution had faced challenges before and entered the new millennium still a potent force in world religion and politics.

Romania

Southeast European nation with an area of 91,699 square miles, slightly smaller than the U.S. state of Oregon. With a 1945 population of approximately 15.5 million people, Romania borders on Ukraine and Moldavia to the north, the Black Sea to the east, Bulgaria and Serbia to the south, and Hungary to the west. After the 1881 Congress of Berlin, Romania became a kingdom, independent of the Ottoman Empire. At the beginning of World War I, Romania proclaimed its neutrality. However, in 1916 it joined the Allied powers in hopes of securing additional territory. Forced to sign the punitive Treaty of Bucharest with Germany in May 1918, Romania reentered the war on the Allied side at its end. As a consequence of having sided with the Allies, Romania nearly doubled in size, securing possession of both Russian and Hungarian lands, including Bessarabia and Transylvania.

In 1938, King Carol II turned the monarchy into a dictatorship by abolishing the 1923 constitution. In the turbulent year of 1940 the nation was reorganized along fascist lines. That May, under heavy German pressure,

The House of the People in Bucharest, originally meant to house the state government of Romania, was nearing completion upon Nicolae Ceaușescu's overthrow in 1989. The immense building was renamed the Palace of the Parliament in the post-Cold War era. (Corel)

Romania joined the Axis de facto. In June, acting in accordance with secret provisions of the Soviet-German Nonaggression Pact of August 1939, the Soviet Union forced Romania to cede Bessarabia and also northern Bukovina, which had not been Russian before. Germany then forced Romania to return part of Transylvania to Hungary and the southern Dobruja to Bulgaria.

King Carol II had alienated his people by his open affair with a mistress and widespread corruption. National outrage over the loss of half of the nation's population and territory allowed the profascist, anti-Semitic Iron Guard to bring about Carol's abdication in September 1940.

Carol's nineteen-year-old son Michael (Mihai) replaced him but was a figurehead. The prime minister, World War I military hero General Ion Antonescu, exercised real power. In November, Romania officially joined the Axis. Antonescu sent troops to participate in the invasion of the Soviet Union in June 1941 in order to reclaim Bessarabia and northern Bukovina. He continued offensive operations in the Soviet Union on promises from Hitler of additional territory, including the Black Sea port of Odessa. Romania ultimately supplied more troops to the war against the Soviet Union than all the other German satellites combined.

Antonescu rejected appeals after the disastrous Battle of Stalingrad from other Romanian political leaders to withdraw the nation's troops from the

Soviet Union, claiming, no doubt correctly, that Axis victory was no longer possible. Romania had mounted the tiger and was now obliged to finish the ride. Finally, in late August 1944, with Soviet forces having crossed the eastern border, King Michael ordered the arrest of Antonescu and announced Romania's withdrawal from the Axis alliance.

Romania now fell under Soviet occupation. The armistice signed in Moscow on 12 September 1944 required Romania to join the Allies; relinquish Bessarabia, northern Bukovina, and Dobruja; and pay to the Soviet Union war reparations equivalent to \$300 million. The Soviets in return promised to restore to Romania northern Transylvania from Hungary. The Paris Peace Treaty of February 1947 ratified these agreements.

During the war, Romania suffered some 600,000 casualties. Antonescu was tried by the communists in May 1946 and executed. Soviet pressure, meanwhile, impeded King Michael's attempts to form coalition governments. During March 1945–June 1952, the communist takeover proceeded under the Soviet-installed regime led by Petru Groza. Never a major force in Romanian politics, the Romanian Communist Party (PCR) had fewer than 1,000 members in 1945.

Nonetheless, the Groza government systematically squelched rival parties and appointed communists to key ministerial and army posts. Prominent figures included Ana Pauker and Vasile Luca, who returned from Soviet exile, and Gheorghe Gheorghiu-Dej, Teohari Georgescu, Nicolae Ceaușescu, and Alexandru Drăghici, who had been imprisoned during the war. A new secret police force, the Securitate, formed in 1945 under Soviet direction, enforced communist control and directed a network of concentration camps. As a result, in the rigged election of November 1946, the PCR gained almost 90 percent of the vote. King Michael was forced to abdicate in December 1947.

In 1948, the PCR merged with a wing of the Social Democrats into the Romanian Workers' Party (PMR). Now known as a people's republic, Romania adopted a Stalinist constitution with Gheorghiu-Dej, Luca, and Pauker heading the PMR Central Committee. Banks, industries, mines, and transportation were nationalized, and a state planning commission was set up. Already a member of the Communist Information Bureau (Cominform), in January 1949 Romania joined the Council for Mutual Economic Assistance (Comecon), formed to promote economic development and cooperation among communist states.

Industrialization and the forced collectivization of agriculture proceeded rapidly. These moves led to food shortages and reduced exports, causing the government to slow down collectivization. Concurrently, churches were placed under government control, and much of their property was seized. Soviet dictator Josef Stalin's purges after the 1948 Soviet-Yugoslav split prompted Gheorghiu-Dej to remove prominent rivals. He became PMR general secretary and Romanian premier in 1952 when Groza was named president, an honorary post that Groza held until his death in 1958.

Gheorghiu-Dej's premiership initially led to somewhat better living conditions. The largest concentration camps closed, and wages rose. After

Soviet Premier Nikita Khrushchev denounced Stalin in February 1956, Gheorghiu-Dej feared criticism as a Stalinist. He therefore responded by consolidating control of the Securitate, now headed by Interior Minister Drăghici, and purging anti-Stalinists.

During the 1956 Hungarian Revolution, Romania allowed Soviet troops to reinforce the Hungarian border, although it refused to send troops to Hungary. Uneasy about the Hungarian minority in Transylvania, the government reduced Hungarian language education there, merged the Hungarian Bolyai University of Cluj with the Romanian Babeş University in 1959, and in 1960 modified the borders of the Hungarian Autonomous Province, an area that Ceauşescu would eliminate in 1968.

Gheorghiu-Dej's final years marked a gradual shift from Soviet domination. The last of 35,000 Soviet ground forces left Romania in July 1958, even though air and naval bases remained. Soviet-Romanian trade dropped off in 1958 when Gheorghiu-Dej refused Khrushchev's request that Romania delay industrialization and specialize in supplying agricultural products and raw materials to Comecon members. In defiance, Gheorghiu-Dej began to seek Western financial and trade support. Critical of the Soviet Union's role in the Sino-Soviet split and the 1962 Cuban Missile Crisis, Romania strengthened its relations with the People's Republic of China (PRC) and Yugoslavia, and Khrushchev's ouster in October 1964 prompted negotiations to remove Komitet Gosudarstvennoi Bezopasnosti (KGB) advisors.

Emerging as first secretary of the renamed PCR after Gheorghiu-Dej's 1965 death, Ceauşescu continued rapid industrialization and an autonomous foreign policy, whereby Romania began its role as mediator between the United States and the Democratic Republic of Vietnam (DRV, North Vietnam). Ceauşescu's popularity rose when he denounced the Warsaw Pact's August 1968 invasion of Czechoslovakia, which ended the Prague Spring. This anti-Soviet stance precipitated U.S. President Richard M. Nixon's August 1969 visit and Ceauşescu's return visits in the 1970s.

The Warsaw Pact's invasion of Czechoslovakia in 1968 also convinced the Ceauşescu regime to promulgate a new military doctrine, the "War of the Entire People," to resist any incursion, whether from NATO or Warsaw Pact nations. The subsequent Law on National Defense (1972) stated that Romania's armed forces would take orders only from the country's national command. Forces of Patriotic Guards were set up to supplement the regular armed forces, and defense strategy focused on prolonged resistance, small-unit attacks, and a scorched-earth policy in case of invasion.

Romania enjoyed a brief period of relative prosperity thanks to Western trade concessions, large foreign credits, and a plentiful supply of energy and raw materials. New construction reduced the housing shortage. Denouncing his predecessor's hard line, Ceauşescu freed political prisoners and deposed Interior Minister Drăghici. This all soon changed as Ceauşescu reimposed rigid central planning. Inspired by a visit to the PRC and the Democratic People's Republic of Korea (DPRK, North Korea) in 1971, he encouraged a cult of personality. Upon Premier Ion Maurer's 1974 retirement, Ceauşescu filled the newly created office of president.

Romanian soldier on a tank in Bucharest, December 1989. Romanian dictator Nicolae Ceaușescu was overthrown in a popular uprising that found wide national support. (David Turnley/Corbis)

Thereafter, natural disasters, export deficits, and energy depletion led to near economic collapse. Romania's foreign debt rose from \$3.6 billion in 1977 to \$10.2 billion in 1981. To pay the debt, Ceaușescu imposed strict food and electrical rationing and, to boost the country's workforce, forbade abortion and contraception. The so-called systematization campaign to resettle villagers in agroindustrial centers destroyed historical landmarks and evoked international criticism. Continuing suppression of minorities, especially of the Hungarians in Transylvania, prompted a string of protests. Increasingly removed from reality, Ceaușescu surrounded himself with sycophants, appointed family members to leading positions, and further weakened the country with his lavish lifestyle and grandiose schemes. Western support dwindled, especially when the 1978 defection of Ion Pacepa, deputy director of the Department of External Information (DIE), the foreign secret service, revealed Ceaușescu's disinformation campaign to gain Western aid and trading benefits.

In March 1989, a publicly released letter signed by six senior PCR members in the name of the National Salvation Front (NSF) signaled the government's imminent demise. In December 1989, antigovernment demonstrations in Timișoara soon spread to Bucharest, where Ceaușescu had called a progovernment rally. The populace and much of the army turned against Ceaușescu and his wife, who fled in a helicopter but were captured, tried, and summarily executed on 25 December 1989.

Political tensions did not end with Ceaușescu's fall. Initially a caretaker government, the NSF, led by Ion Iliescu, was elected in 1990. Soon after, student protests demanding the trial of Securitate agents and Ceaușescu associates erupted in Bucharest. Miners brought in from the Jiu Valley brutally intervened. Allegations persist that former Securitate agents have retained powerful positions. Violent ethnic clashes flared in Tîrgu-Mureș in 1990, followed by protests against the 1995 Education Law. Nevertheless, Hungary and Romania signed a Treaty of Cooperation in September 1996 whereby Hungary renounced all claims to Transylvania and Romania agreed to guarantee minority rights. Romania became a member of the North Atlantic Treaty Organization (NATO) in 2004 and joined the European Union (EU) on 1 January 2007.

The Treaty of Rome was actually two treaties signed in Rome on 25 March 1957 by the leaders of Belgium, the Federal Republic of Germany (FRG, West Germany), France, Holland, Italy, and Luxembourg that established the European Atomic Energy Community (EURATOM) and the European Economic Community (EEC). The two treaties were the result of long negotiations, the roots of which lay in the French rejection of the treaty establishing the European Defence Community (EDC) in August 1954. That dramatic episode halted the process of European integration and left the European Coal and Steel Community (ECSC) as its only tangible result.

In the aftermath of the EDC's collapse, many ideas were put forward to resume the process of integration. The president of the ECSC High Authority, Frenchman Jean Monnet, favored expanding the ECSC to encompass other sources of energy as well as public transportation, and he suggested creating a new community for the peaceful use of nuclear energy. Other policymakers proposed the establishment of a common market or even an economic union. All of these ideas eventually were included in a memo that the foreign ministers of the Benelux countries (Belgium, the Netherlands, and Luxembourg) circulated among the ECSC members on 18 May 1955. On 1–2 June 1955, in Messina, Italy, the ECSC foreign ministers decided to set up an intergovernmental committee under Belgian Foreign Minister Paul-Henri Spaak to explore the options presented in the Benelux memo.

Spaak's committee met in Brussels during July 1955–April 1956 and focused on the creation of a common market and an atomic community. On 29–30 May 1956, the committee's final report, which had suggested the creation of two new communities, was discussed and approved in Venice by the six ECSC foreign ministers, who decided to use it as the basis for a new round of negotiations. These talks, chaired by Spaak, began in June 1956 but soon ran into a number of difficulties. The West Germans were skeptical about turning their newly created nuclear industry over to a supranational authority, preferring instead to concentrate on the creation of a common market that would benefit their expanding industrial exports. The French, on the other hand, were reluctant to abandon their old protectionist habits

Rome, Treaty of (25 March 1957)

and insisted on the creation of an atomic energy community, particularly if this could be endowed with a joint European isotope separation plant for the production of enriched uranium.

The stalemate was broken by the Soviet invasion of Hungary and the disastrous Anglo-French military expedition in the Suez Canal in October 1956. The crises revealed Western Europe's powerlessness and dependence on the United States and acted as a catalyst for the conclusion of the negotiations. The last obstacles were overcome in early 1957, and both treaties were signed in Rome on 25 March 1957. All countries ratified the treaties before the end of the year, and on 1 January 1958 the two new communities were formally established. While EURATOM never acquired the important role that Monnet and others had envisioned for it, the EEC contributed to the continuous economic growth of Western Europe and quickly became the central pillar of European integration.

President Dwight D. Eisenhower's administration showed much support for the negotiations but expressed its favor mostly in private talks, as it feared a repetition of the EDC debacle when the public display of American enthusiasm for the project backfired, making the EDC appear an American rather than a European design. Great Britain, on the other hand, displayed only a limited interest in the early phase of the negotiations, and as they picked up speed, Britain declined to participate any further. Subsequent attempts to merge the EEC into a larger free trade area, including Britain, failed. Thus, the Treaty of Rome deepened what hitherto had been only a limited chasm between Great Britain and continental Western Europe, potentially introducing a source of friction between London and the six EURATOM/EEC members.

Roosevelt, Eleanor (1884–1962)

Democratic activist, first lady, and United Nations (UN) delegate. Born in New York City, the niece of President Theodore Roosevelt, and educated

at Allenswood, a girl's school near London, England, Anna Eleanor Roosevelt married the politically ambitious Franklin Delano Roosevelt, a distant cousin who in 1913 became assistant secretary of the navy in Woodrow Wilson's administration. After having six children, during the 1920s Eleanor Roosevelt, whose husband was left permanently crippled by polio in 1921, became extremely active in Democratic Party politics and women's, labor, and peace organizations.

In 1929 Franklin Roosevelt became governor of New York State and in 1932 ran successfully for the presidency, an office he held from March 1933 until his death in April 1945. Eleanor Roosevelt was a liberal voice in his administration, although as World War II approached, loyalty and perhaps conviction compelled her to break with many friends and support her husband's increasingly interventionist policies. During the war she advocated liberal plans for the postwar world, including the creation of an international organization to maintain peace.

Franklin Roosevelt's sudden death in April 1945 blocked his widow's original plans to attend the first meeting of the UN, to which Harry S. Truman, his successor, soon appointed her a delegate. She chaired the commission that drafted the UN Declaration on Human Rights adopted in 1948. Alarmed by intensifying Cold War tensions, she urged continuing East-West dialogue. She backed the Marshall Plan for economic aid to Europe but opposed the Truman Doctrine's call for U.S. military aid to Greece and Turkey and a global American anticommunist crusade. Gradually won over to anti-Soviet containment policies, in January 1948 she was one of the founders of Americans for Democratic Action, a liberal organization that endorsed Truman in that year's presidential campaign rather than his more pro-Soviet Democratic rival Henry A. Wallace, her husband's former vice president.

Dwight D. Eisenhower dropped Roosevelt from the UN, but his Democratic successor John F. Kennedy again named her a delegate, in which capacity she worked closely with Adlai Stevenson, Kennedy's ambassador to the UN and an old friend. Roosevelt, sponsored by the American Association for the United Nations, traveled extensively, advocating peace, human rights, and dignity for all and urging greater economic aid to developing countries. She died in New York City on 7 November 1962.

Roosevelt, Franklin Delano (1882–1945)

U.S. politician and president of the United States (1933–1945). Born at his family's Hyde Park estate in Dutchess County, New York, on 30 January 1882, Franklin Roosevelt studied at the Groton School, Harvard College, and Columbia Law School. He then entered Democratic politics, consciously modeling his career upon his distant cousin President Theodore Roosevelt (whose niece Eleanor he married in 1905). After serving two terms as a state senator, in 1913 Roosevelt became assistant secretary of the U.S. Navy in the administration of President Woodrow Wilson. In World War I, Roosevelt was vehemently pro-Allied and interventionist, lobbying strenuously for major increases in defense spending. In 1920 he ran unsuccessfully as the Democratic vice presidential candidate on a pro-League of Nations ticket.

Shortly afterward Roosevelt contracted polio, which left him permanently disabled but did not prevent his return to politics. Elected governor of New York in 1928, four years later he ran successfully for the presidency. In his first term as president, Roosevelt concentrated primarily on domestic affairs, launching a major reform program, the New Deal, to tackle the Great Depression and its effects. Even so, by the mid-1930s he displayed far greater determination than most Americans to check the growing influence and territorial designs of expansionist fascist dictatorships in both Europe and Asia, which he and his close advisors believed ultimately menaced American strategic, economic, and ideological interests.

Appreciable popular resistance to American intervention notwithstanding, when the general European war began in September 1939, Roosevelt unequivocally and immediately placed the United States in the broad Allied and antifascist camp. Two years of fierce debate over U.S. foreign policy ensued, during which Roosevelt moved his country ever closer to outright war with Germany while providing massive quantities of aid to Great Britain, France, and, from summer 1940, Free French forces, the Soviet Union (after June 1941), and China.

The United States entered the war as a result of the concurrent crisis in the Pacific, where Roosevelt sought to use economic policies to force the Japanese to withdraw from China and Indochina. The Japanese refused and on 7 December 1941 mounted a preemptive strike on Pearl Harbor. There is absolutely no evidence that Roosevelt knew about the attack in advance and deliberately left the Pacific Fleet exposed.

Franklin D. Roosevelt, the only person to be elected president of the United States four times, was the father of the New Deal and directed the nation to victory in World War II. He is shown here delivering one of his popular Fireside Chats, a series of evening radio talks in which he explained his policies to the American people. (Library of Congress)

From then until 1945 the United States, Great Britain, and the Soviet Union were the senior coalition partners in the Grand Alliance against the Axis powers (Germany, Italy, and Japan). Since Roosevelt sought to build up China as a key postwar U.S. ally in Asia, at times he accorded that country similar formal status, although its military and economic weakness and semioccupation meant that it never carried the same weight as the other three. As president, Roosevelt set the parameters of American and Allied strategy. He consciously chose to place winning the war in Europe ahead of the Pacific theater and authorized the development of atomic weapons. He also presided over the forging of close permanent ties among the U.S. military establishment, science, and industry, links that later hardened into a postwar military-industrial complex.

During the war, Roosevelt met repeatedly with his Soviet and British counterparts, Soviet President Josef Stalin and British Prime Minister Winston

Churchill, to reach agreement on Allied strategy and to plan for the postwar world. At Roosevelt's urging, in August 1941 Britain and the United States signed the Atlantic Charter, committing the two powers to a postwar international organization to maintain peace and to base the postwar order on principles of liberal free trade, international law, national self-determination, and human rights. Other members of the Grand Alliance later endorsed this statement, although both Britain and the Soviet Union expressed significant reservations on economic and colonial matters.

Roosevelt himself frequently expressed strong opposition to the continuation of Western imperialism after the war, sentiments that greatly irritated Churchill, who believed profoundly in the British Empire. Roosevelt was even more dedicated to ending French colonial rule, although there are indications that by early 1945 this was no longer so high a priority for him.

The British and U.S. decision to defer the cross-Channel invasion of Europe until the spring of 1944 effectively ensured that after the war Soviet military forces would control most of Eastern Europe and the Balkans. Early indications of what this would imply occurred from August to October 1944, when Soviet troops stood by while German forces suppressed an uprising in Warsaw that eliminated many potential opponents of Soviet as well as German rule. At the February 1945 Yalta Conference, the three leaders signed the Declaration on Liberated Europe supposedly promising free elections on democratic principles to all areas taken over by the Allies, but only the goodwill of the occupying powers, who could interpret them as they pleased, guaranteed these pledges. At Yalta, the Big Three also agreed to divide Germany into three temporary, separate occupation zones to be administered by their occupying military forces. Roosevelt's acquiescence in the Yalta provisions exposed him to fierce posthumous attacks from conservatives, but given the military situation on the ground, the United States and Britain had few effective means of preventing Soviet domination of the area. By the time of Roosevelt's death in April 1945, U.S.-Soviet relations were deteriorating as the brutality with which Stalin intended to impose effective Soviet domination on much of Central and Eastern Europe became increasingly apparent to often shocked Allied observers.

Roosevelt himself erroneously assumed that the postwar understanding among Britain, the Soviet Union, and the United States would endure beyond victory, envisaging a peace settlement effectively based on the delegation to each great power of a regional sphere of influence. During the war, he endorsed postwar American membership in the United Nations (UN) and newly created international economic institutions, effectively setting the United States on the path of continued involvement in international affairs, moves for which he cannily obtained bipartisan political support. He expected that the wartime Allies, as permanent members of the UN Security Council, would effectively dominate the new UN.

Under Roosevelt, the United States became the world's greatest economic and military power, a position it retained throughout the twentieth century, and moved decisively away from its limited pre-1940 internationalism. In

poor health in his final year, Roosevelt did not survive to view the results of his labors. He died of a stroke at Warm Springs, Georgia, on 12 April 1945.

Roosevelt had not informed his vice president and successor, Harry S. Truman, in any detail of his future intentions in the international sphere, but Truman nonetheless promptly expressed himself as intending, with due guidance from Roosevelt's advisors, to fulfil his predecessor's postwar ambitions. Some historians, notably Daniel Yergin, have suggested that Truman was far more uncompromising in dealing with the Soviet Union than Roosevelt would have been. However, given the weakness of the ties binding the Grand Alliance once Japan had been defeated, it may well be that Roosevelt too would have faced equally great difficulties in maintaining continued harmonious relations with Stalin.

American engineer and Cold War spy. Born on 12 May 1918 in New York City, Julius Rosenberg was educated at Jewish schools and in his late teens became involved in radical politics. He studied electrical engineering at the College of the City of New York, and there he became a central figure in a close-knit group of engineering students who were members of the Young

Rosenberg, Julius
(1918–1953)

Ethel and Julius Rosenberg ride to separate jails on 29 March 1951 after being convicted of espionage against the United States. The trial of the Rosenbergs was held in New York City in March 1951, at the height of the Red Scare. (Library of Congress)

Communist League, some of whom he later recruited into Soviet espionage. He met fellow activist Ethel Greenglass at a union meeting, and the two married in 1939.

During World War II, Rosenberg worked as a civilian inspector for the Army Signal Corps but was dismissed in early 1945 when his past Communist Party membership surfaced. In 1943 he had the first of some fifty meetings with Alexander Feklisov, a Soviet intelligence officer, and began providing classified military information to him, including secrets related to the manufacture of the atomic bomb. Beginning in 1946 Rosenberg started a small and ultimately unsuccessful engineering workshop with his brother-in-law, David Greenglass, who had previously worked as a machinist on the Manhattan Project.

On 17 June 1950 the Federal Bureau of Investigation (FBI) arrested Rosenberg after a series of confessions by Klaus Fuchs, Harry Gold, and David Greenglass, who turned witness for the prosecution. On 11 August Ethel Rosenberg was also arrested. The Rosenbergs' controversial trial began on 6 March 1951, deeply dividing a nation already polarized by McCarthyism and the Korean War. To some, the Rosenbergs personified the threat of atomic espionage; to others, they were unjust victims of McCarthyism and anti-Semitism. The Rosenbergs were convicted of conspiracy to commit espionage in wartime on 29 March 1951 and were sentenced to death six days later. Although it now appears that Julius—but not Ethel—was in some respects guilty of espionage, the verdict appeared shaky in 1951.

The Rosenbergs remained on death row for twenty-six months while their lawyers filed appeals and as international outrage with the verdict intensified. Both denied being communists and maintained their innocence. After President Dwight Eisenhower refused clemency, Julius and Ethel Rosenberg were put to death by electrocution on 19 June 1953, the only two civilians executed for espionage during the Cold War.

U.S. secretary of defense (1975–1977, 2001–2006). Born in Chicago, Illinois, on 9 July 1932, Donald Henry Rumsfeld graduated from Princeton University in 1954. After serving three years as a naval aviator, he went to Washington in 1957 and became an administrative assistant to an Ohio congressman.

In 1962, Rumsfeld won election as a congressman from Illinois. He won reelection three times but resigned in 1969 to assume the post of director of the Office of Economic Opportunity in President Richard Nixon's administration. In 1971 Rumsfeld became director of the Economic Stabilization Program. Early in 1973 he was appointed U.S. ambassador to the North Atlantic Treaty Organization (NATO). In August 1974, following President Nixon's resignation, Rumsfeld headed the transition team for President Gerald R. Ford. Rumsfeld then served the Ford administration as White House chief of staff from 1974 to 1975 and then became secretary of defense on 20 November 1975. Rumsfeld was the youngest secretary of defense to that time and held the post until the end of Ford's term in January 1977. During his tenure at the Pentagon, Rumsfeld oversaw the initial production runs of the B-1 bomber, the Trident submarine, the Mark 12A nuclear warhead, and the MX ballistic missile system.

In 1977, Rumsfeld left government for the private sector, serving as chief executive officer (CEO), president, and later chairman of G. D. Searle & Co., where he engineered a financial turnaround during 1977–1985. During 1990–1993 he was CEO of General Instrument Corporation, again taking a troubled company back into profitability.

In 2001, Rumsfeld returned to the public sector as secretary of defense in President George W. Bush's administration. Following the 11 September 2001 terrorist attacks, Rumsfeld became one of the most visible members of the Bush team and lobbied successfully for a significant boost in the defense budget. He occupied center stage in planning the U.S. invasions of Afghanistan and Iraq. His comments condemning what he called "Old Europe" (namely, France and Germany) sparked controversy. He also came under fire for his handling of the war in Iraq, especially his belief that the conflict could be won by a small number of troops and that only a small number of forces would be required for occupation and stabilization purposes. He shrugged off any responsibility for the abuse of Iraqi prisoners at Abu Ghraib. Nonetheless, he enjoyed the full support of President Bush and continued as secretary of defense into the administration's second term. However, Rumsfeld resigned on 8 November 2006. This came a week after President Bush had expressed confidence in his defense secretary and said that Rumsfeld would remain until the end of his term, but it was also one day after the

Rumsfeld, Donald
(1932–)

midterm elections in which the Republican Party lost its majorities in both the House of Representatives and the Senate. The election was widely seen as a referendum on the Iraq War and, by extension, Rumsfeld's leadership in it. President Bush named former Central Intelligence Agency (CIA) director Robert Gates to succeed Rumsfeld.

Rusk, Dean (1909–1994)

U.S. secretary of state (1961–1969). Born in Cherokee County, Georgia, on 9 February 1909, David Dean Rusk graduated from Davidson College, then won a Rhodes Scholarship to Oxford University, completing a master's degree in politics, economics, and philosophy in 1934. Returning to the United States, he became professor of government and dean at Mills College, California. An Army Reserve officer, he was called to active duty in 1940, working on military intelligence in the War Department, transferring to Joseph W. Stilwell's staff in the China-Burma-India theater in 1943, and ending the war as a colonel on the War Department General Staff.

Rusk became special assistant to Secretary of War Robert P. Patterson, but in 1947 new Secretary of State George C. Marshall invited Rusk to head the State Department's Office of Special Political Affairs. In spring 1949 Rusk became deputy undersecretary of state. Major policy initiatives during his tenure included the Marshall Plan, the establishment of a separate West German state, and the negotiation of the North Atlantic Treaty.

In March 1950 Rusk became assistant secretary of state for Far Eastern affairs, formulating policy on the People's Republic of China (PRC), the Republic of China (ROC, Taiwan), and the Koreans. When the Democratic People's Republic of Korea (DPRK, North Korea) invaded the Republic of Korea (ROK, South Korea) in June 1950, Rusk recommended firm action and military intervention under international United Nations (UN) auspices. A firm supporter of Chinese Nationalist leader Jiang Jieshi, whom Chinese communist forces drove from the mainland to Taiwan in 1949, Rusk strongly opposed U.S. recognition of the new PRC. His varied experiences reinforced his conviction that aggressive totalitarian powers of both Left and Right must be uncompromisingly opposed.

During 1951–1961 Rusk headed the Rockefeller Foundation, greatly expanding aid programs to the developing world. In 1961 President John F.

Kennedy appointed Rusk secretary of state. Rusk placed special emphasis on improving relations with the Soviet Union, pushing arms control agreements, including the 1963 Partial Test Ban Treaty (PTBT) and the 1968 Non-Proliferation Treaty (NPT), and increasing aid to developing countries. Generally speaking, he counseled moderation during the ongoing Berlin Crisis and the Cuban Missile Crisis.

Initially skeptical of Kennedy's growing U.S. troop commitments in Vietnam, Rusk, under President Lyndon B. Johnson, who relied far more heavily on his advice, became increasingly dedicated to the proposition that the United States must resist communist aggression there. He reluctantly acquiesced in the 1963 coup against South Vietnamese President Ngo Dinh Diem, who had failed to institute domestic reforms that Rusk considered essential. Erroneously holding communist China primarily responsible for expanding North Vietnamese and Viet Cong military efforts, Rusk uneasily supported Johnson's escalation of the war in 1965. At that time Rusk opposed peace negotiations, fearing that his country would enter them from a position of weakness.

Although concerned that excessive American escalation might trigger outright war with China, Rusk supported subsequent troop increases and Johnson's bombings of the Democratic Republic of Vietnam (DRV, North Vietnam) and rarely favored bombing halts to facilitate potential peace talks. He became the war's most ardent official defender, clashing repeatedly with J. William Fulbright, chairman of the Senate Foreign Relations Committee. After the communist 1968 Tet Offensive, Rusk staunchly backed U.S. commander General William C. Westmoreland's request for 200,000 additional American troops. When Johnson rejected his advice in March 1968, Rusk's influence began to wane. He played only a minor role in the Paris peace talks that opened in May 1968.

His reputation tarnished by his exhausting years in office, a deeply scarred Rusk left the State Department in 1969, teaching international law at the University of Georgia until 1984 and eventually writing his memoirs. He died in Athens, Georgia, on 20 December 1994.

Russell, Bertrand (1872–1970)

Englishman Bertrand Russell. During his long and prolific career, Russell wrote many philosophical works for both academics and laypeople. He is also widely remembered for his writings on social reform and his campaigns for peace. Russell won the Nobel Prize for Literature in 1950. (Library of Congress)

British philosopher, writer, social commentator, and antiwar activist. Born on 18 May 1872 in Ravenscroft, Wales, to an aristocratic family, Bertrand Russell was first educated by private tutors. He then studied mathematics, logic, and philosophy at Trinity College, Cambridge University, where he excelled so rapidly that after earning his BA in three years (1893), he was named a Trinity fellow in 1895. He first achieved international renown as the coauthor of the *Principia Mathematica* (1910) and wrote prolifically in the fields of logic and philosophy.

Russell worked from the ivory tower during much of his life, pursuing causes that brought him in turn fame and infamy. He was an atheist, a pacifist, an advocate of sexual permissiveness, a socialist, a radical educator, and a peace activist. During World War I he opposed conscription, lost his lectureship at Cambridge because of it, and spent five months in jail in 1918 for participating in antiwar protests.

Russell succeeded to his seat in the House of Lords in 1931 as the third Earl Russell of Kingston. In the interwar period he wrote extensively, lectured, and taught. A frequent visitor to the United States, he was not always well received there. In 1940 he was fired from a teaching post at the City College of New York for his liberal views on adultery. During World War II he abandoned his pacifist stance in the face of fascist aggression.

After the war, he campaigned constantly against the perils of the atomic bomb. In 1955 the Einstein-Russell Manifesto against nuclear weapons laid the foundations for the annual Pugwash conferences that brought together scientists from East and West to debate and discuss international security and the perils of nuclear war. Russell founded the Campaign for Nuclear Disarmament in 1958, and in 1960 he formed the Committee of 100, which advocated civil disobedience against the bomb. In 1961 he was briefly jailed in Britain for inciting the public to civil disobedience during an antinuclear demonstration.

Although he was a socialist, Russell was by no means a supporter of Soviet-style communism. Nevertheless, he could sometimes be politically naive. He once claimed that President John F. Kennedy and British Prime Minister Harold Macmillan were “worse than Hitler” because, he argued, Hitler only wanted to kill Jews, whereas the British and American leaders might kill everybody in a nuclear war. Russell intervened in the 1962 Cuban Missile Crisis via personal letters to Washington and Moscow but in the end seemed to blame Kennedy more than Soviet leader Nikita Khrushchev for the showdown. In 1966, when Russell established the self-styled International War Crimes Tribunal, some criticized it as being more concerned with American war crimes in Vietnam than with criminal acts perpetrated by the Democratic Republic of Vietnam (DRV, North Vietnam). Russell received the 1950 Nobel Prize for Literature, whose inscription aptly reads: “In recognition of his varied and significant writings in which he champions humanitarian ideals and freedom of thought.” Russell died in Penrhyndeudraeth, Wales, on 2 February 1970.

Russell worked from the ivory tower during much of his life, pursuing causes which brought him in turn fame and infamy.

U.S. senator and longtime chair of the Senate Armed Services Committee. Born in Winder, Georgia, on 2 November 1897, the son of a former justice of the Georgia Supreme Court, Richard Russell Jr. earned a bachelor of law degree from the University of Georgia in 1918. He was elected to the Georgia state legislature at age twenty-three and in 1931 became the youngest governor in that state's history.

Russell reached the U.S. Senate in 1933 as its youngest member and preached a small-town conservatism that was rapidly vanishing from the American political landscape. He mentored freshman Senator Lyndon Johnson and developed a powerful reputation as a behind-the-scenes orchestrator of Senate business. In 1951 Russell chaired the high-profile hearings on the dismissal of General Douglas MacArthur from command of United Nations (UN) forces in Korea. The senator handled this potential political firestorm so adeptly that the controversy quickly subsided.

**Russell, Richard
Brevard, Jr.**
(1897–1971)

A master at shepherding defense appropriations through Congress, Russell chaired the Armed Services Committee during 1951–1952 and 1955–1968 while often serving as de facto head of the powerful Appropriations Committee at the height of the Cold War. As such, he provided strong support for what Dwight Eisenhower termed the military-industrial complex and helped ensure minimal congressional oversight of the Central Intelligence Agency (CIA).

Although privately uneasy with the U.S. military commitment in Vietnam, Russell never put the full weight of his stature and influence behind a reevaluation of the U.S. engagement there. He criticized U.S. Defense Secretary Robert McNamara's gradual escalation policies and frequently called for greater U.S. resources and more decisive tactics in Vietnam during the late 1960s, despite doubts that victory was likely. Russell would not offer the White House political cover for extrication from the conflict. The normally outspoken legislator couched his timidity in claims of helplessness over providing solutions to the growing Vietnam quagmire. His equivocation ultimately proved most tragic in light of his special relationship with President Johnson.

Russell died in Washington, D.C., on 21 January 1971.

Ryzhkov, Nikolai Ivanovich (1929–)

Soviet premier. Born in the Donetsk Oblast on 28 September 1929, Nikolai Ryzhkov worked as a miner before his employment at the Orzhonikidze Heavy Machine–Building Plant in 1950. He joined the Communist Party of the Soviet Union (CPSU) in 1956 and studied engineering at the Kirov Urals Polytechnical Institute in Sverdlovsk. After graduation in 1959, he returned to the Ordzhonikidze plant as a foreman. Appointed chief engineer in 1965, he became deputy director in 1970 and general director the following year.

In 1975 Ryzhkov became first deputy minister in the Ministry of Heavy and Transport Machine–Building, a post he held until 1979 when he was named first deputy chairman of the State Planning Commission, where he served until 1982. Elected to full membership in the CPSU Central Committee in 1981, he became a secretary the following year and headed the Economic Department.

In April 1985, Ryzhkov was elected a full member of the Politburo. Five months later, General Secretary Mikhail Gorbachev named him chairman of the Council of Ministers, making Ryzhkov the Soviet premier. In this post, he oversaw the implementation of Gorbachev's perestroika program of economic reforms but would take much of the blame for the poor economic performance of the late 1980s. Ryzhkov resigned on 25 December 1990 following a heart attack.

In June 1991, Ryzhkov ran against Boris Yeltsin for the presidency of the Russian Republic but lost by a large margin. Working in the private sector after the presidential election, Ryzhkov was chairman of the board of the Tveruniversalbank from 1993 to 1995. He was elected to the Russian State Duma in 1995 and was reelected four years later.

S

Saar

A coal-rich state in the Federal Republic of Germany (FRG, West Germany) bordering France and Luxembourg, historically a region of contested sovereignty between France and Germany. In the eighteenth century, the Saar region was partially in France and partially within two German principalities. The 1797 Treaty of Campo Formio transferred the entire area to France, but the 1815 Treaty of Paris following the Napoleonic Wars transferred the area to Bavaria and Prussia.

The Saar's extensive coal deposits led to industrial development following German unification in 1871. After World War I, the Saar was placed under the administration of the League of Nations for a period of fifteen years, with France to receive its coal production during that period to compensate France for the deliberate destruction of its coal mines by retreating German troops. At the end of the fifteen-year period, Saarlanders were to vote on their future. In a plebiscite held in January 1935, 90 percent of voters in the Saar opted to return to Germany.

After World War II the Saar passed under French military administration, and in 1947 the French set up an autonomous government for the region. In a plebiscite that year, the voters of the Saar approved economic unification with France, and a customs union went into effect in 1948. The other Western powers recognized this arrangement, much to the chagrin of West German leaders. France was obliged to give ground, however, for the 1954 Paris Pacts that provided for West German rearmament and its integration into the North Atlantic Treaty Organization (NATO) also provided for a compromise settlement of the Saar question. To the relief of the Germans, the Saar was declared to be autonomous rather than politically integrated into France. However, it was to remain economically integrated with France for fifty years. But Saar voters threw a monkey wrench into this arrangement by rejecting it in October 1955.

The 1952 European Coal and Steel Community (ECSC), which marked the movement toward the European Economic Community (EEC), and West Germany's integration into the Western alliance eased French concerns over the future of the Saar. As a result of the 1956 Franco-German Agreement, the

Saar became a West German territory on 1 January 1957. Although the customs union with France was dissolved in July 1959, France was granted the right to exploit the Saar's Warndt coalfields until 1981.

Sadat, Anwar (1918–1981)

Egyptian nationalist leader, vice president (1966–1970), and president (1970–1981) of Egypt. Born on 25 December 1918 in Mit Abu al-Kum, Egypt, one of thirteen children, Anwar Sadat attended the Royal Egyptian Military Academy, from which he graduated in 1938 as a second lieutenant. His first posting was in the Sudan, where he met Gamal Abdel Nasser, fellow nationalist and future Egyptian president. Stemming from their mutual disdain of British colonial rule, Sadat and Nasser helped form the secret organization that would eventually be called the Free Officers Group, comprised of young Egyptian military officers dedicated to ending British rule and ousting King Farouk II. During World War II, Sadat was jailed for conspiring with the Axis powers to expel British forces from Egypt.

Sadat was an active participant in the 23 July 1952 coup against King Farouk engineered by the Free Officers Group. Farouk abdicated and left Egypt on 26 July 1952. When Egypt was declared a republic in June 1953, Major General Mohammad Naguib became its president, and Nasser became vice president. In October 1954, after an attempt on Nasser's life, Naguib was removed from office, while Nasser consolidated his power. In February 1955 Nasser became prime minister and seven months later became president. Sadat, meanwhile, served loyally under Nasser, acting as his chief spokesman and one of his closest personal confidants and advisors.

In 1964 Sadat became vice president of Egypt and then president upon Nasser's death in September 1970. When Sadat became president, Egypt's relationship with the Soviet Union, once robust, was showing signs of serious strain. At the time of his death, in fact, Nasser had been moving away from the Soviet Union. Part of the reason for this had been the reduction in equipment that the Soviets were willing to sell to Egypt. On 18 July 1972, Sadat ordered all Soviet advisors to leave the country, to be followed by pilots and other army technicians.

Sadat became the first Arab leader to officially visit Israel in November 1977.

On 6 October 1973, Sadat led Egypt, along with Syria, into a war with Israel with the goal of reclaiming the Sinai Peninsula lost in the 1967 Six-Day War. Although Egypt was defeated in the war, initial military successes and Sadat's determination earned him great respect among his people and lifted the morale of the nation, which had been badly shaken by Nasser's heavy-handed rule and economic difficulties. At war's end, the United States and the Soviet Union both were concerned about the balance of power in the Middle East and thus negotiated a cease-fire agreement that was generally favorable to Egypt, allowing Sadat to claim a victory of sorts.

Realizing that only the United States could elicit any substantive concessions from Israel, Sadat completely severed relations with the Soviet Union in March 1976 and began working with the Americans toward a peace settlement with the Israelis. In a courageous move, Sadat became the first Arab leader to officially visit Israel in November 1977, meeting with Prime Minister Menachem Begin and even addressing the Israeli Knesset. In September 1978, Sadat signed the Camp David Accords, ushering in a comprehensive peace agreement with Israel. The accords were highly unpopular in the Arab world, however, especially among fundamentalist Muslims.

Although the Camp David Accords were, in the long run, beneficial for Egypt, many in the Arab world saw them as a great betrayal and viewed Sadat as a traitor. In September 1981, Sadat's government cracked down on extremist Muslim organizations and radical student groups, in the process arresting more than 1,600 people. Sadat's strong-arm tactics angered many in the Arab community and only exacerbated his problems, which included economic stagnation and charges that he had quashed dissident voices through force.

On 6 October 1981, Sadat was assassinated in Cairo while reviewing a military parade commemorating the Yom Kippur War. His assassins were radical fundamentalist army officers who belonged to the Islamic Jihad organization, which had bitterly denounced Sadat's peace overtures with Israel and his suppression of dissidents the month before. Sadat was succeeded in office by Hosni Mubarak.

**Sakharov, Andrei
Dmitrievich**
(1921–1989)

Soviet nuclear scientist, dissident, and human rights activist. Born on 21 May 1921 in Moscow, the son of a physics professor, Andrei Sakharov studied physics at Moscow University during 1939–1942 and at the Lebedev Institute of the Soviet Academy of Sciences during 1945–1947 under the eminent theoretical physicist Igor Tamm. Sakharov earned his doctorate in 1947 and joined the Soviet nuclear weapons program in 1948, working in a special group then headed by his mentor.

Spearheaded by Sakharov, Tamm's group produced the first Soviet hydrogen bomb, successfully tested in August 1953, a development that greatly intensified the nuclear arms race with the United States. For his contributions to the development of the hydrogen bomb, Sakharov received both the Lenin and Stalin Prizes and earned election as a full member of the Soviet Academy of Sciences in 1953.

Sakharov's participation in the Soviet nuclear weapons program lasted nearly twenty years. Initially, he believed that his work was of vital importance to the global balance of power.

However, over time he grew uneasy with what he characterized as moral problems inherent in his work, and he became disillusioned with the Soviet system, specifically the absence of civil liberties and the secrecy surrounding science, culture, and technology.

Beginning in the late 1950s, Sakharov called on the Soviet regime to ban atmospheric testing of nuclear weapons. In the early to mid-1960s, he moved on to criticize the continuing influence of the erroneous theories of T. S. Lysenko on Soviet genetics and to protest Soviet leader Leonid Brezhnev's tentative first steps toward rehabilitating the legacy of Soviet dictator Josef Stalin. Sakharov ultimately crossed the Rubicon to full dissident in 1968, when his essay "Reflections on Progress, Peaceful Coexistence, and Intellectual Freedom" appeared in the Western press. This extended essay, also known as the Sakharov Memorandum, warned of the dangers, including thermonuclear annihilation, that threatened humanity. He also pushed for reconciliation between socialist and capitalist nations, advocated democratic freedoms in the Soviet Union, denounced collectivized agriculture, and called for a careful reexamination of the Stalin era. In response, the Brezhnev regime removed Sakharov from the Soviet

nuclear weapons program and stripped him of all privileges to which he had been entitled as a member of the Soviet Nomenklatura.

In the summer of 1969, Sakharov became a senior researcher at the Lebedev Institute, but his primary concerns for the remainder of his life were human rights and the democratization of the Soviet Union. In 1970, he and fellow physicist Valeri Chalidze established the Moscow Human Rights Committee, which advocated freedom of speech, the full implementation of the Soviet constitution, and monitored violations of the law and the constitution including the arrests of dissidents by the Soviet regime. Sakharov's efforts in the name of human rights earned him the Nobel Peace Prize in 1975, making him the first Soviet citizen to garner the award, although he was not permitted to leave the Soviet Union to claim it.

Although the Soviet Komitet Gosudarstvennoi Bezopasnosti (KGB) harassed Sakharov and threatened him with prosecution, he remained a free man until 1980 when, in the wake of his criticisms of the 1979 invasion of Afghanistan and with the 1980 Moscow Olympics approaching, the Brezhnev regime exiled him to Gorky, a military-industrial city closed to foreigners. There Sakharov remained until December 1986, when Soviet leader Mikhail Gorbachev, as part of his policy of glasnost, freed him, allowing him and his wife Yelena Bonner to return to Moscow and resume his scientific endeavors.

In 1989, the Soviet Academy of Sciences selected Sakharov to serve as a deputy in the newly established Congress of People's Deputies, the first democratically elected national legislative body to sit in Russia since the Bolshevik Revolution. There Sakharov proved to be an outspoken critic of Gorbachev, constantly pushing him to carry his political and economic reforms further. Sakharov died of a heart attack in Moscow on 14 December 1989.

French Army officer and bitter opponent of the dismantlement of France's colonial empire. Born in Roquecourbe (Tarn) near Toulouse on 10 June 1899, Raoul Salan was admitted to the French military academy at Saint-Cyr in

**Salan, Raoul
Albin-Louis**
(1899–1984)

August 1917 during World War I but was immediately sent to the front in France. He returned to Saint-Cyr after the war and graduated in August 1919. He then served in Algeria, Morocco, the Middle East, and Indochina.

At first loyal to Vichy following the defeat of French forces by the Germans in June 1940, Salan later rallied to the Free French Resistance in 1943 and, as a colonel in command of a regiment, took part in the liberation of metropolitan France. In 1945 he was posted to French Indochina, where he commanded French forces in northern Indochina, accompanying Vietnamese nationalist leader Ho Chi Minh to France and the July 1946 Fontainebleau Conference. In April 1952, Salan assumed command of all French forces in Indochina, holding that post until January 1953 when he became inspector general of land forces in France. He accompanied French Army commander General Paul Ely on a fact-finding tour to Indochina in June 1954 and then returned there with Ely when the latter was named high commissioner and commander in chief of French forces (July–October 1954). The French military defeat in the Battle of Dien Bien Phu in May 1954 was a clarion call for Salan, who believed that there could be no defeats for the French colonial empire, a conviction shared by many of his fellow officers.

During January–May 1955, Salan commanded the reserve army in France and was a member of the Supreme War Council. In November 1956 he was dispatched to Algeria as commander in chief of French forces there with the rank of general of the army. At the time, France was heavily engaged in fighting anticolonial forces in Algeria. Salan initially supported General Charles de Gaulle's ascension to power in May 1958 and the establishment of the French Fifth Republic. That December, de Gaulle, who mistrusted Salan, removed him from command.

In 1959 Salan retired to Algeria. When he realized that de Gaulle was prepared to grant Algeria independence, he allied himself with the anti-Algerian independence movement *Algérie française* (French Algeria). On 22 April 1961, Salan was one of four French generals to foment a military coup attempt in Algeria. Known as the Generals' Putsch, it failed after three days, and Salan went underground to lead the Secret Army Organization (OAS) in a brutal campaign of terror against the French government in both Algeria and France. That July he was sentenced in absentia to death for treason.

Arrested in Spain in April 1962, Salan was returned to France and tried a month later. Found guilty, he was sentenced to life imprisonment. He was released in May 1968 under a governmental amnesty. In 1982, President François Mitterrand restored Salan's military rank along with his pension. Salan died in Paris on 3 July 1984.

Portuguese political leader and dictator. Born on 28 April 1889 in the village of Vimeiro, near the town of Santa Comba Dão, Portugal, António Salazar grew up a conservative Catholic. Educated at the University of Coimbra, he became a professor of political economy there. He was elected to the Portuguese Chamber of Deputies but soon withdrew because he considered it to be a futile exercise. In 1926, in order to end chronic political instability in Portugal (there had been forty cabinets since the overthrow of the monarchy in 1910), the Portuguese military seized power. Salazar was then briefly minister of finance. Recalled to the same post in 1928, he received the full authority that he demanded and in short order had placed Portuguese finances on a firm foundation. Over the next few years he gradually increased his power until in 1932 he became premier of an authoritarian government. From that point, he dominated Portuguese affairs until 1968.

Under a new constitution ratified in a 1933 referendum, Salazar reorganized Portugal as a corporative unitary republic rather than a pluralist state. A national assembly, elected by heads of families, served as the legislative body. A corporative chamber advised the assembly on social and economic matters and represented syndicates of various corporations. The Catholic Church also had widespread influence. Salazar's National Union party was the political voice of the so-called *Estado Novo* (New State), which combined eighteenth-century enlightened despotism with Christian morality, but also had both fascist and democratic trappings. This system came to be known as clerical fascism and subsequently became a model for the Nationalists in Spain and for Austria.

Profoundly religious, Salazar was also an ascetic and a bachelor. Unlike most dictators, he lived frugally on a modest salary and was utterly uninterested in the accumulation of personal wealth. He also remained virtually unknown to his people. While he admired fascism and supported the Nationalist side in the Spanish Civil War, he also intensely disliked Adolf Hitler and the Nazis and maintained diplomatic relations with Portugal's long-standing ally, Great Britain. As with Francisco Franco in Spain, Salazar appreciated the German war against communism but, unlike Franco, kept his country strictly neutral during World War II until, under British and U.S. pressure, he

**Salazar, António de
Oliveira**

agreed in October 1943 to lease bases in the Azores. These proved vital to the Allies in the Battle of the Atlantic. Nonetheless, Salazar maintained that the nation was neutral, and Portugal profited from selling goods to both sides.

Portugal emerged from the war in a much better position than Spain, was readily admitted to the United Nations (UN), and was invited to join the North Atlantic Treaty Organization (NATO). Although Portugal was a police state, Salazar always tried to preserve some of the elements of a democratic façade. Unfortunately for his country, however, he refused to allow economic modernization, believing that it would place traditional Portuguese values at risk, and the resultant economic stagnation led many Portuguese to emigrate. In his last years in power, Salazar was increasingly forced to devote substantial financial and military resources to maintaining Portuguese control over its overseas empire, especially in Africa. An injury in 1968 led to a disabling stroke, forcing him to yield power to Marcelo Caetano, who began reforms. Salazar died in Lisbon on 27 July 1970.

San Francisco Peace Treaty (8 September 1951)

Treaty signed by Japan and forty-eight other nations in San Francisco, California, on 8 September 1951 formally terminating the state of war between Japan and the other signatories and restoring full sovereignty to Japan. The treaty went into force on 28 April 1952.

On 17 March 1947, General Douglas MacArthur publicly proposed an early peace treaty with Japan. However, differing attitudes among the European powers, the United States, the Soviet Union, and China over how best to approach such a treaty ultimately led to the postponement of any international conference on the subject.

Meanwhile, growing tensions between the Soviet Union and the United States enhanced Japan's political and strategic importance, leading the Americans to embark on a mission to reconstruct Japan both economically and politically. In light of growing tensions with the Soviet Union, together with the October 1949 communist victory in the Chinese Civil War, U.S. policymakers, particularly those in the Pentagon, argued for the need to maintain U.S. military bases in Japan. Consequently, the United States became increasingly inclined to end its occupation of Japan.

The Americans made substantial moves toward securing a peace settlement after John Foster Dulles was appointed consultant to the State Depart-

ment in April 1950. Dulles, with nonpartisan domestic support, initiated negotiations with other Allied countries beginning in September 1950. Meanwhile, the outbreak of the Korean War in June 1950 added urgency to these peace negotiations.

The terms for the peace treaty drafted by the United States in late 1950 were seen as lenient and were consequently opposed by the Soviet Union, Australia, New Zealand, and the Philippines. While no compromise could be reached with the Soviet Union, U.S. policymakers persuaded the other states to accept the treaty's nonpunitive principles. The final draft of the treaty was jointly prepared by the United States and Great Britain.

The peace conference opened on 4 September 1951 in San Francisco and was attended by fifty-two nations. The treaty itself was signed by representatives of forty-nine nations, including Japan, on 8 September. Although their representatives were in attendance, the Soviet Union, Poland, and Czechoslovakia refused to sign the treaty.

The treaty stipulated Japan's abandonment of all territories acquired since 1895, including Korea, Taiwan, the Kurile Islands, and southern Sakhalin and its adjacent islands. American provisional control of the Ryukyu and Bonin islands was permitted, with an agreement to obtain ultimate authorization of the U.S. administration under a United Nations (UN) trusteeship. The document also established Japan's liability for payment of war reparations and drew attention to Japan's fragile economic situation. Later that same day, the United States and Japan also signed a security treaty.

Nicaraguan revolutionary movement and political party that toppled the dictatorship of Anastasio Somoza in 1979 and ruled Nicaragua during the 1980s.

After 1960, Somoza's restrictions on political opposition combined with the success of revolutionary movements in Cuba and elsewhere emboldened a group of activists to challenge his hold on power. Led by Carlos Fonseca, Tomás Borge, and Silvio Mayorga, the Frente Sandinista de Liberación Nacional (FSLN, Sandinista National Liberation Front) began its operations in Nicaragua's largest cities. The Sandinistas took their name from Augusto César Sandino (1895–1934), who led a nationalist rebellion against the U.S.

Sandinistas

Sandinistas patrol outside Managua, Nicaragua, on 22 July 1979. The Sandinistas seized power three days earlier. (Patrick Chauvel/Sygma/Corbis)

military occupation of Nicaragua in the 1920s and early 1930s until his assassination by the U.S.-created Guardia Nacional (National Guard) enabled Somoza to seize control.

Designed as an urban guerrilla force, the FSLN had little impact. The corruption of the Somoza regime, however, helped sustain its organizational efforts. Shifting from urban to rural districts, the organization survived military defeats and factionalism well into the 1970s. In 1975, the group split into three organizational lines. The Prolonged Popular War faction (GPP), under the direction of Fonseca, Borge, and Henry Ruíz, led the effort to mobilize the population for war against the dictatorship. A second faction, led by Luis Carrión, Jaime Wheelock, and Carlos Núñez, focused on organizing workers and the urban underclass. A third group that would form the core of the Sandinistas' political force after 1979 built connections with business groups and other political opposition forces.

Somoza steadily lost popular support during the 1970s, and his reactionary policies helped the Sandinistas build their base and expand military operations. In 1974 the FSLN sponsored the formation of the United People's Movement (MPU), which linked unions, university students, and church-affiliated groups with their struggle. After 1977, the Sandinistas coordinated their campaigns with allied groups. Attacks against symbols of the Somoza regime, highlighted by the occupation of the National Palace and an ensuing

prisoner exchange in 1978, demonstrated the FSLN's capabilities while it continued to build popular support.

International pressure and dwindling support from President Jimmy Carter's administration led Somoza to choose exile before defeat, and on 19 July 1979 the Sandinistas occupied Managua and took command of the government. The splits in the movement did not initially affect the Sandinistas' efforts. After declaring the unification of the movement's factions in 1979, the FSLN outlined its plans for the political, social, and economic transformation of Nicaragua. Nationalism, agrarian reform, progressive social reforms, universal medical care, and popular education clearly showcased the government's socialist orientation.

The Carter administration briefly offered humanitarian assistance to the Sandinistas, but domestic political pressure from conservatives forced the administration to end aid in 1980. The staunchly anticommunist President Ronald Reagan treated the Sandinistas much more harshly. In 1981 the Reagan administration engineered the end of financial support from international lending agencies and authorized the Central Intelligence Agency (CIA) to coordinate a counterrevolutionary movement in Nicaragua.

In 1982, with nearly \$20 million from the United States, the Contra rebels began military operations against the Sandinista government. Launching small-scale raids from Honduras and Costa Rica, the Contras created an ongoing military challenge that sapped Sandinista resources. Nevertheless, the Sandinistas organized a government structure that allowed them to dominate the political process. A national directorate controlled the political process, the FSLN created youth groups and neighborhood committees to expand its base, and corporate bodies coordinated the political life of students, workers, and professionals.

Internationally, the Sandinistas counted on immediate support from Cuba and the Soviet Union. The Sandinista leadership chose to affiliate with the Socialist International rather than the Moscow-dominated Comintern. Harassed by Contra incursions and placed under a U.S. trade embargo that affected economic relations with its neighbors, the Sandinistas came to rely more and more upon economic and military aid from their communist allies.

Increasingly isolated, the Nicaraguan economy performed poorly under the Sandinistas. Inflation, shortages, and meager productivity hindered the government's efforts to diversify and expand the economy. Ultimately, the flagging economy undermined the Sandinistas' many ambitious social projects. Defense programs interfered with the agrarian reform program and exacerbated prickly government relations with the Miskito Indians in eastern Nicaragua.

In 1984, the U.S. Congress passed the Boland Amendment, which forbade further Contra funding. The Reagan administration skirted the restriction by illegally selling weapons to Iran as a way of generating funds for Contra operations. While revelations of these extralegal maneuvers rocked the Reagan administration, the Contra war continued.

To bring legitimacy to their regime, the Sandinistas organized national elections in 1984. Splits in the opposition forces allowed the Sandinistas to use

their organizational strength to great effect. Daniel Ortega won election as president, and the Sandinistas worked to preserve their revolution's achievements, seeking international assistance in their ongoing conflict with the United States. In 1984, the International Court of Justice ruled that American actions in Nicaragua violated international laws but had no effect on U.S. policy. Latin American efforts to negotiate a peace settlement bore no fruit until 1989. Led by Costa Rican President Oscar Arias Sánchez, the 1989 Central American Peace Initiative brought about a final settlement. Under the plan, the Contras would disarm and the Sandinistas would authorize a national election, scheduled for February 1990.

Opposition forces united behind candidate Violeta Barrios de Chamorro, the widow of a leading opponent of the Somoza dictatorship who had been assassinated in 1978. Poor economic conditions and factionalism among the Sandinistas allowed the United Nicaraguan Opposition movement to capture the presidency and a majority of the seats in the National Congress. The Sandinistas' 1990 electoral defeat left the movement weakened and divided. Out of power, Sandinista leaders have recast their movement as a political party that competes effectively in local and national elections.

Sartre, Jean-Paul

(1905–1980)

French philosopher, novelist, playwright, and social and literary critic. Born in Paris on 21 June 1905, Jean-Paul Sartre studied philosophy at the École Normale Supérieure, from which he graduated in 1929, the same year he met his lifelong companion Simone de Beauvoir, who became well known as a feminist writer and philosopher. During 1929–1930 Sartre served as an officer with a French military meteorological unit, and during most of the 1930s he taught at lycées in Paris and Le Havre.

Sartre's first novel, *La Nausée* (Nausea), published in 1938, caused an immediate sensation. Influenced by German phenomenological philosophy, the novel laid bare the human condition by embracing the idea that human life has no inherent purpose. At the beginning of World War II, Sartre served in the army and fought in the 1940 campaign for France. Captured by the Germans, he was sent to several prisoner-of-war camps, including Stalag XIID, where he produced his play *Bariona*. Released in 1941, he wrote for the French Resistance during 1941–1944.

In 1945 Sartre founded with Beauvoir the journal *Les Temps Modernes*. A year later he published “Existentialism and Humanism,” perhaps his most influential and widely read essay on existentialist philosophy. From 1945, he traveled extensively to lecture and write, becoming more politically active beginning in the 1950s. He refused to accept the 1964 Nobel Prize for Literature, arguing that to do so would compromise his political autonomy.

From the mid-1950s, Sartre was continually involved with leftist political causes. His efforts dealt with issues ranging from the lack of affordable housing in France to torture in Algeria and to the American war in Vietnam. While never a member of the Communist Party (he eschewed formal political allegiances), he evolved into a neo-Marxist who saw promise particularly in Maoism. His slide toward communism ultimately led to the painful end of his friendship with fellow existentialist Albert Camus. In 1960 Sartre reconciled the tenets of existentialism with those of classical Marxism in his *Critique of Dialectical Reason*. In 1960 he also signed the “Declaration on the Right to Insubordination in the War in Algeria” (also known as the “Manifesto of the 121”) supporting Algerian independence and in 1966 was a member of fellow philosopher Bertrand Russell’s International War Crimes Tribunal.

Sartre continued to write voluminously and, increasingly, about politics. He was the editor of *La Cause du Peuple* (1970), *Tout* (1970–1974), *Révolution* (1971–1974), and *Libération* (1973–1974) and was the founder, along with Maurice Clavel, of the Liberation news service in 1971. In failing health, Sartre began to lose his eyesight in 1975 and by the end of his life was completely blind. He died in Paris on 15 April 1980.

Japanese politician and prime minister (1964–1972). Born on 27 March 1901 in Tabuse-chō in the Yamaguchi Prefecture, Satō Eisaku graduated from the law school of Tokyo Imperial University in 1924. He then entered the Ministry of Railways, serving there until 1948. In 1947 he was appointed permanent undersecretary of the Ministry of Railways but served in this post for just thirteen months. In 1948 he became chief cabinet secretary in the second

Satō Eisaku
(1901–1975)

Satō was awarded the Nobel Peace Prize in 1974 for his antinuclear diplomacy, an award that caused considerable controversy.

Yoshida Shigeru government. Satō was chairman of the Policy Affairs Research Council of the Liberal Party in 1949 when he was elected to the Lower House of the Diet.

Satō held ministerial posts in the third and fourth Yoshida governments, including minister of the post office (1951–1952) and minister of construction (1952–1953). In 1953 he became director general of the Liberty Party (which merged with the Democratic Party in 1955 to become the Liberal Democratic Party), but he was forced to resign the position because of a ship-building company scandal during the fifth Yoshida cabinet in 1954. Satō subsequently became minister of finance during 1958–1960 under Prime Minister Kishi Nobusuke, Satō's elder brother by adoption.

In October 1964 Satō succeeded Ikeda Hayato as prime minister. During his seven years in office, Satō signed the 1965 Japan-Korea Treaty restoring normal diplomatic relations between the two countries and regaining control for Japan of the Ogasawara Islands in 1968. Although U.S. troops and bases remained on Japanese soil, Satō managed to negotiate a reversion of Okinawa to Japanese sovereignty in 1972.

Satō was less successful in establishing closer ties to either the Soviet Union or the People's Republic of China (PRC). Public outrage over his agreement to allow U.S. troops to remain on Okinawa ultimately forced his resignation in November 1972. He was awarded the Nobel Peace Prize in 1974 for his antinuclear diplomacy, an award that caused considerable controversy. Satō died in Chiyodaku, Tokyo, on 3 June 1975.

Saudi Arabia

Middle Eastern nation located on the Arabian Peninsula. The Kingdom of Saudi Arabia, founded in 1932, covers 756,981 square miles, nearly three times the area of the U.S. state of Texas, and had a 1945 population of some 3.5 million people. Saudi Arabia borders Jordan, Iraq, and Kuwait to the north; the Persian Gulf, Qatar, and the United Arab Emirates to the east; Oman and Yemen to the south; and the Red Sea to the west. It has been dominated by its ruling family, the House of Saud, for all of its modern history. King Ibn Saud, the founding monarch, ruled until his death in 1953. All succeeding kings have been his sons (he had more than fifty). The House of

Saud has historical ties to the leadership of the Wahhabi sect of Islam, and as a result Saudi Arabian law and society are based on strict Muslim customs.

The role of Ibn Saud in Saudi Arabia cannot be overstated. The state grew inexorably as a result of his domination of the Arabian Peninsula in the early twentieth century as the Ottoman Empire declined. After the end of World War I, he consolidated his position and became king in 1925. The realm was renamed the Kingdom of Saudi Arabia seven years later. The fortunes of the kingdom were transformed with the discovery of petroleum in the 1930s.

American oil companies (Chevron in particular) played the leading role in oil exploration and formed a partnership with the Saudi monarchy, paying royalties for the right to extract and ship Saudi oil. The importance of oil during World War II enhanced the Saudi-U.S. relationship, and in 1944, the Arab-American Oil Corporation (ARAMCO) was formed. President Franklin D. Roosevelt helped to cement the growing relationship when he met with Ibn Saud on an American destroyer in 1945. The Saudi monarchy thus maintained close economic and strategic ties to the United States throughout the remainder of the century.

Because of the growing strategic importance of the Middle East and its oil reserves to Cold War geopolitics, both the United States and the Soviet Union sought increased influence in the region. The Soviets endorsed the rise of secular, socialist, Arab nationalist regimes in Egypt, Iraq, and Syria, and Soviet military assistance was crucial to these nations in their ongoing struggle with Israel after its founding in 1948. The United States countered these Soviet moves by tightening its ties to the royal regimes in Iran and Saudi Arabia.

In 1962 civil war broke out in Yemen as a nationalist faction supported by Egyptian President Gamal Abdel Nasser sought to overthrow the royal government there. Despite previous rivalries with the ruling house of Yemen, the Saudis gave financial support and military assistance to the Yemeni monarchy. Egypt and Saudi Arabia thus confronted each other directly in the conflict. The devoutly Muslim House of Saud opposed the rise of secular, socialist Arab nationalism and refused to tolerate the spread of Nasser's Pan-Arabism in the region. In addition, the respective affiliations of Egypt and Saudi Arabia with the Soviet Union and the United States made the Yemeni Civil War a regional theater of Cold War confrontation.

The Israeli issue greatly complicated U.S.-Saudi relations. The Saudis objected to the 1948 formation of Israel, opposed the displacement of Palestinian Arabs, and played a minor military role in the first Arab-Israeli War (1948). The Saudis would contribute significant funds to Palestinian causes until the 1991 Persian Gulf War.

Despite its vehement opposition to Israel, the Saudi government nonetheless maintained tepid relations with Arab nationalist regimes in Syria, Egypt, Iraq, and Jordan, Israel's principal enemies. Thus, Saudi Arabia did not participate in the Arab-Israeli wars of 1956, 1967, and 1973. However, as American support for Israel increased after the 1967 Six-Day War, the Saudis sought to influence American policy. This conflict laid the foundation for the 1973 oil embargo.

Massive increases in oil revenues (from \$5 billion in 1972 to \$119 billion in 1981) transformed Saudi Arabia into an affluent, urbanized society.

Saudi oil was largely controlled by American oil companies until the early 1970s. At that point, the House of Saud negotiated the gradual takeover of ARAMCO by Saudi interests. By 1973, the transfer of control had begun. When Egypt and Syria attacked Israel in October 1973, prompting the Yom Kippur War, Saudi Arabia's King Faisal obtained U.S. President Richard Nixon's assurances of American nonintervention. The Israelis suffered severe reversals in the opening stages of the conflict, however, which prompted Nixon to send U.S. military aid to Israel on 19 October. The next day, working through the Organization of Petroleum Exporting Countries (OPEC), the Saudi government implemented an oil embargo directed at the United States. The embargo made the United States vulnerable to an economic recession, and American fuel prices rose 40 percent during the five months of the crisis. Even after the embargo ended, oil prices remained high for the rest of the decade.

Saudi Arabia emerged from the crisis as the clear leader of OPEC and with renewed respect in the Arab world. Massive increases in oil revenues (from \$5 billion in 1972 to \$119 billion in 1981) transformed Saudi Arabia into an affluent, urbanized society with generous government subsidies and programs for its citizens and no taxation. The U.S.-Saudi relationship eventually recovered and remained close. Indeed, Saudi Arabia often used its influence in OPEC to keep oil prices artificially low from the mid-1980s to late 1990s.

Supertankers loading oil in Saudi Arabia for shipment abroad. (Corel)

Such policies, however, had a downside. When oil prices dipped dramatically during 1981–1985, the Saudi economy plunged into recession, presenting the government with significant domestic unrest. A similar scenario was played out in the late 1990s. This time the Saudis acted aggressively, hiking oil prices in 2000 and 2001 to right their foundering economy. Continuing close ties between Washington and Riyadh also played a major role in the 1991 Persian Gulf War, as Saudi Arabia was used as a staging area for U.S. troops during Operation DESERT STORM.

Despite the considerable power that the Saudis wielded in international relations beginning in the 1970s and the tremendous increase in wealth as a result of oil revenues, the House of Saud maintained strict control over Saudi society, culture, and law. Saudi Arabia remained an absolute monarchy until 1992, when the royal family promulgated the nation's first constitution.

Angolan rebel nationalist leader, founder of the National Union for the Total Independence of Angola (UNITA) movement, and guerrilla tactician. Born in Munhango, Bie Province, on 3 August 1934, Jonas Savimbi was purposely vague and evasive about his early life, claiming a PhD from the University of Lausanne, Switzerland. He may have spent two years in Portugal as a medical student. In 1966 he founded UNITA, a political movement dedicated to securing independence for that Portuguese colony. He fought a guerrilla war first against the Portuguese and then against the pro-Soviet, Marxist Angolan government, in the process surviving more than a dozen assassination attempts.

The Angolan nationalists fighting Portugal's colonial rule were the left-wing Popular Movement for the Liberation of Angola (MPLA), led by Agostinho Neto, and Savimbi's UNITA. After Angola won independence in 1975, Neto came to power with the explicit support of the Soviet Union and Cuba. Savimbi immediately turned his sights on the MPLA government, plunging the new nation into a horrific civil war. Both South Africa and the United States supplied UNITA with arms and weapons.

**Savimbi, Jonas
Malheiro**
(1934–2002)

Among the African leaders who openly supported Savimbi were Felix Houphouet-Boigny of Ivory Coast and Mobutu Sese Seko of Zaire. Others were more discrete in their aid but nevertheless maintained diplomatic and commercial ties with UNITA. Savimbi began to score victories against the MPLA in the late 1980s. By 1990, in fact, his forces controlled almost half of Angola. The Angolan government negotiated a cease-fire with UNITA in 1991. The following year, Savimbi lost a questionable presidential election, and the civil war was reinvigorated, with periodic breaks, for another decade. Despite United Nation (UN) condemnatory sanctions and embargoes and international recognition of the popularly elected government in Luanda, Savimbi persisted, financing UNITA mainly through illicit sales of diamonds.

The United States and the Soviet Union used Angola as a proxy during the Cold War, while Savimbi used the Cold War to portray himself as a warrior against communism. With the Cold War ended along with the apartheid regime in South Africa, he continued the civil war, becoming a virtual international pariah with no major patrons. Savimbi died in battle in Lucusse on 22 February 2002. Just six weeks after his death, UNITA rebels signed a cease-fire, which ended the long civil war. Savimbi's struggle resulted in the deaths of more than a million people and the displacement of 2 million others.

Scandinavia

A region in the North Atlantic and Baltic Sea area strategically divided between East and West during the Cold War and that displayed a low degree of Cold War tensions and a high degree of internal cohesion. Scandinavia comprised the North Atlantic Treaty Organization (NATO) member states of Iceland, Norway, and Denmark (with Greenland and the Faeroe Islands) as well as neutral Sweden and Finland.

Finland was able to maintain a democratic and capitalist system despite its special ties to the Soviet sphere. Finland in particular and Scandinavia in general can thus be considered anomalies in the predominantly bipolar world of the Cold War. In spite of partial submission to the logic of the Cold War, the Scandinavians never really abandoned the bridge-building approach to international relations that they had pursued in the immediate postwar years. The superpowers in their turn were willing to relax their confrontation in this region and to grant some rather extraordinary exceptions.

Scandinavian nations shared many mutual historical and cultural ties, although Finnish is not a Scandinavian language. Finland was a grand duchy under the Russian tsars during 1809–1917 but is nonetheless an integral part of the Scandinavian community. In the Scandinavian languages, and similarly in Finnish, this community is designated with the term “Norden” (“the North”), whereas the term “Scandinavia” in these languages is ambiguous and might exclude Finland, Iceland, and Denmark. Therefore, the terms “Norden” and “Nordic” are often used instead of “Scandinavia” and “Scandinavian” in the comprehensive sense described above.

Despite their attempts to establish a common policy of neutrality at the end of the 1930s, the Scandinavian countries were unable to escape the harsh realities of World War II. Finland was attacked by the Soviet Union and ended up as an ally of Nazi Germany, while Denmark and Norway were attacked and occupied by Germany. Denmark’s North Atlantic territories (which at that time also included Iceland) were controlled by Great Britain and the United States during the war. Only Sweden was able to retain its neutrality. These different historical experiences were fundamental to understanding the future orientation of these countries.

In the case of Finland, which in its turn had attacked the Soviet Union and had been forced to conclude an armistice in 1944, additional compulsion came into operation. In regard to Denmark and Norway, small parts of these countries were liberated by Soviet forces in 1945, and citizens of both countries felt uneasy about their presence until they departed in 1945–1946. Norway also came under Soviet pressure to participate in a common defense of the Svalbard (Spitzbergen) Archipelago in these years.

Denmark and Norway were in a position to pursue a policy of bridge building after World War II and adhered to this policy until the spring of 1948. The election of Norwegian Foreign Minister Trygve Lie as the first secretary-general of the United Nations (UN) in early 1946 was an acknowledgment of this effort. In the meantime, Sweden actively tried to improve its strained relations with the Soviet Union while maintaining nonalignment. This effort paid dividends in April 1953 when Swedish diplomat Dag Hammarskjöld was elected as the second secretary-general of the UN. Except for Finland, Scandinavian governments decided to participate in the 1947 Marshall Plan, but they also displayed some discomfort with having to take a stand in the Cold War.

The discomfort of nonalignment, however, became ever more pressing as the Cold War deepened. In particular, the February 1948 communist coup in Czechoslovakia was viewed as a signal to seek some sort of security arrangement beyond the framework of the UN. Furthermore, the fact that Finland was forced to conclude a Treaty of Friendship, Cooperation and Mutual Assistance with the Soviet Union in April 1948 raised fears of the possible Sovietization of Scandinavia. In Norway, which shared a border with the Soviet Union, but also in Denmark, there were signs of near hysteria in the spring of 1948.

Against this background, and in order to prevent diverging security paths among the three Scandinavian core countries, Swedish Foreign Minister

Östen Undén suggested an outwardly neutral defense pact to Norway and Denmark in May 1948. Such an arrangement was seriously considered in the latter part of 1948 but collapsed in January 1949 because of irreconcilable differences between Norway and Sweden. While the Swedes insisted on independence from other military alignments, the Norwegians sought security guarantees from the West. The Danish government would have joined either configuration and, with a low-profile approach to foreign policy deeply rooted in its political culture, would even have preferred a bilateral defense union with Sweden over a more comprehensive Western arrangement. For strategic reasons, however, this solution did not appeal to the Swedes.

Thus, Denmark and Norway as well as Iceland were among the founding members of NATO in April 1949, while Sweden continued its policy of armed neutrality. The Swedish stance was also meant as a deliberate disincentive aimed at the Soviets so that the latter would not toy with the status of Finland. Even in the security policy of the Scandinavian NATO members, elements of neutrality or disengagement in the superpower conflict were preserved. Iceland placed the Keflavik Military Base at the disposal of the United States but did not establish any military forces of its own. Denmark and Norway built up their own defense rather slowly, and they accepted neither nuclear weapons nor foreign bases on their territory. The only exception was Greenland, where the Thule Military Base set up during World War II remained an American asset. On the other hand, the Danish government excluded from NATO military activity the island of Bornholm, the easternmost outpost of Denmark in the Baltic Sea, except as a listening post.

During the Korean War, Sweden, Denmark, and Norway contributed a hospital ship, field hospitals, and medical personnel. Since the UN's first peacekeeping operation in Suez in November 1956, all the Scandinavian countries except Iceland have been among major contributors to UN peacekeeping missions.

In recent years, new archival evidence has made it evident that Scandinavian involvement in the Cold War was deeper than contemporary actors admitted at the time. Contrary to its declared nonnuclear policy, for example, the Danish government gave the United States free rein to deploy nuclear weapons in Greenland. Even more remarkable is that allegedly neutral Sweden throughout the Cold War maintained rather elaborate security arrangements with the Western alliance that were kept secret. It is characteristic of the peculiar position of Scandinavia that while such conduct did occur, all parties involved, including the Soviet Union, contributed to the silence. Moreover, political relations with the Western powers, especially relations between Sweden and the United States, were characterized by a certain degree of aloofness. The support of the Scandinavian states for international law and the belief in the superiority of the Scandinavian welfare state contributed to the image of Scandinavia as representing a third (and perhaps better) way to deal with the political, economic, and military exigencies of the Cold War.

Inter-Scandinavian cooperation consolidated the image of communality in the region and helped to establish a picture of unique security arrange-

Female member of a Swedish infantry battalion with United Nations forces in Cyprus. Scandinavian forces often participated in peacekeeping operations during the Cold War. (Corel)

ments. In part to compensate for their different security policy orientation, the Scandinavian countries created the Nordic Council as a common parliamentary institution in 1952. They also closely cooperated in the framework of the UN, thereby frequently acting as mediators between East and West and increasingly between North and South. In 1955, the Soviet Union permitted Finland to become a member of the Nordic Council and of the UN. From then on, Scandinavian mutual cooperation helped Finland to retain a Western profile in spite of its foreign policy dependency on Moscow. The self-declared Finnish policy of neutrality was only at times acknowledged by the Soviet Union and has to be seen as a move in a game about sovereignty, not as corresponding to neutrality in the conventional sense of the word.

Tensions increased in Scandinavia in the 1970s and 1980s over external developments, one sign of which was the widely publicized incidents of Soviet submarines in Swedish waters. In this period, the considerable East-West military buildup began to threaten the status of Scandinavia as a quiet corner. There was some discussion of reviving proposals for a Nordic nuclear weapons-free zone, which had been considered in the 1960s, but nothing came of it.

Domestic developments in Scandinavia in the Cold War period were characterized by various peculiarities. Scandinavian countries were long

Swedish citizens protesting the international policies of the Soviet Union during the visit of a Soviet warship to Göteborg, Sweden, 8 June 1974. (Bettmann/Corbis)

regarded as representing a type of universal welfare state with a large public sector. They have all also been characterized as dominated by strong reformist social democratic parties as well as by a fragmented bourgeois camp and strong agrarian parties. Moreover, they have had a uniquely high degree of trade unionization, with up to 80 percent of the workforce, even white-collar workers, being organized in unions. Nonetheless, the capitalist and socialist sectors worked together with a high degree of consensus during the entire period of the Cold War.

Economically, in the Cold War the Scandinavian countries ranked among the most prosperous nations of the world, but there were characteristic time lags and substantial differences in economic structure. Sweden entered the postwar period with its industrial plan intact, with accelerated growth and an ever more pronounced tendency toward big business, unique for a country of its size. Denmark, for many years closest to Sweden among the Scandinavian states in terms of wealth, had a completely different economic structure based on agriculture and small-scale food industries. Finland was handicapped

because of its lack of participation in the Marshall Plan and the reparations that it had to pay to the Soviet Union. A substantial portion of the Finnish workforce relocated to Sweden during the first decades of the Cold War. Not until the 1980s did Finland approach its Scandinavian neighbors economically or in regard to its welfare programs.

Norway has been characterized by its small industries. It owes its present status as one of the richest countries in the world per capita to the oil production in the North Sea begun in the 1970s. Finally, despite some attempts of diversification, Iceland has been largely dependent on fishery, which left that country economically vulnerable and placed it at the forefront of the fight for the extension of exclusive economic maritime zones.

Given these differences in economic structure, attempts in the 1950s and 1960s to establish closer economic collaboration and a customs union among the Scandinavian countries were doomed to failure. In part because of welfare state nationalism and in part because of nonalignment in the Cold War, the Scandinavian countries were hesitant to participate in the European Integration Movement. Only Denmark, which was heavily dependent on the export of agricultural products to the Federal Republic of Germany (FRG, West Germany) and Great Britain, became a member of the European Community following a referendum in 1972. While the Norwegian elites were also in favor of accession, 53.5 percent of the population rejected such a move in the same year. Thus, while Denmark left the European Free Trade Association (EFTA) in favor of the European Community (EC), Norway remained in the EFTA, with Sweden and Iceland among the other members. Finland was an associated member of the EFTA, but not until 1986 did the Soviet Union allow Finland to join the organization as a regular member.

Scheel, Walter

(1919–)

Federal Republic of Germany (FRG, West Germany) minister for development aid (1961–1966), foreign minister and vice chancellor (1969–1974), and president (1974–1979). Born in Solingen on 8 July 1919, Walter Scheel began his career as a bank trainee. He served in the German military during World War II and became a solicitor in Düsseldorf in 1948.

A member of the Free Democratic Party (FDP), Scheel entered the Diet of his native state of North Rhine–Westphalia in 1950 and served in the Bundestag during 1953–1974. He was also a member of the European Parliament during 1958–1969. In November 1961, Chancellor Konrad Adenauer appointed Scheel minister for economic cooperation, later retitled minister for development aid. Together with fellow FDP ministers, he resigned his post in October 1966 to protest tax increases proposed by Chancellor Ludwig Erhard.

Scheel was elected FDP chairman in January 1968 and became foreign minister and vice chancellor in the Willy Brandt government on 21 October 1969. A strong supporter of Ostpolitik, Scheel helped normalize relations with the Soviet Union and Poland and recognized the German Democratic Republic (GDR, East Germany) with the 1972 Basic Treaty on mutual relations, which marked the end of the Hallstein Doctrine. He was elected president on 15 May 1974. During his tenure, he proved to be an indefatigable promoter of closer European cooperation. Scheel retired from politics in June 1979.

Schlesinger, James Rodney

(1929–)

U.S. director of the Central Intelligence Agency (CIA) during February–July 1973, secretary of defense during 1973–1975, and secretary of energy during 1977–1979. Born in New York City on 15 February 1929, James Schlesinger

attended public schools before enrolling at Harvard, where he earned a doctorate in economics in 1956. He taught at the University of Virginia during 1956–1963, and during 1963–1969 he worked for the RAND Corporation, a think tank.

Following Richard M. Nixon's 1968 election as president, Schlesinger took a position with the Bureau of the Budget, and in 1971 Nixon named him chairman of the Atomic Energy Commission. In February 1973 Nixon appointed Schlesinger director of the CIA, but he stayed only five months before being confirmed as defense secretary that July.

Schlesinger's tenure at the Department of Defense coincided with a tense and troubled time in modern American history. The Vietnam War was winding down, and the Watergate scandal had already begun to engulf the Nixon administration. Schlesinger tried to maintain high defense budgets at a time of economic stagnation, when Congress was intent on trimming military spending. His efforts to increase defense spending were largely unsuccessful. He also sought to keep pace with the Soviets in terms of strategic nuclear weapons. Generally known as a hawkish hard-liner, he had doubts about the efficacy of *détente*, the warming of relations between the United States and the Soviet Union.

The most controversial part of Schlesinger's time in office came during the October 1973 Yom Kippur War. When several Arab countries launched a surprise attack against Israel, the Jewish state requested American military assistance. According to Secretary of State Henry Kissinger, Schlesinger delayed sending war matériel to Israel in U.S. aircraft for fear of offending Arab nations, a charge that Schlesinger has strenuously denied. This led to a permanent rift between the two men, and Kissinger thereafter worked assiduously to push Schlesinger out of the administration.

Following Nixon's resignation in August 1974, Schlesinger stayed on in President Gerald Ford's cabinet. However, Schlesinger's insistence on more defense appropriations and his disagreements with Kissinger led Ford to relieve Schlesinger of his post in November 1975. Schlesinger returned to public life in October 1977 when President Jimmy Carter, a Democrat, named him to be the first secretary of energy. At the time, the United States was still reeling from the 1973–1974 energy crisis, and Carter was determined to implement a cohesive energy policy to wean America off oil imports. By 1979, however, Carter was unhappy with Schlesinger's efforts to handle the second energy crisis, precipitated by the 1979 Iranian Revolution and hostage crisis. Carter replaced Schlesinger in July 1979.

Schlesinger has remained active in politics, writing books and lecturing mostly on military and defense issues.

Schmidt, Helmut (1918–)

Helmut Schmidt, chancellor of the Federal Republic of Germany (FRG, West Germany), speaking to the press at the Massachusetts Institute of Technology in Boston, 27 May 1983. Schmidt was at MIT to give the commencement address. (Bettmann/Corbis)

Federal Republic of Germany (FRG, West Germany) minister of the interior (1961–1965), minister of defense (1969–1972), minister of economic affairs (1972–1974), and chancellor (1974–1982). Born on 23 December 1918 in Hamburg, Helmut Schmidt saw combat in the German Army during World War II before being taken prisoner by British forces late in the conflict. During 1945–1949, he studied economics at the University of Hamburg, earning a doctorate.

Schmidt joined the Social Democratic Party (SPD) in 1946 and was a civil servant in the state government of Hamburg beginning in 1949. He served in the Bundestag during 1953–1962 and in 1961 was appointed minister of the interior, a position he held until 1965. As such, Schmidt earned the reputation of a man of action after successfully coordinating relief efforts during the disastrous 1962 floods.

In 1965, however, Schmidt reentered the Bundestag and served the SDP in a number of leadership positions. Chancellor Willy Brandt appointed him defense minister in October 1969. When Brandt's minister for economic affairs and finance resigned under duress in July 1972, Schmidt took on that position. He soon gained critical acclaim for his economic policies. Upon the fall of the Brandt government, Schmidt became chancellor on 16 May 1974. He continued the Brandt coalition government and was re-elected in 1976 and again in 1980.

During his tenure in office, Schmidt was confronted with the increasing threat of terrorism. Violent attacks of by the Red Army Faction, a far-leftist extremist group, against officials and politicians during 1974–1977 put the chancellor under enormous pressure to find solutions to combat this extremism without compromising constitutional liberties. Schmidt's popularity reached its zenith in October 1977 when West German forces freed all ninety-one hostages aboard a German jetliner hijacked by Palestinian terrorists in Somalia.

In foreign affairs, Schmidt managed to combine support for West European integration with further rapprochement with the East. He and French President Valéry Giscard

d'Éstaing are generally regarded as the political architects of the 1979 European Monetary System, the precursor of the European Currency Unit (ECU) and of the euro currency.

Regarding the German Democratic Republic (GDR, East Germany), Schmidt continued the Ostpolitik of his predecessors. The chancellor's state visit to East Germany in December 1981 raised expectations of a closer rapprochement but resulted in little progress on contentious issues. The downturn in U.S.-Soviet relations had already begun to affect Schmidt's policy options by the late 1970s, however. After the North Atlantic Treaty Organization (NATO) decided in 1979 to deploy new nuclear missiles, mainly in West Germany, by late 1983 and to pursue Intermediate-Range Nuclear Forces (INF) reduction negotiations in the interim, Schmidt's support of these proposals not only adversely affected his negotiations with Soviet leader Leonid Brezhnev in June 1980 but also caused a domestic backlash in Germany. Nationwide antinuclear protests ultimately sparked the creation of the Green Party as a new political force.

When Schmidt demonstrated little understanding of or tolerance for the peace activists and environmentalists, many Germans saw him as being out of touch. His political decline accelerated when a dispute with Free Democratic Party (FDP) Chairman Hans-Dietrich Genscher ensued over a program to reduce unemployment, which led to the resignation of the four FDP ministers in September 1982. After the Bundestag passed a vote of no-confidence against the chancellor in favor of the Christian Democratic Union (CDU) leader Helmut Kohl on 1 October 1982, Schmidt resigned. In 1983 he became co-editor of the weekly magazine *Die Zeit* and in 1985 a member of its managing board, actively committing himself to writing on political topics.

School of the Americas

U.S. military facility that trained Latin American militaries and police forces in counterinsurgency techniques during the Cold War. The School of the Americas opened in 1946 as the U.S. Army Caribbean School at Fort Amador in the Panama Canal Zone. The school was part of the larger U.S. Cold War containment strategy for Latin America that included the 1947 Rio Pact, the Organization of American States (OAS), and President Harry S. Truman's Point Four Program.

After World War II, Latin American militaries looked to the United States to supply the training for their national armed forces, replacing former French, Italian, and German military advisory groups. Particularly in the Caribbean region that included Central America, the Caribbean islands, and northern South America, the U.S. military sought to centralize its instruction of Latin American officers at a single location in the Panama Canal Zone. Initially, most of the training at the Caribbean Army School was in conventional warfare, unit exercises, and equipment maintenance. The school also taught police surveillance and antiriot techniques. Fear of Soviet subversion of Latin American labor movements and indigenous socialist parties became a prime concern for U.S. policymakers in the 1950s. Thus, American instructors trained Latin American armies more for internal repression, the crushing of possible procommunist coups, and the monitoring and suppression of leftist dissenters.

Following the successful 1959 Cuban Revolution, American concerns over communist penetration of the Western Hemisphere heightened, as did worries over the efficacy of leftist guerrilla movements championed by Ernesto "Che" Guevara and other Fidelistas. Guevara's activities unnerved U.S. military officials, who had watched a ragtag group of Cuban radicals defeat a 50,000-man Cuban Army that had been trained and equipped by the United States. Under the aegis of President John F. Kennedy's administration, counterinsurgency doctrine received greater emphasis in U.S. military strategy. In 1963 Kennedy vastly expanded the U.S. Army Caribbean School, renaming it the U.S. Army School of the Americas, and deployed the 8th Special Forces Group to the Canal Zone to serve as instructors. The institution greatly increased the variety of its training programs that now concentrated on counterinsurgency, civic action, crowd control, psychological warfare, and anticommunist ideology.

Critics of the School of the Americas assert that during this period the school began its policy of training officers in the techniques of interrogation, torture, kidnapping, assassination, and paramilitary terror tactics to be used in thwarting communist insurgencies. From 1946 through the 1990s, the school graduated nearly 60,000 officers. The school became a target of attack from

The institution greatly increased the variety of its training programs that now concentrated on counterinsurgency, civic action, crowd control, psychological warfare, and anticommunist ideology.

Panamanian nationalists who saw the facility as a violation of U.S.-Panamanian treaties that approved American military bases within the Canal Zone for canal defense only, not for the continent-wide repression of dissent. In 1967, Bolivian units trained at the School of the Americas helped track down and kill Guevara. During the 1960s, trainees from the school participated in six different counterinsurgency campaigns against leftist guerrillas in Latin America.

In the 1980s, the School of the Americas came under even sharper scrutiny from human rights groups for its contribution to the U.S.-backed counterinsurgency wars in El Salvador, Guatemala, and Nicaragua. Human rights advocates such as Father Roy Bourgeois traced numerous atrocities committed against Central American civilians back to commanders and units trained by U.S. Green Berets at the School of the Americas. Links between graduates of the school and right-wing death squads also abounded. Critics increasingly referred to the institution as a “School for Assassins” or the “School for Dictators.” Indeed, the school’s alumni included Panamanian drug trafficker and dictator Manuel Noriega, Salvadoran death squad leader Roberto D’Aubuisson, Argentine military junta leader Leopoldo Galtieri, and Bolivian dictator Hugo Bánzer Suárez. Opposition to the school grew so vociferous that in 1984 the Pentagon agreed to withdraw the School of the Americas from the Canal Zone and transfer it to Fort Benning, Georgia, where it continues operating to this day under the new name of the Western Hemisphere Institute for Security Cooperation.

U.S. Air Force (USAF) general, commander of the Air Research and Development Command (ARDC)/Air Force Systems Command (AFSC) during 1959–1966, and key leader in the development of USAF missile and space capabilities. Born in Bremen, Germany, on 14 September 1910, Bernard Schriever immigrated to the United States with his parents in 1917. He graduated from Texas A&M University in 1931 and secured a U.S. Army commission. He earned an MA degree in aeronautical engineering from Stanford University in 1942.

**Schriever, Bernard
Adolf**
(1910–2005)

Schriever was initially commissioned in the field artillery but then entered the U.S. Air Corps, earning his wings in June 1933. Prior to World War II, he served as a pilot and engineering maintenance officer. During the war, he flew B-17s in the Pacific theater and served in a number of staff positions, which led to duty at the U.S. Army Air Forces headquarters after the war. He continued to serve in staff positions related to science and research and development. He was promoted to brigadier general in June 1953.

In June 1954, Schriever became assistant to the commander of ARDC and commander of the Western Development Division with responsibility for the intercontinental ballistic missile (ICBM) program. He was promoted to major general in December 1955. He supervised the production of the first three classes of ICBMs: Atlas, Titan, and Minuteman. His responsibilities expanded into the USAF space program, which he also guided to success with the DISCOVERY/CORONA system. He moved up to command the ARDC in 1959 as a lieutenant general and remained in charge when the ARDC became the AFSC in April 1961. He was promoted to full general on 1 July 1961.

Schriever retired in April 1966 and was active as a consultant. He also founded the Urban Systems Associates. Often called the father of the air force missile and space programs, he was honored when Falcon Air Force Base outside Colorado Springs, Colorado, was renamed for him in 1998. Schriever died in Washington, D.C., on 20 June 2005.

Schröder, Gerhard

(1910–1989)

Federal Republic of Germany (FRG, West Germany) minister of the interior (1953–1961), foreign minister (1961–1966), and minister of defense (1966–1969). Born in Saarbrücken on 11 September 1910, Gerhard Schröder earned his doctorate in law from the University of Bonn in 1934. He began his career as an assistant at the Kaiser Wilhelm Institute for Foreign and International Private Law, was a law clerk in 1936, and became a self-employed lawyer in Berlin in 1939.

Immediately after World War II, Schröder worked for the provisional government in the North Rhine Province of the British military occupation government, but in 1947 he established himself as a lawyer in Düsseldorf. A member of the Christian Democratic Union (CDU), he entered the Bundestag in September 1949. In his second cabinet, Chancellor Konrad Ade-

nauer appointed Schröder minister of the interior in October 1953. He served in that post until November 1961. During his tenure, he pushed for a national emergency law, which was enacted only after acrimonious debates in 1968.

In Adenauer's fourth cabinet, Schröder became foreign minister in November 1961, a position he held until October 1966. An unabashed Atlanticist, he promoted closer ties with the United States, which was the major reason for his long-running quarrel with Adenauer. Schröder agreed, however, with both Adenauer and Chancellor Ludwig Erhard on the goals of enlarging the European Economic Community (EEC) and strengthening collaboration within the North Atlantic Treaty Organization (NATO). Regarding the Soviet bloc, Schröder showed some willingness to modify the Hallstein Doctrine and to allow a gradual thaw in relations with Eastern Europe in economic matters, which he described as the "policy of movement." West German industrial interests strongly supported Schröder's attempt to open relations with Soviet satellites, resulting in the opening of trade missions in four Eastern capitals during 1963–1964.

During December 1966–October 1969, Schröder served as minister of defense. During 1969–1980, he was chairman of the foreign committee of the Bundestag. Schröder died on 31 December 1989 in Kampen, Germany.

Dr. Gerhard Schröder, minister of the interior of the Federal Republic of Germany (FRG, West Germany), 1959. (Bettmann/Corbis)

Federal Republic of Germany (FRG, West Germany) Social Democratic Party (SPD) politician and proponent of German unification. Born on 13 October 1895 in Kulm, Germany, Kurt Schumacher enlisted in the German Army at

Schumacher, Kurt
(1895–1952)

the outbreak of World War I and was severely wounded in December 1914. Beginning in 1915, he studied law and economics, receiving his doctorate from Münster University in 1920.

Schumacher joined the SPD in 1918 and served as editor of its newsletter during 1920–1924. He was elected to the Württemberg Diet in 1924, serving until 1931, and to the Reichstag in 1930, serving until 1933. He was imprisoned much of the time during 1933–1944 because of his opposition to Nazi rule.

In 1945, Schumacher became a driving force in the re-creation of the SPD, proving to be a staunch opponent of the merging of the party with the German Communist Party (KPD). The October 1946 merger agreement reached with Otto Grotewohl, chairman of the German Democratic Republic (GDR, East German) SPD, confirmed Schumacher's status as the leading SPD politician in Germany's western occupation zones. After the fusion of the SPD and KPD in the Soviet occupation zone, which brought the Socialist Unity Party (SED) into being, Schumacher was elected chairman of the SPD for West Germany and West Berlin. A member of the Parliamentary Council since 1948, he supported the founding of West Germany but repeatedly stressed its provisional character.

Schumacher's campaign to become the first West German president ended unsuccessfully in the September 1949 elections. As a member of the Bundestag (lower house of parliament) since 1949 and especially as opposition leader of the SPD group, he became one of the strongest critics of Chancellor Konrad Adenauer, whose policy of integrating West Germany into the Western bloc was regarded by Schumacher as the main obstacle to Germany's reunification. Schumacher called Adenauer "the chancellor of the Allies" during a parliamentary debate in November 1949 and was excluded from a subsequent session. Schumacher not only opposed the dismantling of Ruhr industry and the agreements on the Saar region but also fought against the entry of West Germany into the European Council and against the founding of the European Steel and Coal Community. In spring 1952, he regarded the so-called Stalin Note, a Soviet propaganda proposal to reunite Germany, as an important step forward, but Adenauer rejected Schumacher's demand to consider it seriously. Schumacher died in Bonn on 20 August 1952.

French finance minister (1945–1947), premier (1947–1948), foreign minister (1948–1952), justice minister (1955–1958), and founder of the European Coal and Steel Community (ECSC). Born on 26 June 1886 in Luxembourg, the son of a French Lorrainer and his Luxembourg wife, Robert Jean-Baptiste Nicolas Schuman grew up in Luxembourg, speaking Luxembourgish, French, and German fluently. A brilliant student, he also learned Greek, Latin, and English at the academically rigorous Atheneum. He then studied law at the universities of Bonn, Berlin, and Munich, where he again excelled, and in 1910 he began to practice law in Metz. During World War I he fought in the German Army, and when Germany's defeat returned Alsace-Lorraine to France, he remained in Metz, specializing in German legal problems, especially those arising from the region's repeated transfers.

An austere bachelor and a devout Roman Catholic, in 1904 Schuman joined the ultra-Catholic student organization Unitas and became a leading Catholic layman. He was well versed in religious literature, and his pronounced social conscience and commitment to democracy made him a prominent founder of France's Christian Democrat political movement. In 1919 he joined the Catholic Popular Democratic Party and won election to the French Chamber of Deputies, remaining there for forty years. When Germany invaded France in 1940, he refused to join Marshal Henri Philippe Pétain's collaborationist Vichy government but instead returned to Alsace-Lorraine, where his public condemnation of German expulsions of French residents brought his arrest. Escaping the Gestapo, Schuman participated in wartime resistance propaganda efforts, helping to found the Mouvement républicain populaire (MRP, Popular Republican Movement), France's Christian Democratic party.

As French governments rapidly succeeded each other after liberation in 1944, Schuman spent two years as finance minister and seven months as premier before serving as foreign minister from 1948 to 1952. His heritage, liberal Catholicism, and democratic outlook all guided his dedicated efforts to encourage West European reconciliation. Working closely with Jean Monnet, on 9 May 1950 Schuman issued the Schuman Declaration, a public appeal to other European nations to create the ECSC, which evolved into the European Economic Community (EEC) in 1957 and subsequently the European Union (EU). By

Schuman, Robert

(1886–1963)

French Foreign Minister Robert Schuman, shown here in 1950. (Leo Rosenthal/Pix Inc./Time Life Pictures/Getty Images)

In the early twenty-first century, Schuman was under serious consideration for beatification as a Roman Catholic saint.

integrating key sectors of the French, German, Italian, and Benelux economies, the ECSC greatly reduced the possibility of future European hostilities.

From 1955 to 1958 Schuman was French justice minister and from 1955 to 1961 president of the European Movement. In 1958 he became the first president of the European Parliamentary Assembly in Strasbourg, France, retiring in 1961. Schuman died at Scy-Chazelles, Lorraine, France, on 4 September 1963. In the early twenty-first century, he was under serious consideration for beatification as a Roman Catholic saint.

Schuman Plan

Proposal announced on 9 May 1950 by French Foreign Minister Robert Schuman whereby France and Germany would pool their coal and steel industries. The plan was designed to eliminate eighty years of Franco-German rivalry, which had contributed to two world wars. It also marked the first step toward West European political and economic integration.

Schuman and Jean Monnet, France's leading proponent of European integration, argued that the Schuman Plan would transform intra-European relations in numerous ways. First, Franco-German production of heavy industry would necessitate joint control of the mineral-rich Ruhr and Saar regions, the geographical bone of contention between France and Germany. A basis of trust would thus be created between the French, who still feared another attack by Germany, and the Germans, who were concerned about permanent dismemberment by a vengeful former enemy.

Second, the successful implementation of the Schuman Plan would essentially solve the German problem by forcing the Federal Republic of Ger-

many (FRG, West Germany) to surrender much of its sovereignty in favor of integration into a larger European community. It was hoped that such an arrangement would stanch German militarism in the future. Yet Schuman and Monnet assured Germany that should the plan go forward, it would serve as the first step toward a mutual defense pact that would assuage its fears of permanent disarmament. This would later be proposed as the European Defense Community (EDC).

Third, the plan symbolized European integrationists' vision of a supranational organization that would transcend the nationalism they believed had stoked two world wars. Politically, therefore, Western Europe would become unified. Finally, the Schuman Plan could ultimately establish an economic bloc rivaling the United States and the Soviet Union.

Informed of the proposal on 8 May 1950, German Chancellor Konrad Adenauer agreed that the Schuman Plan was based on equal rights for both nations and removed the Saar question from traditional Franco-German rivalry. He quickly wrote the French foreign minister and pledged that he would strongly urge West Germany's Bundestag (lower house of parliament) to approve the plan. Within days, the United States and Italy declared their approval, with the Benelux countries (Belgium, the Netherlands, and Luxembourg) not far behind. After nearly a month of negotiations, the British signed off on it, and on 3 June 1950 a joint communiqué was issued announcing mutual acceptance of the plan. On 18 April 1951, France, West Germany, Italy, and the Benelux countries signed the Schuman Treaty, thereby creating the European Coal and Steel Community (ECSC).

Medical missionary, musician, theologian, and philosopher. Born in Kaysersberg, Upper Alsace (French territory then occupied by Germany), on 14

Schweitzer, Albert
(1875–1965)

Albert Schweitzer was a German theologian and philosopher who is known for his missionary medical work in Africa. He wrote many books on his studies of music and philosophy and was awarded the 1952 Nobel Prize for Peace. (Arthur William Heintzelman/Library of Congress)

January 1875, the eldest son of a Lutheran pastor, Albert Schweitzer studied music and became an accomplished organist. In 1899 he was awarded a doctorate in philosophy by the University of Strasbourg. He remained at the university as a professor and administrator until 1913. In 1906 he published *The Quest of the Historical Jesus*, which dealt with the major scholarly writings on Jesus Christ, and *The Art of German and French Organ Builders and Players*. He also produced the widely used performance edition of Bach's organ works (1912–1914).

In 1905 Schweitzer began medical studies at the University of Strasbourg with the aim of becoming a mission doctor. In 1913 he received his medical degree and set out for Lambarene, Gabon, in French Equatorial Africa. There he founded the Albert Schweitzer Hospital to treat the inhabitants of that area. Although the hospital and his treatment methods were often criticized by outsiders as being colonial, Schweitzer continued to operate the hospital and treat thousands of African patients. He also continued to study philosophy and took a keen interest in world problems.

In 1923 Schweitzer wrote *Kulturphilosophie* (Philosophy of Civilization), setting forth his personal philosophy of the reverence for life, an ethical system based on the mutual respect of all living things. He used this philosophy to guide not only his hospital work but also his everyday

life. He would later expound on it via several philosophical and theological publications.

In 1952, Schweitzer was awarded the Nobel Peace Prize. From the 1950s on, he spoke out against nuclear weapons and urged world leaders to stop nuclear weapons testing. Schweitzer died at Lambarene on 4 September 1965.

Securitate

Established in 1945, Romania's secret police service, popularly known as the Securitate, went under the official title of Departamentul Securității Statului (DSS, Department of State Security) during 1978–1989 and was allied with

the Departamentul de Informații Externe (DIE, Department of External Information), the main foreign intelligence service. Upon the fall of the Romanian communist regime in December 1989, the Securitate was proportionately the largest secret police force in Eastern Europe.

In April 1945, Petru Groza, Romania's Moscow-appointed prime minister, signed an order establishing the Serviciul Special de Informații (SSI, Special Information Service) to replace the World War II Siguranța. Initially directed by agents from the Soviet People's Commissariat for Interior Affairs (NKVD), the SSI dealt with both foreign and domestic intelligence, while military intelligence fell to the Army General Staff under Soviet Military Intelligence (GRU). Under Interior Minister Teohari Georgescu and Securitate head Lieutenant General Gheorghe Pintilie, the SSI was renamed the Direcția Generală a Securității Poporului (DGSP, General Directorate for People's Security) in 1948. Expansions in 1949 included setting up special security troops and a militia to replace the police and gendarmerie, and, in 1950, a Directorate for Labor Units to oversee some 180,000 inmates of concentration camps throughout Romania. In 1951, a body for foreign intelligence was set up in the renamed Direcția Generală a Securității Statului (DGSS, General Directorate of State Security). Throughout these changes, Alexandru Drăghici, who controlled both the Ministry of the Interior (1953–1965) and the short-lived Ministry of State Security, maintained a firm grip on the Securitate. The 1964 withdrawal of Soviet counselors marked the agency's increasing independence from Moscow. Following the 1965 death of party leader Gheorghe Gheorghiu-Dej, Nicolae Ceaușescu continued a nationalist line, purging NKVD agents and deposing Pintilie and Drăghici. The DIE became a separate body in 1972, and in 1978, the DGSS, now known as the DSS, was reorganized in nine directorates. As Romania's primary foreign intelligence organization, the DIE worked closely with the Ministry of the Interior, the Securitate, and the Directorate for Military Intelligence (DIA). The 1978 defection of DIE deputy director Lieutenant General Ion Pacepa led to a major purge of personnel and, upon his debriefing by U.S. Central Intelligence Agency (CIA) agents, the cooling of Romanian-U.S. relations.

Moreover, the December 1989 overthrow of Ceaușescu highlighted the Securitate's weakness. Although it is uncertain to what extent Securitate forces were primarily responsible for violence before and immediately after Ceaușescu's overthrow, allegations persist that former Securitate agents have retained powerful positions, particularly in the Ministry for Foreign Trade and in private import-export businesses.

Security and Cooperation in Europe, Conference on (1973–1990)

Multinational and multiphase discussions dealing primarily with the diminishment of East-West tensions in Europe and human rights issues. The Conference on Security and Cooperation in Europe (CSCE) first convened on 3 July 1973 and was attended by thirty-five European and North American states. The CSCE provided critical momentum for sweeping political and social changes in the Soviet bloc that would significantly influence the end of the Cold War.

The Soviets, seeking formal recognition of their post–World War II borders, had sought a European security conference since 1954. West European countries had resisted such a conference, concerned that it might strengthen the Soviets' international position and potentially divide the Western alliance. By the late 1960s, however, widespread public interest in reducing East-West antagonism led West European governments to reconsider their position. Moreover, the Soviet Union removed a significant obstacle to the conference by indicating that it would not oppose American or Canadian participation.

The outcome was a complex, drawn-out period of diplomacy divided into four phases: the Helsinki Consultations to determine the timing and agenda of the conference from 22 November 1972 to 8 June 1973, the six-day meeting of foreign ministers formally launching the CSCE from 3 July to 8 July 1973, the principal negotiations of the Geneva stage from 29 August 1973 to 21 July 1975, and the final summit from 30 July 1975 to 1 August 1975 during which representatives from the thirty-five states convened in Helsinki and signed the Helsinki Final Act.

The CSCE negotiations centered around four so-called baskets of issues. The first dealt with ten principles guiding relations in Europe, including the inviolability of frontiers, the territorial integrity of states, and the peaceful settlement of disputes. The first basket also incorporated confidence-building measures such as advanced notification of military troop maneuvers. The second basket addressed economic, scientific, and technological cooperation among CSCE states, while the third concentrated on humanitarian issues such as the reunification of families, improved working conditions for journalists, and increased cultural exchanges. The fourth basket focused on follow-up procedures.

The fourth basket extended the CSCE by stipulating that a follow-up meeting be held in 1977 in Belgrade, Yugoslavia, to assess the progress made toward fulfilling the terms of the Helsinki Final Act. The principal accomplishment of the Belgrade meeting (4 October 1977–9 March 1978) was the initiation of a process of review whereby countries that did not meet the terms of the Helsinki agreement, particularly its human rights provisions, could be held publicly accountable. Such reviews were held in a number of subsequent meetings that became known as the Helsinki Process. Despite the value of the follow-up meetings, however, some policymakers were concerned that the often acrimonious nature of the review process threatened the central goal of the CSCE, namely the reduction of tensions in Europe.

The Madrid review meeting (11 November 1980–9 September 1983) made little further progress in decreasing East-West tension or improving human rights, largely because of external events such as the imposition of martial law in Poland in December 1981 and the Soviet downing of KAL Flight 007 on 1 September 1983. The Vienna meeting from 11 November 1986 to 19 January 1989 produced significant accomplishments related to human rights issues, especially the right of people to emigrate, religious tolerance, the upholding of the rights of national minorities, and the removal of restrictions on foreign broadcasting. The Vienna meeting exemplified how the CSCE successfully linked human rights with other elements of East-West relations, and the agreement there to hold a conference on human rights in Moscow signaled the extent to which the Helsinki Process had encouraged and facilitated progress on these issues in states such as the Soviet Union.

The emphasis on the protection of human rights, as pursued by the North Atlantic Treaty Organization (NATO) and the neutral and nonaligned countries through the Helsinki Process, ultimately paved the way for the political and social transformations in Eastern Europe that marked the end of the Cold War. The CSCE summit meeting in Paris (19–21 November 1990) recognized, for the first time, the fundamental political and social changes that had occurred in Europe in the fifteen years since the signing of the Helsinki Final Act. In Paris, the leaders of the CSCE nations, including a now-reunified Germany, signed the Charter for a New Europe, recognizing the end of confrontation in Europe and, as the charter proclaimed, a new era of “democracy, peace, and unity.”

Beyond the influential review meetings, the CSCE encouraged regular East-West engagement, forging connections that bridged some of the deep divisions in Europe with targeted discussions on issues such as scientific cooperation, the peaceful settlement of disputes, and security in the Mediterranean. These talks, known as experts’ meetings, maintained connections between Western and Eastern countries. In addition, neutral and nonaligned CSCE signatories often played an important role in brokering compromises between the two sides.

Service, John Stewart
(1909–1999)

U.S. Foreign Service officer and one of the so-called Old China Hands. Born in China to American missionary parents on 8 August 1909, John Service grew up in Sichuan Province, attended high school in Shanghai, and studied art history at Oberlin College in Ohio. He returned to China in 1922 and, following a brief time in banking, joined the American Foreign Service. When the Japanese entered Beijing, he helped escort Americans to safety. Assigned to the new Guomindang (GMD, Nationalist) capital at Congqing as a political officer in 1941, his task was to gather information on all Chinese political parties and factions, including the communists. Service knew China well and had great insight regarding events there.

In the communist witch-hunt hysteria of the early Cold War period, Senator Joseph R. McCarthy attacked Service and other China Hands, including John Carter Vincent, John Paton Davies, and Oliver Edmund Clubb. Accused of being soft on communism, Service had in fact reported truthfully on corruption in Jiang Jieshi's Nationalist government. Service had also pre-

U.S. Foreign Service officer John Stewart Service, whose career was ruined as a result of false accusations against him. (Bettmann/Corbis)

dicted a civil war that would lead to a communist victory if things were not changed.

Contrary to the charges made by the far Right, the China Hands did not welcome communism. They simply urged that U.S. pressure be brought to bear on Jiang and, failing that, advocated a policy of American neutrality in what was an inevitable civil conflict. Had their advice been heeded, the United States would probably have been able to maintain diplomatic relations with China. Certainly the charge that Service and other Foreign Service officials “lost” China was patently ridiculous. The Chinese themselves accomplished that.

In February 1950, Senator McCarthy specifically charged Service with being “a known associate and collaborator with communists.” Although Service was subsequently cleared by a Senate committee, a Loyalty Review Board named by President Harry S. Truman said that there was “reasonable doubt as to his loyalty,” and Secretary of State Dean G. Acheson dismissed Service the same day. In 1956 the U.S. Supreme Court ruled 8–0 (one justice took no part in the case) that the board had no right to review the State Department’s findings and that Acheson had no right to dismiss him. Service then rejoined the State Department, retiring from an obscure post in the Liverpool, England, consulate in 1962.

Service then earned a master’s degree at the University of California, Berkeley, and became library curator of its Center for Chinese Studies. With the 1970s thaw in relations between the United States and the People’s Republic of China (PRC), Service visited China, even meeting with Chinese Prime Minister Zhou Enlai in 1971. Service also published several books on China. He died in Oakland, California, on 3 February 1999.

An anticolonial uprising in Algeria that signaled the start of a liberation movement culminating in Algerian independence in 1962. On 8 May 1945, as much of the world celebrated the end of World War II in Europe, riots broke out among the Berber population of the city of Sétif in the Department of Constantine in Algeria. It began as just another victory parade, which had been approved by the French authorities.

Sétif Uprising (8 May 1945)

Because 8 May was a market day, it attracted many Berbers from around the city who nursed long-standing grievances with the European settlers over the seizure of their ancestral lands. While marchers did carry posters proclaiming the Allied victory, there were also placards calling on Muslims to unite against the French for the release of nationalist leader Ahmed Messali Hadj and death to Frenchmen and Jews. Early in the parade a French plain-clothes policeman pulled a revolver and shot to death a young marcher carrying an Algerian flag. This touched off a bloody rampage, often referred to as the Sétif Massacre.

Muslims attacked Europeans and their property, and violence quickly spread to outlying areas. The French authorities then unleashed a violent crackdown that included Foreign Legionnaires and Senegalese troops, tanks, air force planes, and even naval gunfire from a cruiser in the Mediterranean Sea. Settler militias and local vigilantes supported the authorities and took a number of prisoners from jails and executed them. Major French military operations lasted two weeks, while smaller actions continued for a month. An estimated 4,500 Algerians were arrested, of whom 99 were sentenced to death and another 64 were given life imprisonment. Casualty figures remain in dispute. At least 100 Europeans died. The official French figure of Muslim dead was 1,165, but this is certainly too low, and figures as high as 10,000 have been cited.

In March 1946 the French government announced a general amnesty and released many of the Sétif detainees, including moderate nationalist leader Ferhat Abbas, although his Friends of the Manifesto and Liberty political party was dissolved. The fierce nature of the French repression of the uprising was based on a perception that any leniency would be interpreted as weakness and only encourage further unrest.

The Sétif Uprising, which was not followed by any meaningful French reform, drove a wedge between the two communities in Algeria. Europeans now distrusted Muslims, and the Muslims never forgave the violence of the repression. French authorities did not understand the implications of this and were thus caught by surprise when a rebellion began in Algeria in November 1954.

Shehu, Mehmet

(1913–1981)

Albanian military leader and premier of Albania (1954–1981). Born in Corush in southern Albania on 10 January 1913, Mehmet Shehu graduated from the American Vocational School in Tirana in 1932 with a degree in agriculture. He also briefly attended the Naples Military Academy in Italy before being expelled for his communist sympathies. During the Spanish Civil War (1936–1939), he served in the International Brigades on the Republican side. Like many soldiers who fought for the Republican cause, he spent time in French internment camps, remaining there until 1942.

Shehu returned to Albania in 1942 and joined Enver Hoxha's military operations against the Italians, Germans, and noncommunist partisans. Shehu became a brigade commander in 1941 and was promoted to division command that same year. In 1943 he was elected a member of the Albanian Communist Party's Central Committee. The following year he became a member of the Albanian provisional government.

After the end of World War II, Shehu received advanced military training in Moscow and was named Albanian Army chief of staff in July 1946. Together with Hoxha, Shehu vociferously opposed Albania's incorporation into Yugoslavia. Hoxha removed him from office in December 1947, apparently under pressure by Coci Xoxe, leader of the pro-Yugoslav faction. Shehu was politically rehabilitated in 1948 and led the infamous purges of the Albanian Communist Party during 1948–1951.

A member of the Central Committee and Politburo beginning in 1948, during 1949–1954 Shehu served as deputy chairman of the Council of Ministers, minister of internal affairs, and head of the Albanian police. He became prime minister in 1954 and was then subordinate in Albania only to Hoxha.

Shehu significantly shaped both Albanian foreign and domestic policy, including helping to create the Albanian-Chinese alliance in 1961 that lasted until the mid-1970s. Domestically, he helped collectivize agriculture, nationalize industry, and institute universal health care and education. From the mid-1970s on, however, he came to oppose Hoxha's policy of increasing Albania's isolationism and self-sufficiency. In 1981 the power struggle between Hoxha and Shehu was resolved with Shehu's death, allegedly a suicide, in Tirana on 17 December 1981. Many believe that it was in fact a political assassination ordered by Hoxha, who claimed that Shehu was an agent of the U.S., Soviet, and Yugoslav governments.

Sherman, Forrest Percival

(1896–1951)

American admiral and chief of naval operations. Born in Merrimack, New Hampshire, on 30 October 1896, Forrest Sherman graduated second in his United States Naval Academy class of 1917 and saw convoy escort service in World War I. He soon switched to naval aviation and thereafter remained a strong advocate for naval airpower. In May 1942 during World War II, he earned command of the aircraft carrier *Wasp*. While in support of the Guadalcanal campaign, he lost the *Wasp* to a Japanese submarine in September 1942. He survived the career blemish and was named chief of staff to Admiral John H. Towers, commander of the Pacific Fleet's air arm. Sherman then joined Admiral Chester Nimitz's staff as head of the War Plans Division.

Sherman made a substantial contribution to the navy's Cold War role. Promoted to vice admiral in December 1945, he served as deputy chief of naval operations under Nimitz during 1945–1947 and urged the navy to adopt a balanced force capable of global reach. Sherman served as the navy's representative during negotiations that helped unify the military services under the Defense Department in 1947. He advocated a permanent American naval presence in the Mediterranean Sea to counter Soviet moves in the Balkans. In December 1947, he assumed command of the U.S. Sixth Task Fleet in the Mediterranean.

Sherman was named chief of naval operations on 2 November 1949 in the wake of the disaster of the Revolt of the Admirals and began the task of

restoring naval morale. He proved himself a powerful chief and began to carve out a strong role for the navy in the Cold War. He backed the carrier task force as central to the navy's Cold War mission and saw the need for future supercarriers. He also supported the expansion of the navy to meet other traditional missions, such as antisubmarine warfare, and saw a place for nuclear-powered vessels in the navy's future.

Sherman became the dominant member among the Joint Chiefs of Staff (JCS). With the outbreak of the Korean War, he was a reluctant supporter of Douglas MacArthur's Inchon operation but convinced the JCS to endorse the plan. He supported President Harry S. Truman's decision to remove MacArthur from Korean command. Still serving as chief of naval operations, Sherman died in Naples, Italy, on 22 July 1951 while on a diplomatic mission concerning U.S. North Atlantic Treaty Organization (NATO) basing rights.

Soviet foreign minister (1985–1990, 1991), chairman of the Georgian State Council (1992–1995), and president of Georgia (1995–2003). Born on 25 January 1928 in the Georgian village of Mamati, Eduard Shevardnadze graduated from the Party School of the Communist Party Central Committee in 1951 and from the Kutaisi Pedagogical Institute in 1959. He then became an instructor for the Komsomol (Communist Union of Youth). Joining the Communist Party in 1948, he rose quickly through its ranks. He became a member of the Georgian Supreme Soviet in 1959.

During 1961–1964 Shevardnadze served as a party regional secretary, and during 1964–1965 he was deputy minister of internal affairs for Georgia. He became minister of internal affairs of Georgia in 1965, a post he held until 1972. During this period, Shevardnadze reformed Georgian agriculture, creating new incentives for farmers and boosting production. He was also responsible for firing and imprisoning hundreds of officials in his fight against bureaucratic corruption, earning him the reputation of a merciless opponent of corruption and inefficiency. He also forced government officials to give up properties that they had attained through bribery and other illegal means. He firmly believed that the Soviet economy would never move forward if corruption continued to plague the system.

In 1972, Shevardnadze was appointed first secretary of the Georgian Communist Party, a post he occupied until 1985. There too he continued his fight against corruption. He became a member of the Central Committee of the Communist Party of the Soviet Union (CPSU) in 1976. In 1977 Soviet authorities conducted a series of crackdowns against human rights activists, jailing many of the movement’s top figures. Shevardnadze’s Georgian government participated in the crackdowns, and among those jailed was Zviad Gamsakhurdia, who in May 1991 would become the first democratically elected president of the independent Republic of Georgia. In 1978, Shevardnadze was promoted to candidate member status of the Soviet Politburo, which functioned as the central policymaking and governing body of the CPSU. That same year he was awarded the Order of Lenin for his honesty, integrity, and political courage.

In 1985, new Soviet leader Mikhail Gorbachev appointed Shevardnadze minister of foreign affairs after the resignation of Andrey Gromyko. Shevardnadze also became a full member of the CPSU Politburo. As foreign minister,

Shevardnadze, Eduard
(1928–)

Shevardnadze was awarded the Order of Lenin for his honesty, integrity, and political courage.

President Eduard Shevardnadze of Georgia, photographed during his meeting with Secretary of Defense William Cohen at the Pentagon, 17 July 1997. (U.S. Department of Defense)

he played an important role in ending the Cold War. He reformed Soviet foreign policymaking, implementing Gorbachev's policies. These included withdrawing from Afghanistan, developing new arms control strategies, establishing ties with Israel, negotiating German reunification, and allowing for the democratization of Eastern Europe. Shevardnadze rejected all aid requests by communist leaders in Eastern Europe when revolutions and democratization swept their countries, allowing for a smooth and relatively bloodless transition to democracy in the region.

These actions, however, made Shevardnadze many enemies in Moscow. Nonetheless, he adhered to a strict policy of liberalization, which gradually separated him from Gorbachev's incrementalist policy of preserving a socialist system. Because of these differences and growing criticism from Communist Party hard-liners, Shevardnadze resigned his post in December 1990 and warned that the nation was headed toward dictatorship. Following his resignation, an unsuccessful coup by communist hard-liners in August 1991 seemed to prove that Shevardnadze's prediction was correct. He returned to the post of foreign minister in November 1991 but resigned together with Gorbachev in December when the Soviet Union was officially dissolved.

In March 1992, Shevardnadze became head of an interim Georgian government following the ouster of President Gamsakhurdia. In 1995, Shevardnadze survived an assassination attempt and that same year was elected president of the Republic of Georgia by a comfortable margin. He survived a second assassination attempt in 1998. In 2000 he won a controversial presidential election that was immediately followed by accusations of vote rigging. In November 2003, Shevardnadze was forced to resign the presidency after huge demonstrations showed that he had lost much of his political clout.

Shigemitsu Mamoru

(1887–1957)

Japanese diplomat and foreign minister (1943–1946, 1954–1957). Born in Ōita Prefecture on 29 July 1887, Shigemitsu Mamoru graduated from Tokyo

University in 1911. He then joined the Foreign Ministry and served as an advisor to the Japanese delegation to the 1919 Paris Peace Conference and as consul general in Shanghai. He joined other Japanese diplomats after the conference in arguing for a more forceful Japanese foreign policy.

Shigemitsu was counselor to the Foreign Ministry during 1920–1924, chief secretary to the embassy in China during 1925–1927, and consul general in Shanghai during 1927–1930. In 1931 he became Japanese minister to China. Following the Manchurian Incident that same year, he sought direct talks with China rather than see the matter referred to the League of Nations. In April 1932 he was badly wounded (losing a foot) in an assassination attempt by a Korean nationalist.

As deputy foreign minister during 1933–1936, Shigemitsu devoted himself to Japan's relations with China. Resigning over the failure of his hard-line approach, he was subsequently Japanese ambassador to the Soviet Union (1936–1938), Great Britain (1938–1941), and the Wang Jingwei government in China during 1942. Shigemitsu opposed the Tripartite Military Pact that bound Japan to Germany and Italy.

Shigemitsu became foreign minister in the cabinet headed by Tōjō Hideki in 1943 and remained in that post in the subsequent Koiso Kuniaki and Higashikuni Naruhiko cabinets. As such, Shigemitsu signed the World War II capitulation agreement aboard the U.S. battleship *Missouri* on 2 September 1945. The next year, he was arrested and detained as a Class A war criminal. Sentenced to seven years in Sugamo Prison, he was released in 1950.

Shigemitsu was elected to the Japanese Diet in 1952. In 1954 he assumed the posts of both deputy prime minister and foreign minister in the Hatoyama Ichirō cabinet. In this post, Shigemitsu worked to restore diplomatic relations between Japan and the Soviet Union and to gain Japanese entry into the United Nations (UN), both of which occurred in 1956. Shigemitsu died in Yugawara in Kanagawa Prefecture on 26 January 1957.

Rural-based guerrilla organization founded in Peru and operational since 1980. Conceptually, Sendero Luminoso (Shining Path) developed in Peru during

Shining Path

the 1960s. First established at a Peruvian regional university, the group was the result of frustration with a corrupt and unresponsive political system and the ambition of intellectuals to put theory into practice. Shining Path's key leader was Abimael Guzmán Reynoso, who headed the School of Education at the University of San Cristobal de Huamanga. During the 1960s, Guzmán, also known as "Chairman Gonzalo," recruited a core group of like-minded activists. They distinguished themselves from other Marxist groups by promoting a Maoist line of thought and action that reflected the split in the Cominform between the Soviet Union and China.

The adoption of a Maoist line, which Guzmán labeled "Marxist-Leninist-Maoist-Gonzalo Thought," fit Peru well, for its peasant population remained sizable and isolated from political affairs. As Shining Path developed, its leaders developed a strategy of action that involved the mobilization of the peasantry in a revolutionary struggle against international and domestic "oppressors of the people."

The organization used its strength among the student population to dominate university administrations into the 1970s. Graduates of the School of Education sought positions in rural schools, where they used their classrooms to develop community connections for Shining Path. Guzmán and other leaders deepened their connections with China and soon expanded their field operations beyond the university. The failure of government reforms, in particular land redistribution and rural economic development programs, convinced the Shining Path hierarchy that the revolutionary potential of the peasantry was as yet underdeveloped.

Believing that they could serve as a catalyst for a rural revolution that would expand and strangle the urban centers of capitalist exploitation, Shining Path's leaders launched its first military operation in 1980, working to create centers of revolutionary activity throughout the Andean highland region. Shining Path reorganized peasant communities and extracted cash and material goods from "liberated" and other communities by force.

Peru's civilian governments initially proved incapable of meeting Shining Path's challenge. The election of President Alberto Fujimori in 1990, however, changed that. Fujimori suspended constitutional government and launched an ambitious campaign against Shining Path and other guerrilla organizations then in operation in other parts of Peru. His government also requested help and received aid from the United States to train the military and police forces in antiguerrilla tactics. The United States provided additional support for campaigns against cocoa production, which increased the presence of security forces in rural areas. In addition, the Peruvian government trained and equipped peasant forces to separate Shining Path from its popular peasant base.

The Fujimori administration's war against Shining Path achieved success rather quickly. Peruvian forces captured Guzmán in 1992, and a series of subsequent antiguerrilla campaigns destroyed Shining Path's military capabilities. While still nominally active, Shining Path no longer represents a significant challenge to the Peruvian government.

U.S. secretary of labor (1969–1970), secretary of the treasury (1972–1974), and secretary of state (1982–1989). Born in Englewood, New Jersey, on 13 December 1920, George Shultz was the son of a New York businessman. He majored in economics at Princeton University and graduated in 1942. He then joined the U.S. Marine Corps, serving in the Pacific theater as an artillery officer and ending World War II as a captain. After demobilization, in 1949 Shultz obtained a doctorate in industrial economics from the Massachusetts Institute of Technology, where he subsequently taught industrial relations, and then in 1957 began teaching at the University of Chicago.

Under Republican President Richard Nixon, Shultz served successively as secretary of labor (1969–1970), the first director of the Office of Management and Budget (1970–1972), and secretary of the treasury (1972–1974). He resigned in March 1974 to become vice president of the Bechtel Corporation, an international construction company, where he remained until 1982.

In June 1982 Shultz became Republican President Ronald Reagan's second and last secretary of state, replacing the forceful but divisive Alexander M. Haig and adopting a low-key, nonconfrontational style. Even so, Shultz's cautious readiness to negotiate arms control agreements with the Soviet Union brought repeated clashes with the more hawkish secretary of defense, Caspar Weinberger, who favored major increases in weapons systems.

Shultz's tenure in office saw the emergence in 1985 of Mikhail Gorbachev as Soviet general secretary. Gorbachev was a conciliatory leader who became increasingly committed to reducing his country's international military commitments and improving U.S.-Soviet relations. Shultz, initially somewhat skeptical and inclined to discountenance the more optimistic Reagan's readiness in his 1986 Reykjavík meeting with Gorbachev to consider abolishing all nuclear weapons, nonetheless negotiated the 1987 Intermediate-Range Nuclear Forces (INF) Treaty, designed to remove all such weapons from Europe. In 1988 the Soviets also concluded an agreement to withdraw all their

Shultz, George Pratt (1920–)

George Shultz held three cabinet-level posts under five U.S. presidents. A trained economist and specialist in labor relations, Shultz put his negotiating skills to use in service to Presidents Dwight D. Eisenhower, John F. Kennedy, Lyndon B. Johnson, Richard M. Nixon, and Ronald W. Reagan. (U.S. Department of State)

forces from Afghanistan, where they had been at war since 1979 with U.S.-backed mujahideen guerrillas.

From the time Shultz took office, initiatives to resolve or at least ease the entrenched disputes dividing between Israel and its Arab opponents after Israel's June 1982 invasion of Lebanon were one of his major preoccupations. Except in Afghanistan, the warming in U.S.-Soviet relations had relatively little impact on the nearly intractable Middle Eastern situation. Shultz drafted the September 1982 Reagan Plan envisaging partial Israeli withdrawal from occupied territory in return for Arab acceptance and respect for Israeli security interests, proposals that the Israeli government strongly rejected. Throughout his years in office, Shultz repeatedly but unsuccessfully tried to broker similar schemes. In December 1988 he prevailed upon Palestine Liberation Organization (PLO) leader Yasir Arafat to renounce the use of terrorism, a stance enabling the United States to open direct talks with the PLO, but Arafat failed to force his more radical followers to respect this stance, and within a year the U.S.-PLO talks broke down.

Shultz was a determined opponent of international terrorism and of governments, including those of Libya and Iran, that sponsored such tactics. After a suicide bomber from the Iranian-sponsored radical Islamic Hezbollah group attacked the barracks of the U.S. Marine Corps peacekeeping force in Beirut, Lebanon, in October 1983, killing 241 American servicemen, Shultz began to press Reagan to respond forcefully to such attacks on Americans. Shultz supported the use of force as well as military and economic sanctions, not just against individual terrorists but also against states that sponsored terrorism. He applauded Reagan's readiness in 1985 to employ military personnel to capture Palestinian hijackers of the American cruise ship *Achille Lauro* and to mount bombing raids on Libya in April 1986.

Shultz opposed and was therefore deliberately left in ignorance of efforts by National Security Advisor Robert McFarlane and others based in the Reagan White House to sell arms to the fundamentalist Islamic regime in Iran and surreptitiously use the proceeds to fund the activities of anticommunist Contra guerrillas in Nicaragua. The ensuing scandal, which broke in 1986, damaged but did not destroy Reagan's presidency, and his final years in office saw further incremental warming in U.S.-Soviet relations, which came to full fruition under his successor, George H. W. Bush.

Shultz retired at the end of Reagan's presidency and became a senior fellow at the conservative Hoover Institution in Palo Alto, California. In retirement he has written lengthy memoirs.

King (1941–1954), prime minister (1955–1960), and head of state (1960–1970, 1975–1978, 1991–2004) of Cambodia. Born on 31 October 1922 in Phnom Penh to Cambodian King Norodom Suramarit and Queen Sisowath Kosawak, Norodom Sihanouk was educated in French primary schools in Indochina and spent two years studying at the French Cavalry and Armored School at Saumur, France, during 1946–1948. In November 1941 he became King of Cambodia. In 1945 while Cambodia was still under Japanese occupation, he proclaimed his country independent from French colonial rule. When the French returned after the Japanese surrender, however, they attempted to reassert control by minimizing Sihanouk's influence. He soon realized that only by championing independence from France could he maintain his popularity and power.

When the 1954 Geneva Conference formally granted Cambodian independence and called for free elections, Sihanouk abdicated the throne the next year in favor of his father. Sihanouk subsequently won a referendum and became prime minister in March 1955. Immensely popular among the peasantry, he strongly championed neutrality as the war in Vietnam escalated. Following his father's death in 1960, Sihanouk was again named head of state but was not granted the title of king. Alternately taking sides with the People's Republic of China (PRC) and the United States, he tried to prevent the war in the neighboring Republic of Vietnam (RVN, South Vietnam) from spilling over into his country, but he was largely unsuccessful as Democratic Republic of Vietnam (DRV, North Vietnam) forces transited through Cambodia into South Vietnam, and they and the Viet Cong used eastern Cambodia as a sanctuary.

Sihanouk, Norodom
(1922–)

Norodom Sihanouk was king of Cambodia from 1941 to 1955 and again from 1993 to 2004, and was also prime minister, head of state, and president. He tried, with only mixed results, to keep Cambodia neutral throughout the regional and civil conflicts that raged in Southeast Asia during his lifetime. (Library of Congress)

Frustrated in his efforts to keep Cambodia neutral, in 1968 Sihanouk restored relations with the United States and in 1970 secretly agreed to permit the Americans to bomb communist sanctuaries. At the same time, he attempted to block the growing influence of the communist Khmer Rouge.

While out of the country in March 1970, Sihanouk was ousted by a coup led by General Lon Nol. Sihanouk fled to Beijing, where he lived in exile. Following the 1975 Khmer Rouge takeover, he returned to Cambodia and became the symbolic head of state, while dictator Pol Pot remained the power behind the throne. In 1976 Sihanouk was placed under house arrest, but he escaped to China in 1978 when the Vietnamese invaded Cambodia. He unsuccessfully attempted to forge an alliance with the Khmer Rouge and others to oppose the new Vietnamese-imposed Cambodian regime. When Vietnam withdrew in 1989 and a peace treaty sponsored by the United Nations (UN) went into effect in 1991, he returned to Cambodia, where he was reinstated as king and Cambodian president, although his political power was limited. Sihanouk abdicated in October 2004 in favor of his son, Norodom Sihamoni.

“Sinews of Peace” Speech (March 1946)

Speech given by Sir Winston Churchill, viewed by many historians as the opening rhetorical salvo of the Cold War, in which the term “iron curtain” was coined. On 5 March 1946 Churchill, who had been Britain’s wartime

prime minister, presented his “Sinews of Peace” address—also referred to as the “Iron Curtain” speech—at Westminster College in Fulton, Missouri. Churchill’s comments strongly denounced Soviet aggression in Eastern Europe and warned that the Western powers must once again gird themselves for a potential conflict.

In October 1945 President Harry S. Truman forwarded an invitation from the president of Westminster College to Churchill, who had been defeated in the British elections of July 1945, to speak at that institution. Churchill accepted in November. He arrived in Washington, D.C., on 2 March and joined Truman on a three-day train trip to Missouri; the excursion had been Churchill’s idea.

Churchill and Truman were cheered by some 30,000 people en route between Jefferson City and Fulton. More than 2,000 faculty, students, and invited guests filled the gymnasium at Westminster College on 5 March, a friendly audience for both Churchill and Truman.

In his speech, Churchill reviewed the history of the twentieth century with special emphasis on the period since the 1930s. He also painted a rather bleak and disappointing picture of Soviet behavior since the Allied victory over Germany a year earlier. Churchill argued that Soviet expansionist policies had drawn an “iron curtain” between Eastern and Western Europe. To counter the Soviets’ threat to world peace, Churchill called for a mutual defense agreement among noncommunist states. He also called attention to the long-standing “special relationship” between the United States and Britain.

The speech had considerable impact. Americans and West Europeans were alerted to the new Soviet threat, and their governments appeared ready to respond to the challenge. Because of Churchill’s Cassandra-like role in warning against appeasement in the 1930s and his defiance of Adolf Hitler in World War II, his remarks struck a responsive chord, although Truman was at the time noncommittal.

Churchill gave other speeches in Zurich, Strasbourg, Boston, and The Hague. These hugely successful speeches revitalized a political career that seemed to have ended in July 1945. His rhetorical success as leader of the opposition sustained his leadership of the Conservative Party and prepared the way for his political comeback in 1951. It also confirmed his constancy as an opponent of communism.

Singapore

Southeast Asian nation. The Republic of Singapore, covering just 267 square miles, is one the smallest nations in the world. Strategically located off the southern tip of the Malay Peninsula, it is composed of the main island of Singapore along with fifty-eight nearby islands between the South China Sea and the Indian Ocean. Singapore's 1945 population was roughly 1 million people. Its deep-water anchorage makes it a valuable harbor, and records dating from the third century BC suggest that even then it was the main port between the Indian Ocean and the South China Sea. A number of Asian and European empires controlled Singapore for 1,500 years, ending with British rule that began in 1819. By 1832 Singapore was the capital of the Straits Settlement. In 1867 it became a Crown colony. By World War I it was a thriving, multicultural city and a powerful fortress, heralded as "the Gibraltar of Asia."

World War II changed that. Japanese forces overran British defenses on Singapore in February 1942, and the loss of Singapore signaled the beginning of the end of Britain's empire. The British recaptured the city-state in 1945 and established a military government, but the war had unleashed nationalist sentiments. Many Singaporeans favored autonomy, especially after 1946 when the British prepared a federation of Malay states for independence while Singapore remained a colony. British and Malay leaders worried that equal representation for all ethnic groups in Malaya would favor the well-organized and entrepreneurial Chinese, especially in Singapore, where they made up 60 percent of the population.

The Malayan Emergency (1948–1960) exacerbated these concerns and delayed Singapore's independence. In 1959 Singapore was finally granted self-government, but Britain retained control of foreign affairs and defense. In Singapore's first general election that same year, the People's Action Party (PAP) won a landslide victory. It has remained in power ever since. PAP leader Li Guangyao completely dominated Singapore's politics, governing as prime minister until 1990. Consequently, much about Cold War Singapore revolves around Li.

Li's first major challenge came in 1963, when Britain ceded Singapore to the reconstituted Federation of Malaysia. Indonesia and Malaysia nearly went to war. Malaysia's prime minister, Tunku Abdul Rahman, skillfully averted war, but many Malay leaders wanted to break the Chinese hold on Singapore and were unwilling to extend equal representation to the Chinese in Malaysia. In 1964, race riots made for even more tension. However, the main source of contention between Singapore and Malaysia was money. Li's laissez-faire economic policies were antithetical to Malaysia's managed

The Singapore business district and harbor. (Corel)

economy, designed to favor Malays. Moreover, within the union Singapore collected and retained taxes but sent 40 percent annually to Malaysia. After much negotiation and artful diplomacy, Singapore separated peaceably from Malaysia and became a wholly independent country in August 1965.

Li quickly set the agenda for Singapore's independence. He was deeply committed to free enterprise and took full advantage of Singapore's diverse, well-educated, and industrious residents. He encouraged foreign investment and built modern transportation systems and urban housing developments. Singapore became the second most active port in the world. It also grew into a major international airline hub. By the 1980s, Singapore diversified into a major financial center and high-technology manufacturer, making it one of Asia's economic "four dragons," alongside Taiwan, Hong Kong, and South Korea. Annual growth rates ranged between 8 and 11 percent for three decades, while per capita yearly income reached \$12,000 by 1990, the fourth highest in Asia. With fewer than 4 million people, its gross domestic product (GDP) hit \$75 billion by 1994. High life expectancies and literacy rates also distinguished Singapore. This success was all the more remarkable given the republic's lack of natural resources and its almost complete dependency on food, and even water, importation.

In foreign relations, Singapore was firmly in the Western camp until the mid-1970s, when it pursued a more neutral course. In 1967 it became a founding member of the pro-Western Association of Southeast Asian Nations

(ASEAN). It also hosted British military bases until 1971 and then entered into the Five Power Defense Agreement with Britain, Australia, New Zealand, and Malaysia until 1975. Li was also a close friend to the United States and a vigorous supporter of the American war in Vietnam.

At the same time, Li worried about alienating the communist powers, particularly the People's Republic of China (PRC). Although deeply anti-communist, Li realized that the PRC was becoming a major regional, if not global, power. He believed that Singapore's Chinese population could potentially assist in integrating the PRC into the world community. Still, he avoided aggravating delicate relationships with nearby Malaysia and Indonesia. Both endured serious communist insurgencies connected to their Chinese communities, and consequently both viewed the PRC with suspicion. Accordingly, Singapore did not recognize the PRC until 1976, and only after both its neighbors had done so.

Ostensibly a democracy, Singapore was and still is criticized for its somewhat authoritarian character. Li and the PAP ruled with a firm hand. There was little toleration of opposition parties, and the media was heavily controlled. Li justified this by portraying Singapore as a Chinese state surrounded by distrustful Malays. He also claimed that Britain's declining posture in Asia left Singapore vulnerable. In addition, he argued that a stable society was needed to build the economy. The most controversial manifestation of Li's paternalism was the Internal Security Act, which gave the government extraordinary authority to quash dissent. Whereas some point to Singapore's harsh laws and see a very low crime rate, others point to laws against chewing gum or not flushing toilets and see a dictatorship. Opposition to Li did surface, but popular support for the PAP remained above 60 percent.

Li resigned in 1990 and left the PAP in 1992, replaced by his deputy, Goh Chok Tong. In 2005 Li remained a senior minister and was regarded as the senior statesman of Southeast Asia. Similarly, despite what some condemn as its ruthless efficiency, Singapore is widely considered to be a great Cold War success story.

Irish political party advocating republicanism and opposition to British control. Newspaper editor and ardent Irish nationalist Arthur Griffith is usually credited with establishing Sinn Féin (roughly translated as “Ourselves” or “We Ourselves”) in 1905. Griffith believed that by boycotting the British House of Commons, the Irish Parliamentary Party could reestablish Irish independence. He also championed Irish cultural and economic independence.

Griffith’s message attracted many Irishmen and Irishwomen, most of them radicals, who were frustrated by the failure of Westminster-based politics to advance Irish nationalism. The Sinn Féin League (its title until 1908) grew rapidly, often by absorbing other radical groups. It did not impress Irish Parliamentary Party leader John Redmond, however. After his party’s candidate defeated Sinn Féin’s first parliamentary candidate in 1908, he dismissed the group as “a temporary adhesion of isolated cranks.”

Sinn Féin opposed Irish enlistments into the British Army during World War I but had nothing to do with the 1916 Easter Rebellion. The British government believed otherwise because of the group’s radical reputation and undeniable influence on Irish politics, and London referred to the revolt as the “Sinn Féin Rebellion.”

In late 1917, Sinn Féin became what the British thought it was a year earlier: the political arm of Irish republicanism. With Eamon De Valera, one of the surviving leaders of the Easter Rebellion, as its president, Sinn Féin quickly became a well-organized and effective national political party but did not become more popular than the long-established Irish Parliamentary Party until the 1918 Conscription Crisis, sparked by the British government’s threat to impose a military draft on Ireland. In December 1918, Sinn Féin won 73 of Ireland’s 105 Westminster seats and, as Griffith had exhorted, refused to go to London. Instead, the elected members of Parliament established the Dáil Éireann as the legitimate government of the Irish Republic proclaimed in 1916.

Irish republicanism—and its political and military institutions, Sinn Féin and the Irish Republican Army (IRA), respectively—split over the 1921 Anglo-Irish Treaty. Led by De Valera, the antitreaty forces walked out of the Dáil and into civil war. These republicans, however, did not accept their 1923 defeat at the hands of the protreaty republicans, who adopted the name Cumann na Gaedheal (Legion of the Gaels) for their faction, which controlled the Irish Free State’s government. Convinced that both the Irish Free State and Northern Ireland were illegitimate, Sinn Féin declared a policy of abstentionism. Its candidates would stand for election but would refrain from entering the illegitimate parliaments if elected. This strategy ultimately

Sinn Féin

The Sinn Féin League (its title until 1908) grew rapidly, often by absorbing other radical groups.

failed, and votes for Sinn Féin dwindled because most Irishmen accepted the Free State and rejected as nonsensical the idea of voting for a political party that refused to participate in a legitimate government.

Sinn Féin split again in 1926 when De Valera decided to participate in parliamentary politics and left in order to found Fianna Fail. Dedicated to advancing republicanism in Ireland through constitutional means, Fianna Fail formed a government by 1932 and used its power to reconcile many republicans to normal politics. By the end of World War II, De Valera's constitutional republicanism and wartime security measures had all but destroyed the IRA and Sinn Féin.

The IRA enjoyed a brief revival after 1945, training and arming for a campaign against British interests in Northern Ireland. The offensive, known as the Border Campaign, began in 1956, and in the next year's elections, Sinn

Sinn Féin supporters carry banners during a march in Birmingham to protest against internment in Ulster and the British police's alleged harassment of the Irish community, 7 October 1973. (Hulton-Deutsch Collection/Corbis)

Féin won its first seats in the Dáil since 1927. The Border Campaign faltered soon thereafter and ended with a whimper in 1962.

After 1962, new leftist leaders moved the IRA and Sinn Féin toward revolutionary Marxism and away from abstentionism and military action. In December 1969, however, the IRA divided over the proper response to the outbreak of sectarian violence in Northern Ireland during the previous summer. The Provisional IRA supported armed struggle. The Official IRA, on the other hand, decided on a long-term political strategy based on Marxist theories. In January 1970, Sinn Féin split along the same lines.

The Official IRA soon repudiated military action in Northern Ireland and elsewhere, dumping its arms in 1972 and essentially dissolving as a military organization. Official Sinn Féin devoted itself to left-wing politics. In 1977 it became Sinn Féin: The Workers Party, and in 1982 it dropped “Sinn Féin” from its title.

During the 1970s, Provisional Sinn Féin (as with the IRA, the modifier soon disappeared) maintained its refusal to engage in normal politics and mainly acted as a mouthpiece for the IRA. The widespread revulsion at the deaths of republican hunger strikers in 1981 prompted republican leaders to reconsider their traditional rejection of politics. In the early 1980s, the republicans adopted a bullet and ballot box strategy. Sinn Féin became a somewhat conventional leftist political organization, while the IRA continued its military operations. In 1986, Sinn Féin’s president, Gerry Adams, declared that abstentionism no longer applied to Ireland’s Dáil, prompting another republican split and the consequent creation of Continuity IRA and Republican Sinn Féin.

By the early 1990s, the IRA–Sinn Féin leadership acknowledged that a military victory was unattainable. Encouraged by Sinn Féin’s successes as a democratic socialist party on both sides of the border, it announced the cessation of military operations by the IRA in 1994 and, except for five months in 1997, has held to this cease-fire. The terms of the 1998 Belfast Agreement ensured Sinn Féin a place in Northern Ireland’s new Assembly, effectively ending its more than seven decades in Ireland’s political wilderness.

Sino-Indian Border Confrontations (1959–1988)

Protracted border dispute, culminating in a war in 1962 between the People's Republic of China (PRC) and India that compromised India's standing among nonaligned nations and has not yet been settled. While the dispute between the PRC and India, a nonaligned nation, became an issue in the context of the Cold War, the origins of the Sino-Indian conflict date back to the nineteenth century. Both the British, who ruled India until 1947, and the imperial Chinese government had made claims to regions on India's north-eastern frontier. Neither side, however, committed troops or exerted significant political pressure to settle claims over the contested area.

By the 1950s, this situation changed dramatically because of a variety of factors. Greater mobility and instant communications made it easier for the now-independent Indians and Chinese to attempt to exert control over the border areas. In addition, the incorporation of Tibet into China in 1950 substantially lengthened the Sino-Indian border, thereby increasing the likelihood of a conflict. The possibilities for a border clash increased dramatically in 1956 when the Chinese began to construct a military highway in the disputed territory. This led to a series of diplomatic protests and exchanges, followed in 1959 by an Indian military buildup along the border. Although there were no major military operations in the area, frequent military patrol missions and occasional small-scale skirmishes did occur.

In the summer of 1962, however, the border conflict escalated, with heavier than usual clashes. Heavy fighting then occurred in October and November, ending with a cease-fire on 21 November 1962. At the conclusion of this brief war, the PRC had taken all the contested area over which it had made claims, although it stopped short of advancing into Indian territory proper.

With the cease-fire, the Chinese withdrew to the positions they had held before the beginning of the war. The following month, a conference opened in Colombo, Sri Lanka, with representatives of Egypt, Burma, Sri Lanka, Cambodia, Ghana, and Indonesia. These representatives, negotiating with the Indian and PRC governments, formulated what became known as the Colombo Proposals. The proposals called for PRC forces to withdraw 20 kilometers (12 miles) from their positions before the war and India not to advance its own troops. Although never formally ratified, the proposals were accepted by both sides.

Thus ended the actual conflict between India and the PRC, although for the next twenty-six years relations between the two major powers remained frigid. The movement of Chinese troops near the border in 1963, alleged Indian movements across the border, and the incorporation of northern areas as part of India all produced hostile rhetoric. PRC support of Pakistan during the latter's conflicts with India and Chinese opposition to the creation of Bangladesh, championed by India, were other manifestations of the poor relations between the two nations.

There were sporadic attempts on both sides to improve relations. Informal talks between Indian and Chinese diplomats occurred in the early 1970s, and in 1976, fourteen years after the conclusion of the war, full diplomatic

relations were restored. In 1988, the two nations agreed to the establishment of a bipartite commission to resolve the border question. Not until 2005 did the leaders of both India and the PRC announce a settlement of the dispute, although details remained to be arranged.

The conflict had especially pronounced effects in India. Jawaharlal Nehru's final months as prime minister were clouded by both his miscalculations that had led to the war and the loss of standing that the war had brought India within the Non-Aligned Movement.

A series of armed clashes during 2 March–11 September 1969 between the People's Republic of China (PRC) and the Soviet Union over the demarcation of the Sino-Soviet boundary. This clash marked the height of the Sino-Soviet split and pushed the two nations to the brink of a nuclear confrontation.

By a number of unequal nineteenth-century treaties, Russia and the Chinese government agreed on a 4,500 mile-long border, running from the east through the northern border of modern Mongolia to the west of the PRC's Xinjiang Province. In the east, the demarcation line was drawn along the Amur River, known to the Chinese as Heilongjiang (literally meaning "the Black Dragon River"), along Heilongjiang Province's northern border, and along the Ussuri River, an Amur tributary between the eastern border of Heilongjiang and Russian Siberia. This border remained as it was after the fall of the Chinese Qing Dynasty and the Russian regime in the late 1910s and was twice reiterated, first with the Republic of China (ROC) in 1945 and then with the PRC in 1951.

Owing to its heavy reliance on the Soviet Union and the need to maintain Sino-Soviet solidarity, the PRC had consistently refrained from raising the border issue despite its nationalistic effort to eliminate the unequal treaties and restore territorial integrity. As the PRC sought to establish its independence from Soviet influence and the Sino-Soviet split loomed, the border

Sino-Soviet Border Incident

(2 March–
11 September 1969)

A Chinese soldier poses next to a portrait of Mao Zedong in April 1969 on the border between China's Xinjiang Province and the Soviet Republic of Kazakhstan, one of several sites where the two nations clashed in 1969 over border disputes. (AFP/Getty Images)

issue surfaced in 1960 when the PRC revoked the unequal treaties. Border negotiations began in February 1964 in Beijing but broke off in October 1964 when the Soviets insisted on maintaining the status quo. Tensions subsequently mounted along the Sino-Soviet border, with increased armed incidents. By 1969, there were 658,000 Soviet troops confronting 814,000 Chinese troops along the Amur River. The Soviet Union had also secured the permission of the Mongolian government to base Soviet ground and air forces in that nation.

On 2 March 1969, a Soviet border patrol was ambushed by Chinese troops on Damansky Island in the Ussuri River, resulting in 31 Soviet deaths. On 15 March 1969, the Soviet Union retaliated by firing on Chinese troops on Damansky Island, causing nearly 800 deaths. Cascades of diplomatic protests and counterprotests and more border clashes followed. The most serious border incident occurred on 13 August 1969 on the border between China's Xinjiang Province and the Soviet Republic of Kazakhstan, pushing the PRC and the Soviet Union to the brink of nuclear confrontation. In response to the PRC's successful explosion of its first atomic bomb in October 1964, the Soviet Union had increased its nuclear forces in Asia, including those in the

Democratic People's Republic of Korea (DPRK, North Korea) and Mongolia. By 1969, the Soviet Union had installed an antiballistic missile system directed against the PRC. The Soviet action on the Xinjiang border seemed to confirm the PRC's suspicion that the Soviets were planning a preemptive strike against Chinese nuclear installations in Xinjiang.

A war was averted when, on 11 September 1969, Soviet Premier Alexei Kosygin visited Beijing, meeting with Premier Zhou Enlai to settle the border conflict. Both sides agreed on three principles: keeping the status quo of the Sino-Soviet border, not employing military forces, and preventing future military clashes. On 20 October 1969, the border talks suspended in 1964 resumed in Beijing, with concentration on the Amur-Ussuri demarcation line.

These negotiations made little progress, however. The Soviet Union continued its military buildup along the border throughout the 1970s. By the end of the decade, the Soviet Union had tied down 25 percent of its conventional forces along the border. Perceiving this massive deployment as a threat, the PRC decided to normalize its relationship with the United States, culminating in the formal establishment of the Sino-U.S. diplomatic relationship in 1979.

Tensions along the Sino-Soviet border began to ease in July 1986, when Soviet leader Mikhail Gorbachev expressed his desire to restore Sino-Soviet harmony and settle the border disputes. In 1990, Soviet border forces were drastically reduced. Significant progress in the border talks was only achieved after the Cold War ended and the Soviet Union was dissolved. As a first step, Russia returned Zhenbao Island to the PRC on 19 May 1991. Finally, on 14 October 2004, both sides proclaimed the demarcation of the 4,500-mile Sino-Soviet boundary as complete and uncontested.

The collapse of the Sino-Soviet alliance marked the transformation of the Cold War world from bipolarity to multipolarity. Superficially an ideological partnership between the world's two largest communist countries, the Sino-Soviet alliance began on 14 February 1950 with the conclusion of the

Sino-Soviet Split (1956–1966)

Sino-Soviet Treaty. From its inception, the seemingly monolithic union was fraught with constantly shifting expectations about its precise place in the socialist world, subjected to American attempts to split it, and afflicted by the progressively ideological radicalism of People's Republic of China (PRC) Chairman Mao Zedong. Although Sino-Soviet disagreements over Soviet leader Nikita Khrushchev's 1956 de-Stalinization campaign remained hidden for a time, the advanced state of the alliance's disintegration became known to the outside world by the early 1960s. Because Mao exploited ideological conflict for domestic purposes, the final breakdown of the Sino-Soviet partnership in mid-1966 coincided with the beginning of the Cultural Revolution (1966–1976), launched both to purge the Chinese Communist Party (CCP) of alleged ideological revisionists and to create a communist utopia.

Viewing any alliance with a great power solely as a temporary means to help restore past Chinese glory and power, the Chinese Communists by the late 1940s had decided to lean toward the Soviet Union. Surprised by Mao's request in late 1949 for an economic and military alliance, Soviet leader Josef Stalin first hesitated but then agreed for utilitarian reasons to conclude a Friendship and Alliance Treaty that provided the Soviet Union access to railroads, warm-water ports, and important raw materials deposits in Manchuria and Xinjiang in exchange for Soviet military and economic aid. Stalin's limited support of the PRC during the Korean War (1950–1953), however, revealed the limits of the military aspects of the alliance. After the dictator's 1953 death, the end of the Korean War, and Khrushchev's ascendancy to power, the focus of the Sino-Soviet relationship gradually shifted toward assistance in economic development and improved party relations.

Khrushchev's "secret speech" of 25 February 1956, charging Stalin with arbitrary and criminal rule, undermined Mao's growing personality cult in China but strengthened his hand in his relations with the Soviet leaders. After increasing his influence in the socialist world through diplomatic mediation during the 1956 Hungarian Revolution, Mao concluded that although he considered Khrushchev's criticism of Stalin unfair and imbalanced, it had nevertheless revealed the need to preempt internal dissent in China in order to prevent a crisis similar to the Hungarian Revolution. The PRC's Hundred Flowers campaign in the spring of 1957 was designed to allow party members and intellectuals to vent their pent-up frustrations in a highly controlled framework but threatened within only a few weeks to undermine the Chinese communist regime. While Beijing launched the Anti-Rightist campaign in the summer of 1957 to stamp out internal dissent, Khrushchev survived the so-called Anti-Party Incident, which the remaining Stalinists in the party leadership staged with the goal of reversing de-Stalinization. Both events proved to be crucial for the further development of the Sino-Soviet relationship, since they put the PRC and the Soviet Union on two conflicting political, ideological, and economic paths.

As modest liberalization continued in the Soviet Union in 1958, Mao, following the Anti-Rightist campaign, radicalized the domestic political discourse in the run-up to the Great Leap Forward, which was supposed to propel the PRC into full-fledged communism. These internal changes led

People's Republic of China (PRC) leader Mao Zedong confers with leader of the Soviet Union Nikita Khrushchev during the latter's 1958 visit to Beijing. (Library of Congress)

to a more aggressive and anti-American foreign policy before and during the Second Taiwan Strait Crisis (August–September 1958). Mao's willingness, stated to Soviet Foreign Minister Andrey Gromyko in early September, to trigger a nuclear war over a series of small, disputed islands in the Taiwan Strait placed the first significant strains on the Sino-Soviet relationship.

Faced with widespread famine as a result of the misguided economic policies of the Great Leap Forward, the CCP leadership undertook internal discussions in mid-1959 about economic reforms aimed at averting further disaster. Fearing challenges to his leadership, Mao was able both to purge his opponents within the party and to relaunch an unreformed Great Leap Forward in late 1959 in order to save his vision of a communist utopia. The economic catastrophes resulting from the Great Leap Forward, however, shocked the Soviet Union. Furthermore, Mao's radical anti-American stance also clashed with Khrushchev's rapprochement policies.

The unexpected April 1960 Chinese publication of the so-called Lenin Polemics—three articles released on the occasion of Vladimir I. Lenin's ninetyeth birthday that promoted ideologically radical positions diametrically opposed to Soviet viewpoints—revealed the brewing Sino-Soviet tensions to the world. After ideological clashes between the Soviet and CCP delegations during the Third Romanian Party Congress in late June 1960, the Soviet

Union decided to punish the PRC by withdrawing all of its advisors from the PRC in July 1960.

Although the Great Leap Forward had caused the complete collapse of China's economy and had brought Sino-Soviet trade to a virtual standstill, Beijing used the withdrawal to blame Moscow for its economic problems. Until the mid-1960s, the PRC shifted much of its foreign trade away from the Soviet Union toward Japan and Western Europe. Because of China's pressing economic problems and the failure of Khrushchev's rapprochement with U.S. President Dwight D. Eisenhower after the May 1960 U-2 Crisis, however, both sides realized the necessity of an ideological truce, which they formally reached at the Moscow Conference of the world's communist parties in late 1960.

Shunted aside from domestic decision making because of his close association with the failed Great Leap Forward, Mao used the 1961 Soviet-Albanian conflict as a tool to rebuild his political fortunes at home. Subsequent anti-Soviet propaganda in the PRC triggered conflicts between Soviet citizens and ethnic Central Asians living in Xinjiang on the one side and the local Chinese administration on the other. The mass flight of 67,000 people to Soviet Kyrgyzstan in the late spring of 1962 caused Beijing to abrogate its consular treaty with Moscow on the basis of alleged Soviet subversive activities in western China. Mao used these developments to restore his standing in the CCP leadership and to push for more anti-Soviet policies in the second half of 1962. Khrushchev's nuclear provocation and sudden retreat under U.S. pressure during the 1962 Cuban Missile Crisis provided Mao with an unexpected opportunity to attack the Soviet leadership publicly for ideological inconsistency and political unreliability.

The United States had been intent on splitting the Sino-Soviet alliance since 1950, but only in the aftermath of the Cuban Missile Crisis was it able to use the Soviet-British-American negotiations on the Partial Test Ban Treaty (PTBT) to deepen the Sino-Soviet rift. Aware of the problems between Beijing and Moscow, Washington played on Soviet fears about China's nuclear weapons program and Khrushchev's dissatisfaction with Mao's ideological warfare. Despite the fact that the PTBT (initialed on 25 July 1963) did not infringe on China's nuclear program, the signing of the treaty by almost all countries of the world within five months isolated the PRC internationally.

The period from mid-1963 to mid-1966 witnessed the final collapse of Sino-Soviet party and military relations. Convinced that the Sino-Soviet pact had fulfilled its usefulness, Mao fanned and exploited ideological conflict and territorial disputes with his Soviet comrades for domestic purposes. Because the launching of the Cultural Revolution required a prior break with what Mao termed Soviet "revisionists, traitors of Marxism-Leninism, and fascists," he eventually broke party relations in early 1966 by his refusal to send a delegation to the Twenty-Third Soviet Party Congress. Simultaneously, his radical ideological stances precluded the invocation of Sino-Soviet Treaty obligations in support of the Democratic Republic of Vietnam (DRV, North Vietnam) during the Vietnam War (1964–1973). By the mid-1960s, the military alliance between Beijing and Moscow factually ceased to exist,

although the treaty did not officially expire until 14 February 1980. Until the rapprochement initiated by Soviet President Mikhail Gorbachev in the late 1980s, for nearly twenty-five years Sino-Soviet relations consisted only of low-level cultural relations and limited trade links.

Treaty signed between the Soviet Union and the People's Republic of China (PRC) on 14 February 1950. The Sino-Soviet Treaty of Friendship and Alliance marked the culmination of PRC Chairman Mao Zedong's two-month state visit to the Soviet Union (16 December 1949–14 February 1950). Negotiating a treaty was not the sole purpose of Mao's visit to Soviet leader Josef Stalin, for he was also in desperate need of economic aid and diplomatic support. Yet for Mao, the treaty had a substantial symbolic value, as it would replace an existing Sino-Soviet Treaty, signed in August 1945 between Stalin and Guomindang (GMD, Nationalist) leader Jiang Jieshi, Mao's enemy in the civil war that had consumed China on and off during 1927–1949.

To Mao's perplexity, Stalin initially proved reluctant to sign a treaty. Stalin prevaricated, vaguely insinuating that a new treaty would upset agreements reached with the West at the February 1945 Yalta Conference. Only in January, when Mao had begun to complain about the lack of progress, did the Soviet leader change his mind. On 22 January 1950, Stalin told Mao that he was no longer concerned with how the Western powers might react to a new treaty, declaring "to hell with Yalta."

Chinese Foreign Minister Zhou Enlai was then summoned to Moscow to undertake the detailed negotiations. The treaty, to be in force for thirty years, committed each party to aid the other in the event of an attack by Japan "or states allied with it." Additional agreements modified rights that

Sino-Soviet Treaty (14 February 1950)

the Soviet Union had obtained under the 1945 treaty. The Chinese Changchun Railway was to be returned to the PRC no later than 1952, the Soviets would have no rights to Port Arthur after 1952, and the administration of Dalny was to be immediately returned to the PRC.

But Stalin made additional demands, encapsulated in secret protocols. Mao had to acknowledge the formal independence of Soviet-dominated Outer Mongolia, the Chinese were to grant rights of passage across their territory in time of war, and under another protocol, no third party would be granted economic rights in the Chinese regions of Manchuria or Xinjiang. Stalin further sought to set up joint companies with the Chinese to explore and exploit mineral deposits as well as to pressure the Chinese to deliver scarce raw metals to Russia. Mao later complained of these clauses as being semicolonial, but at the time he had little option other than to accept them. The Soviets did, however, grant \$300 million in credits to the PRC and agreed to send technical experts to China to assist in economic development. Although Mao made many concessions, the treaty was undoubtedly an achievement for him, and the Soviet aid was most welcome.

Sino-Vietnamese War

(17 February–5 March 1979)

Short war between the People's Republic of China (PRC) and the Socialist Republic of Vietnam (SRV). Known to the Chinese as the Punitive War, its principal cause was the December 1978 Vietnamese invasion of Cambodia (Kampuchea). Although the Vietnamese-backed Cambodian government of Heng Samrin soon controlled the cities and received official recognition from the SRV, the Soviet Union, Laos, and most other communist states, Pol Pot's ousted Khmer Rouge conducted guerrilla warfare. The Khmer Rouge received assistance from China, which saw Cambodia as being in its sphere of influence. The United States also aided the Khmer Rouge, despite the latter's genocidal activities.

When Vietnam refused to withdraw its forces from Cambodia, the PRC threatened military force. In early January 1979, Deng Xiaoping, Chinese

deputy premier and chief of staff of the People's Liberation Army (PLA), announced that China might be forced to take measures contrary to its desire for peace. The PRC leadership considered the Vietnamese invasion as part of a greater Soviet expansionist design aimed at China.

There had also been numerous border disputes between the PRC and the SRV over their common 797-mile-long border, which had been delineated by the French. Although the territory under dispute was small, border incidents had multiplied. The two states also had conflicting claims over the Paracel and Spratly Islands in the South China Sea and waters in the Gulf of Tonkin, spurred by the possibility of oil deposits there.

Another major catalyst of the war was Vietnam's treatment of its Chinese Hoa minority. Some 1.5 million Hoa lived in Vietnam, most of them in Ho Chi Minh City (Saigon). They were an important economic force, but many refused to become Vietnamese citizens. In March 1978 the SRV abolished private trading, confiscating at least 50,000 Chinese firms and forcing some 320,000 Chinese into the countryside for agricultural work as part of a plan to reduce the population of Ho Chi Minh City.

Many Chinese fled overland into China, and by early July more than 150,000 had crossed the border. Many more attempted to escape by sea. This exodus of boat people was prompted by provocateurs working for the government and by gangsters motivated by greed. Many refugees perished at sea or were preyed upon by pirates. China expressed outrage over what it considered a deliberate SRV policy, recalling its ambassador and suspending aid to the SRV. The Chinese exodus slackened off after July 1979, but it remained a serious cause of friction.

Some historians have also suggested that the war may have been in part motivated by Deng's desire to highlight the technological deficiencies of the Chinese Army in order to make a case for its modernization or that Deng sought to keep the army occupied while he consolidated power.

Militarily, the PRC appeared to enjoy tremendous advantages. Its PLA numbered 3.6 million men in 175 divisions, but it was basically an inadequately equipped infantry force. With the exception of a brief clash with

In March 1978 the SRV abolished private trading, confiscating at least 50,000 Chinese firms and forcing some 320,000 Chinese into the countryside for agricultural work.

SINO-VIETNAMESE WAR, 1979

India in 1962, the PLA had not fought a major war since the Korean conflict. The navy numbered 280,000–300,000 men and 1,050 vessels, and the air force had about 400,000 men and 5,000 mostly obsolete combat aircraft. In preparation for war, Beijing evacuated its side of the border. The government also placed on maximum alert its forces on the Soviet border. Deng assumed overall command, assembling thirty-one divisions and 1,200 tanks in the Vietnam border area.

The SRV's entire military establishment numbered only about 615,000 men, centered on twenty-five infantry divisions. Its military, the People's Army of Vietnam (PAVN), was a modern, relatively well-equipped, well-disciplined force hardened by war. But six of the divisions were in Laos, and fourteen were in Cambodia. That left only five in Vietnam, four of which protected Hanoi. Some 70,000 Border Security Forces guarded the border with China, with another 50,000 lightly armed militia also available. Vietnam possessed up to 485 combat aircraft. The Vietnamese prepared for war by placing obstacles and laying minefields along the border and covering possible invasion approaches with artillery.

On 17 February 1979, 100,000 Chinese troops commanded by General Xu Shiyou attacked simultaneously at forty-three different points along the border, seeking to spread the defenders and probe for weak spots. The main Chinese attacks came along the half dozen traditional invasion routes to Hanoi, with the PLA intent on securing the key mountain passes. Everywhere the Chinese encountered tenacious Vietnamese resistance.

Chinese tank crewman taken prisoner by the Vietnamese during the 1979 Sino-Vietnamese War. (Bettmann/Corbis)

Advancing into the SRV an average of 10 miles, the Chinese then halted for two days to regroup. Soon there were some 200,000 Chinese troops engaged. On 22 February the Chinese captured the important border cities of Lao Cai and Cao Bang. SRV Defense Minister Vo Nguyen Giap worked closely with army commander Senior General Van Tien Dung. The two men chose to wait to see where the major Chinese thrust would develop. Finally, on 3 March, Hanoi committed one division to the battle for Lang Son, which soon fell to the PLA. A second PAVN division was sent north along the coast, and Hanoi also withdrew a division from Cambodia, although it did not arrive in time to take part in the fighting. Had the war lasted longer, Hanoi would certainly have been forced to recall additional forces. Neither side employed its air force in the war.

The Chinese advanced up to 40 miles into Vietnam, but on 5 March Beijing abruptly announced that it had accomplished its goals and was withdrawing. As it departed, the PLA carried out a scorched-earth policy. The Vietnamese simply watched the Chinese depart, the withdrawal completed by 16 March.

Likely casualty totals in the war were 26,000 Chinese killed and 37,000 wounded, with Vietnamese casualties of 30,000 killed and 32,000 wounded. After the war, the Chinese exchanged 1,636 Vietnamese prisoners for 260 Chinese.

China obtained only a portion of its objectives. It had not destroyed any SRV regular divisions, had not forced Vietnam to withdraw from Cambodia, and had not altered Hanoi's policies toward its Chinese minority. The war also exposed glaring Chinese weaknesses, in communications especially but also in transport and weaponry.

During the war, the Soviet Union had airlifted supplies to Vietnam. Over the next year, the Soviet Union doubled its military advisors in Vietnam and its naval units in Vietnamese waters. Despite these moves, the war had exposed shortcomings in Soviet-Vietnam ties, which may have been another Chinese goal of the war.

Skybolt Affair and Nassau Conference

Defense procurement issue that shook relations between Great Britain and the United States. Toward the end of 1962, Great Britain faced the prospect of having no means of delivering its atomic weapons apart from its aging V-bombers. A British missile project, Blue Streak, had been recently abandoned because of technical problems. British Prime Minister Harold Macmillan thus turned to the American Skybolt missile, which President Dwight D. Eisenhower's administration had promised to sell to Britain in March 1960. But in 1962, hearing rumors that the Americans might scrap Skybolt, Macmillan asserted that the United States was not fully supportive of other Western states possessing independent nuclear capability, preferring instead to rely on a vaguely multilateral arrangement defined by the North Atlantic Treaty Organization (NATO). The Skybolt Affair caused a great rift in Anglo-American relations, possibly the worst one in several generations.

In his memoirs published in 1973, Macmillan wrote that "it was difficult to suppress the suspicion that the failure of Skybolt might be welcomed

in some American quarters as a means of forcing Britain out of the nuclear club.” For the prime minister, this was a fundamental issue, as the United Kingdom’s independent deterrent showed that “we were not just satellites or clients of America.” More to the point, a British bomb was a hedge against the possibility that the United States might not always be relied upon to use its weapons in defense of Europe.

Against this background, Macmillan and President John F. Kennedy agreed to meet in Nassau, Bahamas, in December 1962, but in deference to French President Charles de Gaulle’s sensitivities about Anglo-American collusion, Macmillan met with de Gaulle first in Rambouillet, France. In generally even-tempered talks, de Gaulle hinted that he might veto Britain’s application to join the Common Market, at that time still in negotiation. He also stated that the French, like the British, sought an independent nuclear deterrent and that he too was unclear about the implications of a multilateral nuclear force.

When Kennedy and Macmillan met on 19 December 1962, the prime minister immediately established Britain’s credentials by enlarging on the crucial British scientific contribution in developing nuclear weapons and subsequent Anglo-American cooperation. President Eisenhower, he claimed, had promised him Skybolt as well as the submarine-launched Polaris missile “if necessary.” Thus, Macmillan made it clear that if the Skybolt missile were now unavailable, he wanted the Polaris. Kennedy confirmed that Skybolt was indeed to be abandoned but suggested the sharing of development costs of a new missile, a quixotic offer that Macmillan declined. But Kennedy resisted offering Polaris to the British, unconvincingly arguing that to do so would alienate de Gaulle.

Macmillan was distressed by Kennedy’s seeming disingenuousness and the importance that the Americans attached to their plan for the NATO-led multilateral control of nuclear weapons. He fought fiercely for Polaris but, in the process, had to concede something to the American demand for multilateralism, offering to make British nuclear forces available to NATO except where supreme national interests were involved. With that concession, Kennedy agreed at the Nassau Conference to provide the Polaris missile.

Slánský Trial (1952)

Infamous 1952 Czech show trial. On 6 September 1951, Rudolf Slánský was dismissed from his post as general secretary of the Communist Party of Czechoslovakia (CPCz). At the time of his dismissal, he was second only to President Klement Gottwald and had introduced Stalinist policies to post-war Czechoslovakia. On 24 November, agents of the Státní Tajná Bezpečnostní (STB), Czechoslovak secret police, arrested Slánský. Despite the fact that he had been a lifelong communist and an ardent follower of the orthodox party line, he was charged with high treason, espionage, conspiring to kill Gottwald, and Zionism.

Slánský was apparently targeted because of an intercepted communication from OKAPI, the code name for an intelligence organization of Czechoslovak émigrés established in 1948 by the United States in Bensheim, Germany. One of its analysts noticed that Moscow had failed to mark Slánský's fiftieth birthday with the obligatory congratulatory telegram. This led operatives at OKAPI to conclude that Slánský could be persuaded to defect. On 8 November 1951, an OKAPI letter to Slánský offering him political asylum in the United States was intercepted by the STB and sent to Moscow.

Rudolf Slánský, general secretary of the Czechoslovak Communist Party of Czechoslovakia (CPCz), shown here in 1951. (Library of Congress)

Soviet leader Josef Stalin had expressed doubts about Slánský since July 1951. Now Stalin had “evidence” that the former general secretary was in communication with U.S. intelligence. With the OKAPI letter in hand, Stalin demanded Slánský's arrest.

By January 1952, physical torture and psychological duress led Slánský to admit his guilt to all the trumped-up charges against him. In his November 1952 show trial, the prosecutor depicted him as the head of an antistate conspiracy. Slánský and his thirteen codefendants followed the script prepared by the STB and its Soviet advisors and confessed to crimes they had never committed. All were found guilty. Slánský and ten others were summarily sentenced to death on 27 November 1953 and were executed in Prague on 3 December 1952. When the noose was placed around his neck, Slánský is reported to have said, “Thank you. I'm getting what I deserved.”

The show trial in Prague helped to advance Stalin's geopolitical aims in two ways. First, all but three of the defendants were Jewish and were ostentatiously identified by the prosecution as Zionists. Their trial enabled Stalin to signal a reorientation of Soviet Middle Eastern policy in favor of Israel's Arab rivals. Second, the trial took place in the midst of the Soviet-Yugoslav split. The message to Central and East European governments was that if Slánský, a loyal Stalinist, was not safe, then no one was. Stalin would accept only strict obedience. The practice of modify-

ing Soviet policies to take into account specific conditions in each satellite country would not be tolerated.

The Slánský trial seriously damaged the cause of communist ideology. Before it, many European intellectuals associated communism with optimism and hope. Slánský's bizarre confession, delivered in the monotonous and tired voice of a tortured man, showed communism's real face.

The term "small arms" generally refers to those types of handheld firearms that an individual can carry and operate by oneself. The introduction of assault rifles—independently developed in both the Eastern and the Western blocs—came to symbolize the history of military firearms in the Cold War era. Assault rifles, pioneered by the German Kurz MP 44 (Sturmgewehr 44) during World War II, are lightweight, short-barreled military rifles that fire smaller-sized rifle cartridges at either a fully automatic or semiautomatic setting.

The Soviets were the first to successfully develop assault rifles for practical use. Emphasizing mass production and durability, Mikhail Kalashnikov designed what would become the most common rifle in military history, the AK-47 (Avtomat Kalashnikova of 1947.) Through the 1950s and 1960s, the Soviet Union and its satellite countries mass-produced the AK-47 and its derivatives. As the legacy of their military cooperation during the Cold War and as the result of the tremendous trade of Soviet weapons after the collapse of European communism in the late 1980s, today the AK-47 type assault rifle remains in common use throughout Africa and the Middle East.

Pressured by Moscow during the Cold War, most Eastern bloc armed forces had to adopt the standard weapons of the Soviet Union. This allowed the Warsaw Pact countries to enjoy among themselves the benefits of standardized and interchangeable weapons, military equipment, and training. The Warsaw Pact forces uniformly used the 7.62mm × 39 intermediate-powered round (M 43) developed by the Soviet Union along with the AK-47. The Eastern bloc countries also manufactured variations of the AK-47 rifle.

Small Arms

Unlike the Eastern bloc countries, however, each Western bloc country designed its own assault rifles using the 7.62mm NATO cartridge.

A Vietnamese communist soldier holding an AK-47 assault rifle. He was participating in the exchange of prisoners of war on 12 February 1973. (U.S. Department of Defense)

To produce a lighter rifle and to increase productivity, the Soviets developed the AKM rifle in 1957, an improved version of the AK-47. Warsaw Pact nations such as the German Democratic Republic (GDR, East Germany), Hungary, and Romania soon adopted the new version. However, the People's Republic of China (PRC), a large-scale manufacturer of the AK-47 rifle, did not switch to the new Soviet weapon, perhaps an early sign of the coming Sino-Soviet split.

Meanwhile, the Western bloc countries under the North Atlantic Treaty Organization (NATO) also standardized their assault rifles to use the 7.62mm × 51 NATO cartridge in 1954. Later, some fifty noncommunist countries outside NATO adopted the 7.62mm NATO cartridge as well. Unlike the Eastern bloc countries, however, each Western bloc country designed its own assault rifles using the 7.62mm NATO cartridge. Among them, the U.S. M-14 rifle, the Belgian Fusil Automatique Léger (FAL), the Spanish CETME, and the West German Gewehr 3 A3 are well known.

Wishing to increase accuracy at full-automatic mode, in 1955 the United States began designing an improved version of the M-14. This new assault rifle, the AR-15 (Armalite) fired the .223 Remington 5.56mm × 45 cartridge, a smaller caliber than the 7.62mm NATO round. The AR-15 became a standard weapon for U.S. armed forces as the M-16 rifle.

During the Vietnam War the M-16 did not function well, especially in jungle environments. In response, the Americans introduced the revised M-16A1 rifle. A newer version, the M-16A2 rifle, debuted in the 1980s and remains the standard U.S. weapon. With the successive conversions to newer versions, the United States periodically sold its old M-16 rifles to other countries in the Middle East, Africa, Latin America, and Asia. Consequently, the M-16 rifle, as with the AK-47, became ubiquitous in various armed conflicts around the world. Indeed, the AK-47 and the M-16 epitomized the split between East and West that divided the world during the Cold War.

During the 1960s and 1970s, many Western bloc countries adhered to the 7.62mm NATO cartridge and produced high-quality military rifles for the cartridge. It took time for them to recognize the superiority of smaller-caliber assault rifles such as the M-16A1, which can be loaded with more ammunition. In 1980, NATO adopted the .223 Remington cartridge as the 5.56mm NATO. Some Western bloc countries began experimenting on designs of smaller-caliber military rifles in the mid-1970s. Among those, the bull-pup type rifles such as the British Lee Enfield L-70 automatic rifle, the Austrian Steyr AUG, and the French MAS 5.56 automatic rifle featured a

A U.S. Air Force master sergeant fires his M-16 rifle during a training exercise at Hickam Air Force Base, Hawaii, in October 1980. (U.S. Department of Defense)

shorter body without shortening the barrel by fitting the magazine behind the trigger.

The Eastern bloc also studied smaller-caliber assault rifles. The Soviet Union developed the AK-74 rifle that can fire the 5.54mm × 39 cartridge. After officially adopting the AK-74 in the 1970s, the Soviet Union displayed the power of the new assault rifles in its invasion of Afghanistan (1979–1989).

As for the development of military pistols during the Cold War, both the Eastern and Western blocs adopted automatic pistols. The Western bloc possessed the .45 ACP (Automatic Colt Pistol) represented by the U.S. M1911A1 (Colt Government Model Automatic Pistol) and various types of the 9mm Parabellum among West European countries. Among Eastern bloc countries, the Soviet TT33 (Tokarev) with the 7.62mm caliber cartridge and the PM (Makarov) with the 9mm caliber cartridge became the principal military pistols. Most communist nations imported these pistols from the Soviet Union or manufactured them under a Soviet licensing system.

Smith, Ian Douglas (1919–)

Premier of the British colony of Southern Rhodesia during April 1964–November 1965 and prime minister of Rhodesia (present-day Zimbabwe) during 1965–1979. Born on 8 April 1919 in Selukwe (now Shurugwi), Ian Smith was educated in Gwelo before study at South Africa's Rhodes University.

Smith interrupted his studies to serve with the Royal Air Force (RAF) in World War II. He returned home to complete his degree in 1947 and farm in Selukwe. He became active in politics, first in the Liberal Party, then in the United Federal Party. In 1962, he cofounded the prosettler Rhodesian Front (RF) that won a slim parliamentary majority that same year. Two years later, in April 1964, Smith was appointed leader of the RF, replacing Winston Field as premier of Southern Rhodesia. When the white settler colony declared independence from Britain on 11 November 1965, Smith became prime minister of Rhodesia.

Smith adamantly opposed the transfer of political control to Rhodesia's black majority. Opponents of minority rule were labeled as communists and, after the outbreak of civil war in 1966, were considered terrorists. Rhodesia was subjected to international condemnation and sanctions, although neighboring South Africa did not support such actions.

In 1974, after spirited discussions with U.S. Secretary of State Henry Kissinger and under pressure from South African Prime Minister John Vorster, Smith reluctantly accepted that the end of minority rule was inevitable. In 1979, under an internal agreement, multiracial elections were held, which brought Bishop Abel Muzorewa to power as the state's first black prime minister. Smith remained in the new multiracial cabinet.

Nevertheless, the civil war in the country continued, during which Rhodesian forces, with the assistance of dissident Mozambicans, breached the country's border. This precipitated great internal destabilization. Intervention by the British government, under the leadership of Foreign Secretary Lord Peter Carrington, led to the Lancaster House Conference, which finally ended the Rhodesian impasse in December 1979.

New elections in 1980 brought Rhodesia full independence, ending its long international isolation. Robert Mugabe was elected the country's first president, and Smith became leader of the opposition, although his political

base had been badly eroded. In 1982, Smith retired to his farm in Shurugwi, ending a political career of almost thirty years. In his retirement, he remained an outspoken critic of Zimbabwe's government.

U.S. Army general, director of the Central Intelligence Agency (CIA) during 1950–1953, and undersecretary of state during 1953–1954. Born in Indianapolis, Indiana, on 5 October 1895, Walter Bedell Smith was educated at Manual Training High School in Indianapolis and briefly attended Butler University. He decided on a military career and in 1910 enlisted as a private in the Indiana National Guard. In the interwar years Smith, who had risen to the rank of major in 1939, acquired the organizational, administrative, and planning skills essential to managing modern warfare. He served with the Bureau of Military Intelligence, the Bureau of the Budget, and the Federal Liquidation Board and had several assignments either studying or instructing at the Infantry School at Fort Benning, Georgia; the Command and General Staff School at Fort Leavenworth, Kansas; and the Army War College.

General George C. Marshall, appointed U.S. Army chief of staff in 1939, noted Smith's abilities and in October 1939 summoned him to Washington to assist in swiftly building up the military from its existing weakness to full wartime strength and capability. In September 1942 Smith was assigned to Dwight D. Eisenhower, commander of the European theater of war, as chief of staff, where he remained until the end of 1945, winning a stellar reputation as one of the finest army chiefs of staff.

Smith returned to Washington in January 1946 as chief of the Operations and Planning Division of the Joint Chiefs of Staff (JCS), but two months later President Harry S. Truman appointed him ambassador to the Soviet Union, where he remained until 1949. Smith's experiences in this post, as

Smith, Walter Bedell
(1895–1961)

U.S. Army General Walter B. Smith performed important service as a staff officer during World War II. During the postwar period, he served capably as ambassador to the Soviet Union, the second director of the Central Intelligence Agency (CIA), and undersecretary of state. (Library of Congress)

the Cold War steadily and rapidly intensified, convinced him that the United States must take a firm line to contain Soviet expansion but also that the Soviets did not deliberately seek war and would back down when confronted by American strength.

In late June 1950 Truman named Smith, then commanding the First Army, director of the CIA. He was advanced to full general in July 1951. The president hoped that Smith would improve leadership and organization within the agency, then attracting heavy criticism for its failure to predict the Democratic People's Republic of Korea (DPRK, North Korea) invasion of the Republic of Korea (ROK, South Korea). Smith's reputation as an outstanding bureaucrat and a staunch anticommunist helped to deflect further criticism from the CIA, which he centralized and coordinated, persuading Douglas MacArthur not only to allow the agency to operate in Korea but to utilize its intelligence. Under Smith, the CIA nonetheless wrongly predicted that China would not intervene in the Korean conflict and also failed to anticipate assorted coups in Latin America. Smith tightened the flow of intelligence, restricting the overall picture to a few high-ranking officers, and instituted a training program to develop a group of career intelligence officers.

As undersecretary of state during 1953–1954 in the Eisenhower administration, Smith provided a degree of continuity. After his retirement in 1954 an embittered Smith, who never received either the fifth star or appointment as chief of staff of the army that he believed he deserved, turned to business, amassing an estate valued at almost \$2.5 million. In 1958 John Foster Dulles appointed Smith, a staunch and vocal supporter of nuclear expansion,

as his special advisor on disarmament. Smith died in Washington, D.C., on 9 August 1961.

South African military leader, international statesman, and prime minister (1919–1924, 1939–1948). Born in Bovenplaats, Cape Colony (now South Africa), on 24 May 1870, Jan Smuts was educated at Christ's College, Cambridge University, where he read law. He earned his degree in 1895 and then built a successful law practice in Johannesburg. Although born a British subject, he was extremely proud of his Boer ancestry and was an effective guerilla leader in the Boer War (1899–1902). In 1910, he and his close friend Louis Botha worked together to create the Union of South Africa. Smuts then entered politics in Botha's cabinet, serving in several ministerial positions.

At the beginning of World War I, Smuts was serving as defense minister under Prime Minister Botha. Smuts commanded the offensive that took control of German Southwest Africa (the future Namibia) from the Germans. Made a British Army general, Smuts then took charge of British operations in East Africa. Before the end of the war, he joined the British Imperial War Cabinet as minister of air and helped to organize the Royal Air Force, the world's first independent air force. Smuts represented South Africa during the 1919 Paris Peace Conference, where he supported the League of Nations and helped develop the mandate system.

During 1919–1924 and again in 1939–1948, Smuts served as South Africa's prime minister. He returned to power in September 1939 as an advocate of war with Germany. He was also minister of defense, and from June 1940 he commanded South African armed forces in the war. Made an honorary field marshal in the British Army in 1941, he was throughout the war one of British Prime Minister Winston Churchill's closest advisors.

Smuts believed that cooperation was the key to international stability and peace. After World War II, he took a leading role in the creation of the United Nations (UN) and was a strong supporter of South African cooperation with the British. Unfortunately, Smuts's visions of cooperation were never fully realized. At the time of his death in 1950, the Cold War was well established, and the world was no closer to genuine peace. Smuts died in Irene (near Pretoria), South Africa, on 11 September 1950.

Soares, Mário (1924–)

Portuguese socialist politician, prime minister (1976–1978, 1983–1985), and president (1986–1996). Born on 12 July 1924 in Lisbon, Mário Alberto Nobre Lopes Soares graduated with a degree in history, philosophy, and law from the University of Lisbon in 1957. While there, he joined the Portuguese Communist Party. He was arrested multiple times during the era of the Estado Novo (New State), the conservative, clerical fascist regime under António de Oliveira Salazar, who ruled Portugal during 1932–1968. In 1951 Soares quit the Communist Party and went back to college to study law. By the 1960s he had aligned himself with the socialists and in April 1964, together with Francisco Ramos da Costa and Manuel Tito de Morais, created the Acção Socialista Portuguesa (Portuguese Socialist Action).

In March 1968, Soares was again arrested and banished for eight months to the island of São Tomé. He returned to Portugal but by 1970 had been banished again, this time to Italy, although he eventually settled in France. He returned to Portugal after the 25 April 1974 Carnation Revolution that ousted Marcelo Caetano.

In the aftermath of the coup, Soares was appointed minister for overseas negotiations and helped arrange the independence of Mozambique. However, the coalition government of the Movement of the Armed Forces (MFA), coupled with the growing strength of the Portuguese Communist Party, caused Soares to question the direction of the revolution. He was instrumental in the resignation of Premier Vasco dos Santos Gonçalves. Elections were held in April 1976, and the socialists won sufficient seats for Soares to become premier. In July 1976, Soares was sworn in as the first premier under the new Portuguese constitution.

Soares and the socialists were unable to form a strong majority on the Left because of a rift with the communists. In 1977 he applied for Portugal to join the European Economic Community (EEC). He resigned in late 1978. Re-elected in 1983, he served until 1985, when he lost to the Social Democrats and Aníbal Cavaco Silva.

Soares subsequently ran for president in 1986, winning by a narrow margin, but he won reelection in 1991 with a clear majority. He did not seek reelection in 1996,

Prime minister of Portugal Mário Soares, 14 March 1984.
(Bettmann/Corbis)

but in 1999 he headed the socialist ticket in elections to the European Parliament, where he served until the 2004 elections.

Soviet general and defense official. Born the son of peasants in the village of Kozliki, near Grodna (then Poland, now Belarus), on 9 July 1897, Vasily Sokolovsky in 1918 joined the Red Army. As a participant in the Russian Civil War, he commanded a company, a regiment, a brigade, and finally the 32nd Rifle Division. He graduated from the Red Army Staff Academy in 1921 and then served in Central Asia in the Operations Directorate of the General Staff. He was then chief of staff first of a division and then a corps. Later he was chief of staff of first the Urals and then the Volga Military Districts.

Promoted to major general in May 1938 and to lieutenant general in June 1940, Sokolovsky became deputy chief of the General Staff in February 1941. In midsummer he was chief of staff of the Western Front, with responsibility for the defense of Moscow. Promoted to colonel general in June 1942, he took command of the Western Front in early 1943. In August 1943 he was promoted to general of the army. From April 1944 he was chief of staff of the First Ukrainian Front. In the last months of the war he was deputy commander of the First Belorussian Front.

After the war, Sokolovsky became deputy commander of Soviet occupation forces in Germany and governor of the Soviet zone of Berlin. During 1946–1949 he commanded Soviet occupation forces in Germany, a period that coincided with the Berlin Blockade of 1948–1949. Indeed, it was Sokolovsky who suggested that American, British, and French soldiers in the western sectors of Berlin were guests of the Soviets rather than fellow occupiers.

Returning to the Soviet Union in 1949, Sokolovsky continued to play a major role in the Soviet military. During 1949–1960 he was first deputy minister of defense and then chief of the General Staff (1952–1960). At the end of his military career, he served as inspector general for the Ministry of Defense and oversaw the writing of *Voennaia strategija* (Military Strategy), a 1962 planning manual that shaped Soviet thinking for most of the remainder of the Cold War. Sokolovsky died in Moscow on 10 May 1968.

Solidarity Movement

Polish independent labor union established in September 1980, credited with bringing democracy to Poland and helping to end the Cold War. On 1 July 1980, the Polish government, headed by Prime Minister Edward Babiuch and communist First Secretary Edward Gierek, announced across-the-board price increases. Immediately, factory workers throughout Poland staged protest strikes. These proliferated and soon reached the Baltic coast, affecting Poland's largest port cities of Gdańsk and Gdynia.

Workers at the Lenin Shipyards in Gdańsk went on strike at the beginning of August. The local strike committee, led by electrician Lech Wałęsa, was soon transformed into the Inter-Factory Strike Committee. It was unprecedented in both size and form, as it claimed to represent not just the shipyard workers but all Polish workers. The Strike Committee put forth a list of twenty-one demands to be met by the Polish Communist Party. These demands included the right to form independent labor unions, the right to strike, freedom of speech and press, the release of political prisoners, and other social and economic demands. On 31 August 1980, Wałęsa's committee signed an agreement in Gdańsk with Deputy Prime Minister Mieczysław Jagielski by which the government agreed to the workers' demands, including the formation of independent trade unions. Similar agreements were signed in Szczecin and Jastrz"bie. Several days later, Gierek resigned his post.

As soon as the agreements were signed, workers began to organize themselves into union groups. Inter-Factory Strike Committees became Inter-Factory Founding Committees. Until this point, Polish labor unions had been an extension of the Communist Party and had no true independence.

On 17 September 1980, the Founding Committees decided to organize one umbrella labor union known as Solidarność (Solidarity). By this time, union membership was close to 4 million people, and the decision to form one central union was deeply troubling to Polish authorities. On 10 November 1980, following a series of difficult negotiations, Solidarity was officially registered as a union.

Moscow and Warsaw eyed Solidarity with great trepidation. The movement was large, and Soviet leaders especially viewed its antisocialist ele-

These demands included the right to form independent labor unions, the right to strike, freedom of speech and press, the release of political prisoners, and other social and economic demands.

During a 1987 visit to Poland by Pope John Paul II, demonstrators march down a street carrying banners reading “Solidarność” (Solidarity), the name of the first Polish trade union, formed despite communist government opposition. (Peter Turnley/Corbis)

ments as particularly troubling. They also feared that it would set a precedent that might be followed in other communist bloc nations. Over the next thirteen months, an uneasy relationship existed between the Communist Party and Solidarity. Solidarity was gradually realizing its demands through strikes or the threat of strikes. These demands were in most cases limited to working conditions, wages, and workers’ rights. By the end of 1981, nearly 10 million members, some 80 percent of the national workforce, had joined the movement.

Polish authorities never fully accepted the legitimacy of Solidarity. In fact, they had resorted to stalling tactics and harassment of union activists in the hope of weakening the movement. Meanwhile, the authorities were preparing plans to crush Solidarity, by military means if necessary. Tensions between Solidarity and the government peaked during the Solidarity Congress in September–October 1981. Solidarity’s 8 September 1981 “Message to the Working People of Eastern Europe,” which urged workers in other communist bloc nations to unite, brought applause among union members and near panic on the part of Polish and Soviet authorities. By then, it was clear that Solidarity had become a grave threat to communist rule. Moscow threatened Polish leaders with armed intervention unless Solidarity was shut down. For a time, the real threat of a Soviet military invasion loomed.

Then, on 13 December 1981, the Polish government, now headed by General Wojciech Jaruzelski, imposed martial law and declared Solidarity illegal. Almost 10,000 Solidarity members were detained. Wałęsa was among those arrested.

Pope John Paul II and the Catholic Church publicly supported the struggles of Solidarity and its imprisoned principals while clandestinely sending messages of encouragement to Wałęsa and others. Wałęsa credited the eventual triumph of Solidarity to the pope's intercession.

In April 1982, Solidarity activists who had avoided arrest formed the Solidarity Temporary Coordinating Committee to stage underground union activity. Four years later, in September 1986, Wałęsa initiated an open, albeit illegal, Solidarity Committee. The government refused to recognize this committee, and its members were closely watched by the secret police. Nevertheless, Wałęsa, who had won the 1983 Nobel Peace Prize, was now a prominent international figure. Silencing him was therefore exceedingly difficult for Polish authorities.

In August 1988, Polish authorities, together with the Catholic Church and the still-illegal Solidarity movement, commenced negotiations concerning the future of Poland. During February–April 1989, a roundtable brought together communists, opposition leaders, Solidarity members, and Catholic Church representatives. The talks brought an end to the government prohibition of Solidarity. In the elections that followed in June 1989, in which 35 percent of the seats were to be decided by election, Solidarity candidates won 161 of 161 seats in the Sejm and 99 of 100 in the Senate. In August 1989, Tadeusz Mazowiecki, one of Solidarity's founders, formed the first noncommunist post–World War II Polish government. After 1989, Solidarity became a traditional political labor party.

**Solzhenitsyn,
Aleksandr**
(1918–)

Soviet-Russian dissident and writer. Born in Kislovodsk on 11 December 1918, the son of an artillery officer, Aleksandr Isaevich Solzhenitsyn studied mathematics and physics at the University of Rostov-on-Don. Graduating in

1941, he briefly worked as a physics teacher. Following the German invasion of the Soviet Union in June 1941, he was drafted and served as an artillery captain.

In February 1945, Solzhenitsyn was arrested in East Prussia for his criticism (in a private letter) of the policies of Soviet dictator Josef Stalin and sentenced to eight years of hard labor in a gulag. In 1953 Solzhenitsyn was exiled to a village in Kazakhstan. Following his release in 1956, he settled in Riazan in 1957, working as a high school math teacher, all the while writing furiously.

In 1962, the leading Soviet literary journal *New World* published Solzhenitsyn's novella *One Day in the Life of Ivan Denisovich*. A sensational success, it made the author famous. Never before had the conditions in a Soviet labor camp been described in such gritty detail and laconic poignancy. The support of Soviet leader Nikita Khrushchev then allowed Solzhenitsyn to pursue a career as a freelance writer and essayist.

Solzhenitsyn proved a brilliant strategist, preparing a profound assault on the moral legitimacy of the Soviet system by analyzing its labor camp system in his three-volume *The Gulag Archipelago* (1973–1975). In his cat-and-mouse games with the Komitet Gosudarstvennoi Bezopasnosti (KGB) and its literary minions that he later described in *The Oak and the Calf* (1975), he was always mindful of the international position in which the Soviet Union found itself during the Cold War. After the confiscation of manuscripts in 1965 and subsequent harassment by Soviet officials, Solzhenitsyn employed dissident tactics such as writing an open letter to the Fourth Congress of Soviet Writers in 1967, having manuscripts smuggled to the West, and publishing them illegally through samizdat (chain mail–style self-publishing).

In the late 1960s, Solzhenitsyn's life became increasingly dramatic and regularly made international headlines. In 1969 he was excluded from the Soviet Writers' Union, but the following year he won the Nobel Prize in Literature. Soviet officials viewed the latter as a provocation, despite the backing that Solzhenitsyn received from leftist intellectuals such as Heinrich Böll, who had nominated him for the prize.

The publication of the first volume of Solzhenitsyn's *The Gulag Archipelago* in 1973 caused a cultural and political uproar and left no doubt that the author was beyond reconciliation with the Soviet system. In 1974, Solzhenitsyn was charged with treason and forced to leave the Soviet Union. After living briefly in Zürich, in 1976 he settled in Cavendish, Vermont. During his years in the United States, he led a secluded existence, rarely granting interviews and concentrating on his multivolume chronicle *The Red Wheel*, which focused on World War I and the factors that led to revolution in Russia in 1917. His 1978 Harvard University commencement speech made it clear that he was not a liberal reformer but rather an archconservative who rejected communism because of his ethical, spiritual, and national outlooks.

Soviet leader Mikhail Gorbachev's perestroika and glasnost reforms permitted a gradual acceptance of Solzhenitsyn in the Soviet Union. In 1989 he was reinstated to the Soviet Writers' Union, and his citizenship was restored in 1990. Solzhenitsyn's book-length essay *How We Can Rebuild Russia* (1990)

advocated grassroots democracy modeled after Switzerland and rejected a “consumerist civilization.” Solzhenitsyn returned to Russia in 1994, visiting numerous cities on his triumphant sojourn to Moscow. Yet after several years, the writer’s openly antimodern worldview turned him into an anachronism seemingly out of touch with postcommunist realities. He therefore rapidly lost his authority as a social visionary. Solzhenitsyn’s nonfictional historical exploration *Two Hundred Years Together* (2001–2002) generated much controversy and led to accusations of anti-Semitism.

Somalia

East African nation covering 246,199 square miles with a 1945 population of approximately 1.7 million people. Somalia is slightly smaller than the U.S. state of Texas and is bordered by the Gulf of Aden to the north, the Indian Ocean to the east, Djibouti to the northwest, Ethiopia to the west, and Kenya to the southwest. Part of the strategically important Horn of Africa, Somalia served as a counterbalance to first the Soviet Union and then the United States for the other’s presence in neighboring Ethiopia.

When Somalia achieved independence in 1960, the Soviet Union established relations with the new state, which became stronger when Major General Mohammed Siyad Barre seized power in 1969 and established a socialist state. During his failed attempt to seize the Ogaden region of Ethiopia during 1977–1978, he broke ties with the communist bloc and turned instead to the United States. As Somalia’s internal problems worsened during the 1980s and clan rivalries intensified into civil war, however, the United States withdrew its support. Barre fled Somalia in 1991, but no new leader emerged, and civil war continues to plague the impoverished nation.

On 1 July 1960, the former colony of British Somaliland and the United Nations (UN) trusteeship of Italian Somaliland merged to form Somalia. Although the inhabitants shared a common ethnicity, clan loyalties divided the population and formed the basis of the political parties that continually vied for power. During 1960–1967, Aden Abdulla Osman served as president and was succeeded by Abdirashid Ali Shermarke (1967–1969).

In 1960, recognizing Somalia’s potential as a counterbalance to the American presence in neighboring Ethiopia, Soviet leader Nikita Khrushchev established relations with Somalia and offered economic aid and expanded

SOMALIA AND ERITREA

the port facilities at Berbera. In October 1969, following President Shermarke's assassination, Barre, commander in chief of the armed forces, seized power. He dismissed the elected government and proclaimed Somali socialism. Barre's attempts to improve conditions within Somalia included the adoption of an official script for the Somali language, improved education and health care facilities, and large-scale agricultural projects. He also granted the Soviets access to military facilities and received military aid sufficient to make Somalia one of the most heavily armed states in Africa. The Soviet-Somali Treaty of Friendship and Cooperation was signed in July 1974, the same year that Somalia joined the Arab League. In 1976, the Somali Revolutionary Socialist Party was founded.

Nationalism and irredentism—not communism—motivated Barre. He believed that the European scramble for Africa in the nineteenth century had destroyed his nation by dividing among the colonial powers the land inhabited by the Somali people. Barre wanted to reunite ethnic Somalis in neighboring Ethiopia, Kenya, and Djibouti with the rest of the Somali nation but was constrained by the 1964 Cairo Resolution that pledged African states to maintain existing borders. With diplomatic backing unlikely, Barre resorted to military conquest to implement his plans, whereby chances of victory would be improved by external support. Hence, he tightened relations with the Soviet Union.

Barre began his campaign in July 1977 when, supported by Soviet arms and advisors, he attempted to seize the Ogaden region of Ethiopia. However,

his fears that the Soviets had developed relations with Somalia only because they could not control Ethiopia were soon realized. Although Ethiopia and Somalia had both received military aid from the Soviet Union since 1974, the onset of the Ogaden War forced the Soviet Union to choose sides. In October 1977, Moscow halted military aid to Somalia.

In November 1977, Barre broke ties with the communist bloc and turned instead to the United States, hoping that the Americans would appreciate Somalia's value as a Cold War counterbalance. However, newly elected President Jimmy Carter was attempting to focus foreign policy on such principles as human rights rather than the Cold War. Citing Barre's deplorable human rights record and violation of international law by invading Ethiopia, Carter refused to help. With no external support and with the might of the communist bloc aiding Ethiopia, the war reached an inevitable conclusion. On 9 March 1978, Barre announced the withdrawal of all Somali forces from Ethiopia.

By 1980, however, the changing international environment, particularly the 1979 Soviet invasion of Afghanistan and the 1979 Iranian Revolution, compelled Carter to steer U.S. foreign policy toward a more traditional Cold War orientation. In August 1980, an agreement was reached that granted the Americans access to military facilities in Somalia in return for military aid, thus countering the Soviet presence in Ethiopia and facilitating American military operations in the Indian Ocean. Barre's reputation prevented a closer relationship, and in 1989 his continued human rights violations prompted the U.S. Congress to halt military assistance.

As conditions in Somalia deteriorated, the misgivings felt by the Americans were progressively shared by the Somali people. During the 1980s the economy declined steadily, and periodic droughts aggravated food shortages caused by poor agricultural policies and government price controls. Barre's persistence in awarding key positions to members of his own Marehan clan and subclans of the Darod clan exacerbated clan rivalries and government corruption. Increasingly, dissent manifested itself through violence. The country entered a state of virtual civil war following an uprising that began in northern Somalia in May 1988 and then consolidated under the leadership of the Issaq-led Somali National Movement (SNM). Barre provided the Darod clan with arms with which to oppose the SNM, but Darod loyalty to Barre was diminishing. In April 1988 he lost support of the Ogadeeni subclan when Somalia and Ethiopia signed a peace treaty in which Barre renounced all claims to the Ogaden.

Opposition from the Hawiye clan led to the formation of the United Somali Congress (USC), which concentrated on efforts to take control of Mogadishu, prompting Barre to withdraw those troops still loyal to him to defend the

capital. By December 1990, much of Mogadishu had been destroyed and thousands had been killed in the fighting. On 27 January 1991, Barre fled Mogadishu, and the USC took control of the city. With the common enemy gone, however, clan rivalries exploded once more and civil war resumed, which, despite attempts by the international community—including the UN—to quell, continues.

Nicaraguan dictator and president (1967–1972, 1974–1979). Born in León on 5 December 1925, Anastasio Somoza Debayle was the second son of Nicaraguan President Anastasio Somoza García (1936–1956). Often referred to as “Tachito,” Somoza Debayle graduated from the United States Military Academy, West Point, in 1946 before heading Nicaragua’s National Guard beginning in 1947. As commander of the National Guard, he helped his family maintain its hold on political power after his father’s 1956 assassination. During his brother Luis Somoza Debayle’s presidency (1956–1967), Anastasio Somoza brutally suppressed protests, crushed potential rivals, and developed important political and business contacts.

The death of his brother in 1967 allowed Somoza to seize power. In contrast to his brother’s reliance on political parties and rigged elections, Anastasio Somoza established a thoroughly authoritarian rule. Throughout the years, violent repression of opposition groups, rigid press censorship, and challenges to businesses that rivaled the growing interests of the Somoza dynasty mounted. At the same time, Somoza maintained close relations with the United States and was viewed as a bulwark against communist subversion in Central America.

In 1972, Somoza was constitutionally forbidden from serving another presidential term, although he continued to be the de facto head of state. In December 1972 a massive earthquake virtually leveled Managua, and Somoza used the ensuing chaos to declare martial law, making him—as head of the National Guard—the ruler of the state. The earthquake resulted in

Anastasio**
(1925–1980)

considerable international aid to Nicaragua, but revelations that Somoza had embezzled much of the aid led to his political isolation. Nevertheless, he was reelected president in 1974. Soon thereafter, the leftist National Liberation Front (FSLN, Sandinistas) launched a guerrilla war against the Somoza dictatorship. When the government lashed out at its enemies, popular support for the FSLN grew.

In response to the situation in Nicaragua, U.S. President Jimmy Carter sharply reduced financial and military aid to the Somoza regime. By 1978, the military situation in Nicaragua had turned against the dictatorship. In July 1979, facing condemnation at home and abroad, Somoza fled the country for Miami, Florida. He was assassinated in Asunción, Paraguay, on 17 September 1980.

Somoza García, Anastasio (1896–1956)

Nicaraguan military leader and president (1937–1947, 1950–1956). Born in San Marcos on 1 February 1896, Anastasio Somoza García was the founder of the Somoza political dynasty (1939–1979). Somoza's close ties to the United States began when he attended but did not graduate from the Pierce School of Business Administration in Philadelphia. He returned to Nicaragua in 1919 and pursued a military career. In 1933 he was named the first commander of the Nicaraguan National Guard, which the United States had helped create in 1927. Although the National Guard was designed as an apolitical force, Somoza nevertheless used it to seize political power. He ordered the assassination of political rivals, including Augusto César Sandino in 1934, and increased the National Guard's size and authority after seizing power in 1936 and installing himself as president in 1937.

Through World War II, Somoza maintained strong relations with the United States. He also launched a campaign against Nazi subversion in Nicaragua, an effort that allowed him to take control of German-owned assets throughout the country. These seized properties bolstered the family's sizable fortune and helped sustain the dynasty's political and economic ambitions for decades.

When the Franklin Roosevelt and Harry Truman administrations encouraged democratic trends in the Western Hemisphere after 1944, Nicaraguan opposition groups organized to push Somoza from power. Acting quickly, he

promised reforms and scheduled elections to ensure a change of administrations in the near future, which stalled the opposition movement. He then reinforced his grip on power by invading Costa Rica in 1946. Declaring the invasion a necessary intervention against communist subversion, he transformed himself into a staunch Cold Warrior and secured strong support from the United States.

Having faced down one challenge, Somoza used a combination of rewards and repression to manage Nicaraguan politics. He orchestrated social and economic reforms that improved working conditions and fostered economic growth in urban centers. He also allowed for the formation and operation of token opposition parties and loosened press restrictions. In January 1947 he symbolically stepped down as president but one month later ousted his successor and installed a puppet president while he held de facto power until 1950, when he arranged for his reelection.

Somoza continued to cultivate support from the United States. When Guatemalan President Jacobo Arbenz Guzmán embarked on a series of significant economic reforms, most notably land reform, beginning in 1952, Somoza helped the U.S. Central Intelligence Agency (CIA) train mercenaries in Nicaragua, from which they launched an invasion that toppled the Arbenz regime in 1954.

Having survived two decades in power, Somoza was shot by an assassin in León on 21 September 1956 and died of his wounds on 29 September. His eldest son, Luis Somoza Debayle, inherited the presidency. A second son, Anastasio Somoza Debayle, already commander of the National Guard, maintained the family's control over the military and later gained the presidency.

Wife of Jiang Jieshi, Guomindang (GMD, Nationalist) leader and president of the Republic of China (ROC, Taiwan). Born in Shanghai, Jiangsu Province, on 5 March 1897, Song Meiling, daughter of a Methodist minister, was educated in the United States and graduated from Wellesley College in 1917.

Song Meiling
(1897–2003)

When she returned to Shanghai at year's end, she engaged in church affairs and social welfare outreach until 1927, when she married Jiang, the leader of the GMD and future president of the ROC.

Song served as Jiang's closest aide, personal secretary, and English interpreter. From 1930 to 1932, she also held a membership in the Legislative Yuan. In 1934, she headed the women's department of Jiang's New Life Movement, a reform program aimed at halting the spread of communism by stressing traditional Chinese values.

During the Xi'an Incident of December 1936, Song played a critical role in securing Jiang's release from the rebellious GMD military generals and facilitated the GMD's cooperation with the Chinese communists to fight the Japanese during 1937–1945. Besides continuing the New Life Movement and leading Chinese women to fight against China's enemies, Song's other contribution during both the Sino-Japanese War and the Chinese Civil War was to capture international attention and seek foreign assistance, especially from the United States. Throughout the 1940s she visited Washington frequently, lobbying for economic and military assistance to save the GMD government from collapse. This made her something of a celebrity in America, especially with the China Lobby.

In January 1950 Song went to Taiwan, joining Jiang, who had been defeated in the Chinese Civil War and forced to relocate the GMD headquarters on Taiwan. There Song continued her works in organizing women and seeking, largely in vain, U.S. assistance to defend the ROC. After Jiang's death in 1975, she moved to New York City and lived in semiseclusion. Song died on 23 October 2003 in New York City.

Song Qingling

(1892–1981)

Vice chairwoman of the People's Republic of China (PRC). Born in Shanghai, Jiangsu Province, on 27 January 1892, Song Qingling was educated in the United States and graduated from Wesleyan College in 1913. In 1914, on her way back to China, she stopped in Tokyo, where she met and immediately married Sun Yixian, founder of both the Republic of China (ROC) and the Guomindang (GMD, Nationalists). During her marriage to Sun, which ended with his death in 1925, she developed her own career in revolutionary politics.

As Sun's widow, Song assumed a greater role in politics. She was elected to serve on the GMD's Central Executive Committee until 1945. In 1927,

she was also appointed a member of the State Council in the GMD government led by Jiang Jieshi, her brother-in-law as well as Sun's successor. Despite these familial connections, Song grew increasingly resentful of Jiang's hostility toward the Chinese communists, which she perceived as a betrayal of Sun's ideals of national unification. Embittered and frustrated, she left China and traveled to the Soviet Union and Europe in late 1927. She returned to China in 1931 and resisted taking part in politics, focusing instead on social welfare issues.

During the Sino-Japanese War, Song founded the China Defense League to promote the anti-Japanese war drive, an effort that included cooperation with the Chinese communists. Song's anti-Jiang and procommunist stance became even more obvious after the war, when she transformed the league into the China Welfare Fund, which supported communist-oriented organizations during the Chinese Civil War.

Upon the establishment of the PRC in 1949, the Chinese communists paid Song special treatment and great respect, primarily due to her symbolic value as a link between the PRC and Sun's revolutionary movement. Because of her past GMD connections, however, her PRC appointments were largely ceremonial in nature, carrying with them no real power or responsibility. She was, for a time, one of three noncommunist vice chairpersons in the new PRC government, a post she held until 1954, when Mao Zedong reorganized the government. She was also made the vice chairperson of the Sino-Soviet Friendship Association, owing to her earlier contacts with the Soviet Union. In 1959 she became one of the two vice chairpersons of the PRC, a post she retained until 1980. In early 1981, she was named honorary president of the PRC. Song died on 29 May 1981 in Beijing.

Located on the southern tip of Africa, South Africa covers 471,008 square miles, making it roughly three times as large as the U.S. state of California. South Africa, which had a 1945 population of approximately 15 million people, is bordered by the Indian Ocean to the south and east, the Atlantic Ocean to the west, Namibia to the northwest, Zimbabwe and Botswana to the north, and Swaziland and Mozambique to the northeast.

South Africa's Cold War history is essentially the history of apartheid, or racial separation. The National Party (NP), which came to power in 1948 and

South Africa

would dominate South Africa until 1990, fully codified apartheid. The NP built a strong state, and consequently South Africa became the preponderant power in southern Africa. But its racial policies also rendered it a pariah in the international community. Still, South Africa, through its involvement in civil wars in Angola and to a lesser extent Mozambique and Zimbabwe, played an important role in Cold War geopolitics.

The apartheid era, which neatly coincides with the Cold War, can be divided into four periods: 1948–1958, including the administrations of D. F. Malan (1948–1954) and Johannes Strijdom (1954–1958); the premiership of Hendrik Verwoerd (1958–1966); the reign of Prime Minister John Vorster (1966–1978); and P. W. Botha's premiership beginning in 1978 and resignation as state president in 1989. The subsequent rise of F. W. de Klerk marked apartheid's denouement, hastened by the end of the Cold War.

During the late 1940s and 1950s, the NP's consolidation of state power was most clearly reflected by its policy of job reservation for whites. In the late 1950s, many businesses, most of which were run by English speakers, preferred to hire cheap black labor. The government responded by reserving fifteen different occupations for whites. This period also witnessed the inchoate institutionalization of apartheid by, for instance, the Prohibition of

Mixed Marriages Act (1949), the Suppression of Communism Act (1950), the Population Registration Act (1951), and the Bantu Education Act (1955). Domestic resistance to apartheid was barely active during this period and came mainly from black political groups through civil protests.

Malan, and then Strijdom, advanced Afrikaner dominance while the colonial (white) dominance of the rest of Africa was in full retreat. Shielding South Africa from what they saw as the contagion of decolonization and the advancement of majority rule was their chief foreign policy priority. Malan outlined his Africa policy in a document titled *The African Charter* (1949), which was imbued with the notion of an African continent safe for "Western European Christian Civilization." Strijdom took a somewhat more pragmatic and prudent path. For instance, the growing importance of Africa to South Africa's foreign policy was reflected by the 1959 creation of South Africa's Africa Division in the Department of Foreign Affairs, its first geographic division. Throughout the 1950s, South Africa maintained a favored position in the West.

Civil unrest and the brutality at Sharpeville defined Verwoerd's premiership. In March 1960, the South African police fired on a group of demonstrators whom the Pan Africanist Congress (PAC) had called upon to protest the South African Pass Laws, enacted by the government to restrict the movement of nonwhites. (Except when required for domestic help or other certified jobs, blacks had to remain in their own designated areas.) In the con-

Segregated stands in a sports arena in Bloemfontein, South Africa. (Corel)

adopted the Lusaka Manifesto, calling for an end to colonialism in Mozambique, Angola, Rhodesia (Zimbabwe), and South West Africa (Namibia). It also included South Africa within its anticolonialism mandate.

The matrix of threat and opportunity facing South Africa inalterably changed on 24 April 1974, when Portugal's President António Salazar was overthrown. The cordon sanitaire was broken. Northern Namibia was now open to attacks by the anti-South African guerrilla force, SWAPO, from southern Angola. Mozambique became a base for forces fighting the Ian Smith regime in Rhodesia, and South Africa was now directly vulnerable to ANC and PAC penetration from Mozambique. South Africa was pulled into the Angolan Civil War, with at least tacit support from the United States. In 1975, the U.S. Congress passed the Clark Amendment, however, ending covert Central Intelligence Agency (CIA) assistance to UNITA, the rebel group fighting the Soviet Union/Cuban-backed Angolan government.

Growing global hostility toward South Africa led to the promotion of secret ventures initiated by Dr. C. P. Mulder, minister of information, and Eschel Rhodie, secretary of the South African Department of Information, to shore up South Africa's international image. The exposure of these activities, which became known as Infogate, led ultimately to the fall of Vorster.

Botha came to power on 28 September 1978 promising to accelerate the reform process begun by Vorster. Instead, Botha instituted a near-totalitarian state. The 1980s were a period of stagnation and decline for the South African economy. South Africa's real economic growth rate since World War II had averaged more than 5 percent annually. By 1979, however, it declined in every five-year period thereafter. During 1975–1980, the real growth rate was 2.8 percent, whereas during 1980–1985 it was a mere 1.1 percent.

Botha did allow for the abrasion of the petty aspects of apartheid, but his most radical and important reform was the 1983 constitution. It was meant to placate international public opinion by replacing the white-only franchise with a multiracial franchise. However, the new franchise and its two new chambers included only Indians and coloreds (people of mixed race or Malaysians). The first election in 1984 under the new constitution witnessed only a 29.6 percent turnout by coloreds and a 20.2 percent turnout for Indians. But most importantly, the new constitution triggered new instability and political changes.

The 1984 disturbances were to the Botha administration what Soweto had been to Vorster and what Sharpeville had been to Verwoerd. And, just as Soweto was a greater threat to apartheid than was Sharpeville, the 1984–1986 disturbances were a qualitatively different phenomenon than their precursors. The trade unions, the United Democratic Front (UDF), and the ANC were better organized and had deeper support both within and outside the country. In addition, portions of the white population were becoming increasingly critical of the government. Rising emigration and a growing reluctance to serve in the armed forces reflected the weakening confidence in the state.

The new constitutional dispensation triggered the August 1983 formation of the UDF, which was not a political party but rather an umbrella organiza-

tion encompassing many local groups that had accepted the ANC's 1955 Freedom Charter, which had advocated ideals of justice, equality, and economic development through state intervention in the best interest of the entire population. By March 1984, the UDF had more than 600 affiliated organizations with a combined membership of more than 2 million. Also, the new constitution led to a split in the NP. In 1982, Dr. Andries Treurnicht, NP leader for the Transvaal, and twenty-one other NP members refused to support Botha's reforms and were expelled from the party. Treurnicht subsequently formed the Conservative Party.

South Africa's foreign policy under Botha, which was run out of the State Security Council (SSC), was part of South Africa's total national strategy, a reaction to what was labeled as the total onslaught of communism. It held that the Soviet Union would cling to any territory over which it acquired control in Africa and would only surrender it if the center collapsed or if overall strategy favored such a move and that in black Africa, the Soviets had already selected and effectively controlled at least three states and were preparing the ground for three more: Zimbabwe, Namibia, and South Africa. To combat this perceived threat, Pretoria undertook a massive destabilization program, which included military forays as far north as Zambia and cost the region an estimated 1.5 million lives during 1980–1988 with a cumulative cost to the region of approximately \$60.5 billion.

On 15 August 1985, Botha gave his much-anticipated "Rubicon Speech" at the Annual National Party's Province Congress in Durban. South Africa's foreign minister, Roelof Frederik Botha, had briefed Western leaders in advance, and the speech was in fact broadcast to the United States, Great Britain, and the Federal Republic of Germany (FRG, West Germany). However, what P. W. Botha delivered was not a radical departure from apartheid but rather a continuation of incremental reforms and the maintenance of apartheid. The international community was shocked. The South African rand, which had been falling since 1983, fell to a low of 0.35 to the American dollar in August 1985; the Johannesburg Stock Exchange was closed for the first time since Sharpeville; and Chase Manhattan Bank in New York decided not to roll over maturing short-term loans to South Africa. Other banks soon followed suit. South Africa had sunk to the depths of its pariah status.

In 1984, Pretoria reached an agreement with Mozambique, via the Nkomati Accord, which was to end South African support for the Resistencia Nacional Moçambicano (RENAMO), the rebel force fighting the Mozambique government, in return for an end to Mozambique's support for the ANC. The Nkomati Accord was as much a signal to the West as a sincere effort to improve regional relations. Botha followed this success with an eight-nation tour of Europe. In 1988, military stalemate in the southern Angolan town of Cuito Cuanavale precipitated the end of South Africa's Angola war, which had become Pretoria's Vietnam.

Ill health ended Botha's reign in 1989, and an internecine struggle within the NP ensued. The next president, de Klerk, would ease South Africa into its transition away from apartheid, if not actually direct it, although the transition was certainly hastened by the end of the Cold War.

De Klerk released Mandela from Robben Island Prison on 11 February 1990. Mandela had been incarcerated for twenty-seven years. Nine days prior to his release, all opposition groups, including the ANC, were unbanned. Apartheid was in full retreat, and South Africa then entered a transition period that led, four years later, to full democratic freedoms.

South African Destabilization Campaign

South African government program of forward defense in southern Africa designed to quash nationalist movements in the region, thereby preventing them from spreading to South Africa. Beginning in the late 1970s, South Africa began a concerted effort to cripple independent African states in the region. There were two components: one military, the other economic.

First, South Africa routinely violated the sovereignty of the neighboring states of Mozambique, Lesotho, Swaziland, Botswana, and (less frequently) Zimbabwe. Rationalized as hot pursuit, the purpose was to flush out members of the outlawed African National Congress (ANC), especially its armed wing, Umkhonto we Sizwe (MK, Spear of the Nation). While methods differed in each military foray, four basic tactics were employed: commando raids, assassination of key leaders, aerial bombardment, and, in 1981, a coup attempt against the government of the Seychelles. These were complemented by a series of dirty wars similar to those used by the U.S.-backed Contras in Nicaragua, which the South Africans waged against Mozambique, Lesotho, and Angola.

The decision to destabilize Marxist-oriented Mozambique was taken by the Rhodesian regime that, in the mid-1970s, had founded and supported a

dissident group known as National Resistance of Mozambique (RENAMO). After Zimbabwean independence in 1980, RENAMO was clandestinely adopted by the South African state and used by the South African Defence Force (SADF). Now backed with more firepower, RENAMO was active in all parts of the country. This campaign, along with increased economic pressure by South Africa on Mozambique, was highly effective and enabled the signing of the 1984 Nkomati Accord.

The SADF provided covert support to the Lesotho Liberation Army, which conducted a low-intensity war against the Lesotho government. This support, together with SADF raids on Lesotho and economic pressure, was also successful, culminating in the formal denial of refuge to the ANC by the Lesotho government. South Africa also occupied large parts of southern Angola, a tactic that began in 1974 when South Africa invaded that country ostensibly to fight communism. The occupation enabled the SADF to fight in the civil war in Angola on the side of the Uniao Nacional para a Independência Total de Angola (UNITA), a West-leaning liberation movement.

The economic component of the destabilization campaign was more subtle. South Africa's economy dwarfed those of its neighbors. Moreover, most regional transport routes passed through South Africa. In addition, many states in the region were dependent on employment offered in South Africa, especially in the mining sector. By manipulating one or more of these factors, South Africa created extensive economic dislocation in neighboring countries.

In response, the region sought support from the international community. The West offered sporadic aid, while the Soviet bloc provided some military assistance, including weapons and training. Solidarity for the affected states was strong among African states in the Organization of African Unity (OAU), especially its Liberation Committee. In this forum, the idea of developing Frontline States took root, and, in these same councils, the Southern African Development Co-ordination Conference (SADCC) was conceived. The SADCC sought to mitigate South Africa's economic preponderance. The nonaligned states were also vociferous in their condemnation of South Africa's destabilization effort. The U.S. policy of constructive engagement was interpreted as being sympathetic to destabilization, and the Americans were initially reluctant to condemn South Africa. As circumstances deteriorated, however, individual acts of destabilization were condemned by President Ronald Reagan's administration.

A United Nations (UN) study estimated the costs of South Africa's destabilization campaign to be more than \$60 billion during 1980–1988, while as many as 1.5 million people were thought to have perished due to war, terrorism, malnutrition, and epidemics.

South Asia

World War II ended with the certain prospect for South Asia that British imperial power in the region, which had stood uncontested for more than a century, was about to come to an end. What was not clear was whether a single postimperial polity would emerge or whether South Asia would be divided into a number of successor states with competing interests and values. Also in question was whether one of the global superpowers would follow the British precedent and enforce its hegemonic suzerainty across the Indian Ocean. A half century later, it is still too soon to address these questions.

The Cold War history of South Asia is a story of incompleteness. Bitter grievances have been fought over with no decisive result, and enormous human and natural resources remain largely untapped. The Indian subcontinent did not prove to be as volcanic a juncture between the Eastern and Western blocs as, say, neighboring Southeast Asia, but the vacuum of power left by the retreating British attracted at various times the attentions of the United States, the People's Republic of China (PRC), and the Soviet Union, all of which vied unsuccessfully to secure a monopoly of influence.

The partition of the British Raj remains the starting point for any discussion of modern South Asia. Contrary to popular assumption, the British were never enthusiastic about the breakup of their Indian empire—divide and conquer played no part in British calculations in 1947. On the contrary, Prime Minister Clement Attlee's Labour government wanted a strong and united postcolonial India that (so it believed at the time) could still serve British interests through informal Commonwealth ties. But this preference for unity was less important than a bloodless exit from the theater. After it became clear that India's Islamic minority, led by Mohamed Ali Jinnah's Muslim League, would not accept a single-state solution without violence, British Viceroy Lord Louis Mountbatten resigned himself to partition.

In fact, Attlee's secretary of state for India, Frederick Pethick-Lawrence, had come close to brokering a one-India solution in 1946. His proposal for a three-tier federal state received tentative consent from Jinnah (whose cautious pragmatism is mostly forgotten today) and the Hindu-dominated Con-

Oxen and camels drafted to carry the belongings of Muslims fleeing to Pakistan following the separation of India, 5 September 1947. (Bettmann/Corbis)

gress Party, but the plan was scotched when Congress's President Jawaharlal Nehru made a public statement appearing to renounce Pethick-Lawrence's constitutional assumptions. The result was a wave of sectarian bloodshed that left cross-party cooperation impossible. It must be said that even the most conciliatory behavior by Jinnah and Nehru would have still left unsolved the problem of India's large and restless Sikh population, which had separatist ambitions unaddressed by the Pethick-Lawrence plan. Partition may have been a historical inevitability, at least by the end of World War II.

The ethnic cleansing of the India-Pakistan frontier following independence in August 1947 was the legacy of this political failure, a South Asian trauma that had vast psychological as well as material consequences for the future of the region. At least 1 million Hindus, Sikhs, and Muslims died in what can only be described as spontaneous cross-border genocide. Between 10 million and 15 million more found themselves unwelcome foreigners in a state now hostile to their faith and were forced into permanent exile.

The inhumane exchange of population did not resolve the problem of religious minorities for either of the new nations, for 40 million Muslims still remained in India, and 10 million Hindus remained in Pakistan. Nor did it

At least 1 million

border genocide.

provide for a stable or mutually acknowledged border. The new Pakistani state was strung awkwardly across India's northern perimeter, with roughly equal numbers to east and west. This arrangement would ultimately prove untenable. And a number of the historic princely states with populations of mixed confession were hard to incorporate into the partition. Among these, Kashmir proved so intractable a problem that it set off a series of informal Wars of the British Succession among India, Pakistan, and, to a lesser degree, China.

The postcolonial order proved unsatisfactory to a number of South Asian constituencies who believed that they were inadequately represented by the terms of 1947. India's untidy internal borders, a legacy of the ad hoc development of British imperial rule, were reorganized several times from the 1950s onward to try to appease the particularistic claims of language groups. Thus, the old province of Madras was broken up into Tamil and Telugu districts, and Bombay was partitioned between Marathi and Gujarati speakers. These reforms were, however, straightforward compared to the problem of postindependence Punjab and its Sikh minority. The traditional province of Punjab was carved up in the partition, and its namesake successor within post-1947 India went through a number of contortions before an agreeable all-Punjabi speaking unit was demarcated in 1966. But this concession failed to assuage the passions of secessionist Sikh radicals of the Shiromani Akali Dal Party, who sought the establishment of a free Khalistan state and, from the early 1980s onward, demonstrated an increasing willingness to use terrorist methods of political persuasion. The violent occupation of the Golden Temple of Amritsar by Sikh zealots in 1984 and the equally ferocious counter-response by the Indian Army not only led to the assassination of Prime Minister Indira Gandhi that same year but also brought a round of depressingly familiar retaliatory pogroms against Sikhs in Delhi.

Independent Ceylon (Sri Lanka after 1972) was dogged by internecine conflict on a similar model, making stable postcolonial rule just as difficult. The genteel paternalism of the country's first Westernized elite was rejected after 1956, when the Sri Lanka Freedom Party achieved parliamentary power, and its strident peasant-based Sinhalese nationalism became the characteristic motif of Ceylon's politics. Educational and religious laws brazenly favoring the Sinhalese language, culture, and Buddhist faith alienated the Tamil minority, leading to the vicious response of the Liberation Tigers of Tamil Eelam (LTTE) in the 1970s. The Tamil Tigers seized de facto control of much of the island's forested northern and eastern regions, but their success eventually triggered intervention by the Indian government, which with a large and politically turbulent Tamil community of its own had no desire to see Sri Lanka's civil war spill across the Laccadive Sea.

India's three-year military expedition to the war-torn LTTE homeland, beginning in 1987, was an attempt to enforce a shaky peace deal that ultimately failed. The price that India paid for its interference was the murder of Indira Gandhi's son Rajiv (prime minister during 1984–1989) by Tamil extremists, continuing the subcontinent's wretched tradition of political assassination.

Perhaps the best illustration of the irreducible nature of the problem is Bangladesh. The former East Pakistan emerged as a breakaway region seeking autonomy from its distant and imperious central government, but after independence in 1971, its own army engaged in sporadic campaigns across the southeastern Chittagong Hill Tracts, trying to suppress Buddhist tribes who themselves objected to Dhaka's overbearing style.

The subcontinent's internal disputes did not, of course, go unnoticed by the Cold War powers. The Soviet Union inherited from tsarist Russia a desire to break out of its landlocked Central Asian hinterland and expand its influence southward, a continuation of the Victorian era's Great Game. For its part, the United States had no desire to allow for a Soviet presence on the shores of the Indian Ocean, which would threaten Western lines of communication to the oil-rich Middle East. India, by far the largest and most populous state, was the key to regional hegemony, but neither side was able to secure its patronage for long, partly because successive Indian governments were able to play one side against another and partly because of the vague but cyclical appeal in New Delhi of the so-called Asian Resurgence, by which India, perhaps in partnership with the PRC, would reject the bipolarity of the Cold War and forge a third way.

Nehru, who acted as his own foreign minister during his premiership (1947–1964), brought the moral glamour of his long anticolonial career to the conference table and was something of a diplomatic celebrity during the first decade of India's independence. His commitment to self-determination and nonalignment policies had a fashionable cachet in the 1950s, encapsulated in the "Five Principles of Peaceful Coexistence" drawn up with the PRC in 1954 and later the foundation of the Bandung Conference and the Non-Aligned Movement. However, Nehru's high-mindedness was called into question when his government publicly supported the Soviet Union's invasion of Hungary in 1956, a decision that cynics not unreasonably connected to the contemporaneous expansion of Soviet development aid to India.

Pakistan, meanwhile, smarting from the disappointing result of the First Kashmir War, sought and received military and economic support from Great Britain and the United States. It confirmed this Western tilt with founding memberships in the Manila Pact (the Southeast Asia Treaty Organization, or SEATO) in 1954 and the Anglo-Iranian Middle East Treaty Organization (later the Central Treaty Organization, or CENTO) the following year.

The dream of Sino-Indian fraternal leadership in Asia was abruptly brought to an end in 1962 when Chinese leader Chairman Mao Zedong's People's Liberation Army (PLA) hammered Indian border positions in Arunachal Pradesh and Aksai Chin at the Himalayan extremes of their long and imperfectly mapped frontier. Tensions with China had been more or less inevitable since 1950, when the traditional buffer region of Tibet was swallowed up by the PRC, but India's military drubbing that year and its reliance on hastily deployed American and British armaments was a stark reminder that rhetorical disengagement from the Cold War and pious appeals to non-violence could not guarantee national security. The Sino-Indian War brought about a regional shift in allegiances. The PRC made successful approaches

Crowds watching the transport of Indian troops during the border war between India and China in 1962. (Hulton-Deutsch Collection/Corbis)

to Pakistan (which still enjoyed Western support), while India took advantage of the split within the international communist movement to forge closer ties with the Soviet Union. The second round of major Indo-Pakistani fighting in 1965 underwrote this diplomatic realignment but bogged down in stalemate, with both sides having to rely on the bittersweet consolation that their opposition's war effort had been as badly managed as their own.

Until 1971 the balance of power in South Asia was still roughly divided between India and Pakistan, despite the large differences in size and population between the two. But the successful Bengali revolt that year and Pakistan's clear defeat by Indian forces in the field demonstrated the latter's resurgence under the virtuoso leadership of Nehru's daughter, Indira Gandhi. India's victory in 1971 was far more than military, for Pakistan's genocidal atrocities in Bangladesh had been so embarrassing to the West that Britain and France had broken ranks with President Richard Nixon's administration in supporting their habitual ally in the region. Gandhi meanwhile secured a twenty-year Treaty of Peace, Friendship, and Cooperation with Soviet leader Leonid Brezhnev's regime that provided conventional Warsaw Pact hardware as well as the technical support to launch an independent nuclear weapons

program. The underground detonation of India's first atomic bomb in 1974 was the confirmation, if anyone still needed it, that India was now the pre-eminent power in the subcontinent. As the rapport between New Delhi and Moscow continued to improve throughout the 1970s and as Pakistan languished in despotic chaos, it looked as though the West had backed the wrong horse in South Asia.

The Soviet Union's temporary advantage was squandered, however, by its ill-advised invasion of Afghanistan in 1979, which uselessly soaked up prestige and resources. The war placed South Asia in the front line of the Cold War for the first time and proved particularly important for Pakistan, which the United States viewed as a vital logistical support base for anti-Soviet Afghan insurgents. The Afghan conflict proved at best a mixed blessing for the Islamabad regime, which was also under pressure from neighboring Iranian fundamentalists after the 1979 revolution. The United States poured arms and money into the country, but the influx of Afghan refugees and mujahideen guerrilla fighters in its northern provinces placed social and economic strains on an already fragile state. At the same time, Indira Gandhi's 1984 assassination and the political emergence of her much less Russophile son Rajiv opened the possibility of a rapprochement between the United States and India. The younger Gandhi was unenthused by India's traditional socialist practices and sought American ideas and capital to reinvigorate his country's economy in the computer age.

The weakening of India's entente with the Soviet Union also led to some improvement in its relationship with the PRC. While little concrete progress was made on the serious disputes over the Line of Actual Control along the Himalayan border or the ongoing occupation of Tibet (the Dalai Lama had operated a government-in-exile in Dharamsala since 1959), there was at least some symbolic economic and technological assistance, and the Chinese took a less emphatically pro-Pakistani line at the conference table. The creation of the South Asia Association for Regional Cooperation (SAARC) in 1985 was a welcome cross-border initiative that proposed cooperative efforts to tackle the region's social and environmental problems—overpopulation, poverty, rural and urban squalor, and illiteracy—but a dialogue could only begin by avoiding any mention of ongoing political differences. Indeed, the Cold War ended without any major breakthroughs in key South Asian diplomatic problems. Kashmir, for instance, remained as much an Indo-Pakistani flash point as it had been in 1947.

Britain's withdrawal after World War II left the Indian subcontinent's smaller states without their traditional patron. Nepal, one of the most isolated polities in the world, still lingered in a premodern atmosphere of court intrigue, its domestic affairs dominated by the rivalry between the Shah dynasty and a number of feuding noble houses. After the dominant Rana clan was deposed in 1950, the Crown reasserted its authority, and the country thereafter went through cycles of royal authoritarianism interspersed with failed experiments in constitutional government. The smaller Himalayan kingdoms of Bhutan and Sikkim were left in an even more exposed position after the British retreat, particularly once the invasion of Tibet raised the

specter of frontier conflict with the PRC. Both accepted Indian client status as they emerged unsteadily into the modern world, with Sikkim ultimately proving untenable as an independent nation and choosing complete absorption into its giant southern neighbor in 1975. Aside from feudal microstates of this type, the end of the Raj also left South Asia with a scattering of colonial anachronisms. Most significant were the so-called princely states that had never been formally administered by British India, Kashmir being the most notorious of these. Most of the others voluntarily became Indian provinces at independence, but the large landlocked kingdom of Hyderabad refused to cooperate despite the hopelessness of its position, and a year-long standoff ensued that ended only when India sent in troops in 1948.

There were also lingering remnants of European colonization, notably the French Indian territories on the Coromandel Coast and Portugal's old factory concession at Goa. The former were painlessly integrated into India proper in 1954. The latter resisted decolonization until 1961, when Indian forces again moved in and unilaterally annexed the territory—another move difficult to reconcile with Nehru's much-touted renunciation of political force.

World War II and the Cold War both had a dramatic impact on Southeast Asia. This region includes Myanmar (Burma), Thailand, Laos, Cambodia, Vietnam, Malaysia, Singapore, Indonesia, and the Philippines. While it was the scene of other conflicts, Southeast Asia also experienced two of the Cold War's most serious and prolonged armed conflicts: the Indochina War (1946–1954) and the Vietnam War (1959–1975).

The Cold War affected Southeast Asia in a strikingly different manner than it did Europe. For one thing, the effort by the colonial powers to reestablish their authority at the end of World War II gave stimulus to nationalist movements throughout a region that already contained significant communist elements. Also, unlike Europe, where the bipolar system remained static and rival alliances for the most part maintained their internal cohesion, Southeast Asia witnessed frequent shifts in alliances as national interests often trumped ideology. In its later stages, Machiavellian rather than ideological considerations marked the Cold War in Asia.

Vietnam saw the most intense and prolonged turmoil in the region during the Cold War. There in 1941, veteran communist Ho Chi Minh established an umbrella nationalist organization known as the Viet Minh to fight for Vietnamese independence from the French and Japanese. By the end of World War II, the Viet Minh had gained widespread popular support and had liberated much of Tonkin. Indeed, Ho formally declared the independence of the Democratic Republic of Vietnam (DRV, North Vietnam) in Hanoi in September 1945. When both the United States and the Soviet Union refused to assist North Vietnam, however, Ho was obliged to negotiate with the French authorities.

The determination of the French to reestablish their control over their richest colony in addition to mutual mistrust and the breakdown of talks in France led to open warfare between the French and Vietnamese nationalists in November 1946 and the beginning of what would be, in its French and U.S. phases, the longest shooting conflict of the Cold War. At the beginning of the Indochina War, the French easily established control over the population centers, but the Viet Minh controlled much of the countryside and increasing amounts of it as the war went on.

The establishment of the People's Republic of China (PRC) in 1949 spelled defeat in the war for the French, for it opened up the long Vietnam-China border for resupply to the forces fighting the French. The PRC also provided training camps on its territory for the Viet Minh. The United States was increasingly drawn into the conflict in support of the French, not only because of communist Chinese support for the Viet Minh but also because of the

A French patrol questioning a suspected communist. The French Foreign Legion played a major combat role in the war against the Viet Minh. (National Archives and Records Administration)

Chinese military intervention in Korea. The French claimed that the two fronts of Korea and Indochina were interrelated. By the end of the Indochina War in 1954, the United States was paying some 80 percent of the cost of the war. The French also refused to grant true independence to Vietnam. They continued to control, down to the end of the war, the institutions of the State of Vietnam, which they created in 1949.

The war had become immensely unpopular in France, and the French defeat in the 1954 Battle of Dien Bien Phu allowed politicians in Paris to shift the blame to the generals and extricate the nation from the conflict. Under the terms of the 1954 Geneva Accords, Laos, Cambodia, and Vietnam were all to be independent. Vietnam was temporarily divided at the 17th Parallel, with elections to reunify the country scheduled to occur in 1956.

President Dwight Eisenhower's administration firmly believed in the domino theory: if one Southeast Asian country became communist, the remainder would fall to communism. Determined to prevent further losses in Southeast Asia, U.S. policymakers decided to form a regional security alliance. On 8 September 1954, Australia, France, New Zealand, Pakistan, the Philippines, Thailand, the United States, and the United Kingdom signed the Manila Pact, establishing the Southeast Asia Treaty Organization (SEATO). The signatories extended the alliance's collective security guarantees to Cambodia, Laos, and the Republic of Vietnam (RVN, South Vietnam).

The government of South Vietnam, headed by President Ngo Dinh Diem, refused to hold the elections called for by the Geneva Accords. The United States supported Diem in his stand. Viewing Vietnam through the history of communist regimes elsewhere, President Eisenhower was convinced that the communists would not abide by the democratic process. The decision not to hold the elections in South Vietnam led to a renewal of fighting, begun by Viet Minh political cadres who had remained in South Vietnam to prepare for the elections. The North Vietnamese government undertook to support the insurgency and then took over the entire direction of the war.

With the communists gaining ground in South Vietnam, President John F. Kennedy had to make difficult choices. He sent significant economic and military aid, along with several thousand U.S. advisors, helicopter pilots, and support personnel, to the Diem regime. Diem proved inept at running the war, and South Vietnamese forces failed to make any headway against the communists. With the tacit approval of Washington, South Vietnamese generals overthrew Diem in November 1963. In the short term, this brought more chaos and a revolving-door political leadership in South Vietnam.

Kennedy also had to deal with developments in Laos. A 1957 agreement had led to the creation of a coalition government there under neutralist Prime Minister Souvanna Phouma that included the communist Pathet Lao. The coalition collapsed in 1959, leading to a power struggle among the American-supported rightists, the neutralists, and the Pathet Lao supported by North Vietnam. Kennedy favored diplomacy rather than intervention by SEATO to resolve the problem.

A cease-fire in 1961, followed by another Geneva Conference in 1962, led to the establishment of a unified government and the neutralization of

A Soviet BTR-40 armored personnel carrier shown on Route 7 in northern Laos, October 1961. (U.S. Department of Defense)

the country. This arrangement soon broke down, however, with Pathet Lao forces supported by North Vietnam battling the neutralist regime. Thailand became critical of tentative U.S. policies that failed to check the Pathet Lao. Washington mollified Bangkok through increased military and economic aid, a secret agreement to defend Thailand, and the stationing of American forces in Thailand.

Meanwhile, the Vietnam War steadily escalated. With South Vietnamese communist Viet Cong (VC) attacks on U.S. bases, in 1965 President Lyndon Johnson dispatched first the Marines and then substantial numbers of army ground forces. At the height of the war in early 1968, the United States had more than half a million troops in Vietnam. In an effort to halt infiltration into South Vietnam, the United States extensively bombed both North Vietnam and Laos.

Laos, in fact, became the most heavily bombed country in the history of air warfare as the United States sought, without success, to halt infiltration along the Ho Chi Minh Trail through eastern Laos into South Vietnam.

Haunted by fears of a repeat of the Korean War, when the PRC had entered the war with the UN invasion of North Korea, the administrations of Johnson and Richard Nixon never did contemplate an invasion of North Vietnam, which meant handing the strategic initiative to the North Vietnamese.

With public pressure in the United States mounting for an end to U.S. participation, especially after the communist Tet Offensive of January 1968 (ironically, a U.S.–South Vietnamese victory over the communists), President Nixon accelerated American troop withdrawals. To purchase more time for the program of turning over more of the war to the South Vietnamese (Vietnamization), Nixon expanded the war into Cambodia. The United States supported General Lon Nol's overthrow of the neutralist Norodom Sihanouk regime in Cambodia in March 1970 and conducted first secret bombing and then troop incursions by South Vietnamese and U.S. soldiers. These decisions helped to bring the communist Khmer Rouge to power in that country.

After finally reaching accord with Hanoi, in January 1973 the United States withdrew its forces from South Vietnam, leaving the South Vietnamese government largely to fend for itself. In April 1975, South Vietnam fell to a North Vietnamese military offensive. Vietnam was reunited under the communist government in Hanoi, and the long war was over.

During the remainder of the Cold War, the Vietnamese government picked up the pieces of the war and worked to integrate the capitalist South into the North's communist system, with varying success. Vietnam also invaded and occupied Cambodia (1978–1992), fought a brief war with the PRC in 1979, and worked to secure international recognition and trade with the noncommunist states of Asia. Relations with the United States remained difficult, and there were no formal diplomatic ties. Vietnam battled major problems, and economic success was obtained only with the decision by the leadership to allow limited private enterprise. Ironically, the South became the economic engine driving the remainder of the country. Vietnam did establish close ties with the Soviet Union, which took over former U.S. bases at Cam Ranh Bay and Da Nang. In 1975, the Pathet Lao took over full control of Laos, making it a satellite of Hanoi, and the communist Khmer Rouge came to power in Cambodia.

Elsewhere in Southeast Asia, decolonization proceeded relatively more peacefully. Indonesian rebels led by Sukarno proclaimed independence in the Dutch East Indies on 17 August 1945. When the Netherlands sent out military reinforcements and resorted to force to regain control over their colony, the Soviet Union sided with the Indonesians. American attitudes toward the struggle were at first ambivalent. Later fearful that Indonesia might move into the Soviet camp, Washington applied economic pressure on the Netherlands, and the Dutch finally capitulated. Indonesia became formally independent on 27 December 1949.

Indonesia's leaders embraced nonalignment, rejecting a 1950 proposal by the Philippines for an anticommunist Pacific Pact. A high point of Jakarta's diplomacy was the April 1955 Bandung Conference of Afro-Asian states. The PRC and Indonesia used the occasion to solidify Chinese-Indonesian relations. Despite the resumption of American economic aid to Indonesia in

1956 and a visit by Secretary of State John Foster Dulles, U.S.-Indonesian relations sharply deteriorated when the United States supported the Dutch in the dispute over West Irian in 1957 and, rejecting Indonesian requests for American arms, supported secessionist Sumatran rebels. Although Washington soon abandoned its support of the rebels and agreed to sell small arms to Indonesia, Sukarno turned to the Soviet bloc for aircraft, destroyers, and submarines. Following a visit by Soviet leader Nikita Khrushchev to Indonesia in 1960, Jakarta became a leading recipient of Soviet-bloc economic and military aid.

Even before World War II, Washington had promised to grant the Philippines independence. Buoyed by this pledge, most Filipinos had remained loyal to the United States during the war, and the United States granted the archipelago its independence on 4 July 1946. The United States retained key military bases there, however, and the Philippines remained under the U.S. defense umbrella throughout the Cold War as a key component in Washington's offshore defensive line to contain the PRC. Subic Bay Naval Base and Clark Air Base on the islands, the largest U.S. military facilities outside U.S. territory, proved indispensable during the Vietnam War. Unfortunately, however, U.S. policy toward the Philippines encouraged political repression and economic stagnation. The Ferdinand Marcos regime was a prime example. In power continuously during 1965–1986, Marcos savagely repressed his political opponents, subverted the democratic process, and bilked the government of billions of dollars. Meanwhile, most Filipinos lived in abject poverty. The United States tolerated and supported Marcos because of Cold War imperatives. When his rule became truly intolerable by late 1985, Filipinos rose up and forced Marcos and his spend-thrift wife Imelda to flee to the United States in February 1986.

Racked by civil war and under military rule throughout much of the Cold War, Burma's only direct involvement in the Cold War came soon after its independence in 1948. In late 1949, following the Guomindang (GMD, Nationalist) defeat in the Chinese Civil War, remnant GMD forces entered Burma. Using arms and supplies air-dropped by the U.S. Central Intelligence Agency (CIA), they sustained their futile and clandestine activities until 1961.

In 1948, an insurgency by members of the pre-World War II Communist Party, mainly of Chinese ethnicity, who had served as the only real active guerrilla opposition to the Japanese, began in the Federation of Malaya. The guerrillas sought to carry out a war of liberation along Maoist lines against the British. Calling themselves the Malaysian Races' Liberation Army (MRLA), the communists enlisted the support of other Chinese in the colony. The insurgency reached a high point in 1952 with the assassination of High Commissioner Sir Henry Gurney. Tough new British measures brought the insurgency under control by 1960.

In 1963 the Malay Federation, which had become independent in 1957, became the Federation of Malaysia with the addition of Sabah, Sarawak, and Singapore. Indonesia opposed its formation and initiated a low-intensity, undeclared war, known as the *Konfrontasi*, against Malaysia. The Western

powers supported Malaysia. In 1968, Britain announced the impending closure of its bases in Malaysia and Singapore as part of its decision to withdraw its forces from east of the Suez.

U.S.-Indonesian relations improved temporarily after the Kennedy administration mediated a final settlement of the West Irian issue in 1962. In the Sino-Soviet schism, Indonesia sided with Beijing. After an abortive coup by some pro-Chinese military officers with ties to the Indonesian Communist Party, the Indonesian Army ousted Sukarno from power in 1966. A massacre of suspected communists followed. With the strongly anticommunist army dominating, Indonesia moved away from the PRC, suspending diplomatic relations with Beijing in 1967. Indonesia also ended its confrontation with Malaysia and moved closer to the U.S. camp while remaining technically nonaligned.

In Thailand, the sole Southeast Asian state not under prior colonial rule but nonetheless dominated by Japan during World War II, the army overthrew the elected government in November 1947, alleging antiroyalist plotting by procommunist elements. In April 1948, the army restored Thailand's wartime prime minister, Phibunsongkhram (Phibun). His anti-Chinese and anticommunist policies endeared him to the United States, despite his record of collaboration with Japan in World War II. Thailand became a staunch American ally in the Cold War and received extensive U.S. financial and military assistance. Thailand was in fact the first Asian nation to send troops to the Korean War.

Meanwhile, disillusioned with SEATO and unwilling to see themselves used as pawns in the superpower game, Indonesia, Malaysia, the Philippines, Singapore, and Thailand began in the early 1960s to explore the formation of a regional organization of their own. As such, they established the Association of Southeast Asian Nations (ASEAN) in August 1967. At its Kuala Lumpur summit in 1971, ASEAN proposed establishing a Zone of Peace, Freedom, and Neutrality (ZOPFAN) in the region.

The East-West stage of the Cold War in Southeast Asia ended with the domino theory only partly fulfilled. Vietnam, Laos, and Cambodia became communist, but no state outside of the former French Indochina fell to communism. Having defeated the United States, the victors began fighting among themselves. In Vietnam, the remainder of the Cold War saw the leadership of that state endeavoring to extricate the country from the consequences of its success against the United States.

In Cambodia, the Khmer Rouge entered the capital of Phnom Penh in April 1975 on the departure of Lon Nol and the Americans. Led by Pol Pot, the Khmer Rouge regime unleashed a savage policy to return Cambodia, renamed Kampuchea, back to the Middle Ages. The Khmer Rouge in effect waged genocide against its population. The massacre of ethnic Vietnamese in Cambodia and clashes with Vietnamese forces along the border between the two states brought the Vietnamese invasion and occupation of Kampuchea beginning in December 1978. Vietnam set up a puppet government and sought to wipe out the remnants of the Khmer Rouge, now actively supported by Thailand and the PRC and indirectly by the United States.

In 1982, a coalition of Cambodian resistance groups, including the Khmer Rouge, headed by Prince Sihanouk and supported by the PRC and Thailand, assumed Cambodia's UN seat with the backing of ASEAN and the West. The Vietnam-backed regime in Phnom Penh never gained international legitimacy, despite the fact that it had ended one of the most brutal regimes in modern times. In 1992, under heavy international pressure and with Hanoi having settled on other priorities, Vietnamese forces were withdrawn. Negotiations among the warring Cambodian factions proved long and difficult, however.

As the Cold War came to an end, ASEAN emerged as a vibrant community. The new realities of the post-Cold War era became further evident as countries such as Malaysia and Indonesia fretted that the complete Soviet withdrawal from the region would invite interference by the PRC. By the time the Cold War ended, forty-five years of interstate and intrastate wars in Southeast Asia had combined to create one of history's great human tragedies. The wars and immense loss of life had continuing effects, especially on the Indochinese states. Democracy became one of the casualties of the Cold War in Southeast Asia. While the Soviets and Chinese supported communist factions favoring their line wherever they existed, the West often sided with authoritarian regimes, overlooking their oppressive and corrupt domestic policies as long as they opposed communism. Communist treatment of political opponents was matched by anticommunist witch-hunts in Thailand and Indonesia.

While the Cold War progressed, some of the Southeast Asian states made rapid economic strides. By the end of the Cold War, Indonesia, Malaysia, Thailand, and above all Singapore were leaders of the Asian economic miracle. Vietnam was actively seeking to join them. Burma, Laos, Cambodia, and the Philippines, however, were still plagued by stagnant economies and political instability. Nevertheless, Southeast Asia appeared set on emulating Europe, the Cold War's original theater, in progressing toward regional cooperation and prosperity rather than interstate rivalry and economic hardship.

Southeast Asia Treaty Organization

Multilateral, regional political and mutual security alliance among eight nations: the United States, Great Britain, France, Australia, New Zealand, Thailand, the Philippines, and Pakistan. The Southeast Asia Treaty Organization (SEATO) was established by the Southeast Asia Collective Defense Treaty signed in Manila on 8 September 1954. A supplementary Pacific Charter, declaring the self-determination of Asian peoples, accompanied SEATO's formation. While the charter established principles of economic, social, and cultural cooperation among signatory nations, SEATO's main goal was collective security. Member states agreed to defend one another and other designated nations against aggression from external or internal threats.

Established only weeks after the end of the 1954 Geneva Conference, SEATO was created in the wake of the French withdrawal from Indochina. The organization was the brainchild of U.S. Secretary of State John Foster Dulles, who hoped that the alliance would fill the void left by France's retreat and prevent the spread of communism in Southeast Asia. SEATO also represented the first binding commitment by the United States to the defense of the region. Moreover, it came alongside expanded efforts by President Dwight Eisenhower's administration to build a viable regime in the southern half of Vietnam.

SEATO's structure and focus were problematic from the start. Unlike the North Atlantic Treaty Organization (NATO), SEATO had no standing military force, and its membership included only two Southeast Asian nations. Thus, the organization was not truly representative of the region as a whole. The exclusion of Indonesia, Burma, and Malaya—all facing significant communist insurgencies—was a glaring weakness. In addition, the inclusion of Pakistan stirred the anger of India, driving it farther away from the Western

The national delegations of the Southeast Asia Treaty Organization (SEATO) meet at the Social Hall of Malacanang Park in Manila, the Philippines, on 8 September 1954. (Bettmann/Corbis)

bloc. British and French participation was viewed as anachronistic by Asian members, an unwelcome remnant of European imperialism.

London and Paris viewed SEATO and its role quite differently than did Washington. The British did not fully share American convictions about the threat posed by the People's Republic of China (PRC) in Southeast Asia. Nor did the British see the French defeat in Indochina as an absolute failure, as did U.S. officials. The British also hoped that SEATO would serve as the basis for a broader, regional nonaggression pact, perhaps eventually initiating détente with China. For their part, the French were never very interested in SEATO, especially given their humiliation in Indochina.

Equally troubling was Thailand's viewpoint. The Thais initially hoped that SEATO signaled a genuine commitment to fight communism on their doorstep, but they soon lost faith in it. Bangkok was chosen as SEATO headquarters, and in many ways Thailand, on the front lines of the communist advance, was the centerpiece of the organization. But against the backdrop of the worsening crisis in Laos, by the early 1960s Thai leaders saw SEATO as little more than a paper tiger.

CENTO AND SEATO

The crux of the problem for Thailand, and often the United States, was the rule of unanimity incorporated into the SEATO voting structure. The Thais frequently proposed forceful SEATO action against communism in the region, including resolutions approving the deployment of military forces to Laos and Vietnam by member states. The French and British refused to endorse such actions, however. Despite their anticommunist rhetoric, Pakistan and the Philippines also eschewed such commitments. SEATO planning sessions, training exercises, and joint military maneuvers were held annually, but behind this façade of unity the organization was paralyzed by dissension.

Few American officials saw SEATO as anything more than a military alliance. Dulles and others hoped that SEATO provisions in the Geneva Agreements would circumvent the barring of aid to Indochina. With this in mind, the Americans insisted that SEATO declare the intention to maintain a “protective area” over the Republic of Vietnam (RVN, South Vietnam), Laos, and Cambodia. Problems soon arose with other members over how this should be fulfilled. For the United States, SEATO was the principal mechanism through which military support for South Vietnam could be justified.

By the early 1960s, U.S. policymakers had less ambitious plans for SEATO. Presidents Eisenhower and John F. Kennedy both hoped that SEATO would resolve its difficulties and represent a viable alternative to unilateral commitments in the region, but as its ineffectiveness became ever more apparent, the emphasis in Washington shifted to maintaining the alliance for symbolic purposes. It was believed that the organization would at least help combat defeatism among governments in the region.

SEATO was not, however, entirely ineffective. Under the auspices of its military planning and training exercises, the Americans developed a considerable array of covert and overt operations in Thailand for use in Indochina. Washington also later used the organization to solicit commitments from Australia and Thailand to send troops to Vietnam. Moreover, although member states knew SEATO to be generally ineffective, the specter of unified military intervention by SEATO signatories may have in fact prevented more significant PRC and Democratic Republic of Vietnam (DRV, North Vietnam) support for communist insurgencies in the region.

In Indochina, however, by the mid-1960s SEATO was obviously toothless. As U.S. troops began pouring into Vietnam after 1965, France and Pakistan refused to sanction American policy, openly signaling SEATO’s grave limitations. As the war intensified and expanded, even the pretensions of SEATO cohesion evaporated. American commitments to Asian member states, and those in the so-called protective area, were governed almost exclusively by bilateral agreements rather than by SEATO itself.

As U.S. forces began their withdrawal from Southeast Asia in the early 1970s, SEATO fell apart. Embroiled in its continuing conflict with India, Pakistan formally withdrew in November 1973. France followed in June 1974. Following the communist victories in Indochina in early 1975, the remaining members decided to disband the organization in September 1975. SEATO was finally dissolved in February 1977.

Southern African Development Co-ordination Conference

Southern African regional organization designed initially to foster political stability and security, later expanded to encourage economic development. In 1980 nine states in southern Africa sought to lessen their dependency on the apartheid regime in South Africa. The Lusaka Declaration of 7 August 1979 brought the Southern African Development Co-ordination Conference (SADCC) into being to enhance political stability and national security. In 1992 it changed its name to the Southern African Development Community (SADC) and under the Treaty of Windhoek of 17 August 1992 shifted from political ends to economic ones. After 1996, SADC was based on free trade principles.

South Africa abandoned apartheid in 1991 and joined SADC in 1994. Mauritius joined in 1995, followed by the Democratic Republic of the Congo and the Seychelles in September 1997. The fourteen SADC countries as of 2006 were Angola, Botswana, the Democratic Republic of the Congo, Lesotho, Malawi, Mauritius, Mozambique, Namibia, Seychelles, South Africa, Swaziland, Tanzania, Zambia, and Zimbabwe.

Economic growth created disunity as each new member sought its own direction, and the SADC was unable to forge unanimity. SADC economies depend largely on raw materials production and as such have little to trade with each other. Indigenous industries are highly vulnerable to outside competition, which the organization has been powerless to control. Each SADC member has its own needs, commitment, and capacity, although all members share a general economic weakness. Many member nations have ties to larger groups such as the Common Market for Eastern and Southern Africa (COMESA), a customs union, and the European Union (EU). The SADC remains a weak organization unable to overcome the legacies of historical conflict, colonialism, and chronic underdevelopment.

Lao prince and premier of Laos (1951–1954, 1956–1958, 1960, 1962–1975). Born in Luang Prabang on 7 October 1901, the son of Prince Bounkhong, viceroy of the Kingdom of Luang Prabang, and Princess Thongsi, Souvanna Phouma received his secondary education in Hanoi. He then studied in France, earning degrees in architectural engineering from the University of Paris and in electrical engineering from the University of Grenoble.

Returning to Laos, Souvanna Phouma entered the Public Works Service in 1931 at Vientiane and by 1945 headed that body. In 1945, following the Japanese surrender, when his half brother, Prince Phetsarath, formed an independent government, Souvanna Phouma joined it as a minister, along with another half brother, Prince Souvannaphong. Upon the return of the French, the three men and other nationalist ministers fled to Thailand.

When the French granted greater liberties to Laos, Souvanna Phouma returned. He favored gradual Lao independence, unlike Princes Souvannaphong and Phetsarath who advocated radical change. Souvannaphong subsequently joined the Pathet Lao (Country of Lao), which supported a communist revolution. In November 1951, Souvanna Phouma became premier, his party having won sixteen of thirty-five seats in the Lao national election. He remained in power through the end of the Indochina War, until October 1954. He became premier again in March 1956, pledging to integrate the Pathet Lao into the government, a policy strongly opposed by the United States.

Negotiations with the Pathet Lao yielded an agreement at the end of 1957, but following victory by the Pathet Lao's political party, the Neo Lao Hak Set, in the national elections of 1958, Souvanna Phouma resigned in July and became ambassador to France.

Souvanna Phouma returned to Laos in 1960 and was briefly premier that August following a coup by Royal Lao Army Captain Kong Le. The government then fell into the hands of rightists backed by the United States. That

**Souvanna Phouma,
Prince**
(1901–1984)

December, Souvanna Phouma fled to Phnom Penh, claiming to be the legitimate premier. He subsequently set up headquarters at Khang Khay on the Plain of Jars in northern Laos.

Following sporadic fighting between the Lao factions, a cease-fire was negotiated in May 1961, followed by a fourteen-nation conference in Geneva in June. Agreement there led to Souvanna Phouma being named premier of the coalition government.

But both sides violated the spirit of the Geneva Accords. Rightists and their American backers considered Souvanna Phouma a communist sympathizer, or at best terribly naive. They eventually accepted his leadership but, fearing communist influence, successive U.S. administrations pursued covert operations against the Pathet Lao alongside diplomacy. This secret war in Laos paralleled the Vietnam War. The People's Republic of China (PRC) and the Democratic Republic of Vietnam (DRV, North Vietnam) also fought a secret war by supporting the Pathet Lao and using Lao territory to supply insurgents in the Republic of Vietnam (RVN, South Vietnam) down the Ho Chi Minh Trail. The coalition eventually collapsed, but Souvanna Phouma remained as premier and eventually received U.S. support. The People's Army of Vietnam (PAVN, North Vietnamese Army) and the Pathet Lao, meanwhile, fought U.S.-supported Hmong irregulars under General Vang Pao.

The Lao government collapsed altogether in December 1975. Souvanna Phouma, who was in poor health (he had suffered a heart attack in July 1974), resigned and was named to the honorific post of advisor to the government of the Lao People's Democratic Republic. He died in Vientiane on 11 January 1984.

**Souvannaphong,
Prince**
(1909–1995)

Minister of planning (1956–1958), deputy prime minister and economic minister (1962–1963), first president of the Lao People's Democratic Republic (1975–1986), and one of the three princes who, along with Souvanna Phouma and Bounoum, dominated politics in Laos during the Cold War. Born in

Luang Prabang on 13 July 1909, Prince Souvannaphong (Souphanouvong) was highly intelligent. He spoke eight languages, studied engineering in Hanoi and in Paris, and was a certified civil engineer. Unlike those of his half brothers Souvanna Phouma and Phetsarath, Souvannaphong's mother was a commoner. Some believe that this turned him against royalty, although a more likely explanation was the influence of communist revolutions in China and Vietnam.

At the time of the Japanese surrender in August 1945, Souvannaphong was at Vinh in Vietnam. He then traveled to Hanoi, where he met Ho Chi Minh. Ho sent Souvannaphong to Savannakhet in Laos to rally anti-French forces there. Serving with the nationalist Lao Issara (Free Lao) movement, Souvannaphong was wounded fighting the French in 1946. In 1949 he presided over the formation of the communist-dominated Lao resistance movement, the Pathet Lao (Country of Lao), fighting the French. He also secretly joined the Indochinese Communist Party in 1954, although he was always careful to declare himself a neutralist.

For more than twenty years, Souvannaphong was the public face of the Pathet Lao, supporting its claim as a nationalist movement. During 1956–1958 he served as minister of planning in a coalition government led by Souvanna Phouma. When rightists seized power in 1960, Souvannaphong was imprisoned, although his dramatic escape that May helped win popular support for the Pathet Lao.

The 1962 Geneva Accords provided for another coalition government under Souvanna Phouma, and Souvannaphong served as deputy prime minister and minister of the economy. However, continuing power struggles forced his resignation in April 1963.

Souvannaphong remained politically important as the crucial link between communists and the royal family, with whom the Pathet Lao never openly broke. In September 1973 he joined the new Consultative Council in a coalition government under Souvanna Phouma but dominated by communists. When the Pathet Lao finally seized power in 1975, Souvannaphong secured the abdication of the Lao King Savang Vatthana. That December, Souvannaphong was named president of the new Lao republic, although real power rested with the Communist Party. He held the ceremonial post until his resignation in 1986. Souvannaphong died at Vientiane, Laos, on 9 January 1995.

Soviet Union

A large, ethnically diverse Eurasian nation slightly less than 2.5 times the size of the United States, the Union of Soviet Socialist Republics (USSR, Soviet Union) was formed in 1922 and dissolved in 1991. Since 1940, it was divided into fifteen constituent or union republics (Armenia, Azerbaijan, Belorussia, Estonia, Georgia, Kazakhstan, Kirghizia, Latvia, Lithuania, Moldavia, Russia, Tadzhikistan, Turkmenistan, Ukraine, and Uzbekistan). The Soviet Union abutted twelve nations, six in Asia and six in Europe. To the south, its Asian neighbors were the Democratic People's Republic of Korea (DPRK, North Korea), the People's Republic of China (PRC), Mongolia, Afghanistan, Iran, and Turkey. To the west, Soviet European neighbors included Romania, Hungary, Czechoslovakia, Poland, Norway, and Finland. To the north the Soviet Union bordered on the Arctic Ocean, and to the east it bordered on the North Pacific Ocean. Its population in 1945 was 145–150 million people.

As the world's leading communist power during the Cold War, the Soviet Union was the principal antagonist and opponent of the United States. Tensions between the two powers dated back to the revolution and civil war that led to the creation of the Soviet Union. It was not until 1933 that the U.S. government extended diplomatic recognition, and relations remained chilly until 1941, when the two powers found themselves on the same side of the war against Germany. As World War II drew to a close, however, lingering mistrust between the two reappeared and, combined with fundamental ideological differences, led to the Cold War.

The principal postwar goal of the Soviet Union under the leadership of Josef Stalin was national security. Stalin sought to acquire territorial buffer zones that would provide physical defense against first Germany and then any possible Western attack. Soviet leaders believed that this, along with reparations to restore the shattered economy and society of the Soviet Union, was the least they deserved for their role in defeating Germany. At the same time, they hoped to secure and expand the future of communist ideology by surrounding the Soviet Union with like-minded regimes. Although his policies appear to have been fundamentally motivated by practical concerns of national security, Stalin was also a convinced socialist who saw the future in Marxian terms as a struggle between capitalism and communism.

In domestic politics, immediately after the war Stalin attempted to restore the party line. Prisoners of war returning from the West who might have

Columns of Moscow workers entering Red Square in 1948 during a mass demonstration in honor of the thirty-first anniversary of the Communist Revolution of November 1917. (Library of Congress)

been infected with dangerous ideologies were sent to the gulags. The leniency shown in Soviet culture during the war, when nationalism and orthodoxy were allowed to flourish in order to rally the populace, quickly disappeared. In 1946, Soviet authorities launched the Zhdanovschina, a campaign named for Leningrad party boss Andrei Zhdanov intended to force artists, writers, and other cultural figures to follow strict Stalinist ideals in their works. Three years later, Stalin used the excuse of Zhdanov's death to launch a purge of the Leningrad party apparatus. Yet another major purge was being prepared in 1953, indicating that Stalin remained intent on bending the nation and the party to his will.

In the international arena though, it is clear now that the Soviets knew they were not dealing from strength at the outset of the Cold War. In addition to vast property destruction, the Soviet Union had lost 25–27 million people dead in World War II, and it faced a United States that possessed nuclear weapons. As a counter, the Red Army was in physical possession of much of Central and Eastern Europe, and the Allies had allowed the Soviet Union to annex eastern Poland. To secure Soviet participation in the war against Japan, the British and U.S. governments also agreed to allow the Soviet Union to annex the Kurile Islands (which had never been Russian territory) and southern Sakhalin Island and to receive concessions in the Liaodong Peninsula of China (which included Darien and Port Arthur).

In 1946, Soviet authorities launched the Zhdanovschina, a campaign named for Leningrad party boss Andrei Zhdanov intended to force artists, writers, and other cultural figures to follow strict Stalinist ideals in their works.

Stalin's initial pragmatic approach led him to withdraw Soviet forces from northern Iran in 1946, to disassociate himself from the communist rebellion in Greece, and to try to rein in the Chinese communists. The Soviets' inability to reach an acceptable agreement regarding the future of Germany, however, gradually drove Stalin to take a harder ideological line. Recent archival revelations indicate that Stalin desired a unified Germany that would be friendly toward, if not completely within, the Soviet sphere of influence.

Already in control of Poland and the remainder of Eastern Europe, after 1945 the Soviets exerted their influence within their zone of occupation in Germany. Harsh actions by the occupying Red Army had alienated most Germans. Soviet occupation authorities also shipped off to the Soviet Union anything of value, including entire factories. German prisoners of war also remained in the Soviet Union as slave laborers, some of them until 1955, while thousands of other Germans were also sent to the Soviet Union to serve in the same capacity.

Stalin avoided any blatant displays of disagreement over Germany until the spring of 1947, when the announcement of the Marshall Plan apparently convinced him that the United States was trying to build an industrial base in Western Europe for future attacks against communism. The Soviet response was to blockade Berlin, which lay deep within the Soviet zone. The Soviets hoped to win support by providing food and energy to the population and to force the Allies from the city, which they could then use as a bargaining chip. British and American resolve, manifested in the Berlin Airlift and a counter-blockade of the Soviet zone, forced Stalin to admit defeat in May 1949.

Even before that, however, the Soviets had subtly abandoned their policy of accommodation. In September 1947, Stalin orchestrated the creation of the Communist Informational Bureau (Cominform), a renewal of the Communist International that had been abandoned during World War II as a gesture of goodwill. During 1948–1949, the carefully balanced and “democratic” governments of states within the Soviet sphere were purged of any potential opposition to Soviet control, even by native communists. The new loyal regimes assented to the formation of the Council for Mutual Economic Assistance (Comecon), the Soviet substitute for the Marshall Plan, in January 1949.

The Soviet zone of occupation in Germany quickly evolved into a separate state, the German Democratic Republic (GDR, East Germany), which the Soviet Union recognized in October 1949. Meanwhile, bloody purges occurred in the governments of Eastern Europe as Stalin tightened Soviet control of the region.

Even as the Iron Curtain rang down in Europe, the Soviet Union faced a new challenge in Asia. In 1949 the Chinese communists led by Mao Zedong emerged triumphant in the long struggle for power in China, establishing the People's Republic of China (PRC) in October 1949. Although the Soviet Union publicly welcomed the arrival of a second communist power and championed Mao's regime in the United Nations (UN), Stalin was less than delighted. Not only had he failed in his attempt to subjugate the Chinese communist movement, but Mao's ideology challenged the hegemony of

SUCCESSOR STATES TO THE SOVIET UNION

Soviet communism in the international arena. When Mao visited Moscow in the winter of 1949–1950, Stalin initially refused to treat with him. The fear that China might emerge as the leader of Asian communism not only led Stalin to relent in January 1950 but also influenced his decision to support the national ambitions of Kim Il Sung, the communist leader of North Korea. Meanwhile, in August 1949 the Soviet Union exploded its first atomic bomb.

With substantial Soviet military assistance and the support of the PRC, in June 1950 North Korean forces invaded the Republic of Korea (ROK, South Korea). The Soviets' absence from the UN General Assembly (in protest over the refusal to allow Mao's regime to assume the Chinese seat) allowed the United States to marshal international support in what was the UN's first war. In October, the PRC entered the war. The Soviet Union provided air defense for China proper, but Mao was angry that this did not include air support for Chinese forces within Korea, which he believed he had been promised.

While Stalin's maneuvers preserved at least the appearance of Soviet ideological leadership and communist solidarity, the costs were significant. Fearing monolithic communist power bent on world domination, the Western Allies rallied together. They opened negotiations to rearm the Federal Republic of Germany (FRG, West Germany) and bring it into the North Atlantic Treaty Organization (NATO) to defend against any communist aggression in Europe. The United States also signed a separate peace treaty with Japan, pairing it with a defense treaty that not only denied the Soviet Union *de jure* recognition of its territorial acquisitions in Asia but also provided military

bases to support the American strategy of containment. Although Stalin attempted to regain the initiative by proposing a united, neutral Germany in March 1952, there was little hope of this being accepted. When the Soviet dictator died in March 1953 the Cold War was at its peak, with a proxy war going on in Korea and both sides racing to build up their armaments in case a hot war should break out.

In the uncertainty that followed, Stalin's successors moved quickly to lessen tensions both domestically and internationally. Although both Vyacheslav Molotov, Stalin's notoriously hard-line foreign minister, and Lavrenty Beria, the infamous head of the Soviet secret police, were in the initial group that succeeded the dictator, it was Georgy Malenkov and Nikita Khrushchev who really directed policy. Both men favored pragmatic politics and better relations with the West. They lowered food prices and shifted somewhat the focus of the Soviet economy from industrial goods to consumer products. The purge already in progress, the so-called Doctors' Plot, was curtailed, and the accused were released. Thousands of other inmates from Stalin's camps also received their freedom. Beria himself, however, was arrested, tried in secret, and executed.

The thaw in the ideological battle also extended to foreign affairs. In July 1953 an armistice was concluded in Korea, and a year later, Soviet concessions led to the conclusion of the Austrian State Treaty, breaking a decade-long deadlock over the future of that state. Khrushchev, who had emerged as the dominant figure in the new Soviet leadership, reconciled with Josip Broz Tito and visited Belgrade. In 1955 the nations of Eastern Europe signed the Warsaw Pact, pledging mutual defense. That July, Khrushchev met with Western leaders in Geneva in an attempt to mitigate tensions. Then, in February 1956 Khrushchev denounced Stalin's policies and methods in his famed "secret speech" to the Twentieth Congress of the Communist Party of the Soviet Union.

Similar criticisms of Stalinist policy immediately after the dictator's death had led to an uprising in East Germany on 16–17 June 1953. The new accusations caused rebellions first in Poland and then in Hungary. Popular protests against the Soviet occupation forced the Red Army to withdraw from Budapest. When protracted negotiations failed to produce a solution and Imre Nagy announced that Hungary would withdraw from the Warsaw Pact, however, in November 1956 Khrushchev ordered in the Soviet Army, which suppressed the rebellion in bloody street fighting. This Soviet action and the inaction of the Western powers, who were distracted by the concurrent Suez Crisis, made it clear that the spheres of influence delineated after the war would not be challenged.

The rest of the world, however, was under contention. Khrushchev's adopted philosophy of peaceful coexistence held that war between the superpowers was neither inevitable nor desirable but that competition was allowed. He and other members of the Soviet leadership accordingly traveled extensively, offering friendship and Soviet aid. In 1955, Khrushchev and President Nikolai Bulganin had visited India, Burma, and Afghanistan. When Fidel Castro's revolutionary movement gained power in Cuba in 1959, Khrushchev

was quick to recognize the regime as an ally and proffer assistance. A new Sino-Soviet Friendship Pact extended large-scale technical and financial aid to China in 1959 as well. Khrushchev's largest and best-known venture in this regard, however, was to subsidize construction of the Aswan High Dam in Egypt, extending Soviet influence into the Middle East.

Khrushchev sincerely believed that the Soviet economy could overtake the United States, prove the superiority of communist doctrine, and provide an attractive model for third world nations to emulate. He initiated a series of reforms with this aim in mind, beginning in 1957 with the reorganization of the central economic ministries of the Soviet Union. The following year saw an adjustment in state investment priorities, and in 1959 the Soviet Union adopted a new, aggressive Seven-Year Plan designed to increase agricultural output and production of consumer goods. The Soviet leader was so confident of success that he allowed an exhibit of the American way of life in Moscow in 1959, where he engaged U.S. Vice President Richard Nixon in the famed Kitchen Debate on the merits of the two economic systems. In September of that year, Khrushchev became the first Soviet leader to visit the United States.

Although Khrushchev had his successes, most notably in space (which he had aggressively promoted) with the launch of *Sputnik I* in 1957 and Yuri Gagarin's orbiting of Earth in 1960, the Soviet Union made little progress economically. Khrushchev's highly touted Virgin Lands program to vastly expand the cultivated areas of Soviet Central Asia was a failure. His rapprochement with the United States angered the Chinese, who accused the Soviets of revisionism. Mao argued in 1960 that even nuclear war would be preferable to peaceful dealings with the United States.

U.S.-Soviet relations remained tense throughout the period, though, thanks largely to Khrushchev's habit of fomenting crisis as a matter of policy. The Soviets produced their own hydrogen bomb in August 1953, and four years later they successfully tested an intercontinental ballistic missile (ICBM) capable of delivering such weapons to the U.S. mainland. Khrushchev used the missile threat liberally, convincing many Western analysts that the Soviet Union had in fact surpassed the United States in that area. He also revisited the issue of Berlin in November 1958, threatening to sign a separate peace treaty with East Germany if the Allies did not sign a treaty recognizing the existence of two Germanies and "the free city of West Berlin." The Soviet leader intended to use the city as a lever to open talks with the United States that he believed would lead to a European settlement and perhaps even the end of the Cold War. Although no progress was made even on smaller issues, a 1959 meeting with President Dwight D. Eisenhower was cordial enough and seemed to bode well for the future.

Cuban leader Fidel Castro and Soviet leader Nikita Khrushchev watching the May Day parade in Red Square in Moscow on 1 May 1963. (Bettmann/Corbis)

Corn-growing brigade leader A. G. Nee at Sverdlov Collective Farm in Tashkent Oblast, Uzbek Soviet Socialist Republic, July 1960. (Library of Congress)

It did not help Khrushchev's cause, however, when the Soviets shot down a U.S. U-2 spy plane on 1 May 1960. The event scuttled a second summit with Eisenhower, and when Khrushchev did meet with President John F. Kennedy in June 1961, progress was limited by the Soviet leader's condescending attitude. The construction of the Berlin Wall in August 1961, in combination with renewed Soviet nuclear testing, also helped curtail any realistic chance for an understanding with the United States.

The final blow to Khrushchev's aspirations, however, came with the Cuban Missile Crisis of October 1962. Hoping to steal a march on the Americans and force them to recognize the Soviet Union as an equal in the game of global power politics, Khrushchev had arranged for the placement of Soviet missiles on Cuba, only 120 miles from the coast of Florida. American intelligence discovered the installations before the missiles could be deployed, and in early October 1962 Kennedy ordered a naval blockade of Cuba to prevent the arrival of additional weaponry. After a period where the world held its breath while Soviet cargo ships approached the Caribbean and nuclear war seemed imminent, Khrushchev backed down. The Soviet ships bearing the weapons and their support systems returned to the Soviet Union. This humiliation, combined with the failure of several domestic economic reforms in the early 1960s, finally convinced the other members of the Soviet Presidium that Khrushchev had to go, and he was duly removed in October 1964.

As in 1953–1954, the change in leadership brought uncertainty and change to Soviet foreign policy. The Soviet grip on Eastern Europe, in particular, loosened once again as pressure for reform mounted in Moscow. In Hungary,

East Germany, and Czechoslovakia, new economic systems emphasizing market mechanisms instead of centralized control came into effect by 1968. Alexander Dubček, who became leader of the Communist Party of Czechoslovakia (CPCz) in January 1968, boldly permitted political reforms as well.

By allowing independent pressure groups and relative freedom of the press, Dubček hoped to create "socialism with a human face," an aim not far off Khrushchev's desire for communism led by economic success. Like Khrushchev, Dubček miscalculated the effect of his policy. The new Soviet leadership headed by Leonid Brezhnev was not prepared to tolerate such developments. Soviet tanks rolled into Prague on the night of 20–21 August 1968, bringing an end to the so-called Prague Spring and to most hopes of reform in Central and Eastern Europe. Although the Soviet Union allowed Poland to raise loans in the West to facilitate economic expansion in 1970, the Brezhnev Doctrine of 1968 emphatically restated the principle of 1956 that Soviet influence remained supreme in that sphere.

Although that statement of policy went unchallenged by the West, it stirred dissent among other communist states. Albania, Romania, and Yugoslavia all condemned the Soviet action. Only sixty-one of seventy-five nations attending a June 1969 meeting in Moscow agreed to sign the main protocol. China denounced the Soviet Union in strident terms, and skirmishes along the Siberian border between the two powers raised the possibility of open warfare between the two communist giants.

On all other fronts, however, Brezhnev and his cronies were more successful in pursuing Khrushchev's foreign policy than Khrushchev himself had been. Soviet friendship with Cuba remained warm, and the Soviet Union pursued close ties with India and, to a lesser extent, Pakistan. Relations with West Germany also improved, and a treaty recognizing both German states was signed in 1970. While Soviet-supported Democratic Republic of Vietnam (DRV, North Vietnam) forces wore down U.S. and Republic of Vietnam (RVN, South Vietnam) forces in South Vietnam, Brezhnev repeatedly trumpeted the Soviet Union's support for national liberation movements everywhere. The Soviet Union joined Cuba in sending aid to liberation movements in Angola and Mozambique.

Despite these Soviet adventures, relations with the United States were cordial enough to merit an upgrade from peaceful coexistence to *détente*. The United States and the Soviet Union signed the Nuclear Non-Proliferation Treaty (NPT) and began the Strategic Arms Limitations Talks (SALT) in 1969. The resulting Anti-Ballistic Missile (ABM) Treaty was signed in 1972. Visits between American and Soviet leaders became a fairly regular occurrence, with President Nixon visiting Moscow in 1972 and 1974, while Brezhnev came to New York in 1973. In 1975, both states signed the Helsinki Final Act, culminating several years of negotiations on questions of European boundaries and human rights.

Tensions did not, of course, disappear completely. In 1977 the Soviet Union stationed new SS-20 missiles in Eastern Europe. The United States retaliated by introducing cruise missiles to bases in West Germany and the United Kingdom and sent new Pershing missiles to West Germany as well. A second round of SALT prevented crisis and also reaffirmed the policy of *détente* by reaching a tentative agreement on missile placement in Europe in 1979.

Whatever goodwill existed between the two states in the 1970s, however, dissipated in the wake of the Soviet decision to send troops into Afghanistan in December 1979. U.S. President Jimmy Carter ordered an immediate increase in defense spending, and *détente* collapsed. The ideological divide between the two superpowers deepened when Ronald Reagan won the presidency in November 1980 and again when the Soviet Union approved the imposition of martial law in Poland in December 1981. Even Brezhnev's death in November 1982 and another transition period failed to halt the Cold War.

As it had in 1953 and in 1964, Soviet policy moved toward reform and compromise during the period of transitional leadership. Brezhnev's successor, Yuri Andropov, strove to revitalize the Soviet system by introducing new discipline. He implemented anticorruption and antidrinking programs,

introduced new measures to ensure punctuality in the workplace, and commissioned studies for sweeping economic restructuring. To gain the requisite fiscal breathing space, he also attempted to resuscitate détente. He called for a summit with Reagan, proposed further reductions in nuclear arms, suggested a nuclear test ban, and, most startlingly, in January 1983 offered the possibility of a treaty forswearing attack.

Reagan responded by announcing the funding of research on a Strategic Defense Initiative (SDI), the so-called Star Wars system for space defenses against any missile attack, in March 1983. Andropov refused to believe that any such system would be purely defensive, and suspicions mounted on both sides. It appeared that relations might reach crisis proportions when the Soviets shot down a South Korean airliner, flight KAL Flight 007, that strayed into Soviet airspace on 1 September 1983. Diplomats on both sides acted quickly to defuse the situation but were unable to renew the thaw of the 1970s. Any chances of further progress were forestalled by Andropov's declining health and death in February 1984 and then by the illness and incompetence of his successor, Konstantin Chernenko, an octogenarian who suffered from emphysema and lived only until March 1985.

The man who succeeded Chernenko, however, moved with speed great enough to make up for both his predecessors. A protégé of Andropov, Mikhail Gorbachev was known as a reformer, a practical intellectual, and an ambitious man of action. He had traveled in Western Europe, and both he and his wife Raisa appeared at ease in Western society, a marked difference from all Soviet leaders since Lenin. Gorbachev was, however, a committed socialist. He believed that vigorous reforms would prove the viability of the system and that Soviet communism and capitalism could coexist peacefully even as they competed economically.

Gorbachev's initial moves thus came in domestic policy with attempts to revitalize Soviet agriculture and manufacturing through a program of acceleration (*uskorenie*) and openness (*glasnost*). These soon gave way to a general restructuring (*perestroika*) that included foreign affairs and especially Eastern Europe. As Andropov had, Gorbachev sought on the one hand a respite from the arms race and from international distractions. On the other hand, he also believed that a reformed and reenergized Soviet socialist economy could deal with the challenges of the United States and world capitalism. If the United States would not negotiate, he would act unilaterally.

Gorbachev stated his intention to reverse the long-standing Soviet policy of controlling internal developments in the states of Central and Eastern Europe at a meeting of Warsaw Pact leaders in March 1985 and initiated plans to extricate the Soviet Union from Afghanistan in October. He had cordial meetings with President Reagan in Geneva in November 1985 and in Reykjavík, Iceland, in October 1986. At the second meeting, he briefly won Reagan's agreement that all nuclear weapons on both sides should be destroyed within a decade before U.S. advisors effectively vetoed the accord. Negotiations continued, however, and the Intermediate-Range Nuclear Forces (INF) Treaty stipulating the destruction of all ground-based nuclear weapons of a particular range was signed in December 1987. In April 1988,

the Soviet Union pledged to withdraw all its troops from Afghanistan by the end of the year, and Gorbachev later announced a 10 percent reduction in the size of the Soviet Army that would coincide with the recall of six Soviet divisions from Eastern Europe.

These measures led to the end of the Cold War, but not in the way that Gorbachev imagined. The leaders of the Soviet satellites in Eastern Europe felt betrayed by Gorbachev's initiatives, while nationalists and dissidents within the Soviet Union used their new freedom to explore various means of escaping Russian domination. The Baltic states, citing the secret clauses of the Molotov-Ribbentrop Pact of August 1939 that Gorbachev had made public, clamored for independence. Large public demonstrations for independence also occurred in Georgia, Armenia, Azerbaijan, Moldova, Uzbekistan, and Ukraine.

By the middle of 1989, the movement for independence and democracy had spread to Eastern Europe. Poland held free, if limited, elections in June 1989 that the opposition won handily. In September, the Hungarian government dismantled its fortified frontier with Austria and permitted free movement across the border. Thousands of East Germans exploited this loophole to escape to the West, while thousands of others demonstrated in the streets of Leipzig and other East German cities. Erich Honecker resigned as chairman of the East German Council of State in October 1989. The Berlin Wall, long a symbol of the divided world of the Cold War, came down the next month. The communist leaders of Bulgaria and Czechoslovakia stepped down, and Romania's Nicolae Ceaușescu was overthrown and executed.

The Soviet Union did nothing. Within eighteen months, it too would cease to exist, unable to either reform or sustain the communist system that had existed since 1918. And with that, the Cold War, the ideological divide that had held the world in thrall for nearly fifty years, came to a close.

Soviet Union, Army

The Cold War Soviet Army was both the Soviet Union's most important military tool and the Communist Party's main guarantor of power. The Red Army emerged from World War II as the most powerful land force in the world. The Soviets' navy and air force, however, paled in comparison to those of their Western counterparts. The Soviet Red Army occupied the majority of Eastern Europe in 1945, making Poland, East Germany, Czechoslovakia, Hungary, Romania, and Bulgaria unwilling satellites of the Soviet Union. Throughout the Cold War, the Red Army was the key factor in guaranteeing control of local communist governments there. From 1948 to 1949,

Soviet motorized infantry troops on a tactical exercise in May 1984. (U.S. Department of Defense)

the Red Army subsequently cut off Berlin from the West, precipitating the Berlin Airlift. After Soviet leader Josef Stalin's death, Nikita Khrushchev, his successor, shifted Soviet military emphasis from land forces to nuclear weaponry. Khrushchev also began training and supporting proxy forces against the West. Meanwhile, the Soviet Army ensured continued communist rule over Hungary in 1956, helped build the Berlin Wall in 1961, crushed the infant Czechoslovakian revolution in 1968, and clashed with the People's Republic of China (PRC) along the Soviet-PRC border in 1969. By the early 1970s, the Soviet nuclear arsenal also reached rough parity with the West. The Soviet Army, however, faced its greatest challenge in fighting the Afghanistan War (1979–1989).

At the end of World War II, the Soviet Red Army, immense and battle-hardened, was the most powerful land military force in the world. The force that took Berlin alone consisted of 110 infantry divisions, 11 tank and mechanized corps, and 11 artillery divisions, making it larger than all the World War II American land forces in Europe and Asia combined. The Red Army had also learned valuable lessons in fighting the German Army from 1941 to 1945. This experience paid off in the form of great operational skill, experienced leaders, and a cadre of elite, battle-tested units.

In 1946 Stalin renamed the Red Army the Soviet Army and supervised its continued mechanization. He envisioned an army capable of conducting deep penetrations with ground support aircraft, mimicking the Germans' strategy during the early part of World War II. Stalin planned to use his army as a counterbalance to the Americans' atomic monopoly. He believed that the

threat of this massive force invading Western Europe would prevent American atomic blackmail. This approach remained in place until Stalin's death in 1953.

The Soviet Army played a more active role in Soviet politics after Stalin's death. For example, Khrushchev enlisted the help of World War II Red Army hero Marshal Georgi Zhukov, whom Stalin had pushed out of the spotlight, to ensure his ascension as premier. Khrushchev made Zhukov minister of defense as a reward for his help. Khrushchev, like Stalin, grew to fear Zhukov's power, popularity, and ambition and in 1957 removed the old marshal from power.

When Khrushchev became premier, he set out to make the Soviet Army more effective by curbing the worst excesses of the Stalinist system. He reduced the army from 5.3 million men to 3.6 million men as a way to cut expenses and invested more resources in nuclear weapons. These changes, however, unwittingly led to independence and autonomy movements in Soviet satellite states. Soviet leaders subsequently called upon the army to force Eastern bloc governments to toe the line. For example, the Soviet Army brutally suppressed the Hungarian Revolution in 1956 by using 30,000 men supported by armor to fight for ten days, mostly in Budapest.

Efforts to bolster the Soviet Army came to fruition in the late 1950s as it developed into a fully armored and motorized force. New tanks replaced World War II-era tanks, and Soviet industry supplied the army with huge numbers of armored personnel carriers (APCs). While its equipment and numbers were impressive, however, the Soviet Army still relied on the same basic structure and strategy of Stalin's Blitzkrieg-style vision of warfare. This doctrine may have served the Soviet Army well in a general—and conventional—war, but it would prove to be woefully inadequate in future conflicts, such as the war in Afghanistan. Moreover, the officer corps retained older leaders wedded to old doctrine. This problem was so endemic that many Soviet generals in the 1980s and 1990s had been serving since before the German invasion, calcifying Soviet military strategy and doctrine.

The Strategic Rocket Force (SRF) grew to be an integral part of the defense of the Soviet Union in the 1950s. The SRF became an independent military branch in 1959, charged with command and control over the Soviet Union's burgeoning fleet of intercontinental ballistic missiles (ICBMs). The SRF, as it turned out, proved to be too small and inaccurate to deter the Americans during the 1962 Cuban Missile Crisis.

After the humiliating Cuban Missile Crisis, Alexei Kosygin and Leonid Brezhnev replaced Khrushchev in 1964. Brezhnev decided to build up both nuclear and conventional military forces. The consequent buildup of the SRF led to the introduction of the SS-11 missile system in 1966, followed by the SS-9 in 1967 and the SS-13 in 1969. By 1970, the Soviet Union outnumbered the United States in ICBMs 1,299 to 1,054. Subsequently, the Soviets developed a more powerful family of the SS-17, SS-18, and SS-19 ICBMs, now armed with multiple independently targeted reentry vehicles (MIRVs). Thus, the Soviets had reached nuclear parity, if not superiority, with the United States.

While the SRF increased in size and capability, the Soviet Army remained active. It invaded Czechoslovakia in 1968 to quell an uprising, which lasted less than one full day. The Soviet Army also supported other communist regimes and proxy insurgencies, including those in the Democratic People's Republic of Korea (DPRK, North Korea), the Democratic Republic of Vietnam (DRV, North Vietnam), and Cuba.

Despite the West's view of monolithic communism, the Sino-Soviet split in the 1950s led to a border clash in 1969. This schism was ostensibly due to ideological differences, but other issues were also involved. PRC leader Mao Zedong believed that he should have become the international leader of communism after Stalin's death. Khrushchev, however, had no intention of according Mao such status.

The Soviet war in Afghanistan, which lasted from 1979 to 1989, had many correlations to the American experience in Vietnam. After a Marxist party overthrew the Afghan government in 1978, the Soviet Army moved in to support the failing communist regime in December 1979 with one airborne and four motorized rifle divisions. Thus, Soviet mechanized forces secured the People's Democratic Party of Afghanistan. The Soviet-backed Afghan government controlled only the country's urban areas, however. The Afghan guerrillas, or mujahideen, put up a fierce fight that Soviet politicians and military planners had failed to foresee. Opposition increased during the first four years of the war as the Soviet Army attacked the mujahideen in remote and rugged mountainous areas. Analogous to the Viet Cong's use of Cambodia and Laos, the mujahideen used sanctuaries in Pakistan and Iran as safe havens, while the Soviet Army tried valiantly to combat this unconventional style of warfare.

Soviet forces began to use massive airborne operations for rapid movement and attack as well as scorched-earth tactics to starve and terrorize guerrillas. These tactics, however, only served to strengthen the resolve of the mujahideen. When Konstantin Chernenko became Soviet premier in 1984, he decided to change tactics in Afghanistan by attacking the support network and infrastructure of the Afghan resistance, including supply lines and safe havens. Although for a time these tactics appeared to be somewhat effective, the mujahideen's will to resist remained intact.

In 1986, the United States decided to send the Afghan guerrillas Stinger anti-aircraft missiles and other high-tech weapons. With their new American weapons, the mujahideen began to shoot down roughly one Soviet aircraft per day. The Soviet Army could not sustain such losses, nor could it continue to effectively attack the guerrillas without helicopters. This led to the Soviet Army's use of mechanized ground forces to attack the guerrillas, but the army lacked the mobility to combat the elusive mujahideen. As with Vietnamization, the Soviets began to turn the battle over to the Afghan communists. The last Soviet troops left the country on 15 February 1989.

When Mikhail Gorbachev succeeded Chernenko in 1985, he ushered in a completely new era. In 1987 Gorbachev agreed with President Ronald Reagan to destroy all intermediate-range nuclear missiles. In July 1991, Gorbachev and President George H. W. Bush signed the Strategic Arms Reduction

Treaty (START I), drastically reducing the superpowers' strategic nuclear warheads.

Soviet Union, Army Air Force

The Red Army Air Force played an important role in World War II. During the war, Soviet pilots reportedly flew 3.125 million sorties. By 1943, Soviet aircraft production surpassed that of Germany. With more than 36,000 built, the Soviet Ilyushin Il-2 ground support aircraft was the most-produced plane of the war by any nation. The effectiveness of Soviet aviation was enhanced by the country's receipt of some 20,000 U.S. and British aircraft. Nonetheless, the Soviet air arm operated primarily in a ground support role. The Soviets had nothing that approached U.S. or British strategic bombing capability.

The Voenno-Vozdushnyye Sily (VVS, Soviet Air Force) became an entirely independent military service in 1946. Soviet concerns over U.S. strategic bombing and nuclear weapons also led to the establishment of a separate Soviet Air Defense Service as an independent branch with its own interceptor air arm in 1954. In addition, the navy retained its own air arm, and the rise of nuclear weapons led to the creation of a separate strategic striking force to control long-range strategic nuclear missiles. Nonetheless, their World War II experience caused the VVS to place primary emphasis on support of ground forces.

The VVS was composed of three major operational branches, the most important being the theater support arm, Frontovaya Aviatsiya (FA, Frontal Aviation). The other two components were Voenno-Transportnaya Aviatsiya (VTA, Military Transport Aviation) and Dal'naya Aviatsiya (DA, Long Range Aviation), both of which supported theater operations but also served as strategic national resources under the Soviet General Staff.

FA units provided tactical air support for Soviet theater operations, with responsibility for defensive and offensive counter-air operations, deep attacks on critical theater targets, fire support for ground units, reconnaissance, and electronic combat operations. During the 1950s, the FA component numbered as many as 12,000 aircraft.

Compared to Western systems, Soviet aircraft designs tended to be less technologically advanced. Building on German jet engine design, in 1946 the Soviets placed into production their first jet fighters, the Mikoyan-Gurevich MiG-9 and Yakovlev Yak-15. For their strategic bomber, on Soviet leader Josef Stalin's order the Soviets produced a carbon copy of the U.S. Boeing B-29, some of which had been forced to land on Soviet territory during the war. The result, produced by reverse engineering, was the Tupolev Tu-4. The first Soviet jet bomber, the handsome and versatile twin-engine Il-28, entered service in 1950.

During the Korean War (1950–1953), the Soviets sent substantial air units to southern Manchuria to fight on the side of the Democratic People's Republic of Korea (DPRK, North Korea) and the People's Republic of China (PRC). Soviet pilots duelled with United Nations Command (UNC) aircraft in far North Korea. They also trained units of the Chinese air arm and then turned over their aircraft to them, creating the Chinese Air Force.

Soviet fighter attacks did force the UNC to end daytime raids by B-29 bombers, but the Soviets refused to supply air support to communist ground units in Korea. Reportedly, the Soviets lost 120 pilots and 335 aircraft in the war. Their MiG-15 aircraft was one of the most successful of Soviet jet fighters and a close match for the North American F-86, which was hastily rushed to the Korean theater to meet the Soviet MiG-15. In dogfights with the MiG-15, the F-86 generally prevailed, thanks largely to superior American pilot training.

In aircraft design, the Soviets continued to emphasize maneuverability and interception capability in their fighter aircraft. Their MiG-19, entering service in 1955, was the first Soviet supersonic fighter aircraft. That same year, the turboprop Tu-95 entered service. It was the world's fastest propeller-driven aircraft and the first true Soviet intercontinental bomber. Already in 1950 the Soviets had in service their first military helicopters.

The progress of the Cold War and the threat posed by nuclear and thermonuclear war as well as the development of missile technology led to major changes in the VVS. Beginning in the 1960s, the Soviets modernized their fleet of strategic bombers. In 1961, the Tu-22 entered service as the Soviets' first supersonic strategic bomber. This process reached its culmination with the 1987 appearance of the Tu-160. With a gross weight of some 590,000 pounds, the Tu-160 is the heaviest warplane ever built. Capable of carrying a payload of 36,000 pounds, the Tu-160 carries a bigger payload and is faster than its rival North American/Rockwell B-1B. Although only fourteen Tu-160s were delivered by 1991, when combined with the extensive development of cruise missiles it gave the Soviets the capability to carry out deep strikes around the world.

In aircraft design, the Soviets continued to emphasize maneuverability and interception capability in their fighter aircraft.

A Soviet naval air force Tu-95 Bear D aircraft, July 1991. (U.S. Department of Defense)

Strategic bombers nonetheless played a less-significant role than land-based and submarine-launched ballistic missiles (SLBMs), especially compared to the American triad structure. The Soviet bomber program was relatively small compared to that of the U.S. Air Force, reaching a high point of more than 800 aircraft and an average inventory in the 600s, with fewer than 200 truly intercontinental-ranged bombers.

At the same time, the Soviets continued to develop their fighter and interceptor capability, bringing on-line a wide range of fighter aircraft with the MiG-21, MiG-23/27, MiG-25, MiG-29, and MiG-31 as well as the Sukhoi Su-9, Su-11, Su-15, and Su-27. Ground attack aircraft appeared in the form of the MiG-27, Su-7, Su-17, Su-24, and Su-25. With the increasing importance of helicopters, in 1973 the Soviets introduced the superb Mikhail Mil-designed Mi-24 attack helicopter, prompted by U.S. development of the Bell AH-1 Cobra. The heavily armored Mi-24 saw wide service in Afghanistan.

The VTA component of the VVS performed long-range air transportation functions. The VTA controlled tactical—parachute and airfield assault landing and resupply—and international or strategic airlift. With a peak strength of 1,500 aircraft, the VTA was also charged with the delivery of Soviet airborne forces, which were also controlled as a strategic national asset. Transport aircraft extended their range and capabilities in the Antonov An-22, An-24, and An-26 and the Il-76. Entering service in 1987, the An-124 Ruslan, with a gross weight of nearly 893,000 pounds, surpassed the U.S. Lockheed C-5A as the world's largest aircraft to achieve production status.

Soviet Mi-24 Hind helicopter. (U.S. Department of Defense)

In 1988 it was edged out by a stretched version, the An-225. Although only two of the latter have been built, they are the largest aircraft in world history.

Unlike the U.S. structure of assigning intercontinental ballistic missiles (ICBMs) along with the bombers to the Strategic Air Command (SAC) of the U.S. Air Force, the Soviets' land-based missile forces were not assigned to the VVS but rather to the separate service of the *Raketnye Voyska Strategicheskogo Naznacheniya* (RVSN, Strategic Rocket Forces). The RVSN was created in 1959 to control the newly developed ICBM capability as well as intermediate-range ballistic missiles (IRBMs) and medium-range ballistic missiles (MRBMs). The Soviet military considered the RVSN to be the elite service of their force structure, with responsibility for ensuring Soviet security through the capability to conduct effective nuclear strikes at the beginning of any conflict, setting the stage for victory.

The nuclear capabilities of the DA and RVSN were further supported by the SLBM component of the Soviet Navy. The navy maintained a sizable long-range aircraft capability that provided maritime reconnaissance, anti-ship, and antisubmarine capabilities as well as air-to-surface missile strikes against land targets. Aircraft included the VTOL (vertical takeoff and landing) Yak-36, which entered service in 1976 on the first Soviet aircraft carriers. The Soviets also introduced the Kamov Ka-25 helicopter with an antisubmarine warfare capability.

The final component of the Soviet airpower force structure was the Voyska Protivovozdushnoy Oborony Strany (PVO Strany, Troops of National Air Defense). The Soviet leadership created the independent PVO Strany in 1948, giving it responsibility for the integrated air defense system of the homeland. The PVO Strany organization controlled the substantial air defense system through early warning radars, weapons control systems, and a communications network. The technical systems were operated by the Radio-tekhnicheskiye Voyska (RTV, Radio-Technical Troops). The extensive interceptor force assigned to PVO Strany was organized as the Istrebitel'naya Aviatsiya PVO (IA PVO, Fighter Aviation of Air Defense). The interceptors were tightly controlled by the overarching command and control structure, which also integrated fighters that could be assigned to the national air defense role in an emergency. The Soviet interceptor inventory peaked at more than 5,000 aircraft in the late 1950s. PVO Strany also integrated the interceptor activities with the thousands of surface-to-air missiles (SAMs) that it controlled through the Zenitnyye Raketnye Voyska (ZRV, Zenith Rocket Troops) organization. These strategic SAMs could also be supported by the numerous tactical SAM systems that were deployed in the military districts across the Soviet Union as part of the Voyska Protivovozdushnoy Oborony Sukhoputnykh Voysk (PVO SV, Troops of Air Defense of the Ground Forces). When ICBMs became a significant component of the U.S. force structure in the early 1960s, the Soviets reacted by expanding the PVO Strany organization to include an antimissile defense component (designated PRO). Active antimissile sites were deployed around Moscow. Likewise, as space systems were developed by the United States and the Soviet Union in the early 1960s, the Soviet military added an antisatellite component (designated PKO) to PVO Strany.

During the 1980s, the Soviet military developed the air operation concept, an aggressive offensive use of airpower at the start of a theater campaign, designed to seize the initiative and create conditions for a rapid ground victory. The air offensive was intended to reduce an enemy's offensive striking power—especially nuclear delivery systems and air, missile, and heavy artillery firepower—and establish at least localized air superiority over the main axes of attack. Additionally, the air attacks would help soften enemy defenses at and behind the points of attack and would limit enemy maneuvering capability in response to Soviet advances. Soviet theater operations would also include parachute and helicopter assaults to seize key enemy targets and support the rapid advance of the main ground assault. Reflecting their support role, FA units were assigned to the theater or front commander (in peacetime to the Military District commander in the USSR or to the Soviet Group of Forces outside the USSR).

By the mid-1980s, the VVS deployed some 6,000 tactical fighters, ground support, and reconnaissance aircraft as well as 670 strategic bombers. The Soviets also fielded 1,300 fighter interceptors. The VVS possessed some 3,500 helicopters and 650 transport aircraft. Soviet naval aviation added another 1,100 airplanes and helicopters.

Soviet air forces were an important component of Soviet theater war capabilities and operational concepts during the Cold War era. VVS units served during the Cold War not only in the Soviet Union but also in Central and Eastern Europe, Mongolia, and Afghanistan. Noteworthy Cold War service came during the Korean War, the 1962 Cuban Missile Crisis, and especially the Soviet invasion and occupation of Afghanistan (1979–1989). Soviet instructors and pilots saw air combat in the Korean War and the Vietnam War. They also served with the Egyptian Air Force during the War of Attrition (1969–1970), in Angola (1975–1990), and in Ethiopia (1977–1979). Such service demonstrated the wide reach of the VVS and provided much useful training, but it also revealed serious shortcomings in equipment, logistics, and organization and could not conceal that the Soviets placed reliance on numbers and tight control rather than on more flexible training and innovation.

During the Cold War, the Soviet Navy evolved from little more than a coastal protection force to a robust rival to the West's powerful maritime forces. The Red Navy at the end of World War II was small and technologically obsolete. Consequently, the Soviet government built a stronger naval arm to challenge the West's dominance of the seas. When Nikita Khrushchev became the Soviet premier and Admiral Sergey Gorshkov became admiral of the fleet, the Soviet Union laid plans for a powerful Red Navy. The Soviets' inability to challenge the U.S. Navy during the 1962 Cuban Missile Crisis marked a crucial turning point for the Soviet Navy. Because it lacked the capability to challenge the U.S. Navy around Cuba, the Soviets set upon building a navy

Soviet Union, Navy

to vie for control of the seas. By the 1980s, the Soviet Navy was numerically larger than the U.S. Navy but still lagged behind in terms of technology. However, the Soviet Navy—a victim of Gorshkov's 1985 retirement and of economic strain—was one of the first Soviet institutions to foreshadow the collapse of the Soviet Union.

The Soviet Navy was primarily a coastal defense force at the end of World War II. But Soviet leader Josef Stalin feared a large-scale amphibious invasion by the West and wanted the Soviet Red Navy to deter such a threat. Stalin also wanted a large blue-water navy as yet another tool in the Soviet military and diplomatic arsenals. Economic constraints, however, prevented him from building such a fleet. The Soviet naval program was put on hold until the economy recovered sufficiently from World War II.

Shortly after Stalin's death in 1953, the Soviet government created a separate Naval Ministry. When Khrushchev assumed control, he reviewed all Soviet military capabilities with respect to the West. In the process, he emphasized nuclear weapons above other military capabilities and, in January 1956, appointed Admiral Gorshkov as head of the navy. Gorshkov's goal was to create an oceangoing nuclear fleet. Thus, the navy introduced both nuclear reactors and nuclear weapons into its forces, representing a marked change in the Soviet Navy's mission. Gorshkov not only had to pioneer a new Soviet maritime strategy but also had to deal with ice, choke points, and long distances. To these ends, he oversaw the building of a huge icebreaker fleet, the resupply of ships, and the establishment of overseas ports.

A key to the Soviet Navy's future was the submarine-launched ballistic missile (SLBM). Its operational history began in 1955 when the Soviets launched their first ballistic missile from a submarine. Then, in 1957, the Soviets constructed their first nuclear-powered submarine. This combination of SLBMs and nuclear-powered submarines provided a linchpin of Soviet defense.

In October 1962 one of the seminal events of the Cold War, the Cuban Missile Crisis, showcased the Soviet Navy's vulnerabilities, as it was unable to challenge the U.S. Navy's quarantine of Cuba. Moscow deployed several attack submarines to the area but was unable to seriously confront the American naval quarantine. The showdown embarrassed the Soviet Union in many ways, but the impotence of the Soviet Navy proved especially humiliating. Khrushchev vowed to make improvements to remedy Soviet naval deficiencies and to transform the Soviet Navy into the world's most powerful oceangoing force. Gorshkov received the support he needed in the form of a massive Soviet naval-building program.

Soviet SLBMs, like those of the Americans, came to the fore during the 1960s. Soviet SLBM submarines could survive an enemy first strike and thus posed a credible and effective deterrent. This force grew considerably and was a key component of Soviet defenses until the collapse of the Soviet Union in 1991. The Soviet submarine fleet grew from two submarines in 1967 to sixty-one in 1986, compared to the U.S. Navy's thirty-eight. However, the United States retained superiority in the overall number of SLBM warheads because its missiles carried more warheads than those of the Soviets. The

Soviets also employed nuclear-powered submarines armed with antiship cruise missiles. These cruise missile subs, coupled with the Soviet Navy's surface vessels and numerous fixed-wing aircraft, provided a deadly threat to the navies of the West, especially near the Soviet mainland.

The expansion of the Soviet Navy extended beyond submarines. Numerically, the navy grew to be the largest in the world, although its vessels were smaller and less advanced than those of its major foes. At its peak, the Soviet Navy had the capability to operate on and under every ocean during a modern war. The navy also expanded its land-based aircraft fleet's size and capabilities. As the Soviet buildup continued, the two superpowers' navies played a stressful and dangerous game of cat-and-mouse on the high seas. These confrontations included the ubiquitous presence of Soviet fishing trawlers, which were conducting electronic intelligence operations against the technologically superior U.S. Navy.

In 1972 the Soviets began a long-term program to build large nuclear-powered cruisers. These included hybrid aviation cruisers of various types as

Sailors man the rails of the destroyer *Admiral Vinogradov*, 31 July 1990. (U.S. Department of Defense)

well as battle cruisers. The aviation cruisers consisted of the two-ship Moskva class that had a cruiser bow and carrier stern and the four-ship Kiev class with a cruiserlike bow and a full angled flight deck. Both classes were capably armed with their own array of surface weapons systems as well as supporting helicopters and VTOL jet aircraft. The battle cruisers, three of which were commissioned before 1991, consisted of the more modern nuclear-powered Kirov class, which had great staying power and long range. The Soviet Union's first true aircraft carrier, the *Admiral Kuznetsov* (ex-*Tbilisi*) joined the fleet in January 1991.

After Gorshkov's retirement in 1985, the Soviet Navy began to steadily decline. Its vessels spent more and more time in port between patrols, and they also required more unscheduled maintenance because of lax general maintenance due to poor operational funding. These problems grew increasingly worse until the collapse of the Soviet Union, by which time the Soviet Navy had become a mere shadow of its former self.

The conflict between the leadership of the Communist Party of the Soviet Union (CPSU) and the Communist Party of Yugoslavia (CPY) that erupted in 1948 and led to the first public schism in the international communist movement. The reasons for the Soviet-Yugoslav split were the unwillingness of the Soviet leadership to tolerate insubordination, the ultraleftist orientations of Yugoslav leaders, and the Yugoslavs' aspirations to regional hegemony. The split ultimately paved the way for an independent form of socialism in Yugoslavia as well as for a neutral and later nonaligned foreign policy, strengthened movements of national communism in Eastern Europe, and broke up the seemingly fixed bipolar structure in Southeastern Europe.

In the immediate postwar period, the CPY was generally considered the most Stalinist communist party in Central and Eastern Europe and the closest ally of the Soviet Union. This was confirmed by the prominent role played by Yugoslav representatives at the founding session of the Cominform in September 1947. At the beginning of 1948, however, serious differences emerged, the immediate reasons being Yugoslavia's ambitions toward Albania and its continuing aid to the communist side in the Greek Civil War. Soviet leader Josef Stalin accused Yugoslav leaders of pursuing expansionist policies in the Balkans. Yet the Soviets' complaints, albeit containing some truth, were primarily motivated by the hegemonic aspirations of the Soviet leadership itself. It did not want to loosen its grip on Albania, to endanger the October 1944 Stalin-Churchill percentage agreements regarding influence in the states of Southeastern Europe that had placed Greece in the Anglo-American sphere, or to tolerate independent moves by Yugoslavia and Bulgaria. The essential aim was thus to strengthen Soviet supremacy over Yugoslavia and Eastern Europe.

Under the leadership of Josip Broz Tito, however, the overwhelming majority of the CPY leadership dismissed the Soviet criticism. In fact, it resisted Soviet tutelage and Moscow's attempts to interfere in internal affairs. In order to increase the pressure on the Yugoslav leadership, the Soviets recalled their military advisors, instructors, and civil experts from Yugoslavia in March 1948. They also initiated, with the first of three letters signed by Stalin and Foreign Minister Vyacheslav Molotov, a public attack on top Yugoslav leaders. The letters accused the Yugoslavs of opposing prescribed socialist principles.

The Yugoslav leadership repudiated the accusations and refused to take part in the hastily convoked June 1948 Cominform session, which turned out to be a tribunal, of sorts, against the rogue CPY. The Cominform's resolution,

Soviet-Yugoslav Split (1948)

published on 28 June 1948, called upon the “healthy elements” of the CPY to force a policy change or, if necessary, to overthrow its leadership and replace it with a “new internationalist” one.

Belgrade tried to convince Moscow of its lasting loyalty to socialism, the Soviet Union, and Stalin, claiming that the accusations were simply not justified. At the same time, the Yugoslav leadership did not hesitate to fight Soviet Stalinism with Stalinist methods, purging the CPY of pro-Soviet members, called “Cominformists,” of whom more than 55,000 were prosecuted and more than 15,000 were sent to the notorious labor camp at Goli Otok (Naked Island). In the years that followed, Soviet-Yugoslav relations deteriorated further, with Moscow engaging in strident propaganda, labeling the CPY leadership a “gang of spies and murderers,” and accusing it of having turned the CPY into a “fascist party.” During the most spectacular show trials of former East European leaders—Traicho Kostov in Bulgaria in 1948, László Rajk in Hungary in 1949, and Rudolf Slánský in Czechoslovakia in 1952—one of the most serious charges leveled was that all were “Titoist agents.”

The Yugoslavs steadfastly resisted Soviet pressure tactics and gradually changed their policies in the early 1950s. Although Yugoslavia remained a dictatorship, it liberalized its economic policy, developing a new system of self-management socialism. In its foreign policy, Yugoslavia improved its relations with the West but remained independent and later became one of the leading members of the Non-Aligned Movement. After Stalin’s death in 1953, the new Soviet leadership began to reassess its position vis-à-vis Yugoslavia. Finally, Nikita Khrushchev, who emerged as Stalin’s successor, sought to normalize relations with the Yugoslavs, visiting Belgrade in June 1955. Nevertheless, until the dissolution of both states in 1991, Yugoslavia always kept some distance from the Soviets, and its relationship with the superpower to the east remained an ambiguous one.

Spaak, Paul-Henri
(1899–1972)

Belgian socialist politician, international statesman, foreign minister (1936–1939, 1947–1949, 1954–1957, 1961–1966), and premier (1938–1939, 1946,

1947–1949). Born in Schaerbeek, Belgium, on 25 January 1899, Paul-Henri Spaak earned a degree in jurisprudence from Brussels University in 1921. He began his political career as a socialist member of the Chamber of Deputies in 1932. His efforts to keep Belgium out of World War II were in vain, and after the Belgian capitulation to Germany in May 1940, he went into exile first in Paris and then in London.

After the war, Spaak became a staunch supporter of international cooperation and collective security. He helped draft the United Nations (UN) Charter and served as the UN General Assembly's first chairman in 1946. On 28 September 1948 he delivered his famous "Speech of Fear" to the UN, denouncing Moscow's early Cold War policies and enunciating the reasons that Western countries feared the Soviet Union.

A brilliant speaker and an advocate of European integration, Spaak promoted the creation of the Benelux Customs Union (among Belgium, the Netherlands, and Luxembourg) in 1948. In August 1949 he became president of the Council of Europe, an office from which he resigned in protest in 1951 over the lack of support from member governments. He played a leading role in the creation of the European Coal and Steel Community (ECSC) and presided over its General Assembly during 1952–1954. He was also committed to the formation of the European Defense Community (EDC), which was eventually defeated by the French National Assembly in August 1954. In 1955, the Messina Conference of European leaders appointed him to chair a committee charged with the preparation of a report on the creation of a common European market. The "Spaak Report" led to the March 1957 Treaty of Rome, establishing the European Economic Community (EEC) and the European Atomic Energy Community (EURATOM).

In December 1956, when Spaak was chosen as second secretary-general of the North Atlantic Treaty Organization (NATO), the organization was deeply split because of the autumn 1956 Suez Crisis. Spaak was a resolute advocate of the transformation of NATO from a military defense organization into an effective political instrument. As such, in 1957 NATO began to play an important role as a Western clearinghouse on East-West relations. When General Charles de Gaulle returned to power in France in June 1958, however, French nationalist policies reduced NATO's effectiveness and increasingly frustrated Spaak. De Gaulle's obstructionism within NATO contributed to Spaak's decision to relinquish his post in January 1961.

During 1961–1965 Spaak served as Belgium's deputy prime minister, minister for African Affairs, and foreign minister. The Congo crisis demanded most of his attention. He also launched several new plans for a European political community. During July 1965–February 1966 he was foreign minister in

Paul-Henri Spaak was Belgium's most important statesman in the two decades after World War II and undoubtedly one of the most important figures in the European unification movement. (Library of Congress)

the cabinet of Pierre Harmel. After a quarrel with his Socialist Party members over the relocation of NATO headquarters from Paris to Brussels following de Gaulle's withdrawal from the alliance's military command in February 1966, Spaak resigned from politics in March 1966.

Spaak remained closely associated with NATO, however, serving as chair of a NATO special group tasked with establishing closer relations among NATO members during 1967–1972. In 1969, he published his memoirs, *Combats inachevés* (Unfinished Battles). Spaak died on 31 July 1972 in Brussels.

Space Race

Each side used the competition to demonstrate its technological prowess in the areas of science, education, engineering, and management.

The competition between the United States and the Soviet Union to explore outer space, most often defined by the race to place a human on the moon. The space race was an integral part of the Cold War. Each side used the competition to demonstrate its technological prowess in the areas of science, education, engineering, and management. Both nations also used rocket and missile development gleaned from the space race to strengthen their military establishments. The two superpowers had been working on missile development for some time in hopes of developing intercontinental ballistic missiles (ICBMs) to deliver nuclear warheads. Both sides thus hoped that these programs would help develop a rocket capable of placing a satellite into orbit.

The space race officially began on 4 October 1957 with the successful Soviet launch of the *Sputnik I* satellite. The orbiting *Sputnik I* not only established an early Soviet lead in the space race but was a major blow to American prestige, since U.S. leaders believed that the Soviets were incapable of such a breakthrough. The Soviet program, led by chief designer Sergei Korolev, who was largely unknown in the West, continued to reveal the American rocket program as unequal to the task. The Soviets' advantage was confirmed in their launching of the much-heavier payload *Sputnik II* on 3 November 1957.

Americans were surprised to learn that the United States lagged badly behind Soviet rocket and missile technology. Politicians were outraged and

Laika, the first creature to orbit the earth, in her capsule before the launch of the Soviet satellite *Sputnik II*, 1957. (Bettmann/Corbis)

proclaimed the existence of an alleged missile gap, which Senator John F. Kennedy exploited during his 1960 presidential campaign. Other Americans used the Soviet space lead to suggest a lack of rigor in American secondary schools in the fields of science and mathematics. While President Dwight D. Eisenhower rejected the notion of American weakness, the public was shocked when on 6 December 1957 Project Vanguard was unable to place an American satellite in orbit.

Another American program, the Explorer project under the direction of the U.S. Army and headed by former German rocket scientist Wernher von Braun, served notice that the Americans had not yet yielded the space field to the Soviets. On 31 January 1958 the United States successfully launched *Explorer I*, a light satellite that proved more scientific than symbolic when it discovered the Van Allen Radiation Belts. Also, to provide overall direction to the American civilian space effort and to match Soviet successes, Congress created a new government agency, the National Aeronautics and Space Administration (NASA). It began operations on 1 October 1958.

The Soviets continued to produce other impressive space firsts that the United States seemed unable to duplicate. The Soviet *Luna 1* was the first satellite to escape Earth's gravity when it entered solar orbit on 2 January 1959, although it missed its target of the moon. *Luna 2*, launched on 12 September 1959, sent back clear images of the moon's surface, while *Luna 3* on 7 October 1959 photographed the far side of the moon.

As successful satellite launches became routine, both sides sought to be the first to place a man in orbit. The Soviets won this competition with the launch of cosmonaut Yuri Gagarin into a one-orbit voyage around Earth on 12 April 1961. The United States successfully put astronaut Alan Shepard into a suborbital low-level space flight on 5 May 1961. On 25 May 1961 President Kennedy classified the space race as an integral part of the battle between freedom and tyranny and raised the stakes when he announced the American goal of placing a man on the surface of the moon by the end of the decade. On 20 February 1962 the Americans finally matched the Gagarin flight by putting a man into Earth's orbit with the three-orbit trip of astronaut John Glenn.

Following Gagarin's mission, the Soviet Union's other firsts in manned flight included the first day-long space flight of Gherman Titov on 6 August 1961; the first female in space, Valentina Tereshkova, on 16 June 1963; and the first space walk, by Alexei Leonov, on 18 March 1965. Unmanned Soviet moon flight firsts included the *Luna 9* soft landing on the moon with the first photos from the lunar surface on 3 February 1966 and *Luna 10*, the first to be in moon orbit, on 3 April 1966. The Soviets made an impressive unpowered flight to the moon with a return to Earth with *Zond 5* on 14 September 1968, which seemed to suggest that they were on the verge of sending the first man to the moon.

Although it appeared to many that the Soviets remained ahead in the space race, the United States worked feverishly to meet Kennedy's challenge and budgeted funds for it that the Soviet Union could not match. The Americans gradually eliminated the early Soviet race lead by securing qualitative advances, which translated into successes such as the rendezvous and docking of two manned spacecraft and the development and flight testing of the *Lunar Module*, both of which were essential to placing a man on the moon's surface. The United States also matched other Soviet achievements when it conducted several space walks and long-duration flights, and it achieved a soft landing on the moon with *Surveyor 1* (2 June 1966). The United States achieved a major breakthrough with the year-long *Lunar Orbiter* low-level photo-mapping of the moon's surface beginning in August 1966, undertaken in preparation for a manned landing.

Both sides suffered human losses and engineering failures during the race. The most notable American loss occurred during the *Apollo 1* fire, which began during a routine launch pad test on 27 January 1967 and killed American astronauts Gus Grissom, Edward White, and Roger Chaffee. The results of the subsequent investigation appeared to doom the effort to meet President Kennedy's deadline. The Soviets suffered the first loss of a man during actual space flight when they announced the death of cosmonaut Vladimir

Komarov on 24 April 1967 during the crash landing of *Soyuz 1*. Other Soviet failures were masked by the secrecy and closed society of the Soviet Union, which also concealed its inability to keep pace with American successes.

While the Soviets were secretive, the United States won the publicity war. It announced its space mission schedule and proudly showed off its astronauts as men with “the right stuff.” This effort earned positive media coverage and the support of the viewing public. The Soviet Union’s propaganda machine also played up the country’s own progress, but most Soviet space missions were announced only after success was certain. Only after the collapse of the Soviet Union and the end of the Cold War did the world learn of the major flight limitations of the Soviet successes, their space failures, and the many near disasters that the cosmonauts endured.

The United States recovered relatively quickly from the *Apollo 1* disaster of January 1967. On 21 December 1968, American astronauts Frank Borman, James Lovell, and William Anders were launched into space in *Apollo 8*

Astronaut Buzz Aldrin stands beside a U.S. flag on the moon on 20 July 1969 during the *Apollo 11* space mission. (National Aeronautics and Space Administration)

and three days later orbited the moon. By then, the United States had a clear lead in the space race that the Soviets seemed incapable of closing.

When *Apollo 11* (Neil Armstrong, Edward “Buzz” Aldrin, and Michael Collins) landed on the moon on 20 July 1969, the Americans stood victorious in the space race. Five more successful landings on the moon went unchallenged by the Soviets. In September 1970 the Soviet Union succeeded in landing on the moon the *Luna 16* probe, which returned lunar samples to Earth. The Soviets were the first to establish a space station in orbit with *Salyut 1* on 19 April 1971. But in reality, once *Apollo 11* landed in the Sea of Tranquillity and returned safely home, the space race had ended.

Although the sense of a race was largely abandoned by both sides, further space exploration by both countries continued but without the Cold War fervor over which society was the most technologically advanced. In light of budget pressures and many unsolved domestic problems, leaders in both countries began to question the costs of space exploration. The spirit of political détente between the two superpowers began to reach into the field of space exploration. On 15 July 1975 both nations took a giant first step in long-term outer space cooperation with the launch and rendezvous of the *Apollo-Soyuz* mission. Cooperation between the two former adversaries continued in 1993 when the Soviets were invited to participate in the International Space Station.

The space race proved an energetic stimulus to both nations. The United States committed the funding necessary to win the race and, amid the unhappiness of the Vietnam War era, gave the nation a badly needed lift. While the Soviets could never match the United States in funding, they still achieved a stunning number of space firsts. These, however, came at the expense of those mission essentials required to send a man to the moon.

Spain

Southwestern European state. The Kingdom of Spain occupies some 85 percent of the Iberian Peninsula, which it shares with Portugal. Spain covers 194,968 square miles and had a 1945 population of some 27.5 million people. It is bordered by the Bay of Biscay and France to the north, Portugal to the west, the Mediterranean Sea to the south, and the Atlantic Ocean to the southwest.

Spain was united into a kingdom in 1492 and during the sixteenth century was among the most powerful states in Europe. Sapped by wars and not unrelated economic reverses, the country began a period of decline at the end of the sixteenth century and lost most of its vast overseas empire in the course of the nineteenth century. Spain lagged behind the rest of Western Europe in social and political reforms, leading to the expression “Europe stops at the Pyrenees.”

Considerable political turmoil developed in Spain as the nation industrialized, leading to the terrible bloodletting of the Spanish Civil War (1936–1939). The fighting pitted forces seeking modernization (the Republicans) against those favoring traditional Spanish values (the Nationalists). Perhaps half a million people died in the fighting and reprisals following the Nationalist victory. General Francisco Franco held power. One party alone, the *Falange Española Tradicionalista*, was permitted. The Falange’s doctrines were a blend of nationalism, traditionalism, and belief in a hierarchical order.

Spain was not officially a belligerent in World War II, although Franco was sympathetic to the fascist side and sent a division of troops (ostensibly volunteers) to the Eastern Front. Franco also opened Spanish ports to German submarines, and he annexed the international zone of Tangier, only to evacuate it in 1945. He made no move, however, against the principal British base at Gibraltar. Following the November 1942 American and British landings in North Africa, the Franco regime reverted to a more strict neutrality.

After the war, Spain was very much a pariah, especially as leftist parties controlled or influenced so many European governments. The United Nations (UN) voted overwhelmingly to deny Spain membership and, in December 1946, called for diplomatic sanctions against Madrid. Spain was also excluded from Marshall Plan aid.

This quarantine changed with the Cold War. In 1953 the United States and Spain signed a mutual aid agreement that provided U.S. military and economic assistance in return for air and naval bases. In 1955, the United States and Latin American states secured Spain’s admission to the UN.

The United States played a leading role in keeping the Spanish economy afloat. Between 1953 and 1975, Washington extended some \$3 billion in economic and military assistance. As Spanish liberals were quick to point out, this aid helped maintain Franco in power.

The Spanish Cortes (parliament) had begun to function again in 1942, but it was not representative of the people. The 1947 Law of Succession declared Franco chief of state for life and established a Council of the Kingdom to deal with the question of succession. Franco distrusted Don Juan, the son of King Alfonso XIII and heir to the throne, and in 1969 officially designated Don Juan’s son, Juan Carlos, as his successor. Franco also arranged a concordat with the Catholic Church in 1953. Roman Catholicism was declared the official religion of Spain, and the Church received guarantees of special privileges and financial assistance.

Most of Spain’s small overseas colonies vanished after the war. Spanish Morocco became part of the Kingdom of Morocco, but the almost purely Spanish cities of Ceuta and Melilla across the Straits of Gibraltar in North

Africa remained Spanish. Moroccan nationalists continued to demand the return of these as well as Ifni and the phosphate-rich Spanish Sahara, and the latter was indeed given up in 1975. Spanish Equatorial Africa also received independence in 1968. Spain retained the Balearic (Minorca and Mallorca) and Canary Islands.

The Spanish attempted to turn nationalism to their own advantage by mounting an intense and unsuccessful campaign against the British to return Gibraltar, which had been lost in 1704. This included banning British flights over Spain and closing the border with Gibraltar from the land side (1969–1985).

Franco died in November 1975 and was succeeded as head of state by thirty-seven-year-old King Juan Carlos I. To this energetic and charismatic ruler goes considerable credit for both the restoration and survival of democracy in Spain. The new king inherited serious problems. Inflation was running at 20 percent, and there was high unemployment and a growing trade deficit. Politically, there were threats from the Right, especially from among the military. Terrorism by Basque separatists had also increased. The king was, however, committed to democracy and change.

Juan Carlos initially continued Franco's premier, Carlos Navarro, in office. Six months later, however, Juan Carlos named Adolfo Suárez to the post. Suárez organized his own party, the Union de Centre Democrático (UCD, Union of the Democratic Center). He also legalized forty-eight political parties, including the Communist Party, and in 1977 he led the nation into its first free elections—which he won—since 1936. Suárez also began loosening the censorship laws of the Franco era.

A new constitution declared Spain a parliamentary monarchy with seats in the Cortes allotted on the basis of the parties' total votes. The constitution separated church and state, guaranteed human rights, abolished the death penalty, legalized divorce, recognized separate nationalities within Spain, and extended the vote to eighteen-year-olds.

Suárez also moved to give the Basques and Catalonia their own autonomous parliaments under overall Spanish administration. These two were the only regional groups that had been autonomous before Franco revoked such rights after the Civil War, and they were the first two to receive home rule. The Right protested these moves, fearful that they would lead to the breakup of Spain. Terrorism continued in the Basque country, but over time support for the terrorists diminished.

In February 1981, the militant Right attempted to seize power. Lieutenant Colonel Antonio Molina led some 200 armed Civil Guards in bursting into the Cortes when it was in session. They ordered deputies to the floor and fired

A Civil Guardsman who was inside the Spanish Congress of Deputies leaves through a window and surrenders, 24 February 1981. The failed coup d'état saw 200 armed Guardia Civil hold members of the Congress hostage for eighteen hours. King Juan Carlos I played a key role in quelling the coup attempt. (EFE/Corbis)

shots into the ceiling. The whole episode was carried live on Spanish radio and television. Molina demanded military rule, and ultimately four of Spain's nine top generals declared for the putschists. Juan Carlos, clad in military uniform, made a dramatic television appearance and told Spaniards that he would never agree to an attempt by force "to interrupt the democratic process." This step probably saved democracy in Spain. The rebellion quickly collapsed, and the siege of parliament lasted only eighteen hours. Millions of Spaniards marched through the streets throughout the country to demonstrate their support for democracy. In both 1982 and 1985 the government discovered and foiled other plots.

Although the ruling UCD continued in power, Leopoldo Sotelo replaced Suárez as premier. Meanwhile, Suárez formed a new party, the Democratic and Social Center, looking to cooperate with the socialists. In 1982 Spain joined the North Atlantic Treaty Organization (NATO). Its modernizing military had 370,000 troops, more than 190 aircraft, 29 warships, and 8 submarines. More important was Spain's strategic geographical position controlling the western mouth of the Mediterranean.

In October 1982, the Spanish Socialist Workers' Party (PSOE) won a solid majority in the parliamentary elections, which turned on economic issues. Márquez Felipe González became the first socialist premier in Spain since the Spanish Civil War. This also marked the first time in Spanish history that the socialists held an absolute majority in the parliament. The charismatic González turned the party away from Marxism. The socialists promised the creation of new jobs as well as continuation of the democratizing process.

A high point of González's first term was Spain's entry into the European Common Market in January 1986 (full membership came in 1992). The PSOE had come to power insisting on a referendum on membership in NATO. Once in power, the PSOE supported continued membership but had to proceed with the referendum, which passed. The PSOE did insist on a continued ban of nuclear weapons in Spain (a U.S. bomber had accidentally released an atomic bomb off the coast of Spain), maintenance of the Spanish military outside the NATO command structure, and a cutback in U.S. troops in Spain.

In the January 1986 parliamentary elections, the PSOE again won a majority, and González returned to the premiership. After a year of sometimes acrimonious talks, a base agreement was worked out with the United States. Some 12,500 U.S. military personnel were stationed at three air bases (Zaragoza, Torrejon, and Moron) and a naval base (Rota) that provided support for the U.S. Sixth Fleet in the Mediterranean. There was considerable resentment on the part of the Left over U.S. support for Franco and what was seen as U.S. heavy-handedness in foreign policy, particularly toward the Middle East. Many Spaniards also opposed U.S. Latin American policies, and there was no sense of a threat to Spain from the Soviet Union.

In October 1989, González and his governing PSOE won a narrow national election victory and a margin of one seat in the Cortes. The New Right in Spain actively supported the socialists, who were completely committed to a

market-driven economy. By the end of the Cold War, Spain had come far indeed. Democracy appeared solidly rooted, and Spain was the world's twelfth-largest industrial power.

Spiegel Affair (1962)

Political scandal involving top-level political leaders in the Federal Republic of Germany (FRG, West Germany). The 1962 *Spiegel* Affair initially involved West German Minister of Defense Franz Josef Strauss. Ultimately, however, it led to the forced retirement of Konrad Adenauer, West Germany's first chancellor, in 1963.

In the 8 October 1962 issue of *Der Spiegel*, West Germany's leading weekly news magazine, an article appeared that was highly critical of the German Army (Bundeswehr) during joint North Atlantic Treaty Organization (NATO) military maneuvers (FALLEX 62). The article, one in a series of articles aimed at discrediting Strauss by accusing him of misconduct and corruption, revealed the inadequacy of the West German military. In retaliation, Strauss ordered a raid on the offices of *Spiegel*. Eleven staff members were arrested and subsequently charged with leaking state secrets.

The article itself quickly became less important than the issue of freedom of the press in a democratic society. Strauss, an influential politician because of his high-profile role in the Christian Social Union (CSU), the sister party in Bavaria of the Christian Democratic Union (CDU), compounded the damage by lying about his role in the arrest of a *Spiegel* staffer in Spain. It soon became apparent that both Strauss and Adenauer had misled members of the Bundestag (parliament) when they had been questioned by the legislative body concerning their roles in the affair. Some of the tactics used in the affair, moreover, reminded Germans of Nazi measures in the 1930s. Adenauer eventually agreed to accept Strauss's resignation and confirmed that he would retire as chancellor in 1963.

When the *Spiegel* Affair broke, Adenauer failed to recognize the gravity of the situation and tried to use his considerable influence to preserve Strauss's position. For more than a decade, Adenauer had practiced what some observers termed "chancellor democracy," an approach to representative government that emphasized the importance of a powerful chancellor, and he had become accustomed to getting his way. The *Spiegel* Affair was a great test of West Germany's democratic institutions. In the end, democracy and the rule of law prevailed. Adenauer's exit also opened the way toward more representative democracy.

Portuguese military officer and first president of Portugal's Provisional Government (April–September 1974) following the April 1974 revolution. António de Spínola was born in Estremoz, Portugal, on 11 April 1910. He entered the army after graduating from the Colégio Militar (Military College) in 1928. He served in the Portuguese intervention forces in the Spanish Civil War (1936–1939) and accompanied the German Army as an observer on the Eastern Front during World War II.

During 1961–1963 Spínola served in the beginning stages of the Angolan nationalist insurgency. By 1968 he was named commanding general and high commissioner of Guinea-Bissau, where the Party for the Independence of Guinea and Cape Verde was gaining strength, thanks in part to Soviet support. Despite the innovative counterinsurgency tactics that he employed in Guinea with moderate success, he became convinced of the ultimate futility of Portugal's African wars, which were consuming the lion's share of Portugal's resources. Furthermore, he was disillusioned by dictator Marcelo Caetano's refusal to allow any negotiations with the insurgents. It was during his time in Guinea that Spínola's charisma and outspokenness made an impression on the younger generation of officers who later would topple Caetano.

Upon his return from Africa in 1973, Spínola was named chief of staff of the armed forces. In February 1974, without government approval, he published his influential book *Portugal and the Future*. It called for liberalization

and democratization at home and an immediate political solution to end the anticolonial wars in Africa. The book became a best-seller and heralded the end of Caetano's *Estado Novo* (New State). In April 1974 a group of young officers known as the Armed Forces Movement (MFA), many of whom had served under Spínola, toppled Caetano in a nearly bloodless coup and established the Second Republic. They first named Spínola head of the Junta of National Salvation and then provisional president of Portugal.

Spínola and the officers of the MFA disagreed, however, about the extent to which the coup should entail substantial social change and especially about how quickly and thoroughly Portugal should divest itself of its colonies. Spínola envisioned a gradual withdrawal and possibly a Portuguese federation to replace the empire. The more radical leaders of the MFA wanted unequivocal and immediate withdrawal of all troops. Spínola resigned in September 1974, and the next year he conspired with conservatives to overthrow the government but was forced into temporary exile. Following his departure, the establishment of the republic, and decolonization, some of Portugal's former colonies—especially Angola—attracted increased Soviet, Cuban, and American involvement. Spínola died in Lisbon on 13 August 1996.

Sputnik

(4 October 1957)

First man-made, Earth-orbiting satellite, launched by the Soviet Union on 4 October 1957. Although commonly used to describe the first satellite, *Sputnik*, meaning “fellow traveler,” actually designates a series of satellites that were numbered sequentially. *Sputnik I* weighed 184 pounds, excluding the propulsion vehicle, and was placed into space as part of the 1957–1958 International Geophysical Year (IGY), which included the objective of launching artificial satellites for scientific research. *Sputnik I* was followed by the 3 November 1957 launch of *Sputnik II*, a 1,118-pound capsule with a dog named Laika as a passenger. These two stunning Soviet successes occurred before the failed launch attempt of *Vanguard*, the American contribution to the IGY scientific effort, on 6 December 1957.

The *Sputnik* launches, especially when contrasted with the American failure, were important symbols of Soviet technological prowess, which marked the beginning of the intense space competition with the United States that became known as the space race. The launch provided the Soviet Union with an important propaganda tool that was used to publicize the alleged advanced nature of Soviet society and the progress that was possible in a modern communist society.

The American public was shocked by the *Sputnik* success, and American domestic politics were soon dominated by discussions of the Soviets’ technological superiority and of the implied threat to the United States. American political leaders quickly pushed for changes that would restore public confidence and retain technological superiority over the Soviets. The U.S. government responded to the challenge by passing the 1958 National Defense Education Act, which provided incentives to promote the study of science, mathematics, engineering, technical education, and other fields deemed necessary to national security. Additionally, the National Aeronautics and Space Act of 1958 created the National Aeronautics and Space Administration (NASA) to help centrally organize and coordinate American space efforts. However, military-oriented space programs, such as reconnaissance satellites, remained outside NASA and were cloaked in secrecy.

Militarily speaking, the launch of a Soviet R-7 rocket, which propelled *Sputnik* into orbit, confirmed the Soviets’ capability to field nuclear-armed intercontinental ballistic missiles (ICBMs). This created an impression of

Sputnik 1, the first manmade satellite to orbit Earth, was launched by the Soviets on 4 October 1957. Weighing 184 pounds, it circled Earth every ninety minutes. (Bettmann/Corbis)

vulnerability in the United States and led to intensified American efforts to enhance early warning and defensive systems, expand the national civil defense program, and strengthen strategic nuclear forces. *Sputnik* directly contributed to the erroneous idea that a missile gap had developed between the Americans and Soviets, placing the United States at a comparative disadvantage. President Dwight D. Eisenhower knew that no such gap existed but was bound to maintain silence on the issue, as the information was highly classified. Ultimately, the missile gap became a hot-button issue in the 1960 presidential campaign.

For the Eisenhower administration, there was a beneficial side to *Sputnik*, however, as it removed concerns that the Soviet Union would raise national sovereignty issues in response to an orbital overflight by an American satellite. *Sputnik* established a precedent for satellites operating over sovereign territories and opened the legal window for reconnaissance satellite operations that were already being planned by the U.S. government. *Sputnik I* was an important scientific first, a clear public relations victory in the Cold War, and an important event that shaped the continuing international struggle between the United States and the Soviet Union.

Sri Lanka

Island nation in southern Asia. Known as Ceylon until 1972, Sri Lanka lies just 20 miles off the southern tip of India, in the Indian Ocean. Sri Lanka encompasses 25,332 square miles, slightly larger than the U.S. state of West Virginia, and had a 1945 population of approximately 7.2 million people. Largely shaped by India, Sri Lanka's political and cultural development was nonetheless unique. Moreover, unlike India, Sri Lanka never commanded the full attention of the superpowers during the Cold War. Rather, its modern history has been dominated by internal conflict between two principal cultures—the Buddhist Sinhalese and the Hindu Tamils—that still exists today.

As an important source of tea, coffee, spices, and rubber, Ceylon witnessed nearly 450 years of colonialism under Indian kingdoms as well as the Portuguese, Dutch, and British. In the nineteenth century, the British imported Tamil laborers from southern India to work Ceylonese plantations. This changed the balance between ethnicities but still left the Sinhalese comprising 75 percent of the population compared to a Tamil minority in northern and eastern Ceylon at just 20 percent.

Despite this divide, the process of decolonization came relatively peacefully for Ceylon. Strategically located, it was headquarters for the Anglo-American Southeast Asia Command during World War II. Nonetheless, in 1946 the British pulled out. Whereas in India the British faced tremendous pressure from nationalists, in Ceylon there was little activity by either Sinhalese or Tamils. Independence was more the result of British disengagement than any internal impulse. Indeed, many Ceylonese wished to remain part of the British Empire.

With British encouragement, however, Sinhalese leaders passed a constitution in 1946 and a bill of independence in 1947. On 4 February 1948, Ceylon became a self-governing dominion within the British Commonwealth but remained highly dependent on Britain for trade and aid during the first decade of independence. In 1950, Ceylon's capital hosted Commonwealth and Western nations in the so-called Colombo Plan for economic development in Asia. Anxious about possible Indian designs, Ceylon also relied on the British for defense, allowing them to maintain their Indian Ocean naval

base at Trincomalee. Accordingly, Ceylon pursued a predominantly pro-Western foreign policy. At the same time, however, relations with the communist world were amicable. Ceylon recognized the People's Republic of China (PRC) in 1950 and concluded trade pacts with Beijing in 1952. In 1955, Ceylon gained admission to the United Nations (UN) after the Soviet Union dropped its opposition. Two years later, the two nations exchanged diplomatic representation and signed trade accords.

Ceylon's foreign policy during the Cold War was shaped most by Solomon Bandaranaike, prime minister during 1956–1959. He nationalized major industries, abrogated the defense agreement with Britain in 1959, and pursued a self-professed neutral foreign policy by joining the Non-Aligned Movement. In reality, Bandaranaike's foreign policy was more opportunistic, playing the great powers against each other. He strengthened ties with communist countries, concluding agreements with the PRC that brought Ceylon \$41 million in aid during 1957–1967. At the same time, he maintained relatively good relations with the United States. Washington cut aid to Ceylon in 1963 following the nationalization of petroleum industries but resumed the flow in 1966 after American companies were compensated. By 1991, the United States had granted more than \$1 billion in aid. Throughout the Cold War, the Voice of America operated in Ceylon, and U.S. naval vessels made regular calls there. This balancing act remained the consistent focus of Ceylon's foreign policy until the 1990s.

Bandaranaike's domestic policies were equally important. He ignited conflict between the Sinhalese and Tamils by making Sinhalese the only official language and by implementing other policies that exacerbated communal politics. The Tamils began a civil disobedience movement, and occasional violence erupted. In 1959 Bandaranaike was assassinated, not by Tamils but by a Buddhist radical who wanted the prime minister to do even more to establish Sinhalese dominance.

The April 1960 elections were won by Bandaranaike's widow, Sirimavo Bandaranaike, the world's first female prime minister. She expanded her husband's foreign and domestic policies during two terms in office (1960–1965, 1970–1977). In 1962 she hosted a conference of neutrals to mediate the Sino-Indian War. In 1972 she changed the country's name to Sri Lanka (Sinhalese for "resplendent land") and declared it a republic. She then promulgated a new constitution and made Buddhism a state religion, further alienating the Tamils. Bandaranaike also faced insurrection from the Maoist People's Liberation Front (MPLF) that prompted a state of emergency lasting six years (1971–1977).

In 1977 Bandaranaike was ousted by J. R. Jayawardene, who served as prime minister and president during 1977–1988. Later that year the National Assembly adopted a presidential system of government, appointing Jayawardene to the office. Criticized by some as corrupt and authoritarian, he liberalized the economy and tilted to the West. He was elected president again in 1982 but had to contend with an increasingly divided nation. In May 1983, thirteen Sri Lankan soldiers were killed by the Liberation Tigers of Tamil Eelam (LTTE, or Tamil Tigers), militants who demanded an independent

homeland. Ethnic violence then rocked the country, prompting the government to declare a state of emergency. Attempts to crush the insurgents failed. Aided secretly by supporters in the southern Indian state of Tamil Nadu, the guerrillas were effectively organized and well armed.

Agreements in 1987 brought Indian troops, ostensibly as peacekeepers, to diffuse the situation. They remained until 1990 but failed to stop the violence. In fact, the unrest grew worse. Supporting the Tamils, the MPLF renewed attacks on the government in 1989. In 1990 Tamil guerrillas turned against Muslims who supported the Sinhalese. In 1991 the Indian government took over direct rule of Tamil Nadu, provoking the LTTE suicide bomb attack that killed former Indian Prime Minister Rajiv Gandhi that May. By 1992 nearly 20,000 people had been killed in the insurgency, including many senior military and government officials. Then, in May 1993, the LTTE assassinated President Ranasinghe Premadasa, causing even more bloodshed.

In August 1994, Chandrika Kumaratunga became prime minister of a coalition government that bridged both Buddhist extremists and Marxist revolutionaries. In November 1994 she became the first woman elected president in Sri Lanka. Her government thereafter veered between military campaigns and peace negotiations, the most recent of which started through Norwegian intermediaries in 2001.

Stalin, Josef

(1879–1953)

As many as 20 million people may have died as a direct result of Stalin's policies.

Russian revolutionary and dictator of the Soviet Union (1929–1953). More absolute a ruler than any Russian tsar, Josef Stalin (born Iosif Vissarionovich Dzhugashvili) was one of the most powerful and influential figures in history and certainly one of its most horrific. As many as 20 million people may have died as a direct result of his policies.

Much of Stalin's early life remains obscure, in part because he took pains to rewrite it. Born in the town of Gori, Georgia, in the Caucasus on 21 December 1879, he was the only child of his parents to survive infancy. His father was a cobbler and his mother a washerwoman and domestic. His father (who died in a barroom brawl) was an alcoholic and beat young Josef regularly.

Stalin's mother wanted Dzhugashvili to become a priest, and he graduated from the four-year elementary ecclesiastical school in Gori in 1894 and then entered a theological seminary in Tiflis (Tbilisi) on a scholarship. He grew up to be a small man, barely five feet in height, with a pockmarked face and a withered arm (or at least one of sufficient infirmity to keep him out of the Russian Army). He either quit the seminary or was expelled. In any case, he said it was there that he was introduced to Russian Marxism.

In 1901 Dzhugashvili joined the Russian Social Democratic Labor Party. His activities to secure funds included robberies and counterfeiting operations. He was subsequently arrested, tried, and convicted. Exiled to Siberia in 1903, he escaped a year later. His enemies would later charge that he was also in the pay of the tsarist secret police.

One of Dzhugashvili's aliases, the one by which he became best known, was that of Stalin (Man of Steel), given to him by his fellow revolutionaries for his strength and ruthlessness. Coarse and ill-mannered, Stalin was six times arrested and exiled and escaped five times. Freed during the March 1917 Revolution, he returned to Petrograd and became editor of the party newspaper, *Pravda* (Truth). His role in the Bolshevik seizure of power that November is unclear, but he clearly did not take a leading part. Leon Trotsky, a rival for power later, remembered Stalin's role as "a gray blur."

Stalin was active in the Russian Civil War (1918–1921) and the Russo-Polish War (1920–1921), and from 1920 to 1923 he was commissar of nationalities. In 1923 he assumed the post of secretary-general of the Communist Party of the Soviet Union (CPSU), a position he used as a springboard to power. His political rise has been ascribed to his skill at infighting and playing one faction against another as well as his absolute ruthlessness, but he also put in long hours at his job and deserves considerable credit for his achievement.

By the late 1920s, Stalin had triumphed over his rivals, chief among them Trotsky, to wield absolute power in the Soviet Union. Stalin created the bureaucratic system and refined both the secret police and slave labor camps begun under his predecessor, Vladimir Lenin. Stalin abandoned Lenin's New Economic Policy (NEP) that permitted a degree of capitalism in Russia and initiated a series of five-year plans to modernize the economy,

concentrating on heavy industry. Stalin's economic policies included the forced collectivization of agriculture that claimed an estimated 10–15 million lives.

Stalin was personally responsible for the Great Purge trials of the 1930s that consumed virtually all of the top party leadership. Also falling victim to the Great Purge were military leaders, including 60 percent of Red Army officers above the rank of major. In the so-called Deep Comb-Out that accompanied the show trials, hundreds of thousands of Soviet citizens simply vanished without benefit of judicial procedure.

Much of the blame for the dismal showing of the Red Army in the 1939–1940 war with Finland and at the outset of the German invasion of the Soviet Union in June 1941 must be attributed to Stalin's policies. He had also labeled repeated warnings of an impending German attack as "Western disinformation." He grew in stature as a military commander and strategist during the war, however. Learning the art of war and absorbing specialist military information, he made all important strategic decisions for the Red Army as well as taking many decisions on the tactical level.

In foreign affairs, Stalin seized opportunities that presented themselves in Eastern Europe and the Balkans. Knowing exactly what he wanted, he met with Western leaders in Moscow and at the Tehran, Yalta, and Potsdam conferences. In 1919, following World War I, the West had quarantined the new communist Russia with a series of new successor states, endeavoring to contain communism with a cordon sanitaire. Now, following World War II, Stalin sought the reverse, insisting at the very least on governments friendly to the Soviet Union in order to provide security for a badly wounded Soviet empire. Throughout his long reign, Stalin was intensely suspicious of foreigners and foreign, above all Western, influences. Thus, Soviets who had been in the West, including Red Army personnel captured during the war, were immediately suspect and treated as enemies. A great many people who had been in the West, voluntarily or involuntarily, were shipped off to the gulags. Many Soviet citizens had openly cooperated with the Germans during the war. Although Ukrainians were far too numerous to be uprooted, Stalin did make an example of the Crimean Tartars. He ordered some 300,000 of them sent to Uzbekistan in Central Asia.

Although there were fears in the West that Stalin's plans included the communization of Western Europe, the dictator's immediate motivation was simply that of securing the Soviet empire. Because of the Red Army presence on the ground, there was little that Western leaders could do to prevent this short of war with the Soviet Union, which despite the U.S. nuclear monopoly was unimaginable to Washington in 1945. Stalin's regime emerged from the war with all of Eastern Europe and much of Central Europe under its control.

Josef Stalin, dictator of the Soviet Union during 1929–1953.
(Library of Congress)

The Soviet Union had suffered grievously during the war, with perhaps 27 million people dead and widespread physical destruction. Stalin put the population to work rebuilding, although his people paid for this in retention of the forty-eight-hour workweek and living standards well below those of 1940. In a new five-year plan, he continued his emphasis on building heavy industry, although some attention was paid to pressing housing needs.

To unite the Soviet people under his leadership, Stalin proclaimed the belief of a communist world threatened by encircling enemies. Everything was done to maintain the intense nationalist sentiments aroused by the ordeal of the long struggle against the Germans in World War II. Andrei Zhdanov, political boss of Leningrad, became the guiding spirit of this ideology, known as Zhdanovshchina. It championed Russian nationalism and attacked Western influence (now known as bourgeois cosmopolitanism), glorified communism, and above all trumpeted the accomplishments and inspiration of the Great Leader, Stalin, attributing to him all Soviet successes.

Once Stalin rejected a closer relationship with the West, the Cold War was launched in earnest. Stalin refused to allow the East European Soviet satellites to participate in the European Recovery Program (Marshall Plan), and following an impasse over German reunification on Soviet terms and impending Western currency reform in the Allies' zones of Germany, in the summer of 1948 Soviet troops cut off Western land access to the city of Berlin. This sparked a major East-West confrontation and led to the Berlin Airlift. Stalin's tactics and saber rattling resulted in the 1949 formation of the North Atlantic Treaty Organization (NATO) and prompted the movement toward West European unity.

Stalin pushed hard to develop an atomic bomb, a process greatly accelerated by Soviet espionage. Following the explosion of the Soviet Union's first nuclear device in late 1949, he adopted a less militant foreign policy, jettisoning the militant expansionism of the immediate postwar years in favor of one that was comparatively defensive in nature. While maintaining the traditionally truculent Soviet tone, he abandoned the further extension of his European empire. This move was accompanied by a massive propaganda effort, the great Stalinist Peace Campaign. Agitation against colonialism was increasingly used to weaken the Western hold on global military bases, while Soviet foreign policy also sought to sow discord between the United States and its allies.

Early in 1950, Stalin gave his blessing to plans by Democratic People's Republic of Korea (DPRK, North Korea) leader Kim Il Sung to invade the Republic of Korea (ROK, South Korea) and reunify the peninsula under communist rule. Stalin evidently believed Kim's contention that the United States would either do nothing or would not react in time to save South Korea. Later, when the war went badly for Kim and North Korea, Stalin sanctioned military intervention by the People's Republic of China (PRC).

The last act in the Stalinist drama was the so-called Doctors' Plot. Fed by Stalin's continuing paranoia, nine doctors, six of them Jewish, were accused of employing their medical skills to assassinate prominent individuals, among

them Zhdanov, Stalin's heir apparent. Many in the Soviet Union believed that this heralded a return to the purges of the 1930s. But it may only have been a maneuver to strike out against the growing ascendancy of a leadership group headed by Georgy Malenkov and Lavrenty Beria or perhaps an effort to imbue the bureaucracy with renewed revolutionary zeal, much the way that Mao Zedong would do in the Cultural Revolution in China. Whatever the reasons, Stalin's death in Moscow on 5 March 1953, following a paralytic stroke, came as a relief to many in highly vulnerable Soviet leadership positions. His eventual successor, Nikita Khrushchev, began the slow process of de-Stalinization and denounced the many excesses of the Red Tsar.

Star Wars

Secret police of the German Democratic Republic (GDR, East Germany). The Staatssicherheitsdienst der Deutschen Demokratischen Republik, known simply as the Stasi, was one of the central pillars of the highly repressive East German regime. The Stasi functioned as a secret intelligence service, a

Stasi

political secret police force, and a judicial inquiry organization. In Bautzen, the Stasi even maintained a prison for political dissidents. Allegedly, the Stasi was supervised by the Council of Ministers, but its real purpose was securing the Socialist Unity Party's (SED) hold on power.

The Stasi identified itself as a revolutionary organ, with a tradition that dated back to the 1917 foundation of the Bolshevik security service, the Cheka. Many Stasi officers were members of the Communist Party of Germany (KPD), and some had even worked for the Soviet Komitet Gosudarstvennoi Bezopasnosti (KGB). In correspondence with these and other secret police ministries, the Stasi saw itself as the shield and sword of the single Communist Party. This was clear from the beginning. The Soviet Military Administration in Germany (SMAD), after having defeated Adolf Hitler's forces, took full control in the Soviet Occupation Zone (SBZ). Together with German communists, they began to build a secret police organization as early as the spring of 1945. This department (K-5) of the Kriminalpolizei was headed by Erich Mielke, a confirmed party soldier. But not until the founding of East Germany in October 1949 was a ministry of secret service instituted. On 8 February 1950 a proclamation was made creating the Ministry of State Security, headed by Wilhelm Zaisser (and later Ernst Wollweber). Nevertheless, throughout the 1950s, KGB officers and instructors dominated the Stasi.

Because the Stasi employed its personnel based on their political beliefs and socialist zeal rather than their education and skills, its performance was seriously flawed during its first two decades. The East Berlin Uprising of 17 June 1953 caught the Stasi by surprise. It reacted with singular brutality, kidnapping Germans from the Federal Republic of Germany (FRG, West Germany) and West Berlin, torturing detainees, and worse. Only in the 1960s did the Stasi develop more sophisticated and subtle methods. When Erich Mielke took over the organization in 1957, the Ministry of State Security employed 14,000 official workers. Ten years later their number had grown to 33,000. By 1977 Stasi personnel reached 66,000, and at its peak in 1987, some 90,000 people worked for the Stasi.

The number of unofficial employees (agents, or *Inoffizielle Mitarbeiter*) was even higher, at 173,000 during the late 1980s. These unofficial collaborators were counted as the Stasi's most effective weapon in the battle against the enemy, that is, anyone who endangered the socialist order. These elements included foreign enemies, reactionaries in West Germany, or domestic oppositionists. To combat these divisive elements, the foreign intelligence service (HVA), headed by the charismatic Markus Wolf during 1952–1986, and the secret police department (the Hauptabteilung XX) cooperated closely.

Beginning in the 1970s, the ministry developed into a central institute for security, repression, and party power. The Stasi, under the reign of Mielke, was wholly dedicated to the single Communist Party and deeply intertwined with it. It was not subject to parliamentary control and took orders directly from party officials. However, during the autumn of 1989, when the East German regime collapsed, the Stasi quickly disintegrated. Dissidents occu-

pied Stasi headquarters in Berlin. The ministry was dissolved in early 1990, and its files can now only be accessed by the public under certain conditions.

Roman Catholic archbishop, cardinal, and Croatian patriot. Born in Brezarić on 8 May 1898, the eighth of twelve children of a peasant family, Aloysius Stepinac joined the Austro-Hungarian Army in 1916 as a second lieutenant and was taken prisoner in the war against Italy. Upon his release in 1919, he began undergraduate studies in agriculture at Zagreb University.

Stepinac decided to become a priest and went to Rome in 1924. During 1924–1929 he obtained two doctorates (one in theology, the other in philosophy) and returned home in October 1930. He was then appointed secretary to the archbishop of Zagreb and in June 1934 was nominated to be coadjutor of the archbishop. When the archbishop died in December 1937, Stepinac became archbishop of Zagreb.

Stepinac's behavior during World War II is controversial. Some sources accuse him of direct involvement with the fascist Ustashi regime, while others maintain that he acted with diffidence toward the government. In any case, with the end of the war, Yugoslav communist leader Josip Broz Tito proposed that Stepinac establish an autonomous Catholic Church independent of the Vatican. He refused and on 18 September 1946 was arrested and charged with cooperating with the Ustashi regime. In October 1946 Stepinac was sentenced to sixteen years imprisonment. He remained in prison until 1951, when Tito's government commuted his sentence to house arrest in Krašić.

In an investiture ceremony in Rome on 12 January 1953, Pope Pius XII made Stepinac a cardinal, a gesture that led to the breaking of diplomatic relations between Yugoslavia and the Holy See. Stepinac died on 10 February 1960 at Krašić and was buried behind the main altar in the cathedral in Zagreb. He was subsequently rehabilitated and beatified by Pope John Paul II on 3 October 1998.

Stettinius, Edward Reilly, Jr.

(1900–1949)

U.S. Secretary of State Edward Stettinius Jr. (Library of Congress)

U.S. Lend-Lease administrator during 1942–1943, undersecretary of state during 1943–1944, secretary of state during 1944–1945, and ambassador to the United Nations (UN) during 1945–1946. Born on 22 October 1900 in Chicago, Illinois, Edward Stettinius was the son of a prominent industrialist who moved to New York in 1914 to direct Allied purchasing for the private banking house J. P. Morgan and Company during World War I. After attending the University of Virginia, where he spent much time on extracurricular social work, he joined General Motors and implemented innovative employee benefit programs. Moving to United States Steel in 1934, four years later he became chairman of the board.

In 1940 Stettinius's earlier business-government liaison work on New Deal industrial recovery programs brought him the position of chairman of the War Resources Board. The following year he became director of priorities in the Office of Production Management, where he encouraged the development of synthetic rubber. In 1942 President Franklin D. Roosevelt appointed Stettinius administrator of the Lend-Lease Administration, whose organization he streamlined and rationalized while successfully winning congressional support for its sometimes controversial aid programs to the Allies.

In September 1943 Stettinius became undersecretary of state, working under Secretary Cordell Hull with a commission to improve and coordinate the State Department's notoriously inefficient structural organization and improve its lackluster public image. Stettinius's other major responsibility was the creation of an international security organization, the UN. After laying the groundwork for this in discussions with British Foreign Office counterparts in the spring of 1944, Stettinius attended the August 1944 Dumbarton Oaks conference, where he played a major role in drafting the UN Charter.

When poor health caused Hull's resignation in November 1944, Stettinius succeeded him. The new secretary

instituted public relations policies that greatly enhanced his department's popularity. He attended the controversial February 1945 Yalta Conference of Allied leaders, helping to draft American proposals for a Declaration on Liberated Europe and further clarifications of the UN Charter. Stettinius's greatest diplomatic contributions occurred from April to June 1945 at the San Francisco Conference of Allied Nations, which drafted the final UN Charter. His diplomatic skills were instrumental in persuading the numerous delegates to reach consensus on a charter that all could support.

Many officials considered Stettinius a lightweight. During the San Francisco Conference, President Harry S. Truman, who succeeded Roosevelt in April 1945, decided to replace Stettinius with South Carolina Democrat James F. Byrnes. On 27 June 1945, one day after the conference ended, Stettinius resigned to become the first U.S. representative to the new UN.

Disillusioned with the Truman administration's failure to use UN mechanisms to resolve the developing Cold War, in June 1946 Stettinius left the organization and became rector of the University of Virginia. In 1949 he published a carefully documented account of the Yalta Conference, defending Roosevelt's decisions there. Stettinius died of a heart attack in Greenwich, Connecticut, on 31 October 1949.

U.S. politician, Democratic Party presidential candidate, and ambassador to the United Nations (UN). Born in Los Angeles, California, on 5 February 1900, Adlai Stevenson attended the elite Choate School and Princeton University and then earned a law degree from Northwestern University Law School. Joining the leading Chicago law firm of Cutting, Moore and Sidley, he rapidly won social prominence and a wide circle of intellectual friends, serving on many public service organizations, most notably the Chicago Council on Foreign Relations. Elected its president in 1935, he worked energetically

**Stevenson, Adlai
Ewing, II**
(1900–1965)

A prominent figure in the Democratic Party, Adlai Stevenson is perhaps best known for his unsuccessful bids for the U.S. presidency in 1952 and 1956. Stevenson held several high positions in government, including assistant to the secretary of state, governor of Illinois, and U.S. representative to the United Nations. (Library of Congress)

on its behalf, winning a reputation as a stellar public speaker.

A firm supporter of American intervention in World War II, in 1940 Stevenson headed the Chicago chapter of the Committee to Defend America by Aiding the Allies. In 1941 he joined the Navy Department, remaining there until 1944. Shortly afterward, he joined the State Department as a special assistant to the secretary of state, where he stayed until 1947, serving on the American team at the 1945 San Francisco conference that created the UN and attending several UN General Assemblies.

Returning to Illinois, in 1948 Stevenson was elected governor on the Democratic ticket. As governor, he launched an activist and progressive social reform program and attempted to eradicate corruption. An outspoken opponent of McCarthyism, Stevenson quickly won national recognition as a remarkably eloquent rising political star. He was drafted on the third ballot at the Democratic National Convention in 1952, an open contest since the incumbent president, Harry S. Truman, damaged by McCarthyism and the Korean War, had chosen not to run again. Despite unstinting liberal enthusiasm for Stevenson, he faced an uphill battle against Dwight D. Eisenhower, the popular Republican candidate. Little divided them on foreign policy. Both were staunch Cold Warriors who implicitly endorsed the Truman administration's containment policy. In practice, Stevenson's position on Korea closely resembled that of Eisenhower, yet Stevenson offered no new initiatives but rather an indefinite continuation of the existing Korean stalemate. In 1952 and again in 1956, Eisenhower defeated Stevenson by wide margins.

In 1961, Stevenson hoped that the new Democratic president, John F. Kennedy, would name him secretary of state, but he instead became ambassador to the UN, a position he held for the rest of his life. Both John and Robert Kennedy regarded Stevenson as overly liberal, weak, and indecisive, so they treated him rather contemptuously. For fear of provoking congressional conservatives and the China Lobby, Stevenson was forbidden to express his personal preference for U.S. recognition of the communist People's Republic of China (PRC). Left ignorant of planning for the April 1961 Bay of Pigs invasion of Cuba, Stevenson at first erroneously informed the UN that his country had played no part in it.

Stevenson's finest hour came during the Cuban Missile Crisis, when he aggressively demanded that the Soviet UN representative confirm whether or not his country had deployed nuclear missiles in Cuba and advised the president to take a relatively moderate line during the crisis. Stevenson died in London on 14 July 1965.

U.S. secretary of war (1911–1913, 1940–1945) and secretary of state (1929–1933). Born in New York City on 21 September 1867, Henry Stimson was educated at Phillips Andover Academy, Yale University, and Harvard Law School. In 1891 he entered the law firm of Root and Clark. Its leading partner, Elihu Root, a future secretary of war and secretary of state, became one of two role models, the other being future president Theodore Roosevelt, whom Stimson would try to emulate throughout his career.

Like Roosevelt, Stimson found public service more satisfying than a career in law and soon became active in New York Republican politics. Appointed secretary of war in 1911, he followed in Root's footsteps in attempting to modernize the U.S. Army, improving troop training and the efficiency of the General Staff, although congressional opposition blocked his contemplated consolidation and rationalization of army posts around the country.

When World War I began in Europe in 1914, the staunchly interventionist and pro-Allied Stimson campaigned ardently for preparedness, massive increases in American military budgets in anticipation of war with Germany, and universal military training. After American intervention, he volunteered and served in France as a lieutenant colonel of artillery. Returning from the war, he was convinced that the United States must assume a far greater international role.

Appointed by President Herbert Hoover as secretary of state in 1929, Stimson protested firmly against Japan's 1931 establishment of the puppet state of Manchukuo, instituting the policy of American nonrecognition of its government. In the later 1930s, he was among the strongest advocates of firm American opposition to fascist states' demands. When World War II began in Europe in 1939, Stimson, a firm believer in an Anglo-American alliance, outspokenly demanded massive American assistance to the Allies.

Stimson, Henry Lewis
(1867–1950)

In the course of his distinguished public service career, Henry L. Stimson served in the cabinets of four presidents. As secretary of state in 1932, he established a policy, later called the Stimson Doctrine, following the Japanese invasion of Manchuria not to recognize changes in violation of existing international nonaggression pacts. As secretary of war from 1940 to 1945, he recommended employing the atomic bomb against Japan. (Library of Congress)

Although or perhaps because he was a prominent Republican, in summer 1940 Democratic President Franklin D. Roosevelt made him secretary of war, a position Stimson held until the war ended. He attracted an able group of younger lawyers and businessmen such as Robert A. Lovett, Robert P. Patterson, and John J. McCloy who not only oversaw the massive recruitment and industrial mobilization programs that the war effort demanded but also accepted and wished to carry forward the forceful internationalist tradition that their revered chief embodied.

In the spring of 1945, Stimson was the first official to inform President Harry S. Truman that his country and Britain had developed an atomic weapon. Stimson approved its use against Japan but was largely responsible for the July 1945 Potsdam Declaration, whereby the Allies first invited Japan to surrender or face attack by unspecified but highly destructive new weapons. He later published an article justifying his own and other American officials' decision to use atomic weapons against Japan on the grounds that ultimately this saved more lives than it cost. He also initially suggested that in order to disarm Soviet suspicions, the Allies should share the secrets of nuclear power with the Soviet Union, plans that ultimately proved fruitless.

After retiring in 1945, Stimson endorsed a greatly enhanced American international role, publicly supporting the Marshall Plan and the creation of the North Atlantic Treaty Organization (NATO). He published an influential volume of memoirs, setting forth his views on his country's international position. Stimson died on 20 October 1950 at Huntington, New York.

Stockholm Document (1986)

Final document of the Stockholm Conference on Confidence- and Security-Building Measures (CSBMs) in Europe. The 1975 Helsinki Final Act of the Conference on Security and Cooperation in Europe (CSCE) included a modest set of measures to improve cooperation in a range of areas. The key component dealt with security issues and proposed a series of confidence-building measures (CBMs) designed to lessen tensions between the North Atlantic Treaty Organization (NATO) and the Warsaw Pact. The Helsinki CBMs focused on advanced notice and exchanges of information concerning military maneuvers.

The Helsinki Final Act also called for follow-up meetings to assess progress and develop further CBMs. Little was accomplished at the first of these in Belgrade (1977–1978) and Madrid (1980–1983), largely because of the deterioration in East-West relations at the time. However, the Madrid meeting did agree to a call for a new conference on Confidence and Security-Building Measures, to be held in Stockholm, with a mandate to develop a more comprehensive and verifiable set of CBMs, now termed CSBMs. All CSCE members would participate. The Stockholm Conference, as it was better known, began on 17 January 1984 and concluded on 21 September 1986 with the adoption of the Document of the Stockholm Conference, which became effective on 1 January 1987.

The Stockholm Document included agreed provisions for CSBMs in several areas related to the activities of ground and air forces and covered a geographic region from the Atlantic to the Urals. All parties to the agreement pledged to refrain from the threat or use of force and also agreed to give all other parties forty-two days' advanced notice of any military activity involving the movement of more than 13,000 troops or 300 tanks. Notice was also required if more than 200 aircraft sorties would be associated with a notifiable troop movement, if any parachute or amphibious exercise involved more than 3,000 troops, and for the movement of any division-strength force into the covered area. All parties were permitted two observers at any exercise or transfer involving more than 17,000 troops or any parachute or amphibious exercise of more than 5,000 troops. All parties would also submit to all other parties an annual calendar listing notifiable activities at least one year in advance and for any involving more than 40,000 troops two years in advance. Movements of more than 75,000 troops were banned without a two-year notification, while those between 40,000 and 75,000 were banned without a one-year notification. Finally, all parties were granted the right to conduct on-site inspections by air and ground with four inspectors within thirty-six hours of a request, although no state had to accept more than three such inspections per year. This marked the first time that the Soviet Union accepted guaranteed on-site inspections.

The Stockholm Document marked considerable success in the process of developing meaningful CSBMs, which helped provide stability during the turmoil associated with the collapse of communism in Eastern Europe, but it

was not the end of the process. A new round of negotiations beginning in 1989 would produce enhanced CSBMs in the Vienna Document (1990).

Strategic Air Command

Primary U.S. air command for nuclear deterrence during the Cold War. The Strategic Air Command (SAC), a combat command of the U.S. Air Force, was responsible for long-range bombers and intercontinental ballistic missiles (ICBMs), two-thirds of the nation's strategic nuclear triad. SAC's main goal was to maintain a strong, credible strategic nuclear force that could swing into action within minutes, either to prevent a nuclear strike or to inflict one on an enemy nation.

SAC was formed in 1946, a year before the U.S. Air Force became a separate military service. Originally, SAC consisted of World War II B-17 and B-29 bombers. Its first commander was General George Kenney. On 19 October 1948, Lieutenant General Curtis LeMay took command and oversaw the move of SAC headquarters from Andrews Air Force Base in Maryland to Offutt Air Force Base outside Omaha, Nebraska. He quickly established stringent standards of performance, strict evaluation procedures, and incentive and retention programs. He also changed the way that personnel viewed the command.

During LeMay's tenure, SAC added B-50 and B-36 bombers. In its early years, the command had its own jet fighters for bomber protection and its own airlift. B-29 bombers were modified to be used as aerial tankers, with aerial refueling becoming an integral part of SAC and the nuclear war plan. In 1951, SAC began taking delivery of the all-jet B-47 bomber and the KC-97 tanker. These two aircraft were the mainstays of SAC forces into the early 1960s. In 1955, SAC received its first B-52 Stratofortress eight-engine bomber. SAC entered the missile age with the Snark subsonic intercontinental cruise missile and the Rascal, designed to be launched against ground targets from the B-47. The following year, the KC-135 Stratotanker, a four-engine jet air refueling aircraft, entered service.

At least one-third of all aircraft and almost all missiles were on alert at SAC bases twenty-four hours a day, seven days a week. During the 1960s, B-52 bombers armed with nuclear weapons were on airborne alert, ready to strike targets from orbits outside the Soviet Union. The airborne alerts were terminated in late 1968.

In 1959, SAC employed 262,600 personnel, 3,207 aircraft, and 25 missiles, including the Snark, the first Atlas ICBMs, Thor intermediate-range ballistic missiles (IRBMs), and the Hound Dog, an air-launched cruise missile (ALCM) carried by the B-52. By 1959, SAC's bomber force was an all-jet force. In 1960, the Joint Strategic Target Planning Staff (JSTPS) was formed with SAC's commander as director and a vice admiral as deputy director. The JSTPS was established to provide centralized planning for the entire U.S. nuclear triad, SAC bombers and missiles as well as submarine-launched ballistic missiles (SLBMs), nuclear-armed tactical aircraft, and IRBMs. In the early 1960s, the Snark and Thor missiles were deactivated to make room for the new Atlas and Titan I ICBMs. B-47s and KC-97s were phased out, and the supersonic B-58 bomber was put into service. By 1962, the new Titan II

B-52D Stratofortress bombers at Anderson Air Force Base, Guam, on 15 December 1972. The Strategic Air Command fleet was used extensively for bombing missions during the Vietnam War. (U.S. Department of Defense)

and Minuteman I ICBMs came on-line. SAC reconnaissance aircraft included the U-2 and the SR-71, which was commissioned in the late 1960s. At its peak strength peak in 1962, SAC employed more than 282,000 personnel.

During the next thirty years, SAC's mission remained unchanged. Missile forces stabilized with a mix of 1,000 Minuteman II and III ICBMs (with 50 Peacekeeper ICBMs replacing 50 Minuteman IIIs in the late 1980s) and 54 Titan II ICBMs (phased out in the mid-1980s). SAC aircraft included, at various times, a mix of B-1, B-52, and FB-111 bombers armed with gravity weapons, short-range attack missiles, and ALCMs; a tanker force of KC-135s and KC-10s; and U-2 and SR-71 reconnaissance aircraft.

SAC B-52 bombers played a major role in the Vietnam War. The SAC airborne command post, dubbed "Looking Glass," with an airborne battle staff commanded by a general officer, was on alert with at least one EC-135 aircraft airborne at all times during 1961–1992. The number of people in the command remained near 200,000 until reductions in the bomber force caused a slow exodus. SAC had about 110,000 personnel when it was deactivated on 1 June 1992.

After the dissolution of the Soviet Union in 1991, the U.S. Air Force underwent a fundamental reorientation in structure and doctrine. Air force leadership acknowledged that SAC had accomplished its mission. It had maintained nuclear superiority—and peace—for forty-six years. After it was deactivated, SAC's aircraft became part of new U.S. Air Force operational commands.

Strategic Arms Limitation Talks and Treaties

Series of negotiations and agreements between the United States and the Soviet Union that attempted to control the nuclear arms race. Following the 1962 Cuban Missile Crisis, the United States and the Soviet Union began to move away from the abyss of nuclear war and toward the reduction of nuclear armaments. The two superpowers also sought cooperation on this issue because of the immense cost of the nuclear arms race. Continued production

of nuclear weapons was becoming superfluous, as each side had more than enough capability to cripple the other even if only a small percentage of the weapons, should they be launched, actually struck their targets. The leadership of both nations was sufficiently motivated to seek an agreement on nuclear arms reduction. Adding to American motives were concerns that the Soviets might soon undermine U.S. superiority in nuclear arms and that the People's Republic of China (PRC) had acquired nuclear weapons beginning in 1964. Although the United States first approached the Soviet Union concerning strategic arms reduction talks in 1964, efforts to begin a dialogue failed repeatedly until the end of the decade.

Anti-Ballistic Missile Treaty. Arms reduction talks between the two nations began in November 1969 and, after two and a half years of detailed negotiations, a two-part agreement was reached. The first major agreement to come out of the talks was the Anti-Ballistic Missile (ABM) Treaty, signed in Moscow on 26 May 1972. This treaty reflected a belief on the part of both nations that they should seek to limit the deployment of antiballistic missile systems.

ABMs were designed to destroy enemy missiles before they could strike their targets. The United States had sought an agreement with the Soviets since the late 1960s on ABMs, which the Soviets had begun to deploy, arguing that their continued deployment would lead the United States to develop larger nuclear weapons to defeat these defenses. Therefore, rather than slowing the arms race, the development and deployment of ABMs would only intensify the arms race. The Soviets finally accepted this line of reasoning. The preamble to the treaty reflected this understanding: "Effective measures to limit anti-ballistic missile systems would be a substantial factor in curbing the race in strategic offensive arms and would lead to a decrease in the risk of outbreak of war involving nuclear weapons."

The treaty had unlimited duration, with five-year reviews. The two sides created the Standing Consultative Commission to serve as the forum for discussing compliance issues or other problems with the treaty. The commission met in Geneva, Switzerland.

The ABM Treaty prohibited deployment of an ABM system for "the defense of the territory" or the provision of "a base for such defense." This effectively restricted the creation of a nationwide defensive system while permitting the Soviets and Americans to maintain two ABM sites, comprising no more than one hundred interceptor missiles at each location. Each country could position one ABM site to defend its capital, and the other could shield one group of land-based intercontinental ballistic missiles (ICBMs). The agreement also prohibited transferring ABM sites to other nations.

Each side would verify compliance with the treaty through the use of national technical means. A 1974 Protocol to the treaty further limited each side to one ABM deployment site. The United States chose to place its system near the ICBM missile fields of Grand Forks, North Dakota, and the Soviet Union chose to defend Moscow.

The United States and Russia signed a series of agreements on 27 September 1997 that allowed Belarus, Kazakhstan, Russia, and Ukraine to succeed

The agreement froze the number of Soviet offensive ICBMs to 1,618 land-based missiles and 950 submarine-launched ballistic missiles (SLBMs).

the Soviet Union as state parties to the treaty. These agreements also attempted to establish the demarcation between theater and national ballistic missile defense systems.

Ultimately, both sides realized that ABM systems lacked any real military value and were prohibitively expensive. The United States closed its sole ABM site in 1975. Russia's Galosh system surrounding Moscow is still operational. Citing national security concerns and a need to deploy a limited national missile defense system, the United States withdrew from the treaty on 13 June 2002.

Interim Agreement on Strategic Offensive Arms: SALT I. Of greater importance was the wider-ranging arms control agreement that emerged from the Strategic Arms Limitation Talks (SALT). The Interim Agreement between the United States of America and the Union of Soviet Socialist Republics on Certain Measures with Respect to the Limitation of Strategic Offensive Arms, which came to be known as SALT I, was signed in Moscow by President Richard M. Nixon and Soviet Premier Leonid Brezhnev on 26 May 1972, along with the ABM treaty. The SALT I accord, which was scheduled to last for five years, required the two superpowers to maintain nuclear arsenals that were roughly equivalent to one another in terms of offensive land- and sea-launching platforms. The agreement froze the number of Soviet offensive ICBMs to 1,618 land-based missiles and 950 submarine-launched ballistic missiles (SLBMs). The American arsenal was restricted to 1,054 land-based missiles and 710 SLBMs. Mobile missile systems were not addressed. While the Soviets seemed to have a numerical advantage in missile-launching capabilities, the United States continued to enjoy a substantial advantage in bombers (about 450 to the 260 for the Soviets) and could also rely on the nuclear deterrents belonging to their European allies. The Americans also took advantage of their technological superiority to develop multiple independently targeted reentry vehicles (MIRVs). The Nixon administration refused to negotiate any limits in regard to this technological advance, and the Soviets would later take advantage of this.

In order to verify compliance with the terms of the treaty, both countries agreed to satellite photo reconnaissance of each other's territory. Even so, there were flaws in the agreement. The biggest problems were that the agreement failed to sufficiently regulate the upgrading of current missile systems. And it said nothing about the replacement of existing systems with new ones.

Each side took advantage of the loopholes in the treaty. The Soviets began to deploy a new missile system, the SS-19, that carried a warhead with six MIRVed warheads. This missile carried twice as many nuclear warheads as the mainstay of the U.S. intercontinental missile arsenal, the Minuteman. Eventually, the Soviet Union would develop the ability to launch missiles carrying ten MIRVs. On the other hand, the United States began to work on the development of the cruise missile, arguing that such a system was not covered under the SALT I agreement. Further compromising the spirit of the treaty were the new Soviet Backfire bomber, capable of reaching targets in the United States, and American plans to build the North American/Rockwell B-1

bomber and the Trident submarine. Another flaw in the treaty was that it permitted the replacement of so-called light missiles with heavy missiles, without adequately defining the term “heavy.”

SALT I was designed to be an interim agreement, and the treaty contained a provision calling for continued talks aimed at creating a more detailed and comprehensive plan to regulate nuclear arms. Reaching agreement on what would become SALT II proved difficult, however. Progress was stalled by numerous factors, including President Nixon’s resignation over the Watergate scandal in August 1974, American concerns with human rights violations in the Soviet Union, and a general deterioration in U.S.-Soviet relations during the 1970s. The broad numerical outlines of the eventual SALT II agreement were laid out in a summit meeting between Brezhnev and President Gerald Ford in Vladivostok in November 1974, but this did not lead to forward progress for many years.

SALT II. Arms control talks continued between the two superpowers despite these obstacles. By 1979, both sides desired a new SALT agreement. Anxious to overcome numerous foreign policy setbacks, President Jimmy Carter’s administration sought an arms deal to improve his chances for reelection in 1980. The Soviets sought an agreement chiefly for economic reasons, as the nation’s rate of economic growth was quickly stagnating.

Concerned that the Soviets had an advantage in throw weight, or the size of the warhead that a missile could carry into space, Carter offered to cancel development of an experimental mobile ICBM that could carry ten warheads (the MX missile) if the Soviets would cut their heavy ICBM force in half. The Soviets refused to consider an offer to prevent deployment of what was still an experimental system. Carter then backed away from this position, and the negotiations began to move toward an eventual agreement. As a result, Carter and Brezhnev affixed their signatures to the SALT II Treaty at the Vienna summit meeting on 18 June 1979.

By the terms of the treaty, both sides agreed to a limitation on the number of warheads that would be allowed on an ICBM and the total number of allowable strategic launchers. Strategic nuclear launch vehicles were limited to 2,250 on each side, and no more than 1,320 of these missiles could be outfitted with MIRVs. Within that total, a further subcategory limited MIRVed ballistic missiles to 1,200, of which only 820 could be ICBMs. New ICBMs were limited to carry no more than ten warheads, and new SLBMs were limited to fourteen warheads each. The treaty also prohibited space-based nuclear weapons, fractional orbital missiles, and rapid-reload missile launchers.

A protocol to the treaty was signed at the same time and remained in effect until 31 December 1981. The Soviets agreed not to utilize their Tupolev Tu-22M Backfire bomber, which had the ability to reach targets throughout most of the United States, as an intercontinental weapon, while the Americans consented to delay deployment of ground- and sea-launched cruise missiles for three years. In addition, MIRVed ground-launched cruise missiles (GLCMs) and submarine-launched cruise missiles (SLCMs) with a range of more than 600 kilometers could not be tested.

U.S. President Jimmy Carter and Soviet General Secretary Leonid Brezhnev signing the second Strategic Arms Limitation Treaty (SALT II) on 18 June 1979 in Vienna. The treaty was the culmination of a second round of talks seeking to curtail further development of nuclear arms. (Jimmy Carter Library)

The SALT II treaty ran into considerable opposition in the United States, as some liberals expressed disappointment that the treaty had failed to halt the arms race, and conservatives complained that the Soviets had retained a significant edge in throw weight.

Soviet actions in 1979 added immeasurably to the problem of ratifying the treaty. Their support of the Vietnamese invasion of Cambodia, the Sandinista uprising in Nicaragua, and the Soviet invasion of Afghanistan in December 1979 all but torpedoed any prospects that SALT II would be ratified by the U.S. Senate. Knowing that the Senate would not ratify the SALT II treaty under such circumstances, Carter withdrew the treaty from Senate consideration on 3 January 1980. Although the treaty was never ratified by the United States, both sides nonetheless honored the agreement until May 1986, when President Ronald Reagan, citing Soviet violations, declared that the United States would no longer be bound by the limits of the SALT agreements.

A series of bilateral arms control negotiations and treaties between the United States and the Soviet Union (later Russia) during the late 1980s and early 1990s that led to two treaties. The Strategic Arms Reduction Talks (START) resulted in the START I and START II treaties, which, unlike earlier arms control agreements that slowed or froze the rate of growth of strategic systems, were the first treaties to actually reduce the number of warheads and delivery systems on both sides.

Under President Ronald Reagan (1981–1989), in the early 1980s the United States launched an arms buildup that was part of an overall strategy to confront the Soviet Union. Reagan hoped to improve the American bargaining position vis-à-vis the Soviets by increasing the nation's military strength. He also hoped to force the Soviets to allocate more of their resources to the military in order to keep up. The most notable aspect of this renewed arms race was Reagan's Strategic Defense Initiative (SDI), which was an attempt to create a space-based missile shield that would render offensive nuclear weapons impotent and obsolete. Critics viewed the SDI proposal as an expensive, unworkable, and possibly offensive weapons system that violated the 1972 Anti-Ballistic Missile (ABM) Treaty.

The North Atlantic Treaty Organization (NATO) began installing Pershing II and ground-launched cruise missiles in Europe in 1983 in response to the Soviets' refusal to downsize their arsenal of forward-deployed SS-20 theater-range missiles. This move caused the Soviets to walk out of arms control talks that had been ongoing in Geneva since 1982. Negotiations did not resume until March 1985.

Strategic Arms Reduction Talks and Treaties

In October 1986, Reagan abruptly reversed himself. During his first summit meeting with new Soviet leader Mikhail Gorbachev in Reykjavík, Iceland, the American president expressed his willingness to remove intermediate-range nuclear force (INF) weapons from Europe and to eliminate all strategic nuclear weapons. The initiative failed because Reagan was unwilling to include SDI in the proposal, and Gorbachev was unwilling to proceed unless SDI was part of the package.

Some two months later, the Soviets declared that they would negotiate according to the agenda laid out by the Americans, although initially focusing on the INF issue. The Soviets accepted the American proposal in February 1987, which called for the complete elimination of medium-range nuclear weapons from Europe. At the Washington Summit in December 1987, Gorbachev and Reagan signed the INF Treaty. This treaty established a double-zero solution, calling for the removal of two classes of intermediate-range missiles—those with a range of roughly 600–3,500 miles and those with a range of 300–600 miles. An extensive on-site verification process was established as well. By the end of 1988, the removal of the missiles was complete.

START I. The START negotiations that had resumed in Geneva in 1985 bore fruit in 1991 with the signing of the Treaty between the United States and the Union of Soviet Socialist Republics on the Reduction and Limitation of Strategic Offensive Arms, also known as the START I treaty. Under Presidents George H. W. Bush and Gorbachev, the two nations concluded the treaty on 31 July 1991, just months before the collapse of the Soviet Union. The complex document served to reduce strategic nuclear delivery systems to 1,600 on each side, with attributed nuclear warheads (a somewhat arbitrary but agreed-upon number associated with certain delivery systems) restricted to 6,000 each.

There were additional sublimits for attributed warheads: 4,900 on deployed ballistic missiles, of which no more than 1,100 could be on mobile launchers. The Soviet Union was also limited to 154 heavy ICBMs, each carrying ten warheads. The treaty placed a limit on total nuclear throw weight, provided for verification processes, and also placed limitations on the types of vehicles that could carry nuclear warheads (including limits on the numbers of U.S. nuclear armed cruise missiles and Russian Backfire bombers).

On 23 May 1992 the Lisbon Protocol was signed, making START I a multilateral agreement among the United States, Russia, Belarus, Kazakhstan, and Ukraine. The treaty entered into force on 5 December 1994. The three new member states returned their residual Soviet-era nuclear arsenals to Russia prior to the implementation of the treaty and also joined the Nuclear Non-Proliferation Treaty (NPT) as nonnuclear weapons states.

The START I treaty had a duration of fifteen years, with the option to extend it at five-year intervals. All parties officially reached their treaty limits on 5 December 2001. The parties created a Joint Compliance and Inspection Commission tasked with monitoring compliance with the treaty. The commission began meeting in Geneva, Switzerland, in 1991. The treaty is scheduled to expire in 2009.

U.S. President George H. W. Bush and Soviet leader Mikhail Gorbachev sign the first Strategic Arms Reduction Treaty (START I) in Moscow in July 1991. Aimed at reducing the nuclear arsenal of the United States and the Soviet Union, the START negotiations succeeded the Strategic Arms Limitation Talks of the 1970s. (George Bush Library)

START II. START I was followed by the signing of the Treaty between the United States and the Russian Federation on Further Reduction and Limitation of Strategic Offensive Arms, also known as START II, by Bush and Boris Yeltsin at the Moscow summit on 3 January 1993. START II relied heavily on START I for its definitions, procedures, and verification. The U.S. Senate ratified START II on 26 January 1996, and the Russian Duma ratified in on 14 April 2000.

This agreement called for a two-phase series of reductions. Phase one called for each side to reduce its deployed strategic forces to 3,800–4,250 attributed warheads within seven years of entry into force. There were sublimits for several categories within that total. Phase two, which was originally supposed to be completed by the year 2003, required each side to further reduce their deployed strategic forces to 3,000–3,500 attributed warheads. The following sublimits applied to phase two: 1,700–1,750 warheads on nuclear submarines, the elimination of multiple independently targeted reentry vehicles (MIRVs) on ballistic missiles, and the elimination of heavy ICBMs. America's B-2 bomber was left out of the START I treaty process since it was not scheduled to carry air-launched cruise missiles (ALCMs). In START II, however, the two parties agreed to include the B-2 as a strategic weapons delivery vehicle with a U.S. commitment not to hang ALCMs on its wings.

This meant that it was accountable under the warhead limits and inspectable under the treaty's verification and compliance rules. The B-1 bomber was declared to have only a conventional mission. START II also significantly increased the level of on-site inspections necessary for implementation and compliance verification.

In March 1997, Yeltsin and President Bill Clinton met in Helsinki and agreed to extend the time period for START II implementation to 31 December 2007, as long as warheads were removed from the applicable systems by December 2003. Because of the delayed entry into force, phases one and two were to be completed simultaneously. The treaty parties created the Bilateral Implementation Commission, meeting in Geneva, Switzerland, to monitor the compliance regime

Although eventually ratified by both sides, START II lost its relevance over the years, as the United States became more concerned with obtaining a modification to the ABM Treaty in order to deploy a ballistic missile defense system, to which the Russians remained opposed. START II was supplanted by the 2002 Strategic Offensive Reductions Treaty (the Moscow Treaty), signed by Presidents Vladimir Putin and George W. Bush in May 2002. That agreement further reduces the number of nuclear warheads that can be deployed by each nation to 1,700–2,200 by the year 2012. Neither country any longer feels obliged to abide by the provisions of the START II treaty, but both are complying with START I.

Strategic Defense Initiative

Space-based, antiballistic missile (ABM) system endorsed by U.S. President Ronald Reagan in 1983 as a way to neutralize the Soviet nuclear threat. Nicknamed “Star Wars” by its critics and the media, the Strategic Defense Initiative (SDI) foresaw the use of satellites, mirrors, and lasers that would detect, track, and destroy incoming nuclear missiles. Reagan believed that the SDI might force the Soviets to engage in nuclear arms reduction talks and serve as a partial solution to the threat posed by the nuclear arms race.

To counter the Soviet threat in the 1950s, the United States began work on an ABM system. Various incarnations emerged during the 1960s and early 1970s, until the United States and the Soviet Union signed the 1972 Anti-Ballistic Missile Treaty. This treaty limited the deployment of ABM systems to only two operational areas and stipulated that such a system could not protect the entire nation. Nevertheless, work continued in both nations to develop an effective means of nullifying an enemy nuclear attack.

Artist's rendering of one of the Strategic Defense Initiative designs from Los Alamos National Laboratory. It shows a space-based particle beam weapon attacking enemy intercontinental ballistic missiles. (U.S. Department of Energy)

Reagan had many motivations for pursuing the SDI. In principle, he disagreed with the concept of mutual assured destruction (MAD). MAD held that because of the catastrophic nature of thermonuclear war, any nation that initiated a nuclear exchange was guaranteed to suffer complete destruction in a counterstrike. Reagan believed that MAD was immoral and unacceptable. He was further motivated by the upcoming 1984 election and his desire not to be seen as a warmonger. Deploying a defensive system would demonstrate his desire to end the arms race.

Among those who supported the SDI were military contractors who stood to make money developing and deploying such a system. Other supporters included Robert McFarlane, Reagan's national security advisor during 1983–1985, who believed that the SDI could be used as a bargaining chip to motivate the Soviets to scale back their missile production. Opponents of the SDI, including some Reagan administration officials, mockingly nicknamed the plan "Star Wars" after the popular science fiction film series.

In a televised address on 23 March 1983, Reagan publicly announced his desire to pursue the SDI. The scientific task was difficult, he admitted, but the rewards would be worth it: a United States whose citizens did not have to live in fear of nuclear destruction. The SDI would be costly, perhaps in the trillions of dollars. Reagan lobbied his friend and ally British Prime Minister Margaret Thatcher, who initially opposed the SDI but eventually came to see it as a good idea.

Unlike previous ABM systems, the SDI would provide missile defense from space. In fact, to intercept missiles in flight, space-based weapons were the best option, because land-based weapons could not overcome the problems presented by the curvature of Earth. Because Soviet long-range missiles took only thirty minutes to reach their targets, there was just enough time to detect, track, and intercept the warheads before they reentered the atmosphere. As Reagan described it and as scientists conceived it, the SDI would employ a number of satellites and space-based radars to detect and track incoming missiles and land- or satellite-based lasers reflected off orbital mirrors to destroy a warhead in flight. Scientists planned lasers that would employ X-ray, infrared, ultraviolet, or microwave radiation. They also conceived of particle-beam weapons in which streams of charged atomic matter would be directed at incoming warheads.

From the perspective of some, particularly new Soviet leader Mikhail Gorbachev, the SDI was a great threat. When Reagan and Gorbachev first met in Geneva in 1985, the SDI proved the sticking point on any arms control agreements. Gorbachev fiercely objected to the SDI, arguing that such a system only made sense if the United States planned to launch a nuclear first-strike against the Soviet Union. Gorbachev also well understood that the Soviet Union lagged behind the United States in computer technology, an area crucial to such an advanced weapons system. For the Soviet Union to allow the SDI to move forward would be to admit defeat. Gorbachev therefore insisted that Reagan give up the SDI before agreements on limiting offensive weapons could be reached. Reagan refused, but he also told Gorbachev that the SDI was necessary and that when it was finally completed,

he would share the technology with the Soviets. Gorbachev did not believe Reagan, and Reagan could see no logical argument against the SDI. Because of the SDI, the two men departed Geneva without a deal on arms control.

The Reagan administration ultimately failed to develop and deploy the SDI. The technology proved too daunting, and the costs were too high. Still, the mere threat of the SDI put tremendous pressure on the Soviets. Some scholars attribute the Soviet Union's 1991 collapse to Reagan's vigorous pursuit of the SDI. Others, however, regard the SDI as a costly boondoggle that only escalated Cold War tensions and contributed to swollen defense allocations and mammoth budget deficits.

U.S. Air Force general and commander of the Far East Air Force (FEAF) during the Korean War. Born in Cincinnati, Ohio, on 24 November 1890, George Stratemeyer graduated from the U.S. Military Academy at West Point in 1915 and served briefly in the infantry before beginning flight training. During and after World War I, he held various instructional and training positions, gaining a reputation as an effective administrator. During World War II, he served in the China-Burma-India theater as air advisor to Lieutenant General Joseph W. Stilwell and then commanded the Eastern Air Command. He became a major general in 1942. Promoted to lieutenant general in 1945, Stratemeyer took command of the U.S. Army Air Forces in China before returning to the United States in February 1946 to head the new Air Defense Command, later the Continental Air Command.

In April 1949 Stratemeyer assumed command of the FEAF, comprising the Fifth Air Force in Japan, the Thirteenth Air Force in the Philippines, and the Twentieth Air Force on Okinawa. By 1950, 75 percent of the men under his command were products of the Air Force Reserve training program he had organized. Known for his ability to get the most from his subordinates, Stratemeyer displayed effective leadership following the invasion of the Republic of Korea (ROK, South Korea) by the Democratic People's Republic

**Stratemeyer, George
Edward**
(1890–1969)

of Korea (DPRK, North Korea) on 25 June 1950. When President Harry S. Truman ordered U.S. forces into action, Stratemeyer directed FEAF aircraft in the critical early days of the war, ordering attacks on the North Korean forces and providing air cover for the evacuation of Seoul. He then directed strategic bombing of North Korea to include the destruction of lines of communications, installations, and factories.

Following the Chinese military intervention in Korea, Stratemeyer opposed General Douglas MacArthur's flouting of directives. In late November 1950, after MacArthur unilaterally ordered the bombing of the Yalu River bridges, Stratemeyer informed his superiors in Washington, and the Joint Chiefs of Staff (JCS) then restricted air raids to the southern side of the river. Stratemeyer believed, however, that his air forces should be permitted to conduct operations against Mainland China.

In May 1951 Stratemeyer suffered a heart attack, and he retired from active duty in January 1952. Thereafter, he became a public advocate for unlimited military operations against the People's Republic of China (PRC), complaining in an interview that Washington had "handcuffed" MacArthur. "We were required to lose the war," Stratemeyer told a Senate subcommittee. He also lobbied for expanding U.S. airpower as the most economical way to win wars and maintain a strong defense, and in 1954 he tried to dissuade the U.S. Senate from censuring Senator Joseph McCarthy for his reckless anticommunist witch-hunt. Stratemeyer died in Orlando, Florida, on 9 August 1969.

Strauss, Franz Josef (1915–1988)

Federal Republic of Germany (FRG, West Germany) minister for nuclear power (1955–1956), minister of defense (1956–1962), minister of finance (1966–1969), and minister-president of Bavaria (1978–1988). Born on 6 September 1915 in Munich, Franz Strauss studied to become a high school teacher at the University of Munich during 1935–1939 and then served in the German Army during World War II.

Following Strauss's brief internment in spring 1945, the American military occupation government appointed him deputy district president at Schöngau. In 1946 he co-founded the Christian Democratic Union (CSU), the sister party of the Christian Democratic Union (CDU) in Bavaria. In June 1947, he became the youngest member of the Economic Council of the U.S.-British Bizonia. He also served in the Bundestag during 1949–1978 and again in 1987. During 1950–1953 and again during 1963–1966, he was deputy chairman of the CDU/CSU and during 1971–1978 served as economic speaker for the CDU/CSU parliamentary group.

Strauss was appointed minister without portfolio in Chancellor Konrad Adenauer's cabinet in October 1953 and was subsequently appointed minister for nuclear power in October 1955. Strauss served as minister of defense beginning in October 1956, a post he held until 1962. In this post, he pushed forward a number of structural reforms within the German armed forces, including universal conscription, introduced in April 1957. Forced to resign from office in November 1962 following the *Spiegel* Affair, during 1966–1969 he served Kurt-Georg Kiesinger's government as finance minister. When the Social Democratic Party (SPD) and the Free Democratic Party (FDP) formed a coalition in 1969 and launched Ostpolitik, Strauss became a hawkish opponent of Chancellor Willy Brandt's foreign policies.

Strauss's conservative position brought him into bitter conflict with Rainer Barzel, chairman of the CDU/CSU parliamentary group, who showed more willingness to accept the new approach in foreign policy. Because of this controversy, Strauss demanded more independence for the CSU and was eager to establish his party nationwide, especially after Helmut Kohl, who was regarded as a moderate, became CDU chairman in 1973. When Strauss's plans failed in 1976, he committed himself to regional politics and became minister-president of Bavaria in 1978, an office he held until his death.

In his last years, to the surprise of many, Strauss developed a personal relationship with German Democratic Republic (GDR, East Germany) leader Erich Honecker, whom he met twice in 1983 and again in 1987. After their first meeting, Strauss negotiated a major bank credit for the East Berlin government. Strauss died on 3 October 1988 in Regensburg, Germany.

Franz Josef Strauss, minister of defense of the Federal Republic of Germany (FRG, West Germany), shown here in March 1958. (Bettmann/Corbis)

Students for a Democratic Society

Radical American political organization founded in 1959, considered the vanguard movement of the wave of Cold War progressive radicalism known as the New Left. The origins of Students for a Democratic Society (SDS) can be traced to the Student League for Industrial Democracy (SLID), the youth branch of the venerable Old Left society that campaigned on time-honored socialist issues of trade unionism and industrial rights during the 1930s.

The SDS's first official meeting was at Ann Arbor, Michigan, in 1960, but the movement's intellectual ideological platform did not come until the publication of the Port Huron (Michigan) Statement, written and adopted as the group's manifesto in 1962. Its author, Tom Hayden, who also became SDS president that year, spoke of the need for a "participatory democracy" to replace the bellicose and corrupt complacency that, according to him, characterized American political life at the time. In particular, Hayden implored America's college-age youth—the affluent products of the long postwar boom—to openly challenge the unjust conventions of their parents' generation through grassroots educational initiatives, nonviolent protest, and civil disobedience. Hayden's call to arms struck a ringing chord within a young left-wing community, the "red-diaper babies," that was dissatisfied with the narrowly defined interests of traditional American socialism and was becoming increasingly interested in the social critiques of the European existentialists and the Frankfurt School. This marriage of concrete political grievances with more diffuse complaints about the nature of Western industrial civilization became a distinctive feature of the 1960s' Counterculture Movement.

The early years of SDS were occupied in support of the civil rights protests against Jim Crow racial segregation in the South as well as initiatives in poor urban districts to encourage small-scale civic dissent. SDS members took a natural interest in campus politics, particularly the attempts by conservative regents to continue some of the more straight-laced curriculum of earlier college days. The turning point in the history of SDS, however, came with the escalation of America's military involvement in the Vietnam conflict beginning in 1965. From its founding, the group was harshly critical of what it saw as unnecessary international belligerence by the United States and the deleterious effect that the "warfare state" had on economic and social priorities at home.

The August 1964 Tonkin Gulf Resolution gave these concerns a particular intensity, and President Lyndon Johnson's decision in 1966 to limit draft

deferments for college students gave the core SDS constituency a personal stake in the politics of Vietnam. The national group organized mass protest marches in Washington, D.C., and New York City, while local campus chapters sponsored draft card burnings, sit-ins, and disruption of military recruitment visits and ROTC events. The SDS slogan “Make Love Not War” became one of the signature phrases of the era and the motto of antiwar activists around the globe.

By 1968, the SDS boasted more than 100,000 members on 400 college campuses. But while the passions of the Vietnam protests had given a powerful boost to enrollment, they also created tensions within the movement between those who believed in the original nonviolent principles of the Port Huron Statement and others who believed that state violence had to be met with counterviolence. Confrontations between student agitators and the authorities became uglier as the Vietnam struggle took on the character of a generational culture conflict. In 1968, a series of raucous building occupations at New York’s Columbia University was met by a brutal police response that triggered a campuswide strike and the effective collapse of the college’s academic program that year. In Chicago, student protestors outside the Democratic National Convention were among the thousands engaged in street battles against Mayor Richard Daley’s notorious city troopers. The escalation of

Demonstrators protest the trial of the Chicago Seven (also known as the Chicago Eight). The Chicago Seven, antiwar activists arrested for protests during the 1968 Democratic National Convention in Chicago, drew attention to their cause during lengthy and often bizarre legal proceedings. (Library of Congress)

violence reached its peak in 1970 when six students were killed in separate incidents at Kent State University in Ohio and Jackson State College in Mississippi. The internal politics of the SDS themselves spun into turmoil as hard-line followers of PRC leader Chairman Mao Zedong began taking over chapters and a number of extremist splinter organizations emerged, most famously the terrorist Weather Underground, or Weathermen, that in turn gave J. Edgar Hoover's Federal Bureau of Investigation (FBI) the excuse to harass the mainstream organization.

Student protests ebbed with the American disengagement from Vietnam in the early 1970s, but by that point the SDS was already finished as a significant force for change. Some of its prominent members, such as Hayden, continued in mainstream politics and enjoyed successful independent careers. Aside from its achievements in specific policy areas, perhaps the organization's most important legacy was the model it provided for later grassroots activism, much of which was ironically conservative in character, such as the pro-life, antiabortion lobby.

Suárez González, Adolfo (1932–)

Spanish interim president (1976–1977) and prime minister (1977–1981). Born on 25 September 1932 in Cebreros, Spain, Adolfo Suárez studied law at the Complutense University in Madrid and graduated in 1967. He then held several government posts during the Francisco Franco regime, including head of the radio and television ministries. Suárez eventually was appointed secretary-general of the Movimiento Nacional (National Movement) party.

For most of the Franco regime, the National Movement was the only political party allowed to operate legally. Suárez was appointed interim pres-

ident by King Juan Carlos I following Franco's 1975 death. Leftist and centrist politicians opposed Suárez's appointment, based on his close ties to the Franco regime. Nevertheless, Suárez proved to be a true reformer, spearheading political changes in 1976. He was also able to reform the military and return it to civilian control. These actions helped him form a more centrist party for the upcoming 1977 elections.

In 1977, during the first elections held after Franco's death, Suárez led the Unión de Centro Democrático (UCD, Democratic Center Union) to a majority in the parliament and was appointed premier. His government continued to institute democratic reforms, relying on a coalition of centrist politicians. One of the biggest reforms was the implementation of a new constitution in 1979. In the 1979 elections, Suárez and the UCD were again victorious. Government became increasingly problematic, however, with an economic downturn and an increase in regionalist agitation. Suárez resigned in 1981 and subsequently dropped out of the UCD. In 1982 he formed the Centro Democrático y Social (CDS, Democratic and Social Center), which enjoyed only moderate success. In 1991 Suárez announced his retirement from public life. In May 2005 his son announced that his father was suffering from advanced Alzheimer's disease and that he recalled little of his time in government.

Submarine-Launched Ballistic Missiles

Submarines operate both submerged and on the surface. They were developed to scout for the main battle fleet and destroy enemy warships. In World War I, they were also employed effectively as commerce destroyers, and in

Submarines

Submarines 1957

World War II that and hunting enemy surface warships were their principal roles. The Cold War added the missions of hunting enemy submarines and serving as a launch platform for ballistic missiles.

At the beginning of the Cold War, all operational submarines used the diesel-electric drive. This required submarines to either surface frequently to recharge their batteries or be equipped with a snorkel breathing device for submerged diesel operation. Serious research into nuclear power for submarines, which promised essentially unlimited high-speed submerged operation, began immediately after World War II. The *Nautilus*, the first submarine with a nuclear power plant, was commissioned on 30 September 1954, although it was first under way under nuclear power on 17 January 1955. The *Nautilus*, 98.7 meters long with a beam of 8.43 meters, displaced 3,180 tons on the surface and 3,500 submerged. It could attain 22 knots on the surface and 23.3 knots submerged and was armed with six bow torpedo tubes with twenty-two torpedoes.

It was three years before the Soviets launched *K-3*, the first of a class of thirteen nuclear-powered submarines, on 9 August 1957. The *K-3* was commissioned on 7 January 1958. This Project 627-class (NATO-designated November-class) submarine was 107.4 meters long with a beam of 8.0 meters. It displaced 3,087 tons on the surface and 3,986 submerged. Its two-reactor power plant gave it a speed of 15.5 knots on the surface and 30.5 knots submerged. It had eight bow torpedo tubes and carried twenty torpedoes.

Nuclear power provided great cruising range. In 1960 the *Triton* sailed around the world while completely submerged, a trip of 41,519 miles. The *Triton* displaced 5,662 tons on the surface and 7,781 submerged, was 136.4 meters long and 11.26 meters in beam, had a speed of 27 knots both surfaced and submerged, and was armed with four bow and two stern torpedo tubes with fifteen torpedoes. Because submarines could now remain submerged for their entire duration at sea, they became much more difficult to track. However, nuclear power did not completely eclipse diesel submarines. Indeed, diesel submarines continue to be quieter and are considerably less expensive than those with nuclear power.

With the advent of nuclear weapons, including ballistic missiles, both the United States and the Soviet Union sought to protect their missiles from a first strike by the other power. One of the solutions seized upon was to launch ballistic missiles from submarines. The Soviet diesel-electric Project 611 A (NATO-designated Zulu-IV) submarine *B-62*, with a single launch tube, was the first to fire a ballistic missile, on 16 September 1955. The succeeding Project 611 AB-class (NATO-designated Zulu-V) submarines were the first operational ballistic missile boat, the first (*B-67*) being commissioned on 30 June 1956. With a length of 90.5 meters and a beam of 7.5 meters, these submarines displaced 1,890 tons on the surface and 2,450 submerged. They attained 16.5 knots on the surface and 12.5 knots submerged. They could launch 2 R-11FM missiles (NATO-designated Scud) from vertical tubes in the sail, and they mounted six bow and four stern torpedo tubes with twenty-two torpedoes. Initially, Soviet ballistic missile submarines were very vulnerable during launch because they had to surface to fire their missiles.

United States Navy ballistic submarine *George Washington*, the first nuclear-powered submarine designed to launch Polaris ballistic missiles while submerged, on its launching at Groton, Connecticut, 9 June 1959. The *George Washington* was built quickly by cutting an attack submarine in half and adding a missile compartment. (United States Naval Institute)

In 1955, the United States also began work on a submarine-launched ballistic missile (SLBM), which would ultimately become the Polaris. The first U.S. ballistic missile submarines used a design derived from that of the Skipjack-class attack boats, and their construction was expedited by re-directing materials, machinery, and equipment originally ordered for attack submarines. The first, the *George Washington*, was commissioned on 30 December 1959. These nuclear-powered boats displaced 5,900 tons on the surface and 6,700 submerged, were 116.36 meters long and 10.06 meters in beam, attained 16.5 knots on the surface and 22 knots submerged, carried sixteen Polaris missiles in vertical launchers, and had six bow torpedo tubes with twelve torpedoes. The *George Washington* test-fired two Polaris missiles while submerged on 20 July 1960 in the Atlantic and departed on its first patrol on 15 November 1960.

On 10 September 1960, the Soviet submarine *B-62* also successfully fired a ballistic missile while submerged. The new D-4 launch system replaced the earlier D-2 system originally fitted in the first nuclear-powered Soviet

Project 658-class (NATO-designated Hotel-I) ballistic missile submarines, first commissioned in December 1960. The upgraded Project 658M (NATO-designated Hotel-II) boats displaced 4,080 tons surfaced and 5,240 submerged and were 114.1 meters long and 9.2 meters in beam. Their two-reactor power plants provided a maximum speed of 18 knots surfaced and 26 knots submerged. They carried three R-21 (NATO-designated Sark) missiles in vertical tubes plus four bow and four stern torpedo tubes. Recommissioning began in June 1964. On 24 February 1972 while on patrol some 800 miles northeast of Newfoundland, the *K-19*, the first of the class, suffered a catastrophic failure in its cooling system, resulting in the deaths of twenty-eight of its crew.

The Polaris missile was upgraded over time, its range increasing with each iteration. The fourth upgrade produced a new missile, the Poseidon, that featured multiple independently targeted reentry vehicles (MIRVs). Each missile could carry ten to fourteen independently targeted nuclear warheads. The Poseidon first departed aboard a submarine on patrol on 30 March 1971.

Both the United States and the Soviet Union continued to work toward the construction of larger ballistic missile submarines to accommodate bigger missiles. For the United States, this led to the Ohio-class submarines, the largest in the world at that time, embarking the Trident missile. The first of these, the *Ohio*, was commissioned on 11 November 1981. Ohio-class submarines displace 16,764 tons surfaced and 18,750 submerged, are 170.7 meters long with a beam of 12.8 meters, attain 18 knots surfaced and approximately 25 knots submerged, and carry 24 Trident ballistic missiles in vertical tubes and 24 torpedoes fired from 4 bow tubes. The eighteen Ohio-class Trident submarines remain in service, although four are being converted to launch up to 154 cruise missiles via twenty-two vertical tubes rather than ballistic missiles.

The Soviet Union countered with its Project 941-class ballistic missile submarines (NATO-designated Typhoon), the first, *TK-208*, commissioning on 12 December 1981. They are even larger than the Ohio-class boats and thus are the world's largest submarines, although they carried only twenty ballistic missiles apiece. They displace 23,200 tons surfaced and 33,800 submerged, are 172.0 meters long with a beam of 23.3 meters, attain 16 knots on the surface and 27 knots submerged, and have six bow torpedo tubes with twenty-two torpedoes, along with 20 R-39 ballistic missiles (NATO-designated Sturgeon) in vertical tubes.

Besides ballistic missile submarines, the other major categories of submarines are attack and cruise missile submarines. Such submarines are used to hunt other submarines, especially ballistic submarines, as well as enemy surface vessels. Along with the first generation of attack and cruise missile submarines, the Soviets developed submarines equipped with cruise missiles as a means of attacking U.S. aircraft carriers. As with ballistic missiles, cruise missiles initially had to be launched from the surface. It was not until the Project 670-class (NATO-designated Charlie-I) nuclear-powered cruise missile submarines that the Soviets developed the capability to launch cruise missiles while submerged. These submarines displaced 3,580 tons on the surface and 4,550 submerged, were 94.0 meters long with a beam of 10.0

meters, attained 16 knots surfaced and 23 knots submerged, and were armed with eight cruise missiles on individual launchers and twelve torpedoes or antisubmarine missiles fired through six bow tubes. The United States first tested a cruise missile, the Regulus, from the USS *Tunny* on 15 July 1953. It saw limited service aboard five submarines (one nuclear-powered) but was retired in July 1964. Generally speaking, the U.S. Navy chose to rely on aircraft flown from aircraft carriers for antiship warfare purposes.

With the introduction of the second generation of attack and cruise missile submarines, missions included hunting other submarines. This mission was especially important for the Soviets, who built the Project 671-class (NATO-designated Victor) attack submarines specifically to hunt U.S. ballistic missile submarines. The most capable U.S. design in this category were the Thresher-class submarines. They displaced 3,750 tons surfaced and 4,310 submerged, were 84.9 meters long and 9.65 meters in beam, reached 15 knots surfaced and 28 knots submerged, and carried four torpedo tubes and twenty-three torpedoes or submarine rocket (SUBROC) antisubmarine missiles. This generation of submarines represented the bulk of American and Soviet submarine forces from 1961 until the end of the Cold War but is no longer in service.

The third generation of attack and cruise missile submarines are the American Los Angeles-class and the Soviet Project 971 boats (NATO-designated Akula). Production of this third generation of attack submarines was cut short by the end of the Cold War, but they remain in service today. The Los Angeles-class boats displace 6,080 tons surfaced and 6,927 submerged, are 110.3 meters long with a beam of 9.75 meters, and attain more than 30 knots submerged and possibly 20 knots on the surface. They have four torpedo tubes and carry twenty-six torpedoes (and also Tomahawk cruise missiles fired from vertical tubes in later boats). Their Soviet counterparts displace 6,300 tons surfaced and 8,300 submerged, are 108 meters long with a beam of 13.5 meters, travel at up to 20 knots on the surface and 35 knots submerged, and carry forty missiles (a mixture of torpedoes, antiship missiles, and up to twelve cruise missiles) fired through eight torpedo tubes (ten in later boats).

Two characteristics dominate the designs of the third-generation attack submarine classes: high underwater speed and greatly reduced noise emission. The much greater cost of nuclear submarines undoubtedly deterred many navies from adding them to their fleets, but the quest for low noise emission also encouraged development of advanced diesel-electric submarines.

From 1967, the German Type 209 epitomized these advanced conventionally powered boats. Early boats, of Type 209/1100, displaced 1,106 tons surfaced and 1,207 submerged, were 54.4 meters long with a beam of 6.2 meters, and could attain 11 knots surfaced or 21.5 knots submerged. The latest Type 209/1500 boats displace 1,660 tons surfaced and 1,850 submerged, are 62 meters long, and can reach 15 knots surfaced or 22 knots submerged. They are armed with fourteen torpedoes fired through eight tubes. More than forty boats have served with more than a dozen navies, and most are still operational. The new Type 212 that was developed from the Type 209 can be expected to achieve similar success.

The Soviets also continued to build diesel-electric attack submarines. The Project 877 boats (NATO-designated Kilo) displaced 2,350 tons surfaced and 3,126 submerged, were 72.6 meters long and 9.9 meters in beam, reached 12 knots surfaced and 25 knots submerged, and were armed with eighteen torpedoes fired through eight tubes. Although largely withdrawn from service in 2000, an export version of this exceptionally quiet design has proven very successful, with at least twenty sold to six navies since 1986.

Many other nations operated submarines. Among the principal Cold War navies with submarines were Great Britain and France. Britain launched its first nuclear-powered submarine, the attack-type *Dreadnought*, on 21 October 1960. The *Dreadnought* displaced 3,500 tons on the surface and 4,000 submerged, was 81 meters long and 9.8 meters in beam, attained 25 knots surfaced and 30 knots submerged, and was armed with twenty-four torpedoes fired through six tubes. The *Dreadnought* had an American nuclear power plant, enabling the British to save both considerable time and money. The British took a similar path when building their first ballistic missile submarines, the four-boat Resolution-class, by purchasing Polaris missiles. These submarines displaced 7,500 tons on the surface and 8,500 submerged, were 129.54 meters long and 10.06 meters in beam, reached 20 knots on the surface and 25 knots submerged, and could launch sixteen Polaris missiles via vertical tubes and also carried twelve torpedoes fired through six tubes. These submarines provided the British with their own nuclear underwater deterrent force.

Under President Charles de Gaulle, the French also developed an independent submarine nuclear deterrent force. They took a different path than

The *Dreadnought* (1960), the United Kingdom's first nuclear-powered submarine. (Art-Tech)

the Americans, British, and Soviets in that they built nuclear-powered ballistic missile submarines before their first nuclear-powered attack submarines. Altogether, the French built six Redoutable-class ballistic submarines, the first commissioning in 1971. They displaced 8,050 tons surfaced and 8,940 submerged, were 128.7 meters long and 10.6 meters in beam, attained 20 knots on the surface and 25 knots submerged, and carried sixteen ballistic missiles launched from vertical tubes plus eighteen torpedoes fired via four tubes. Five boats were decommissioned by 2003, but the four later Triomphant-class ballistic missile submarines remain operational. France built a series of sophisticated conventionally powered attack submarines between 1961 and 1978 that also were successful export types. The first of France's six nuclear attack submarines, *Le Rubis*, was launched in 1976 and entered service in 1983. It displaces 2,410 tons surfaced and 2,680 submerged, is 75 meters long with a beam of 7.6 meters, attains 18 knots on the surface and 25 knots submerged, and is fitted with four torpedo tubes that can discharge a mix of fourteen torpedoes or Exocet missiles.

Northeast African nation. The largest country on the continent, Sudan covers 967,493 square miles, about one-fourth the size of the United States. It is bordered by Chad and the Central African Republic to the west, Libya and Egypt to the north, Ethiopia and Eritrea to the east, and Kenya, Uganda, and the Democratic Republic of the Congo to the south. It also has a 500-mile

Sudan

coast on the Red Sea and is divided from north to south by the Nile River. Sudan's 1945 population was just under 9 million people.

Sudan was under Anglo-Egyptian rule during 1898–1956. It declared its independence in 1956, but a succession of coups from 1958 on, together with a wide economic and cultural gap dividing northern and southern Sudan, fomented instability in the country, which led to an ongoing civil war. Throughout much of the Cold War, Sudan's foreign policy vacillated between alliance with the West and East, depending on which faction was in control at any given time. Beginning with the so-called Condominium Agreements of 1899, Sudan was jointly administrated by Britain and Egypt. But a 1924 mutiny in the Egyptian Army compelled the British to evacuate Egyptian personnel from Sudan.

The Sudanese nationalist movement was somewhat fragmented and was associated with two rival religious sects: the Ashigga Party, later the National Unionist Party (NUP), allied with the Khatmiyya sect; and the Umma Party, or Independence Front (IF), connected with the Mahdiyya sect. The former called for unity with Egypt, whereas the latter called for complete independence. Two other independence movements, secular in nature, were the Sudanese Communist Party (SCP) and Sudan's Labor Union.

In 1953, Great Britain and Egypt granted Sudan self-rule, phased in over a three-year period. Parliamentary elections resulted in a victory for the NUP, and its leader, Ismail al-Azhari, became the first Sudanese prime minister in January 1954. The NUP soon reversed its policy, however, and strove for independence, which was decided on 19 December 1955 by a unanimous parliamentary vote. Independence went into effect on 1 January 1956.

The issue of north-south relations in Sudan, with the Muslim north more developed and the non-Muslim south ruled as a separate entity, soon became a sticking point after independence. Anxieties about the prospects of Muslim domination and demands for a federal system resulted in riots in southern Sudan. In August 1955, the Equatorial Corps composed of southerners mutinied in Torit, killing several hundred northern traders and government officials.

Although the southern revolt was repressed, civil war soon erupted, lasting from 1955 to 1972. The deteriorating internal situation urged Prime Minister Abdallah Khalil to invite General Ibrahim Abboud, the commander of the army, to take control of the government in November 1958. The resultant military junta ended parliamentary rule and granted power to the Supreme Council of the Armed Forces. Political parties were dissolved, the constitution was suspended, trade unions were abolished, and strikes were outlawed. But in October 1964, following a series of popular uprisings, a transitional government comprised of representatives from all parties including the SCP and the Muslim Brotherhood replaced the Abboud regime.

The spring 1965 elections brought to power a coalition of the UP and NUP with Muhammed Ahmed Mahgoub as prime minister and Ismail al-Azhari as president of the Supreme Council of State. After Mahgoub's resignation in 1966, Sadiq al-Mahdi was elected prime minister.

The al-Mahdi government was overthrown in a bloodless coup led by Colonel Gaafar Muhammad Nimeri in May 1969, leading to the adoption of socialist policies, one-party rule by the Sudanese Socialist Union (SSU), closer relations with the Eastern bloc, and support for the Palestinian cause.

The Tripoli Charter of 27 December 1969, concluded by Nimeri, Muammar Qadhafi, and Anwar Sadat, established a union among Sudan, Libya, and Egypt. Announcement of this in the Sudan led to a coup against Nimeri that ousted him from power. Three days later, with widespread popular support, he returned to power and won the 1971 elections.

In 1972, Nimeri signed the Addis Ababa Agreement with southern rebels that granted regional autonomy for southern Sudan. The Addis Ababa peace agreement also signaled a rapprochement between Sudan and Ethiopia that would not survive Ethiopian Emperor Haile Selassie's fall in 1974, as Sudan was soon pressured by various Arab states to renew its support for the Eritreans in the ongoing Ethiopian-Eritrean conflict.

Leaders of the traditional Sudanese parties, excluded from involvement in politics, in 1974 organized a National Front (NF) to oppose the regime. On several occasions the NF staged abortive efforts to overthrow Nimeri. He continued to receive support from Libya, Ethiopia, Iraq, and Saudi Arabia. Meanwhile, as early as 1971, those opposed to Nimeri had also organized the Southern Sudan People's Liberation Movement (SPLM), later the Sudan

Sudanese antigovernment soldiers in training, 8 March 1971. (John Downing/Express/Getty Images)

People's Liberation Movement. In October 1982, Egypt and Sudan signed a charter of political and economic integration. However, Sudan's deep and seemingly intractable economic problems did not improve.

Nimeri's failure to respect the Addis Ababa Agreement and the introduction of traditional Islamic law, the Sharia, and martial law in 1983 led to the resumption of the civil war led by the Sudan People's Liberation Army (SPLA), the military arm of the SPLM. The disastrous economic situation increased dependence on the West, especially the United States, and brought the bloodless coup in April 1985 in which Lieutenant General Abd al-Rahman Mohammed Swar al-Dahab took control of Sudan through a Transnational Military Council (TMC). He also sought to improve relations with the Soviet Union, Ethiopia, and Libya. In response to the coup, the SPLA declared a cease-fire while at the same time demanding aid for the southern regions and the abolition of the Sharia.

In accordance with General Swar's promise, general elections occurred in April 1986, and parliamentary democracy was restored. A coalition government, headed by al-Sadiq al-Mahdi of the Umma party, ruled the country for the next three years. Although a 1988 agreement ending the civil war was supposed to stabilize Sudan, on 30 June 1989 General 'Umar Hasan Ahmed al-Bashir, supported by the National Islamic Front (NIF), led a bloodless coup and formed a fifteen-member Revolutionary Command Council for National Salvation (RCC). His primary aim was to end the southern rebellion by force. However, the ongoing civil war that claimed nearly 1.5 million people during 1983–1997 showed just how difficult this task would be.

Suez Crisis (1956)

The Suez Crisis was one of the major events of the Cold War. It ended Britain's pretensions to be a world superpower, fatally weakened its hold on what remained of its empire, placed a dangerous strain on U.S.-Soviet relations, strengthened the position of Egyptian leader Gamal Abdel Nasser, and distracted world attention from the concurrent Soviet military intervention in Hungary.

SUEZ CRISIS, 1956

The Suez Crisis had its origins in the development plans of Nasser. The Egyptian president hoped to enhance his prestige and improve the quality of life for his nation's growing population by carrying out long-discussed plans to construct a high dam on the upper Nile River at Aswan to provide electric power. To finance the project, he sought assistance from the Western powers. But he had also been endeavoring to build up and modernize the Egyptian military. Toward that end, he had sought to acquire modern weapons from the United States and other Western nations. When the U.S. government refused to supply the advanced arms, which it believed might be used against Israel, in 1955 Nasser turned to the communist bloc. This step incurred the displeasure of President Dwight D. Eisenhower, as did Nasser's recognition of the People's Republic of China (PRC) and his frequent denunciations of the U.S.-supported Baghdad Pact.

Resentment over Nasser's efforts to play East against West and especially his decision to turn to the communist bloc for arms led the Eisenhower administration to block financing of the Aswan Dam project through the World Bank. U.S. Secretary of State John Foster Dulles had earlier assured Nasser of U.S. support, but on 19 June 1956, Dulles announced that U.S. assistance for the Aswan Dam project would not be forthcoming. The British government immediately followed suit.

Nasser's response to this humiliating rebuff came a week later, on 26 July, when he nationalized the Suez Canal. He had contemplated such a move for some time, but the U.S. decision prompted its timing. Seizure of

When the U.S. government refused to supply the advanced arms, which it believed might be used against Israel, in 1955 Nasser turned to the communist bloc.

the canal would not only provide additional funding for the Aswan project but would also make Nasser a hero in the eyes of many Arab nationalists.

The British government regarded the sea-level Suez Canal, which connected the eastern Mediterranean with the Red Sea across Egyptian territory, as its lifeline to Middle Eastern oil and the Far East. The canal, built by a private company headed by Frenchman Ferdinand de Lesseps, had opened to much fanfare in 1869. It quickly altered the trade routes of the world, and two-thirds of the tonnage passing through the canal was British. Khedive Ismail Pasha, who owned 44 percent of the company shares, found himself in dire financial straits, and in 1875 the British government stepped in and purchased his shares. In 1878 Britain acquired the island of Cyprus north of Egypt from the Ottoman Empire, further strengthening its position in the eastern Mediterranean north of Egypt. The British also increased their role in Egyptian financial affairs, and in 1882 they intervened militarily in Egypt, promising to depart once order had been restored. Britain remained in Egypt and in effect controlled its affairs through World War II.

In 1952, a nationalist coup d'état took place in Egypt that ultimately brought Nasser to power. He was a staunch Arab nationalist, determined to end British influence in Egypt. In 1954 he succeeded in renegotiating the 1936 treaty with the British to force the withdrawal of British troops from the Suez Canal Zone. The last British forces departed the Canal Zone only a month before Nasser nationalized the canal.

The British government now took the lead in opposing Nasser. London believed that Nasser's growing popularity in the Arab world was encouraging Arab nationalism and threatening to undermine British influence throughout the Middle East. British Prime Minister Anthony Eden (1955–1956) developed a deep and abiding hatred of the Egyptian leader. For Eden, ousting Nasser from power became nothing short of an obsession. In the immediate aftermath of Nasser's nationalization of the canal, the British government called up 200,000 military reservists and dispatched military resources to the eastern Mediterranean.

The French government also had good reason to seek Nasser's removal. Paris sought to protect its own long-standing interests in the Middle East, but more to the point, the French were now engaged in fighting the National Liberation Front (NLF) in Algeria. The Algerian War, which began in November 1954, had greatly expanded and had become an imbroglio for the government, now led by socialist Premier Guy Mollet (1956–1957). Nasser was a strong and vocal supporter of the NLF, and there were many in the French government and military who believed that overthrowing him would greatly enhance French chances of winning the Algerian War.

Israel formed the third leg in the triad of powers arrayed against Nasser. Egypt had instituted a blockade of Israeli ships at the Gulf of Aqaba, Israel's outlet to the Indian Ocean. Also, Egypt had never recognized the Jewish state and indeed remained at war with it following the Israeli War of Independence during 1948–1949. In 1955, Israel mounted a half dozen cross-border raids, while Egypt carried out its own raids into Israeli territory by fedayeen, or guerrilla fighters.

During the months that followed Egyptian nationalization of the Suez Canal, the community of interest among British, French, and Israeli leaders developed into secret planning for a joint military operation to topple Nasser. The U.S. government was not consulted and indeed opposed the use of force. The British and French governments either did not understand the American attitude or, if they did, believed that Washington would give approval after the fact to policies undertaken by its major allies, which the latter believed to be absolutely necessary.

The British government first tried diplomacy. Two conferences in London attended by the representatives of twenty-four nations using the canal failed to produce agreement on a course of action, and Egypt refused to participate. A proposal by U.S. Secretary of State John Foster Dulles for a canal “users’ club” of nations failed, as did an appeal to the United Nations (UN) Security Council. On 1 October, Dulles announced that the United States was disassociating itself from British and French actions in the Middle East and asserted that the United States intended to play a more independent role.

Meanwhile, secret talks were going forward, first between the British and French for joint military action against Egypt. Military representatives of the two governments met in London on 10 August and hammered out the details of a joint military plan known as MUSKETEER that would involve occupation of both Alexandria and Port Said. The French then brought the Israeli government in on the plan, and General Maurice Challe, deputy chief of staff of the French Air Force, undertook a secret trip to the Middle East to meet with Israeli government and military leaders. The Israelis were at first skeptical about British and French support. They also had no intention of moving as far as the canal itself. The Israelis stated that their plan was merely to send light detachments to link up with British and French forces. They also insisted that British and French military intervention occur simultaneously with their own attack.

General André Beaufre, the designated French military commander for the operation, then came up with a new plan. Under it, the Israelis would initiate hostilities against Egypt in order to provide the pretext for military intervention by French and British forces to protect the canal. This action would technically be in accord with the terms of the 1954 treaty between Egypt and Britain that had given Britain the right to send forces to occupy the Suez Canal Zone in the event of an attack against Egypt by a third power.

All parties agreed to this new plan. Meanwhile, unrest began in Hungary on 23 October, and the next day Soviet tanks entered Budapest to put down what had become the Hungarian Revolution. French and British planners were delighted at the news of an international distraction that seemed to provide them a degree of freedom of action.

On 29 October, Israeli forces began an invasion of the Sinai Peninsula with the announced aim of eradicating the fedayeen bases. A day later, on 30 October, the British and French governments issued an ultimatum, nominally to both the Egyptian and Israeli governments but in reality only to Egypt, expressing the need to separate the combatants and demanding the right to provide for the security of the Suez Canal. The ultimatum called on

Israeli soldiers shown with a British-made Archer self-propelled gun captured from the Egyptians, 3 November 1956.
(Israel Government Press Office)

both sides to withdraw their forces 10 miles from the canal and gave them twelve hours to reply. The Israelis, of course, immediately accepted the ultimatum, while the Egyptians just as promptly rejected it.

On 31 October, the British began bombing Egyptian airfields and military installations from bases on Cyprus. British aircraft attacked four Egyptian bases that day and nine the next. When Eden reported to the House of Commons on events, he encountered a surprisingly strong negative reaction from the opposition Labour Party.

Following the British military action, the Egyptians immediately sank a number of ships in the canal to make it unusable. The Israelis, meanwhile, broke into the Sinai and swept across it in only four days against ineffective Egyptian forces. Finally, on 5 November, British and French paratroopers began an invasion of Port Said, Egypt, at the Mediterranean terminus of the canal.

The Eisenhower administration had already entered the picture. On 31 October, President Eisenhower described the British attack as “taken in error.” He was personally furious at Eden over events and is supposed to have asked when he first telephoned the British leader, “Anthony, have you gone out of your mind?” The United States applied immediate and heavy financial threats, both on a bilateral basis and through the International Mon-

etary Fund (IMF), to bring the British government to heel. Eisenhower also refused any further dealings with Eden personally.

A threat by the Soviet government against Britain on 5 November to send “volunteers” to Egypt proved a further embarrassment for the British government, but it was U.S. pressure that was decisive. Nonetheless, the world beheld the strange spectacle of the United States cooperating with the Soviet Union to condemn Britain and France in the UN Security Council and call for an end to the use of force. Although Britain and France vetoed the Security Council resolution, the matter was referred to the UN General Assembly, which demanded a cease-fire and withdrawal.

Israel and Egypt had agreed to a cease-fire on 4 November. At midnight on 6 November, the day of the U.S. presidential election, the British and French governments were also obliged to accept a cease-fire, the French only with the greatest reluctance. A 4,000-man UN Emergency Force (UNEF)—authorized on 4 November and made up of contingents from Brazil, Colombia, India, Indonesia, and the Scandinavian countries—arrived in Egypt to take up positions to keep Israeli and Egyptian forces separated. At the end of November, the British and French governments both agreed to withdraw their forces from Egypt by 22 December, and on 1 December Eisenhower announced that he had instructed U.S. oil companies to begin shipping supplies to both Britain and France.

Yugoslav troops with the United Nations Emergency Forces on patrol, El Arish, Egypt, 1957. (Corel)

Nasser and Arab self-confidence were the chief beneficiaries of the crisis. The abysmal performance of Egyptian military forces in the crisis was forgotten in Nasser's ultimate triumph. He found his prestige dramatically increased throughout the Arab world. Israel also benefited. The presence of the UN force guaranteed an end to the fedayeen raids, and Israel had also broken the Egyptian blockade of the Gulf of Aqaba, although its ships could still not transit the Suez Canal. The crisis also enhanced Soviet prestige in the Middle East, and the UN emerged from the crisis with enhanced prestige, helping to boost world confidence in that organization.

The Suez Crisis ended Eden's political career. Ill and under tremendous criticism in Parliament from the Labour Party, he resigned from office in January 1957. Events also placed a serious, albeit temporary, strain on U.S.-British relations. More importantly, they revealed the serious limitations in British military strength. Indeed, observers are unanimous in declaring 1956 a seminal date in British imperial history that marked the effective end of Britain's tenure as a great power. The events had less impact in France. Mollet left office in May 1957 but not as a result of the Suez intervention. The crisis was costly to both Britain and France in economic terms, for Saudi Arabia had halted oil shipments to both countries.

Finally, the Suez Crisis could not have come at a worst time for the West, because the crisis diverted world attention from the concurrent brutal Soviet military intervention in Hungary. Eisenhower believed, rightly or wrongly, that without the Suez diversion there would have been far stronger Western reaction to the Soviet invasion of its satellite.

Suharto (1921–)

Indonesian Army officer and second president of Indonesia (1967–1998). Born Mohammed Suharto in the hamlet of Kemusuk in Central Java on 8 June 1921, Suharto in the Javanese tradition used only his one name. He completed secondary school and then worked briefly as a bank clerk before joining the Royal Netherland's Indies Army (KNIL) in 1940. In 1943 during the Japanese occupation in World War II, he joined the Japanese-trained self-defense force Peta. He then joined the Army of the Republic of Indonesia in October 1945 and participated in the independence war against the Dutch. He was a lieutenant colonel at the time of Indonesian independence in 1949.

During 1957–1959, Suharto commanded the Diponegoro Division in Central Java. In 1962 he went on to command the Mandala Campaign during the liberation of West Irian from the Dutch. By 1965, the army was split into two factions, the leftists, who were loyal to President Sukarno, and the rightists, who included Suharto. On 1 October 1965, Sukarno's guards murdered six right-wing generals during an alleged coup attempt by communist civilians. This galvanized the rightists, who purged the Sukarno faction from the army and began to take steps to oust the president. In the meantime, Suharto had begun to set his sights on seizing control of the government himself.

In keeping with Javanese propriety, Suharto moved cautiously in deposing Sukarno, first obtaining the Supersemar (Letter of Authority) transferring power to him on 11 March 1966 and then installing himself as provisional president one year later. On 21 March 1967, he arranged for his election as president by the People's Consultative Assembly. As Suharto consolidated his power, some half million suspected communists were killed, and Indonesia's Chinese minority was subjected to severe repression. Once his rule had been "legitimized" by the obviously rigged election, Suharto consolidated his power by manipulating the political system. He was reelected five consecutive times (1973, 1978, 1983, 1988, and 1993). Although he would provide unparalleled political stability and economic growth, the costs were steep.

Under Suharto's so-called New Order, parliament was purged of communists, labor organizations were liquidated,

Suharto ruled Indonesia for more than three decades, from 1967 to 1998. During this era, Indonesia shifted its alliances toward the West and rejoined the United Nations. Critics condemned Suharto for suppressing dissent, ignoring human rights, and enriching his family and friends. (Embassy of Indonesia)

and freedom of the press was all but curtailed. Suharto strictly limited the number of political parties, and his Golkar Party established de facto one-party rule.

Suharto revamped Sukarno's state-oriented economic policies with the help of American-trained economists at the University of Indonesia. Suharto encouraged exports and foreign investments, received economic aid from the World Bank and the International Monetary Fund (IMF), stabilized the currency, and kept a tight lid on inflation. By the end of the 1960s, the economy was flourishing, and generally high growth rates were maintained until the 1997 Asian financial crisis, which decimated the Indonesian economic landscape.

Suharto's anticommunism was reflected in Indonesia's initially troubled relations with the Soviet Union and his severing of relations with the People's Republic of China (PRC). At the same time, he restored relations with Malaysia and encouraged regional cooperation that manifested itself in the formation of the Association of Southeast Asian Nations (ASEAN) in August 1967. During the 1970s, he turned increasingly to the West—especially the United States—for military and economic aid.

In 1975 Suharto ordered the invasion of East Timor, and in July 1976 Indonesia formally annexed that former Portuguese colony. In establishing control, Indonesian forces killed perhaps one-third of East Timor's population. As time went on, Suharto's human rights abuses became ever more appalling, and in 1997, during the Asian financial crisis, the World Bank accused Suharto of having embezzled as much as 30 percent of Indonesia's development funds over the years. The financial crisis ultimately brought Suharto down, as the economy spiraled downward and antigovernment protests increased. On 21 March 1998, he was forced from office. A year later, when his economic malfeasance became widely known, he was placed under house arrest. Some estimate that when he left office, he had enriched his family to the tune of \$15 billion through embezzlement and a variety of state-run monopolies over which he exercised de facto control.

Sukarno

(1901–1970)

Indonesian nationalist leader and first president of the Republic of Indonesia (1945–1967). Born Ahmed Sukarno in Surabaya, East Java, on 6 June 1901, like many Javanese Sukarno used only his last name. He studied in modern

In the hopes of securing independence for his nation, Indonesian nationalist leader Sukarno actively collaborated with the Japanese during World War II. After the conflict, he was the first president of Indonesia during 1945–1967. (Library of Congress)

Dutch colonial schools and received a college degree in architecture from the Bandung Institute of Technology in 1926. Pursuing his passion for politics, he cofounded the Partai Nasional Indonesia (PNI, Indonesian Nationalist Party) in 1927 and became a leader of the independence movement.

Arrested by Dutch colonial officials for subversive activities, Sukarno utilized his trial to highlight the nature of imperialism and the importance of the PNI. Found guilty, he was imprisoned during 1929–1931. In July 1932, he was elected chairman of the Partai Indonesia, successor to the PNI. Arrested again on 1 August 1933 and exiled to Flores and then Bengkulu (in southern Sumatra), Sukarno's exile ended with the Japanese invasion of Indonesia in 1942.

Sukarno embarked on active collaboration with the Japanese as a means to win Indonesian independence and used his considerable oratory skills to unify the people through radio broadcasts and personal appearances. He also secured significant concessions from the Japanese, such as administrative positions for Indonesians and permission to organize Indonesian political parties and military forces.

On 17 August 1945, only days after the Japanese surrender, Sukarno and fellow nationalist Mohammad Hatta declared Indonesian independence. A day later, the provisional parliament adopted a constitution that had already

been drafted. It also elected Sukarno president. The 1945 constitution, based heavily upon Sukarno's political philosophy, encompassed the Pancasila (Five Pillars): national unity, internationalism, representative democracy, Marxist-style social justice, and belief in God. Sukarno's sterling negotiating skills and reputation ultimately steered Indonesia through the Battle of Surabaya, the Madiun Rebellion, and Dutch attempts to regain control over their colony.

Taken prisoner by Dutch forces in December 1948, Sukarno was released on 26 December 1949. The formal transfer of sovereignty from the Netherlands occurred on 27 December 1949. Indonesia's anticolonial battle was over.

Sukarno's powers as president were somewhat circumscribed by the 1950 provisional constitution that provided for a parliamentary system. However, the new constitution proved just as ineffectual as the first. The parliament gridlocked, while social, political, religious, and ethnic tensions grew in scope and severity. Political instability ultimately prompted Sukarno in 1959 to introduce what he termed "guided democracy" by dissolving parliament, exiling political rivals, and reinstating the 1945 constitution that conferred upon him vast executive powers. As he became more autocratic, his reliance on the army and the Communist Party of Indonesia increased dramatically.

Sukarno also moved boldly in foreign policy. He hosted the Pan-Asian-African Bandung Conference in April 1955, established formal ties with the People's Republic of China (PRC), and requested financial and military aid from the Soviet Union. His pursuit of the West Irian claim against the Dutch ended successfully in 1963, although his confrontation with Malaysia culminated in Indonesia's withdrawal from the United Nations (UN) in 1964.

After several attempts on his life in the late 1950s, Sukarno tightened control by establishing strict publishing laws, bringing more communists into the government, and increasing state-sponsored discrimination toward the Chinese minority. In July 1961, he was made president for life. On 30 September 1965, when an abortive coup led by communists and junior army officers resulted in the brutal killing of six senior right-wing generals, Sukarno reacted hesitantly. General Suharto, commander of the Kostrad (Strategic Reserve), took the initiative and gradually pushed Sukarno from power. On 21 March 1967, Sukarno was forced to cede control to Suharto, who then ordered Sukarno held under house arrest. Sukarno died on 21 June 1970 in Jakarta.

Administrative military headquarters for the North Atlantic Treaty Organization (NATO). NATO established the Supreme Headquarters Allied Powers Europe (SHAPE) on 2 April 1951, just four months after U.S. President Harry S. Truman named General Dwight D. Eisenhower as NATO's first Supreme Allied Commander Europe (SACEUR). SHAPE became the nerve center of NATO's integrated military forces. Originally located in Rocquencourt, France, SHAPE moved to Casteau, Belgium, in 1967 when French President Charles de Gaulle withdrew France from the NATO military command. Thus, the French military was autonomous from NATO, but France remained a member of NATO. Because Eisenhower wanted NATO to transcend individual nationalities, he fashioned SHAPE into a fully integrated command with officers from NATO nations acting as its staff officers. SHAPE served NATO well throughout the Cold War and continues to function to this day.

The origins of SHAPE date back to the Supreme Headquarters Allied Expeditionary Force (SHAEF), which was organized by Eisenhower and began as a combined staff between the United States and Britain during the Allied liberation of Europe (1944–1945). Two key issues, however, pointed toward a smaller, integrated headquarters that would be the genesis of SHAPE. SHAEF's American and British planners had often worked on divergent paths and were not always efficient. Second, Americans lacked understanding of the British conference system. Consequently, American officers often did not fully comprehend the ramifications of these meetings and wasted time and effort attempting to rectify misperceptions. Those studying these problems concluded that a supreme allied headquarters should employ one integrated staff cognizant of the need to avoid affronts to national pride.

The March 1948 Brussels Pact was crucial to the formation of SHAPE. This pact included a common defense arrangement among Belgium, Luxembourg, the Netherlands, France, and Great Britain. The Western European Union was the mechanism for planning its military operations. Following the creation of NATO on 4 April 1949, the Western European Union headquarters, or the military headquarters of those European nations that would become part of NATO and were already allied, became the basis for SHAPE.

The integrated, multinational nature of SHAPE is evident in its first senior leaders: Eisenhower as SACEUR, British Field Marshal Bernard Montgomery as deputy SACEUR, and British Air Chief Marshal Hugh Saunders as the air deputy to SACEUR.

SHAPE presided over NATO's Cold War collective defense against the Warsaw Pact and had to be ready to produce the strategies that would act as

Supreme Headquarters Allied Powers Europe

a deterrent and defend NATO's constituent nations. Following the collapse of the Soviet Union in December 1991, SHAPE continued its service by controlling such NATO operations as those in Bosnia (1995–present) and in Kosovo (1999–present). Thus, SHAPE's mission has changed from collective defense to cooperative security.

Suslov, Mikhail Andreyevich (1902–1982)

Soviet political leader. Born on 8 November 1902 in Shakhovskoye in western Russia, Mikhail Suslov served in local Komsomol (Young Communist League) posts from 1918 to 1921 and then joined the Communist Party of the Soviet Union (CPSU). He graduated from the Prechistenskaia Workers' Faculty in Moscow in 1924 and from the Plekhanov Institute of the National Economy in 1928. He did graduate work at the Institute of Economics of the Communist Academy during 1929–1931 while teaching at Moscow University. During 1931–1935 he served in administrative posts in the party apparatus before attending the Moscow Economic Institute. Graduating in 1937, he was elected to the CPSU Central Committee in 1941 and worked in party administrative posts in Rostov and Stavropol until 1944. During World War II, he was also a member of the Military Council of the North Caucasus Front and served as chief of staff for regional partisan forces.

Beginning in 1944, Suslov held a succession of Central Committee posts. Named a Central Committee secretary in 1947, he had responsibility for enforcing party ideology. Following the purge of Andrei Zhdanov in 1948, Suslov also assumed responsibility for relations with foreign communist parties and served briefly as editor of *Pravda*. In 1952 he was elected to the expanded Presidium (Politburo), although he lost his seat when the body was reduced from twenty-five to ten members in 1953. Shortly afterward, he became second secretary of the Central Committee. He returned to the Presidium in 1955 and served until his death, wielding considerable influence in matters of ideology and foreign affairs.

A party conservative, Suslov opposed Nikita Khrushchev's extensive attempts to implement a de-Stalinization campaign beginning in 1956. Suslov became the principal advocate of intervention in Hungary during the 1956 uprising and was in Budapest to help oversee its implementation. He was also responsible for the banning of the Boris Pasternak's novel *Dr. Zhivago*. While Suslov supported Khrushchev in the Politburo power struggles of 1956–1957, differences between the two men grew over a number of issues, including economic reform, foreign policy, and the publication of Aleksandr Solzhenitsyn's *One Day in the Life of Ivan Denisovich*, which Khrushchev permitted.

In October 1964, Suslov was a key figure in the ouster of Khrushchev. Suslov's conservative influence grew under Khrushchev's successor Leonid Brezhnev, especially in cultural affairs, in part because Suslov did not seek higher office himself. In foreign policy, he generally opposed détente, advocated intervention in Afghanistan in 1979, and urged similar action in Poland the following year. Suslov died in Moscow on 25 January 1982.

Mikhail A. Suslov, member of the Presidium of the Soviet Union and hard-liner in matters of communist ideology and foreign policy, shown here in March 1956. (Bettmann/Corbis)

Czechoslovak general and president (1968–1975). Born on 25 November 1895 in Hroznatín, Moravia, to a peasant family, Ludvík Svoboda was drafted into the Austro-Hungarian Army during World War I. He deserted and joined the Czech Legion in Russia, attaining the rank of captain. At war's end, he returned to the new state of Czechoslovakia and joined its army. Following the German occupation of all Czechoslovakia in March 1939, he fled to Poland, where he organized a Czechoslovak military unit.

Svoboda, Ludvík
(1895–1979)

Following the German conquest of Poland in September 1939, Svoboda and his men went to the Soviet Union, where he led a Czechoslovak army corps against the Axis powers, becoming a brigadier general in 1943. Sympathetic to the communists, he secretly joined the Communist Party of Czechoslovakia (CPCz) during the war. In April 1945, President Edvard Beneš appointed Svoboda minister of defense, and Svoboda was promoted to full general in August 1945.

Svoboda officially and publicly joined the CPCz in October 1948, but the party hierarchy did not trust him and made certain that he had little power. During the Stalinist purges, he lost his positions in 1950 and was briefly imprisoned in 1951, after which he returned to his home village.

During his 1954 visit to Prague, Soviet leader Nikita Khrushchev personally interceded and demanded that Svoboda be politically rehabilitated. Svoboda then became the director of the Klement Gottwald Military Academy, retiring in 1959. A popular war hero, Svoboda was elected president of Czechoslovakia on 30 March 1968 during the Prague Spring.

After the August Warsaw Pact invasion, Svoboda refused to accept a Soviet puppet government or negotiate with the Soviets until he was assured that the leaders of the Prague Spring would not be harmed. So assured, he then agreed to Soviet demands that the Prague Spring reforms be reversed and accepted the normalization of Czechoslovakia, thereby losing much of his credibility. Illness forced his removal from office on 29 May 1975. Svoboda died in Prague on 20 September 1979.

Sweden

Scandinavian nation. Sweden covers 173,731 square miles, slightly larger than the U.S. state of California, and had a 1945 population of approximately 6.8 million people. Sweden is bordered by Norway to the west, Finland to the north, the Gulf of Bothnia and the Baltic Sea to the east, and the North Sea to the south-southwest. Once a great power, Sweden was reduced to a regional power following the Napoleonic Wars. During both world wars, Sweden managed to maintain its neutrality. Thus, its wartime experiences were quite the opposite of many other Western democracies. Not having had

to regret appeasement at Munich in 1938 or experience a Pearl Harbor, Swedish postwar foreign policy therefore became a continuation of its prior neutrality. Swedes adopted nonalignment in peace and neutrality in case of war. However, unlike Switzerland—another perennial neutral—Sweden did join the United Nations (UN) in 1946.

Following World War II, Sweden attempted to mollify the Soviets by forcing Baltic refugees to repatriate and granting Moscow substantial financial credits. The Soviets, however, did not show much gratitude. After Swedish diplomat Count Raoul Wallenberg negotiated the release of Hungarian Jews, he was apprehended by Soviet agents and disappeared. This aroused great anti-Soviet sentiments in Sweden. Other early Cold War Soviet provocations included the presumed Soviet downing of a Swedish surveillance aircraft in 1951 and Soviet efforts to disrupt the subsequent search and rescue mission.

In the immediate postwar years, Sweden failed in its attempt to create a nonaligned Nordic bloc to keep all of Scandinavia out of the Cold War. Finland signed a mutual aid, cooperation, and friendship treaty with the Soviet Union in 1948, while Denmark and Norway joined the North Atlantic Treaty Organization (NATO) in 1949. This constellation of Norwegian and Danish NATO membership, Swedish nonalignment, and Finland's ties to the Soviet Union has frequently been termed "the Nordic balance." During the early Cold War, Sweden's Social Democrats and center-rightist political parties differed little on the practical aspects of nonalignment. Nevertheless, Sweden conducted security-related consultations with the United States and NATO in both the political and military spheres. On occasion, the center-rightists did advocate a tougher line with the Soviets in regard to Eastern Europe.

Although Swedes experienced some economic dislocation in the immediate post-World War II years, having escaped wartime destruction meant that their economic, political, and social institutions were still intact in 1945. In the elections of that year, the Social Democrats formed a majority government under Prime Minister Per Albin Hansson. When he died the following year, Tage Erlander replaced him and held the premiership until 1969. During 1951–1957, the Social Democrats had to share power with the Peasant Party, as it had done during the interwar years.

Swedish society was thoroughly democratic and civic-minded in its social and political structures. Swedes enjoyed a well-functioning social welfare state, a high level of social and corporate organization, and a strong public sector. Much of this was made possible by a thriving industrial base, funded by domestic financing. Swedish exports included high-value industrial products such as automobiles, machine tools, and ball bearings. But the postwar era also witnessed the rapid depopulation of rural Sweden, as industry and commercial concerns in the cities lured workers from the hinterlands.

Despite fears of provoking Soviet suspicions, Sweden accepted Marshall Plan aid and in 1951 also adopted the U.S. Cold War initiative that called for an embargo of strategic commodities and products to the Eastern bloc. Sweden also put recognition of the German Democratic Republic (GDR, East Germany) on hold until 1972 in accordance with the general Western view

This constellation of Norwegian and Danish NATO membership, Swedish nonalignment, and Finland's ties to the Soviet Union has frequently been termed "the Nordic balance."

that recognition could be seen as a hostile act against the Federal Republic of Germany (FRG, West Germany), a major trading partner.

In the areas of trade and other transnational interactions, Sweden did align itself with the West. Swedish policymakers thus created a tension between nonalignment and economic necessity. The European Council provided one arena for interacting with other democracies without being tied to a bloc. The European Free Trade Association (EFTA) allowed for free trade outside the more politicized European Economic Community (EEC), which Swedish officials refused to join because it would contradict nonalignment.

As East-West tensions eased beginning in the mid-1960s, many non-aligned states had more freedom of action of foreign affairs. Accordingly, the Social Democratic government moved from pure *realpolitik* to a more idealistic foreign policy. At the core of this reorientation were expectations of a new economic world order, decolonization, nuclear disarmament, and the curbing of great power influence. The move away from *realpolitik* became most evident at the UN by Swedish participation in peacekeeping missions in the Middle East and the Congo and by Dag Hammarskjöld's posting as UN secretary-general. Indeed, rapid decolonization swelled the number of nonaligned states and broadened the appeal of Swedish foreign policy.

Swedish leaders did not shy away from confronting the United States. Prime Minister Olof Palme spoke out fiercely against the Vietnam War. Indeed, after the U.S. Christmas Bombings of Hanoi in December 1972, Palme compared the incident to the Holocaust. President Richard M. Nixon's administration was outraged and withheld its ambassador from Stockholm until 1974. Sweden also provided asylum to U.S. draft dodgers seeking to escape service in Vietnam, a policy that particularly rankled Washington.

In 1976, U.S.-Swedish relations improved markedly when the political Right gained power under Prime Minister Thorbjörn Fälldin. The Peasant Party, to which Fälldin belonged, had changed its name to the Center Party and simultaneously aligned itself with the political Right. Still, no major policy changes occurred, although the idealism of the Social Democrats was drastically toned down.

With Cold War tensions already on the rise again in the late 1970s, the Swedish government condemned the 1979 Soviet invasion of Afghanistan and the imposition of martial law in Poland in 1981. At the same time, dramatic events were also unfolding closer to home. In October 1982, a Soviet submarine ran aground outside the Karlskrona naval base in southern Sweden. Moscow acknowledged the undeniable fact of the grounded sub (which the Soviets blamed on a damaged navigation system) but denied that there had been any systematic Soviet violation of Swedish territorial waters. Nonetheless, Soviet intrusions by submarines into Swedish waters continued.

When the Social Democrats and Palme regained power in 1986, Swedish officials withdrew their protests of Soviet submarine violations and announced an upcoming state visit to Moscow. However, Palme was assassinated in February 1986, and the trip was made by his successor, Ingvar Karlsson, in 1987. The rapprochement between the Soviet Union and Sweden was facilitated by new Soviet leader Mikhail Gorbachev's reforms.

The end of the Cold War transformed the Baltic Sea from a part of the Iron Curtain to an increasingly important line of communication between Sweden and the former Eastern bloc countries. As such, Sweden's influence in the region grew. However, friction was also apparent. Estonia, Latvia, and Lithuania harbored a grudge toward Sweden for its 1940 recognition of the Soviet takeover of these republics and had not forgotten Sweden's forced repatriation of Baltic refugees back to the Soviet Union in 1945. There was also some Baltic discontent over Stockholm's tepid support during the 1989–1991 struggles for independence. Baltic skepticism toward Sweden also had deep historical roots, as it was here that Sweden had vied with Russia for Baltic supremacy in the seventeenth and early eighteenth centuries.

With the end of the Cold War, Sweden no longer regarded the European Union (EU), the successor of the EEC, as part of a political bloc to which membership on their part would be a breach of their nonalignment policy. Thus, Sweden joined the EU after a referendum in 1994.

At the end of the twentieth century, government interventionism and large-scale industrial structures marked a troubled Swedish economy. It faced the challenge of globalization and demands for harmonizing with EU standards. Unemployment has been comparatively high by Scandinavian standards, placing additional burdens on social services. Foreign interests have purchased Swedish trademarks such as Volvo and Saab, and production has moved to countries in which labor costs are lower. Fearing unemployment and diminished benefits, Swedish trade unions have not always been cooperative in making necessary sacrifices in order to make Sweden's industry more competitive.

In 1945, the Swedish Army lacked the capability of fighting a mechanized opponent in open terrain. The Swedish Navy and the Swedish Air Force had been expanded and were relatively modern in 1945, but the army was widely

Sweden, Armed Forces

dispersed in a large number of units defending different parts of Swedish territory rather than maintaining fewer, more modernized, and well-equipped units. This problem worsened during the 1970s and 1980s.

Sweden's war planning prepared for a combined Soviet coastal and airborne attack directed toward eastern Sweden around Stockholm, eventually followed by landings in southern Skåne as well as on the island of Gotland and in Gothenburg in western Sweden. In some scenarios, a land invasion across the Finnish border was also regarded as a potential threat. From the early 1960s, relatively more emphasis was placed on preparations to defend the most northern parts of Sweden. Here the fortress of Boden was supported by lines of fortifications along the rivers in northern Sweden. Other large systems of modern fortifications were built, especially in the Stockholm archipelago, while along the shores of Skåne in southern Sweden no fewer than 600 fortifications built during 1939–1945 were utilized during most of the Cold War.

Sweden's policy of neutrality prevented any formal ties with the North Atlantic Treaty Organization (NATO), but Sweden secretly established multi-lateral military cooperation with Denmark, Norway, the United Kingdom, and the United States. Swedish air bases were prepared to receive U.S. strategic bombers, plans were made for receiving oil and other strategic goods via Trondheim in Norway, and the communication system of the Swedish Air Force was connected with the U.S. air base in Wiesbaden in the Federal Republic of Germany (FRG, West Germany). It is believed that Sweden also maintained intelligence cooperation with other Western nations and, beginning in 1960, was tacitly protected by the U.S. nuclear umbrella.

In the late 1940s, Swedish armed forces consisted of 850,000 conscripts, approximately 60,000 professionals, and more than 100,000 volunteers. The total military structure comprised 36 army brigades, 33 large surface warships, 24 submarines, and 50 air force divisions with 1,000 airplanes. A large armaments industry included artillery systems from Bofors, aircraft from Saab, and surface ships from the Karlskrona shipyard. From 1960 on, the navy developed the concept of a lighter navy, in which the 2 cruisers and 15 destroyers were sequentially replaced by smaller but more powerful units. With the parliamentary defense budget decisions of 1968 and 1972, the military establishment was expected to do more with less. This resulted in severe organizational cutbacks and canceled training exercises, especially for the air force and navy, and the postponement of equipment replacement for the army. Instead, the need to defend a large area of territory took priority over further modernization and training. During 1956–1994, 70,000 Swedish soldiers participated in peacekeeping missions for the United Nations (UN) in the Middle East (1956–1994), the Congo (1960–1964), and Cyprus (1964–1987).

As late as 1982, Sweden could mobilize 850,000 men in twenty-eight army brigades, forty-eight naval ships (including twelve submarines), and twenty-three to twenty-four air force divisions. But of the twenty infantry brigades, only eight were regarded as modern, meaning that they could be employed for offensive operations. The remainder could only be used for

defensive tasks. In 1992, the infantry brigades were reduced to seventeen, and the total personnel in the armed forces amounted to 750,000.

As early as 1954, instructions had been issued as to how Swedish troops should deploy in case of a nuclear attack by the Soviets. During the 1950s, the Swedish military establishment began demanding the development of a Swedish nuclear deterrent. After serious and protracted debate, however, all such plans were scrapped in 1968.

For most of the Cold War period, the Swedish Air Force was among the world's most modern and powerful. In the 1950s, it numbered some 1,000 aircraft, produced by domestic manufacture. Many of these planes were in hardened sites, and the Swedes developed a widespread system of air-strips that would make use of the Swedish highway system in order to make it difficult for an attacker to wipe out the majority of aircraft in a first strike. The chief task of the air force and navy was to meet and defeat in the Baltic Sea any invasion force before it could reach Sweden itself. Training in close air support for ground forces was thus not a priority.

Officer in the Polish security apparatus and one of the most celebrated of communist defectors. Józef Światło was born Izak Fleischfarb on 1 January 1915 in Medyna (Eastern Galicia), the son of a Jewish low-ranking civil servant. He completed only primary school. During 1932–1938, he was an active member of a communist youth organization in Kraków and was twice arrested for his political activities.

In 1938 Fleischfarb was drafted into the Polish Army. Captured by the German Army in their invasion of Poland in September 1939, he escaped and made his way to eastern Poland, which had been incorporated into the Soviet Union. In 1943 he joined the communist-organized Polish Army, and

Światło, Józef
(1915–1985?)

Józef Światło, who was deputy chief of Poland's secret police before he fled to the West, is shown at a press conference at the Voice of America headquarters in New York City on 1 October 1954. Światło was one of the most important defectors from the communist bloc to the West during the Cold War. (Bettmann/Corbis)

in November 1944 he was transferred to the Ministry of Public Security, where he worked with the Soviet Komitet Gosudarstvennoi Bezopasnosti (KGB).

In postwar Poland, the Soviets coerced Jews to change their Yiddish names to Polish names, and Izak Fleischfarb became Józef Światło. During 1945–1948 he held key posts in the regional structure of the security apparatus, and in October 1948 he was transferred to the central offices to work in a unit specially created for dealing with the Polish Communist Party. Dependable and distinguished for his abilities, he was entrusted with such tasks as the arrests of Władysław Gomułka and Cardinal Stefan Wyszyński.

On 5 December 1953, while on an official trip to Berlin, Światło found his way to U.S. authorities, defected, and was transported to the United States, where the Central Intelligence Agency (CIA) used him for propaganda purposes. In September 1954 he was granted political asylum, which was trumpeted by the U.S. government. Radio Free Europe broadcast more than 100 of Światło's programs titled *Behind the Scenes of the Security and the Party*, and in

1955 more than 800,000 copies of a brochure based on the broadcasts were scattered on Polish territory as part of the CIA's largest balloon campaign, Operation SPOTLIGHT. Światło's revelations forced Polish authorities to reorganize the security apparatus and to discharge or arrest several high-ranking Polish security officials.

Światło continued to reside in the United States under an assumed name and with CIA protection, essentially a nonperson. He died possibly in New York City in May 1985.

West European nation encompassing 15,942 square miles, about twice the size of the U.S. state of New Jersey. Switzerland is bordered by Italy to the south, France to the west, and Germany and Austria to the north and east. The Swiss population in 1945 was 4.428 million people. By the end of World War II, Switzerland's neutrality during the conflict and its role as a financial and commercial center for Nazi Germany assured strained relations with both the United States and the Soviet Union. The Swiss were internationally isolated and viewed integration and multilateralism warily. Their long-standing tradition of neutrality was at odds with the multilateral collectivism of the United Nations (UN). In 1946, Switzerland determined that it could not join the UN without having its neutrality explicitly recognized.

In 1954, the Swiss promulgated the so-called Bindschedler Doctrine, specifically outlining the nation's neutral position in peacetime. This doctrine strictly differentiated between the political and technical aspects of international affairs. Thus, while Switzerland would keep aloof from political and military alliances, it would play an active role in international economic, humanitarian, and technical organizations, displaying its commitment to international solidarity. During the Cold War, Swiss foreign policy hence pursued economic integration without political encumbrances.

Switzerland

Sir Anthony Eden (*right*) and Swiss President Max Petitpierre review a Swiss Honor Guard in Geneva in 1955. (Library of Congress)

Swiss Cold War security policy, with its emphasis on autonomous national defense by a militia army, was derived from the principle of armed neutrality. The concept of the citizen-in-arms was an important part of Swiss life and provided for a large army despite the nation's small population. At peak strength, the Swiss Army could field 600,000 soldiers.

During the early Cold War, Switzerland sided with the West and indirectly profited from the nuclear umbrella of the United States and the North Atlantic Treaty Organization (NATO). Under Federal Councilor Max Petitpierre (1945–1961), the Swiss government emphasized that the nation was ideologically aligned with the West, although it remained militarily neutral.

As a small landlocked country, Switzerland relied heavily on international trade. Therefore, with the exception of the subsidized agricultural sector, it supported the reduction of trade tariffs. Switzerland remained prosperous throughout the Cold War, depending on industrial exports such as textiles, chemicals, and engineering-related products. Switzerland also kept its place as an international financial center. Because the Swiss eschewed a large welfare state, their economy weathered the economic storms of the 1970s and 1980s rather well. The nation boasted comparatively low inflation, low unemployment, and positive growth and productivity. In addition, labor-

management relations remained positive and nonconfrontational, which added to Swiss economic stability.

Swiss politics are unique in that parties are highly decentralized and are focused on local rather than national issues. Although all the major parties are represented at the national level, they tend to be fixated on local constituencies and their particular interests, which dilutes the political system at the federal level. There is also a plethora of political parties in Switzerland that are decidedly balkanized by the large number of religious and linguistic cleavages throughout the country. Large French, German, and Italian-speaking populations help account for the great diversity in the political process. The four largest political parties in Switzerland are the Social Democratic Party (SPS), the Swiss People's Party (SVP), the Radical Party (FDP), and the Christian Democratic Party (CVP).

The Cold War accorded Switzerland an intermediary role in the East-West conflict. Switzerland provided its mediation services offices to both East and West, including offers to mediate a settlement to both the 1967 and 1973 Arab-Israeli conflicts. In 1953, Switzerland engaged in the Korean War cease-fire agreement through two international commissions. Swiss neutrality was further recognized when the Soviet Union suggested in 1955 that Austria should develop a neutrality of the kind practiced by the Swiss.

Switzerland also took on international mandates to act as a protecting power, such as in representing U.S. interests in Cuba after 1961. In addition, Geneva served many times as a center for international negotiations. In 1985, for example, Geneva was the site of the historic summit between U.S. President Ronald Reagan and Soviet leader Mikhail Gorbachev. Switzerland also hosted the humanitarian offices of the Geneva-based International Committee of the Red Cross, which aims at assisting civilian victims of war.

In the 1970s, under Foreign Minister Pierre Graber (1970–1978), Swiss foreign policy became more active and multilateral. The Swiss Federal Council's landmark 1973 Security Report envisioned political participation in international security organizations such as the Conference on Security and Cooperation in Europe (CSCE). Switzerland played an important role in the CSCE together with other neutral and nonaligned nations.

During the Cold War and beyond, Switzerland's relationship with an increasingly united Western Europe was often troubled. Switzerland joined the Organization for European Economic Cooperation (OEEC) in 1948 and, with great delay, the Council of Europe in 1963. Yet Swiss relations with Europe became more difficult after the European Free Trade Association (EFTA), founded in 1960 with Switzerland as an active member, lost its importance in the 1970s with British entry into the European Economic Community (EEC).

After a late, even if most-narrow, referendum in favor of joining the United Nations (UN) in March 2002 (in 1986, a vast majority of Swiss voters had still voted against such an entry), Switzerland's major challenge in the twenty-first century remains the shaping of its relationship with a dynamically proceeding European Union (EU).

Swords to Ploughshares Movement

Independent peace movement begun in the German Democratic Republic (GDR, East Germany) in 1980. “Swords to ploughshares” is a biblical quotation from the Book of Micah 4:3 and the Book of Isaiah 2:4. The movement’s symbolic motto is depicted by sculptor Evgeniy Vuchetich’s statue “Let Us Beat Swords into Ploughshares,” donated by the Soviet Union to the United Nations (UN) Headquarters in New York in 1959.

During the preparations for the first Peace Decade in 1980, a ten-day period of peace activities conducted by the East German Union of Evangelical Churches, youth vicar Harald Bretschneider first used the symbol to summon all Christians to attend nationwide prayers. He also connected the symbol to the pacifist campaign “Make Peace Without Weapons” and to various peace movements in the West.

The symbol was made into cloth badges and was eagerly worn by many East German youths, who used it as a silent protest against the militarization of East German society. From 1980 on, peace groups formed within many churches in East Germany. They demonstrated against the presence of Soviet missiles on East German soil as well as against the degradation of the environment caused by industrial waste. Consequently, in November 1981 East German officials banned the wearing of the badges. The government considered it subversive to its so-called communist peace politics.

Peace activists both in and outside East German churches were labeled as subversive elements. Many youths who persisted in wearing the badges were harassed by the secret police (Stasi), banned from their final exams, and even prosecuted. The East German regime managed to prevent these groups from maturing into political movements, at least for a time. Pacifist and ecological groups remained at the grassroots level and were closely observed by the Stasi. Nevertheless, in the summer and fall of 1989, the opposition peace groups formed the nucleus of the mass protests against the government, which in turn brought an end to communism and the division of Germany.

Arab nation in the Middle East covering 71,498 square miles, just slightly larger than the U.S. state of North Dakota. The Syrian Arab Republic, with a 1945 population of approximately 3.2 million people, borders on Jordan and Israel to the south, Lebanon and the Mediterranean Sea to the west, Turkey to the north, and Iraq to the east. For much of its history, Syria was dominated by larger powers. It was part of the Ottoman Empire until 1920, and its economy and educational system had left its populace in relative destitution. In 1920, France received a League of Nations mandate over both Syria and neighboring Lebanon. However, French rule there resulted in repeated uprisings—particularly among the Druze. After a tortuous series of negotiations that began in the late 1920s, Syria was granted considerable autonomy in 1936. To fulfill previous agreements, France announced the formation of an independent Syrian republic in September 1941 with Shukri al-Kuwatli as its president. Syria became fully independent on 1 January 1944.

Syria took part in the failed Arab war against Israel during 1948–1949. A member of the Arab League, Syria was a vociferous opponent of Israeli statehood. The defeat in the war and disagreement over Syria's potential union with Iraq torpedoed al-Kuwatli's government. There were three coups in 1949, the last one headed by Lieutenant Colonel Adib al-Shishakli, who governed with a heavy hand until 1954. Al-Shishakli was ousted in 1954, and late that year elections were held to determine the makeup of the new government. In the end, a three-party coalition (People's, National, and Baath Parties) emerged with National Party chief Sabri al-Asali as head of the government. In the succeeding years, the Baathists, who combined Arab nationalism with socialist policies, became the most powerful political force in Syria. As such, Syria entered into economic and military agreements with the Soviet Union.

Syria

There were three coups in 1949, the last one headed by Lieutenant Colonel Adib al-Shishakli, who governed with a heavy hand until 1954.

In February 1958, Syria and Egypt joined to form the United Arab Republic (UAR). Within a year Egypt's intention to dominate the UAR became obvious, which forced yet another coup against the Syrian government in September 1961. Carried out by a group of military officers, the coup plotters pulled Syria out of the UAR and established the Syrian Arab Republic. In December 1961 elections for a national assembly occurred, and the body chose two conservative People's Party members to lead the new regime. Another coup in late 1962 again toppled the government.

In 1963, a joint Baath-military government came to power. The new government nationalized most industrial and large commercial concerns and engaged in land reforms that redistributed land to the peasants. Meanwhile, Syria continued to cultivate relations with the Soviet bloc. A schism in the Baath Party resulted in more instability, and in 1966 the radical wing of the party staged a coup and installed Yusseff Zayen as prime minister. Nureddin al-Attassi became president. This new regime tightened Syria's ties with the Soviets and Egyptians.

A member of a Syrian honor guard stands at attention during Operation DESERT SHIELD. Despite Syrian animosity toward U.S. ally Israel, Syria joined the United States in the coalition against Iraq during the Persian Gulf War of 1991. (U.S. Department of Defense)

Syria fought yet another war with Israel in June 1967. This time, its defeat included the loss of the Golan Heights to the Israelis. The outcome of the war ultimately brought General Hafez al-Assad to power in 1970. An ardent Baath nationalist, Assad sought to increase ties to other Arab states, de-emphasize Syrian reliance on the Soviet Union, and defeat Israel.

In early 1971, Assad was elected president. He would rule the country until his death in 2000. Over the next several years following his election, he modernized the Syrian Army and engaged in modest economic reforms, while the Baath Party gained even more strength. Befitting his Baathist philosophy, the state played a central role in economic planning and implementation. It must be noted, however, that Assad's tactics could be brutal and that there was little room for dissent or democracy in Syria. Syria was involved in a fourth Arab-Israeli war in October 1973. After initial successes, and although Syrian forces this time fought well, they were nonetheless driven back beyond their original positions.

In the late 1970s and 1980s, Sunni Muslim fundamentalists began challenging the Baath Party's secular outlook. During 1976–1982, urban areas all across Syria became hotbeds of political unrest. Assad brutally crushed a February 1982 uprising by the Muslim Brotherhood in Hama, and troops killed several thousand people.

Assad also sent his army into Lebanon in 1976, ostensibly as a peacekeeping force during the civil war there. The troops stayed on, however, Assad siding with the Muslims who were fighting Christian militias. By the mid-1980s, Assad's forces had become the preponderant political and

military force in Lebanon. Syrian troops were not withdrawn from Lebanon until 2005.

At the same time, the 1980s saw the Assad regime taking harder-line Arab positions and moving closer to the Soviets. Assad's get-tough approach in regional politics included his funding and encouragement of terrorism. Assad, who was always in the end a pragmatist, sought to ameliorate relations with the West as the Soviet Union began to implode in 1990. When Iraq invaded Kuwait in August 1990, Assad was the first Arab leader to denounce the attack. His government also provided 20,000 troops to the international coalition that defeated Iraqi forces in the 1991 Persian Gulf War.

In 1991, Assad's government entered into peace negotiations with Israel, although the process broke down with no firm agreement in January 2000. In June 2000, Assad died unexpectedly after thirty years in office. He was succeeded by his son, Bashar al-Assad, who was carefully groomed as the heir apparent. Allegedly a free-market proponent, the younger Assad attempted some economic and political reforms, but the process has been fraught with setbacks and obstacles. In 1998, 65 percent of all Syrian revenues came from petroleum products.

T

U.S. senator (1939–1953) and unsuccessful candidate for the Republican presidential nomination (1940, 1948, 1952). Born in Cincinnati, Ohio, on 8 September 1889, the eldest son of the future Republican President William Howard Taft and his wife Helen Herron Taft, Robert Taft attended the Taft School for Boys in Watertown, Connecticut, and graduated from Yale University (1910) and Harvard Law School (1913). From 1914 onward Taft practiced law in Cincinnati, where he soon became active in Republican politics. Hostile to most New Deal domestic measures of the 1930s, by the time he won election to the Senate for Ohio in 1938 he was firmly identified with his party's conservative wing.

Taft was equally critical of President Franklin D. Roosevelt's foreign policies. When World War II began, Taft opposed American aid to the Allies, supporting the America First policies enunciated by ex-President Herbert Hoover and others and insisting that war would destroy American civil liberties and that Germany posed no danger to the Western Hemisphere. Following the U.S. entry into the war, Taft constantly assailed what he viewed as the excesses of domestic controls and propaganda while opposing the creation of a world bank or any other international organization apart from the United Nations (UN).

By 1946 Taft, nicknamed "Mr. Republican," had become a major figure within the cross-party conservative coalition that effectively dominated Congress. Immune to appeals for bipartisanship, as the Cold War developed he opposed high defense expenditures, voted in 1946 against the large American loan to Britain; complained that American military and economic support for Greece, Turkey, and the Marshall Plan were all too expensive; and opposed the creation of the North Atlantic Treaty Organization (NATO). He believed that America's atomic weapons safeguarded it from any foreign attack and that his country should not commit troops outside the Western Hemisphere.

When the Korean War began, Taft, de facto though not official leader of a Republican Senate majority, exploited the war to shore up both his party's and his own political fortunes in the impending 1952 presidential campaign,

Taft, Robert Alphonso
(1889–1953)

Ohioan Robert Taft, son of President William Howard Taft, was known as “Mr. Republican,” a title that reflected his prominence as a powerful leader in the Senate but also characterized the values of the middle America he represented and held dear. His isolationist position prevented him from gaining the Republican nomination for president in either 1948 or 1952, but he remained influential. (Library of Congress)

which the Republicans were determined not to lose as they had unexpectedly done to Truman in 1948. Taft reluctantly supported Truman’s initial decision to commit forces to Korea, but after communist China’s intervention in late 1950, Taft accused the president of mishandling the war. Taft also deplored the administration’s failure to seek either a formal declaration of war or a congressional resolution authorizing the use of force in Korea. He laid much of the responsibility for the war on the administration’s “bungling and inconsistent foreign policy.” Taft even suggested that the United States might be well advised to withdraw from Korea and base its defenses upon a line running through the island positions of Taiwan and Japan. When Truman recalled General Douglas MacArthur in the spring of 1951, Taft defended the general, abandoning his customary restraint and publicly advocating MacArthur’s preferred and highly provocative measures of bombing Chinese supply lines in Manchuria and including Guomindang (GMD, Nationalist) troops from the Republic of China (ROC) on Taiwan in UN forces.

Even though Taft found the extremist tactics of Senator Joseph R. McCarthy personally distasteful, he tolerated them, believing that they would enhance the Republican Party’s chances of victory. Campaigning for the 1952 Republican nomination, which he lost to the internationalist war hero Dwight D. Eisenhower, Taft harped constantly on the refrain that the Democratic administration had blundered unnecessarily into an expensive war that it could neither win nor end with honor, a theme that Eisenhower and other Republican candidates continually repeated. Named Republican majority leader after the election, a mellow Taft unsuccessfully attempted to rein in the excesses of McCarthyism. Taft died of cancer in New York City on 31 July 1953.

Shelling of offshore Chinese islands in the Taiwan Strait from 3 September 1954 to 1 May 1955, initiated by the People's Republic of China (PRC). The PRC's birth in October 1949 did not signify complete victory in the Chinese Civil War, at least not in the mind of PRC Chairman Mao Zedong. Jiang Jieshi's Guomindang (GMD, Nationalist) government still retained control of Taiwan and a number of the offshore islands in the Taiwan Strait, and Jiang continued to harbor quixotic ideas of retaking Mainland China. Mao in turn wished to complete his victory by capturing Taiwan and crushing the GMD. In fact, both Mao and Jiang had devised military plans to carry on the civil war so as to liberate the territories held by the other. The Korean War, however, had temporarily put these plans aside.

The first sign of a resumption in the civil war occurred in summer 1954. In August, Jiang deployed troops to the Jinmen and Mazu islands, known to Westerners as Quemoy and Mazu, two clusters of small islands located 8 miles off Mainland China's southeastern coast. At the same time, ongoing negotiations in Manila for a Southeast Asian mutual defense treaty, initiated by the United States during the Geneva Conference in April 1954, were about to conclude. Rumors flew that Jiang's GMD and the United States were working on a mutual defense pact aimed at the PRC. Seeing these moves as unwarranted provocation by the West, Mao was determined to stage a military showdown. On 3 September 1954, he ordered an artillery bombardment of Jinmen from Fujian Province, beginning the initial phase of the First Taiwan Strait Crisis, which endured until late October. In the process, both Jinmen and Mazu suffered heavy bombardment.

The second phase began on 1 November and ended four days later, when PRC forces shelled and raided the Dachen and Yijiangshan islands off Mainland China's Zhejiang Province, north of Taiwan. Afterward, China's bombardment subsided and resumed periodically on a limited scale while the PRC's government awaited U.S. and Taiwanese reactions. In the midst of the crisis, the U.S. Congress passed the Mutual Defense Treaty on 2 December 1954, which promised defensive aid to Taiwan. The PRC strongly protested the U.S. commitment to Taiwan, a stance that later secured the PRC's success at the Bandung Conference in April 1955.

The crisis reached a new zenith when PRC forces resumed heavy bombardment of the Dachens on 10 January 1955 and seized Yijiangshan on 18

Taiwan Strait Crisis, First (1954–1955)

January 1955. To halt further PRC advances, the U.S. Congress passed the Taiwanese (Formosan) Resolution on 24 January 1955, which authorized the use of U.S. military force to fight further hostile Chinese communist movements. Determined to avoid a direct confrontation with the United States, Mao ordered the shelling scaled back. At the same time, Washington also wished to prevent a full military confrontation, as it was not prepared to defend all of the offshore islands in the Taiwan Strait.

The stalemated crisis finally drew to a close in late April 1955, upon an initiative from the PRC. On 23 April 1955, Premier and Foreign Minister Zhou Enlai declared at the Bandung Conference that the PRC had no desire to engage the United States in a war and was ready to negotiate an end to the standoff. To show its good faith, the PRC stopped all bombing of the offshore islands on 1 May 1955, which effectively ended the First Taiwan Strait Crisis. Shortly thereafter, the PRC and the United States agreed to hold ambassadorial talks to resolve the Taiwan question. The talks began on 1 August 1955 in Geneva between the Chinese ambassador to Poland, Wang Bingnan, and the U.S. ambassador to Poland, Alexis U. Johnson. The Sino-American Ambassadorial Talks deadlocked, however, and were suspended in December 1957. In September 1958, the Second Taiwan Strait Crisis broke out, which resulted in another Sino-American confrontation.

Taiwan Strait Crisis, Second (1958)

Artillery bombardment of the offshore islands in the Taiwan Strait from 23 August to 25 October 1958, initiated by the People's Republic of China (PRC). Unlike the First Taiwan Strait Crisis (1954–1955), the Second Taiwan Strait Crisis may be attributed to PRC Chairman Mao Zedong's desire to enhance his country's international standing in view of its growing diplomatic

A house on Jinmen destroyed by People's Republic of China (PRC) shelling, 1 October 1958. (John Dominis/Time Life Pictures/Getty Images)

isolation. This isolation was chiefly a result of poor relations with the United States and a deteriorating rapport with its erstwhile ally, the Soviet Union. Sino-American ambassadorial talks following the Bandung Conference and the First Taiwan Strait Crisis had been suspended in late 1957 because of irreconcilable positions over Taiwan. By mid-1958, after Soviet Premier Nikita Khrushchev's Beijing visit and his advocacy of peaceful coexistence with the West, Mao realized that the Soviet Union could not be counted on to lead the communist bloc. Mao was thus emboldened to pursue his own independent course in hopes of establishing himself as the true leader of the socialist world.

International events during July 1958 provided Mao with the perfect opportunity to test his mettle. The United States sent troops to intervene in Lebanon's civil disorder, and Britain deployed troops to quell uprisings in Jordan. Meanwhile, Taiwanese President Jiang Jieshi ordered his military on alert, which the PRC perceived as provocation. In response, on 23 August 1958 Mao ordered the shelling of Jinmen and Mazu, known to Westerners as Quemoy and Mazu, two island groupings 8 miles off Mainland China's southeastern coast. Mao rationalized his actions as providing moral support to the Middle East's "anti-imperialist struggles." Several days after the bombing began, the United Nations (UN) General Assembly passed a resolution requesting the withdrawal of Anglo-American troops from the Middle East.

Unlike in the first Taiwan Strait crisis, the United States was fully prepared to defend Taiwan and the off-shore islands.

TAIWAN STRAITS CRISES (1954 – 1958 AND 1988)

Mao played this up by publicly denouncing “continuing U.S. imperialism” in the Taiwan Strait. He also restated the PRC’s claim of sovereignty over Taiwan and its offshore islands. At the same time, he momentarily drew closer to the Soviet Union when Khrushchev gave his full support to the PRC’s claims over the offshore islands.

Soviet support, as it turned out, was halfhearted. Disturbed by Mao’s seemingly irrational and independent conduct, Khrushchev decided to rescind his earlier promise of sharing nuclear secrets with the PRC. Unlike in the First Taiwan Strait Crisis, the United States was fully prepared to defend Taiwan and the offshore islands. In a show of force, the United States deployed additional air and naval forces to protect the Taiwan Strait, and as a result, American and Chinese forces exchanged fire. The United States and the PRC appeared to be headed for a full-fledged conflict, which was not what Mao had intended. He had only wanted to keep the Taiwan question in play by applying what he called his noose strategy. He viewed the Jinmen as nooses constraining the United States, with Taiwan as another more distant noose. He reasoned that America, by committing itself to the defense of these three areas, had put a rope around its neck by trapping itself in the Taiwan Strait. This, he thought, would not only stretch U.S. resources but would also provide the PRC with the upper hand in the region.

Having successfully hooked the U.S. on the nooses, Mao decided to ease tensions in the Taiwan Strait. On 6 September 1958, the PRC proposed the resumption of the Sino-American Ambassadorial Talks, which finally

reconvened at year's end. On 5 October 1958, the PRC issued the "Message to the Compatriots in Taiwan," restating the PRC's claim to sovereignty over the Taiwan Strait and its willingness to settle the crisis by peaceful means. On 25 October 1958, the PRC issued the "Second Message to the Compatriots in Taiwan," announcing that the shelling of the Jinmen would be restricted to odd-numbered days and would be limited by certain conditions, which helped defuse the Second Taiwan Strait Crisis. Periodic bombardment continued until 9 January 1959, when Mao lifted the shelling orders.

Japanese politician and prime minister (1972–1974). Born in Niigata Prefecture on 4 May 1918 to a poor family that raised cattle, Tanaka Kakuei moved to Tokyo at age fifteen and established his own construction company, which became very successful during World War II. He was elected to the lower house of the Diet in 1947 and served as secretary-general of the conservative Liberal Democratic Party (LDP) during 1965–1966 and 1968–1971.

Tanaka held several cabinet positions, including minister of finance (1962–1965) and minister of trade and industry (1971–1972). He succeeded Satō Eisaku as prime minister in July 1972.

The advent of Soviet-American détente and America's opening of relations with the People's Republic of China (PRC) beginning in the early 1970s gave Tanaka a chance to improve Japanese relations with both the Soviets and Chinese. After President Richard M. Nixon's historic February 1972 visit to the PRC, Tanaka visited Beijing in September 1972, meeting with Prime Minister Zhou Enlai and establishing diplomatic relations with the PRC. Tanaka also visited Moscow in October 1973, although a joint Japanese-

Tanaka Kakuei
(1918–1993)

Soviet communiqué issued at the end of the meeting indicated minor progress in improving relations between the two nations.

The 1973–1974 oil crisis presented diplomatic difficulties for Tanaka. Although U.S. Secretary of State Henry A. Kissinger visited Japan in November 1973 to unite the Western powers behind a single policy to deal with the crisis, Japan moved its Middle East policy toward a more pro-Arab stance to ensure a continued flow of oil.

Tanaka was forced to resign as prime minister in December 1974 over alleged financial mismanagement. He was arrested in 1976 and charged with accepting 500 million yen in bribes from the Lockheed Corporation. Even after his conviction in 1983, he continued to lead the LDP's largest faction and thus influenced Japanese politics until his health declined in 1985. Tanaka died in Tokyo on 16 December 1993.

Tank Warfare

Despite those who believed that the atomic bomb had rendered conventional weapons obsolete, tanks—also known as armored fighting vehicles (AFVs)—saw wide service after World War II. The Soviet Union in particular saw AFVs as an essential element in forces that would engage the North Atlantic Treaty Organization (NATO) on the plains of Central and Eastern Europe.

One lesson learned in World War II was the need for all military components in a military force to be as mobile as the tanks. This led to the introduction of armored personnel carriers (APCs) to transport infantry but also to mount antiaircraft weapons, rockets, and mortars. The Soviets led in this development. Their Boevaia Mashina Pekhoti (BMP, Combat Infantry Vehicle) series was the first infantry fighting vehicle in the world. Infantry could now fight from within the vehicle, and some BMPs mounted a powerful gun and carried antitank missiles, enabling them to provide effective close infantry support. Self-propelled guns also continued in wide use.

In modern wars, armor, infantry, and artillery work together as a team in battle. Infantry and armor provide mutual support and protection. Tanks without accompanying infantry are vulnerable to enemy tank-killer weapons, while infantrymen in turn fall prey to small arms, machine guns, and other direct-fire weapons. Infantrymen and artillery help to protect the tanks from the tank killers, and the tanks engage enemy direct-fire weapons and armor. Offensive tactics envision armor employed en masse, in large formations to overwhelm an enemy and make deep penetrations.

The Soviet Union planned to utilize its far larger numbers of AFVs offensively. The Soviets thus opted for fast, maneuverable tanks with excellent firepower. Nuclear, biological, and chemical (NBC) protection was a low priority. The Western powers, assuming that they would be standing on the defensive against far larger Soviet formations, adopted defensive tactics. The British gave top priority to firepower, followed closely by protection for the tank crews as the second priority and then mobility as the third priority. As a result, the British fielded some of the heaviest tanks of the Cold War era. The Americans adopted a middle position. Speed and maneuverability held top priority, followed by firepower second and protection third.

In the late 1950s, the Soviet Union gradually moved away from nuclear warfare doctrine back to maneuver warfare. By the 1970s, the doctrine of the deep battle held sway in Soviet military thinking. Soviet armor doctrine evolved into something akin to that of World War II. Other forces would open gaps in an enemy front, which would then be exploited by massed armor formations, up to that point held in reserve. Armor columns would then drive deep into the enemy rear areas.

American and NATO strategy relied on firepower and slow withdrawal to inflict maximum punishment on Warsaw Pact attacking forces. This doctrine shifted in the 1980s in the AirLand Battle concept combining airpower, air mobility, and armor in a united offensive strategy in which NATO forces planned to outmaneuver and outfight the Warsaw Pact armies.

Although the dreaded confrontation between the Warsaw Pact and NATO forces did not occur, Soviet tanks saw action in the restive satellite states, helping to quell an uprising in the German Democratic Republic (GDR, East Germany) in 1953 and to crush the 1956 Hungarian Revolution. The almost completely bloodless 1968 occupation of Czechoslovakia that ended the Prague Spring involved some 2,000 Warsaw Pact tanks, the largest deployment of armor in Europe during the Cold War. Tanks also took part in fighting in the former Yugoslavia at the end of the Cold War.

In Asia, tanks participated in the Chinese Civil War (1946–1949) and in the Korean War (1950–1953), notable as the first clash between U.S. and Soviet armor. At the beginning of the conflict, the Korean People's Army (KPA, North Korean Army) had a tremendous advantage in military hardware, including some 150 T34/85 medium tanks. The Army of the Republic of Korea (ROK, South Korea) had no tanks at all. The United States first deployed M24 Chaffee light tanks, hastily dispatched from Japan. The arrival in Korea of more powerful M4 Shermans and M26 Pershings, along with the 3.5-inch bazooka antitank rocket, helped turn the tide against the KPA armor.

A flamethrower tank during training in Korea. (U.S. Department of Defense)

Korea's terrain precluded large tank battles, although each side employed tanks as mobile pillboxes in dug-in positions for long-range pinpoint sniping fire against enemy positions.

Tanks also took part in the long Indochina War (1946–1954). They were, however, largely useless in the interior jungles. The French flew ten M24 Chaffees into Dien Bien Phu and assembled them there to take part in the most important battle of the war, but they could not prevent the French defeat.

Tanks participated in the Vietnam War (1957–1975). Army of the Republic of Vietnam (ARVN, South Vietnamese) Army forces utilized the M24 Chaffee. After American forces entered the fighting in 1965, the United States deployed some 600 tanks to Vietnam. Although some lighter tanks—such as the M551 Sheridan and M50A1 Ontos—proved ill-suited for the Vietnam combat environment, the M48A3 Patton MBT (main battle tank) was widely employed in search and destroy missions, where it came to be known for its jungle-busting ability in clearing paths through dense vegetation. Its 90mm main gun proved an effective bunker buster, and its tracks and great weight

could survive mines and grind down bunkers. Tanks helped protect convoys, secure lines of communication (LOCs), and protect bases and also served as a rapid-reaction force.

Communist AFVs, chiefly the Soviet PT-76 light amphibian tank, were deployed mostly during the conflict's last few years and primarily in an offensive role. People's Army of Vietnam (PAVN, North Vietnamese Army) forces deployed some 100 T-34 and T-54 Soviet-supplied tanks in their unsuccessful invasion of the Republic of Vietnam (RVN, South Vietnam) in the spring of 1972 and lost 80 percent of them. In the final 1975 communist offensive, PAVN armor units with Soviet T-54s and T-55s, now better trained and integrated with infantry and artillery, proved an important element in the swift conquest of South Vietnam.

Tanks fought in the three wars between India and Pakistan, especially in 1965 and 1971. In the 1965 war, principally around Chamb and Shakargarh, India and Pakistan each deployed more than 1,000 tanks. In the ensuing heavy fighting, Pakistan lost some 300 tanks, India perhaps half that number.

Many governments used tanks to keep their own population in check. No more powerful image of the tank in the Cold War exists than that of Wang Weilin, the so-called "Tank Man," placing himself in front of and temporarily halting a line of Chinese NORINCO Type 69/59 MBTs on their way to crush the June 1989 student protest movement in Beijing's Tiananmen Square.

In the Middle East, tanks saw widespread service in Arab-Israeli wars, in the Iran-Iraq War (1980–1988), and in the Soviet occupation of Afghanistan (1979–1989). Perhaps no other conflicts of the period captured the world's imagination as did the numerous wars in the Middle East, which saw some of the largest tank battles in history and proved useful laboratories concerning the design and employment of armored fighting vehicles. For the most part, the Soviet Union acted as chief supporter and arms supplier to the Arab states, and the Western powers, particularly the United States and France (at least until after the 1967 War) supported Israel. The fighting in the Middle East also saw the beginning of a new age in warfare with the first employment of antitank and antiship missiles.

In its war for independence, Israel initially had only a small armored force of pre–World War II French Hotchkiss light tanks, World War II British Cromwells, and U.S. Shermans, the latter purchased from Italy and the Philippines. These faced the far more numerous tanks of Lebanon, Syria, Jordan, Egypt, and Iraq. After 1949, the Israel Defense Forces (IDF) invested heavily in tanks, and the Jewish state became one of the most skillful practitioners of armored warfare in history. In collusion with France and Britain against Egypt in 1956, Israeli Super Shermans and French tanks rolled across the Sinai Peninsula in only four days, defeating a far larger Egyptian force of Shermans,

Wang Weilin, known as the "Tank Man," slowing the progress of tanks on the Avenue of Eternal Peace in Beijing during the crushing of the Tiananmen Square uprising, 5 June 1989. (Reuters/Corbis)

British Centurions, and some Soviet JS-3s but also 230 Soviet T-34/85s and a number of armored personnel carriers and self-propelled guns.

In June 1967, Israel again used its highly mechanized forces to launch a devastating preemptive strike against Egypt and Syria. Israeli tactics were similar to those employed by the Germans in their Blitzkrieg of World War II. Tanks would break through the enemy front and then push forward, closely followed by mechanized infantry that would engage enemy forces. This armored thrust was followed by motorized infantry to mop up what remained of enemy resistance in order to allow the vital supply column to proceed forward. Rapid Israeli envelopments allowed the numerically inferior Israeli armored forces to take the heavier Arab tanks from the rear and make short work of the Arab armies. Israel had some 800 tanks, while Egypt, Saudi Arabia, Jordan, Kuwait, Syria, Lebanon, and Iraq had a combined strength of perhaps 2,500 tanks. Of 1,200 Egyptian tanks before the war, 820 were lost. Israeli armor losses amounted to 122 tanks, many of which were repaired and returned to battle.

In the 1973 Yom Kippur War, the tables were almost turned, thanks to Israeli complacency and new Egyptian tactics. Israel had invested heavily in the Bar Lev Line, a static defensive front along the eastern bank of the Suez Canal, in effect rejecting maneuver tank warfare in which the bulk of armored forces are held back in mobile reserve. Egyptian troops struck in force across the Suez Canal, while Syrian troops simultaneously invaded the Golan Heights. These offensives caught the Israeli defenders completely off guard. On the Golan Heights, Syria deployed 1,400 tanks including Soviet T-34s, T-54s, and the latest T-64 model. To break through the thick Israeli minefields and defenses, the Syrians also utilized specialized armor vehicles such as flail tanks, bridge-layers, and engineer tanks. At the end of four days of savage fighting, however, Israeli forces (which included only 177 tanks) centered on British Centurions defeated the attacking Syrians.

With 1,700 tanks and another 2,500 armored vehicles, the Egyptian force on the Suez front was even larger. The Egyptians pushed across the canal with two armies and more than 1,000 tanks. The Egyptians promptly inflicted heavy losses on the counterattacking Israelis, releasing barrages of shoulder-fire missiles and in two days destroying 260 Israeli tanks. This success emboldened Egyptian President Anwar Sadat, who decided on a deeper penetration of the Sinai. But this took Egyptian forces beyond the range of their surface-to-air (SAM) missile cover. The Egyptian offensive on 14 October involved more than 2,000 tanks on both sides, making it second in history only to the World War II Battle of Kursk in numbers of tanks engaged. The Israelis brought up reinforcements but were still outnumbered two to one in tanks, a disadvantage offset by superior hardware and training and the involvement of the Israeli Air Force. The Israelis not only stopped the Egyptian advance but also destroyed some 500 of their tanks.

Israeli forces then crossed over the canal and were in a position to inflict a resounding defeat on the Egyptians when a cease-fire went into effect. Israel won the Yom Kippur War but at a high cost, including the loss of 830

tanks. Many analysts concluded that the Yom Kippur War spelled the end of the tank era, as small, wire-guided missiles and rocket-propelled grenades (RPGs) had caused about a third of Israeli armor losses. The conclusion proved premature.

Israeli tanks, most notably their superb new Merkava MBT, took part in the invasion of Lebanon in 1982 and destroyed the Syrian 1st Armored Division. Although there were no interstate wars involving Israel thereafter, tanks and other AFVs continued to play a key role in intrastate operations as perhaps the most visible component of Israeli security operations against the Palestinian uprising.

Despite the proliferation of new antitank weapons and predictions that the day of the tank was over, when the Cold War came to a close with the collapse of the Soviet Union, AFVs were still very much a part of the world's military establishments.

Tanks, often referred to loosely as armor, armored fighting vehicles (AFVs), or tracks, are tracked and armored fighting vehicles armed with a high-velocity, flat-trajectory main gun for direct-fire engagement. This distinguishes them from artillery, which primarily employs indirect fire. Conceived in World War I as a means of ending the bloody stalemate of trench warfare, tanks were first employed by the British in September 1916 during the Battle of the Somme. They came into their own during World War II.

Among tank developments in the Cold War period was the end of the heavy tank in the 1950s. Technological advances allowed their functions to be performed by lighter, more maneuverable, and less expensive MBTs (main battle tanks), combining the old World War II medium and heavy tanks. Guns increased in caliber from 76mm, 88mm, and 90mm at the end of World War II to 105mm and even 120mm. Tanks appeared in a bewildering array of models. Their many variants included bridge-layers, flamethrowers,

Tanks

and engineer and tank recovery vehicles. In addition to their main guns, tanks mounted one or more machine guns for antiaircraft protection and for engaging personnel and thin-skinned vehicles.

During the Cold War, tanks received improved engines and were capable of higher speeds. Systems also developed to provide protection for crews against the new threats posed by nuclear, biological, and chemical (NBC) attack. New sights, night vision equipment, improved laser rangefinders and thermal imaging systems, and more powerful guns and projectiles also came into widespread use. In the ongoing race between projectiles and armor, more effective armor emerged in the form of layers of steel interspersed with ceramic-based light alloys providing excellent protection against both kinetic and chemical energy rounds.

United Kingdom. The United Kingdom possessed a number of tanks from World War II that saw extended postwar service. Among these was the Comet (A34), with a 77mm main gun. It fought in the Korean War and remained in service until the early 1960s. The Centurion (A47) remained the principal British main battle tank of the first decades of the Cold War. The Centurion Mk VII mounted a 105mm main gun. It was widely exported and saw combat service in Korea, the Middle East, southern Africa, Pakistan, and Vietnam. It remained in service until 1969. The heavy A22 Churchill Infantry tank, first mounting a 75mm and later a 95mm main gun, fought in Korea.

The threat posed by Soviet heavy tanks in Europe led the British to develop the Conqueror heavy tank. Entering service in 1956, it mounted a 120mm gun. A new tank also mounting a 120mm main gun, the Chieftain Mark V MBT, came on line in 1963. Chieftains were exported to Iran, Kuwait, Jordan, and Oman. The chief British MBT of the 1980s was the Challenger, introduced in 1983. It mounted a 120mm rifled gun and performed well in the 1991 Persian Gulf War. Among tanks built specifically for export were the Vickers Mk I MBT (1964) with a 105mm main gun, sold to Kuwait and to India; an improved model Vickers Mk III MBT (1973), sold to Kenya and Nigeria; and the Khalid MBT (1981) with a 120mm gun, sold to Jordan.

France. In the immediate post–World War II period, France relied extensively on World War II equipment, on U.S. tanks supplied to the French Army at the end of the war but also on stocks of captured German tanks, most notably the Panther. The most successful of French-designed tanks was the excellent lightweight, air-transportable AMX-13. Introduced in 1952 with production continuing into the 1980s, it had an automatic loader for its long-barreled 75mm main gun, later upgraded to 90mm and then 105mm. The French sold the AMX-13 widely abroad, including to Israel.

Until the mid-1950s, both France and the Federal Republic of Germany (FRG, West Germany) relied chiefly on the U.S. M47 Patton as their MBT. These nations and Italy then decided to develop a lighter and more powerful MBT for their common use. The Germans produced the Leopard, while the French developed the AMX-30. It entered production in 1966 and mounted a powerful 105mm main gun along with a coaxial 20mm cannon. A large number of AMX-30s were sold abroad, including to Spain.

A British Challenger main battle tank moves into a base camp with other Allied armor during Operation DESERT STORM, 28 February 1991. (U.S. Department of Defense)

West Germany. When the West German government was permitted to rearm in 1955, it initially employed the U.S. M47 Patton as its MBT. With the failure of the joint French-German tank project, however, West Germany developed the Leopard. Produced during 1965–1984, it was also built under license in Italy. Mounting a 105mm gun, the Leopard 1 sacrificed armor protection for speed and maneuverability. This reliable, effective MBT attracted a number of foreign purchasers and was exported to a number of Western nations.

United States. Initially, the United States continued a number of its World War II tanks in service. The 75mm-gun M24 Chaffee was the main U.S. light tank until 1953. It was the first U.S. tank to enter the Korean War and saw wide service abroad in other armies during the entire duration of the Cold War. France employed it in Indochina, and Republic of China (ROC, Taiwan) modified its M24s with a 90mm main gun.

The M41 Walker Bulldog replaced the Chaffee. One of the first U.S. tanks to be designed around a suitable engine, rather than designing the tank first and then trying to find an engine to suit, it mounted a 76mm main gun. Widely exported, it saw extensive and long service in many armies.

In the 1960s the U.S. Army tried to counter the growing weight of tanks with the M551 Armored Reconnaissance/Airborne Assault Vehicle (AR/AAV) Sheridan, a lightweight, air-transportable armored vehicle with a heavy gun

capable of knocking out any known tank. It mounted a 152mm gun, designed to fire the Shillelagh HEAT missile or combustible cartridge case conventional projectiles. The M551, although strictly speaking not a tank, was nonetheless used as one but had only limited armor protection. The Sheridan experienced numerous problems and did not enter service until 1968. It served in Vietnam but was poorly protected against enemy mines. The Sheridan remained in service with the 82nd Airborne Division into the 1990s and saw service both in Panama in 1989 and in the Persian Gulf War.

Sherman M4A3 and M4A3E8 medium tanks, the mainstay of U.S. armored forces at the end of World War II, fought with the United Nations Command (UNC) forces in Korea. There were many models and variants of the basic design, including dozers, 105mm howitzers, rocket launchers, tank retrievers, and flamethrowers. A great many Shermans were exported to other countries after World War II. Israeli Shermans, which were kept in operation for decades from a wide variety of sources, were also armed with an equally wide panoply of weapons, including antiradiation missiles. The French upgraded a number of Israeli Shermans with 75mm and 105mm main guns. Known as M50 and M51 Super Shermans, these fought modified M4 Egyptian Army Shermans in the 1973 Yom Kippur War.

The M26 Pershing tank, which entered service only in the last few months of the war in Europe, fought in Korea. Pending introduction of a new medium tank, World War II M26 Pershings were converted into the M46 medium with a new V-12 engine and cross-drive transmission. The M46 was unofficially known as the Patton, the name later officially bestowed on the M47. The M46 and the M26 bore the brunt of armor combat in Korea. The M46 had many of the same basic characteristics of the M26 and mounted a 90mm main gun.

The Korean War caught the U.S. Army in the midst of developing a new medium tank. The T42 design was not ready, but its turret and new gun were. As a stopgap measure, these were then adapted to the M46 hull, in effect the old World War II M26 with a new engine and other upgrades. This marriage of convenience became the M47 Patton. Mounting a 90mm gun, it entered service in 1952 and proved a successful design. Although it did not serve in the Korean War, it saw extensive service life in other armies, including in West Germany, France, Iran, Pakistan, the Republic of Korea (ROK, South Korea), and Yugoslavia.

The M48 Patton II MBT was rushed into service as a consequence of the Korean War and Soviet pressure on Berlin. Entering service in 1952, it was a brand-new design with new hull, turret, tracks, suspension, and transmission. The M48 was one of the most important of post-World War II tanks. Although it saw considerable service during the Vietnam War, this was rarely against communist armor. In Middle Eastern fighting with the Israeli Army, the M48 achieved an enviable record against its Soviet counterparts. It too was widely exported.

The M60 was essentially a refinement of the M48 begun in the late 1950s. Later, a number of M48s were rebuilt as M48A5s, essentially M60s, making the two virtually indistinguishable. The first M60 prototypes appeared in

An M46 Patton tows another tank during the Korean War. The United Nations Command (UNC) often employed its tanks in long-range, pinpoint fire against communist positions. (National Archives and Records Administration)

1958. The M60 entered production in 1959 and service in 1960. It mounted the new British L7A1 105mm (4.1-inch) gun (known in the U.S. as the M68). The M60 also had a new fire-control system. The new tank weighed nearly 116,000 pounds and had a four-man crew. Its 750hp engine produced a maximum tank speed of 30 miles per hour. Armament consisted of the 105mm gun and two machine guns. Variants included the M60A1, with a new turret; the M60A2, which had a new turret with the 152mm gun/launcher developed for the M551 Sheridan; and the M60A3, which returned to the 105mm gun but with a thermal barrel jacket, a new fire-control computer with laser rangefinder, infrared searchlight, and night vision equipment. Most M60A1s were later modified to M60A3s.

The M60 was first supplied to U.S. Army units in Germany. Although no longer in U.S. active military service, the M60 was the principal U.S. main battle tank for twenty years, until the introduction of the M1 Abrams. The M60 saw combat in the Arab-Israeli wars and in the Persian Gulf War, when it served with the U.S. Marine Corps and the Saudi Arabian Army. A number of M60s remain in reserve and in the armed forces of many nations.

(U.S. Department of Defense)

The M60's replacement, the M1A1 and M1A2 Abrams, is today probably the top main battle tank in the world. It began during a search by West Germany and the United States for a new MBT that could defeat the vast number of tanks that the Soviets might field in an invasion of Central Europe. The first production model M1 came off the assembly line in 1980. The M1 was a revolutionary design and also a sharp departure from previous U.S. tanks. The M1 was more angular, with flat-plate composite Chobham-type armor and with armor boxes that could be opened so that the armor could be changed according to the threat.

After initial M1 production had begun, the army decided to arm the M1 not with a 105mm but with a German-designed 120mm smoothbore gun. It was first available in 1984, and the first M1A1 with this new armament was delivered in 1985. The M1A1HA introduced new steel-encased, virtually impenetrable, depleted-uranium armor. Kuwait and Saudi Arabia bought the Abrams. Egypt produced more than 500 under a coproduction arrangement.

Soviet Union. The Soviet Union ended World War II with a large inventory of AFVs. Their excellent T-34/85 remained in production until the late 1940s. In 1947 the Soviets introduced an upgraded model, the T-34/85 II, that remained the principal Soviet MBT into the 1950s. Produced under license in both Poland and Czechoslovakia in the 1950s, it was widely exported, and production did not cease until 1964.

The T-34/85 II saw extensive service in the Korean War with the Korean People's Army (KPA, North Korean Army). It also fought in the successive

Middle East wars and in Africa, and it saw combat as recently as the Yugoslav wars of the 1990s.

As noted, the Soviets led in the post–World War II development of armored personnel carriers (APCs) and modified them to carry a variety of weapons. These were gradually replaced by the Bronirovanniy Transportnaya Rozposnania (BTR, armored wheeled transporter) series of eight-wheeled APCs through missile-armed Boevaya Razvedyvatnaya Descent Mashina (BRDM, airborne combat reconnaissance vehicle) scout cars and the BMP series of personnel carriers. The BMPs mounted a large gun capable of providing effective support to dismounted infantry. They also carried antitank missiles and were constructed so as to allow infantry to fight from inside the vehicle, which distinguished this infantry fighting vehicle (IFV) from the less-capable APCs.

Along these lines the Soviets developed the PT-76 light tank, which had no equivalent in the West. As large as an MBT, the PT-76 was, however, thinly armored and was developed chiefly to lead amphibious assaults and conduct reconnaissance. Easily identifiable by its pointed nose and low, round turret with sloped sides and flat roof, the PT-76 was an amphibian without any preparation. Movement through water was accomplished by means of water jets from the rear of the hull. Mounting a 76.2mm main gun, the PT-76 entered service in 1955 and continued in Soviet service until 1967. It saw wide service in the armies of Soviet bloc countries but also was widely exported to Africa, the Middle East, Asia, and Latin America. It fought in the Vietnam War, in the 1965 India-Pakistan War, and in conflicts in Africa. It continued in wide service well past the Cold War.

The IS-3 (Josef Stalin-3) remained the principal Soviet heavy tank immediately after World War II. The first postwar Soviet MBT, introduced in 1948, was the formidable T-54, itself a refinement of the T-44, the short-lived redesign of the T-34/85 at the end of World War II. It mounted a 100mm main gun.

The T-55, a follow-on T-54, appeared in 1958. Among many improvements was a more powerful engine. The T-54/T-55 had a long service life. Production continued until 1981, with a phenomenal 95,000 tanks manufactured, more than any other tank in history. Both the Chinese and Romanians produced copies. Even at the end of the Cold War, T-54/T-55s constituted some 38 percent of Soviet tank strength and as much as 86 percent of non-Soviet Warsaw Pact armor. Reliable and relatively inexpensive, the T-54/T-55 was exported to more than thirty-five other nations. The T-54/T-55s had a mixed combat record. While sufficient to crush the 1956 Hungarian Revolution, they were not successful against Western-supplied Israeli armor in the 1967 Six-Day War or Coalition tanks in the 1991 Persian Gulf War.

In 1953 the Soviets introduced their last heavy tank, the T-10 Lenin. It was basically an enlarged IS with a 122mm main gun. Expensive to build, heavy, and difficult to maintain, the T-10 was phased out in the mid-1960s in favor of the T-62, but it nonetheless equipped a number of Warsaw Pact armies and was exported to both Egypt and Syria.

A Soviet T-55 main battle tank, 29 September 1989. (U.S. Department of Defense)

The successor tank to the T-54/T-55 was the follow-on T-62 of 1961, which remained in first-line Soviet service for two decades. Similar in layout and appearance to the T-55, the T-62 introduced a number of improvements. It also mounted the new, larger 115mm smoothbore main gun, the first smoothbore tank gun in the world. Its gun enabled the T-62 to fire armor-piercing, fin-stabilized discarding sabot rounds that could destroy any tank at ranges of under 1,500 meters. Nonetheless, the gun could only fire four rounds a minute, and its automatic spent-case ejection system was a danger to the crew.

The Soviets built some 20,000 T-62s, and it was the principal Soviet MBT of the 1960s and much of the 1970s. It constituted 24 percent of Soviet tank strength at the end of the Cold War. T-62s were also built in large numbers by the People's Republic of China (PRC), Czechoslovakia, and the Democratic People's Republic of Korea (DPRK, North Korea). The T-62 had a checkered combat record. Many were exported to the Middle East, where they proved vulnerable to hostile fire.

While the T-62 was simply an improvement of the T-55, the next Soviet MBT, the T-64, was a new design and a significant advance in firepower, armor protection, and speed. It entered production in 1966 and was designed to replace both the T-54/T-55 series and the T-62. Initially it was armed with a 115mm gun, but Soviet designers decided that the tank was undergunned against the U.S. M60A1, so they upgraded the definitive version T-62A to a

more powerful 125mm smoothbore. The T-62B version could fire the 4,000-meter-range Songster antitank guided missile. The new tank experienced numerous reliability problems and was never exported.

The T-72 of 1971 proved to be both more reliable and far cheaper to produce. Similar in appearance to the T-64, it utilized the same gun, suspension, and track. Although its enormous 125mm smoothbore main gun allows the T-72 to fire projectiles with great destructive capability, ammunition flaws mean that the gun has a reputation for inaccuracy beyond about 1,500 meters. The gun is stabilized, allowing it to fire on the move, but is only truly effective at short ranges, and most crews halt the tank before firing. This put the T-72 at an enormous disadvantage against Western tanks with far superior gun-stabilization systems.

A large number of T-72 variants have appeared, offering an improved diesel engine, improved armor, and better sights. The T-72 currently equips not only the Russian Army and the armies of the former Warsaw Pact states but is also widely employed in the Middle East and Africa. It has been produced under license in Czechoslovakia, India, Iran, Iraq, Poland, and the former Yugoslavia. It is in fact the world's most widely deployed tank. Despite its many sales, the T-72 has not fared well in battle.

Both Iran and Iraq employed T-72s during their eight-year war in the 1980s, but there is little information about their effectiveness. Iraq counted some 1,000 T-72s in its inventory during the Persian Gulf War, but they were easily defeated by the U.S. M1A1 Abrams, which was able to take on the T-72 and destroy it at twice the effective range of the T-72's main gun. No M1A1s were destroyed by Iraqi tank fire. Despite these failings, it should be remembered that the T-72 was not designed to defeat Western armor—that was to be left to the T-64 and T-80. Rather, it was intended as a relatively inexpensive MBT that would be reliable and easy to maintain and could be widely exported. It met these criteria well.

The T-80 was the MBT designed to take on and destroy U.S. and other Western tanks. The last Soviet Union MBT, it appeared in prototype in 1976 but did not enter production until 1980. It was basically the follow-on to the T-64 with the flaws corrected, including a new engine and suspension system. It is armed with the 125mm smoothbore gun and two machine guns and is protected by composite explosive-reactive armor. The T-80 continues in production in both Russia and Ukraine. It has gone through upgrades and has been sold to China, Pakistan, and South Korea.

Israel. Tanks were essential weapons on the relatively flat and open terrain of the Middle East. The first Israeli armored vehicles were a hodgepodge of converted trucks and buses. In the 1948–1949 War for Independence, Israel had few tanks available. The United States provided a number of World War II-vintage M4 Shermans, and the Israelis also secured surplus Shermans from other armies. These saw long service, undergoing a bewildering succession of upgrades, including heavier guns, improved engines, and modified turrets. Once they had reached the limit of possible improvements, a number were turned into self-propelled guns. Indeed, improvisation became a hallmark of the Israeli military. The British Centurion, one of

Tanks were essential weapons on the relatively flat and open terrain of the Middle East. The first Israeli armored vehicles were a hodgepodge of converted trucks and buses.

the world's most successful tank designs, underwent upgrades in Israel beginning in 1967 to improve its range but also to improve crew protection, in which Israel probably led the world.

France also supplied AMX-13 light tanks (until France cut off arms shipments to Israel in 1967). Other tanks in the Israel Defense Forces (IDF) included the British Centurion and the U.S. M47 and M60 MBTs.

Remodeled M60s are designated the Magach 6, 7, and 8. The Magach 7s and 8s fitted with a 120mm smoothbore gun are known as the Sabra. Israel offered this tank to Turkey and also converted a number of Turkish M60s to Sabras.

In their wars, the Israelis captured large numbers of Soviet T-54 and T-55 tanks from the Arab armies. These were modified and added to the Israelis' inventory. Improvements included a new 105mm rifled gun, improved armor, and new fire-control systems.

In the 1970s, Israel began development of its own tank. Known as the Merkava, it entered service in 1978. Built on lessons learned in previous wars, the primary concerns in its design were firepower and armor protection. The Merkava underwent continued upgrades, with the Mk 2 appearing in 1983 and Mk 3 in 1990. One of the world's most powerful tanks, it also affords perhaps the best crew protection. The Mk 1 mounts a 105mm gun and also has a 60mm mortar in the turret roof. The Mk 2 has the same armament but improved armor and a new fire-control system. These two models were superseded by the Mk 3, introduced in 1990.

Tanks are expensive and difficult to design and manufacture, and the Arab states lacked such capability. Egypt manufactured tanks under license and produced an excellent APC. Saudi Arabia has also produced light armored vehicles. But for the most part, the Arab states have chosen to rely on foreign-manufactured AFVs.

Iran. Iran was forced, both because of its isolation from much of the world as a result of its Islamic fundamentalist government and a long war with neighboring Iraq, to manufacture its own tanks. One of its projects was to upgrade Soviet T-54 and T-55 tanks captured during the long Iran-Iraq War. Known as the T-72Z Safir-74, this tank incorporates a 105mm rifled gun. The Zulfiqar MBT, however, combines components of the U.S. M48 and M60 and Russian T-72 tanks. The Iranians also produce their own APCs.

India and Pakistan. Aside from the Middle East, the largest Cold War-era tank battles occurred on the Indian subcontinent. Originally, both armies were equipped with World War II-vintage U.S. M4 Shermans. India secured from France the AMX-13 light tank and from Britain the Centurion MBT. Pakistan acquired the U.S. M24 Chaffee light tanks and the M48 MBT. These AFVs were the principal tanks of the first war fought between India and Pakistan in 1965. In their 1971 war, Pakistan also deployed Type 59 tanks from China, and India used T-55 tanks from the Soviet Union.

Following the 1971 war, India took steps to develop its own MBT. Beginning in 1974, India began design work on the Arjun. While the Arjun was undergoing development, India proceeded with local production of a Vickers MBT design, the Vijayanta (Victory) and the Soviet T-72. As the arms race

on the Indian subcontinent intensified, Pakistan developed the MBT-2000 Al Khalid beginning in 1988.

China. China produced no tanks of its own during World War II or the civil war that followed. After the communist victory in 1949, China acquired a number of T-54s, and China simply copied these for its first tank, the T-59. Developed by NORINCO (China North Industries Corporation) in 1959, the T-59, a virtual copy of the Soviet T-54 with modifications, mounted a 100mm smoothbore gun. In the early 1980s a Type II appeared with the substitution of a 105mm rifled main gun. China exported the Type 59 widely. It remains in service in China and in many countries of the Middle East, Southeast Asia, and Africa. Western companies have since upgraded a number of these tanks.

The first Chinese indigenous AFV was the Type 62 light tank of 1962. In essence a reduced version of the T-59, it mounted an 85mm main gun. Most remain in service. The T-62 was exported to Albania as well as to Africa and other Asian states, with Vietnam the principal recipient.

Chinese armor doctrine copied that of the Soviet Union in placing reliance on large numbers of light amphibious tanks. The Chinese Type 63 light tank improved on the Soviet PT-76 but mounted the same 85mm main gun armament.

The next Chinese MBT design was the NORINCO Type 69. Believed to have appeared first in 1969, it was first seen in public in a parade in 1982. The Type 69 MBT employed the same basic design of the Type 59 but soon received the more accurate 100mm rifled gun. The subsequent Type 79 was virtually a Type 69 but with the 105mm gun. A number of Type 69 tanks were exported to Iran and Iraq. Completely outclassed by the U.S. M1A1 Abrams and British Challenger MBTs, a large number of Iraqi Type 69s were destroyed in the 1991 Persian Gulf War.

The NORINCO Type 80 introduced many improvements. Much of the world first saw the Type 69, believed to have entered production in 1985, in scenes of Chinese tanks crushing the prodemocracy student movement in Tiananmen Square, Beijing, in 1989. It incorporated a 105mm gun that could fire both Chinese and Western ammunition and an improved fire-control system.

Japan. As with West Germany, Japan rearmed only as a consequence of the Cold War. Japan did not produce a post-World War II tank until 1962. Its Type 61 MBT for the Japanese Ground Self-Defense Force (GDF) closely followed the U.S. M48 Patton, mounting a 90mm main gun. Its successor, the Type 74 MBT with 105mm gun, entered service in 1975.

Tanner, Väinö Alfred (1881–1966)

Finnish politician, Social Democratic Party (SDP) leader, and prime minister (1926–1927). Born in Helsinki on 12 March 1881, Väinö Tanner was the son of a railway worker. After his secondary education in Helsinki in 1900, he completed a year of business school in 1901, then worked for corporations in Hamburg, Turku, and Viborg before entering law school at the University of Helsinki. Graduating in 1911, he then practiced law until 1915 while playing a leading role in the cooperative movement. In 1918, he became chairman of the Finnish Social-Democratic Party. He struggled to defend Finnish freedom and democracy first against the threats posed by the right wing in Finland and then from the Soviet Union during and after World War II.

Tanner was instrumental in concluding the 1920 Tartu Treaty and the 1940 Moscow Treaty, both of which eased Finland's relationship with the Soviet Union. He transformed the SDP into a party that offered a Scandinavian brand of socialism. His pragmatic leadership helped heal the wounds of the civil war following World War I, and he led his party to power in 1926 and again in 1937. He served as premier of Finland from December 1926 to December 1927.

When the Winter War with the Soviet Union began in November 1939, as foreign minister Tanner championed his government's resistance to Soviet demands. A cabinet minister throughout World War II, he helped rally the Finnish working class behind the war effort.

Following World War II, Moscow considered Tanner its greatest nemesis. On Soviet insistence, in 1946 a Finnish court sentenced him to five and a half years of imprisonment under the vague charge of "war responsibility." Pardoned in 1949, he made an energetic political comeback and was reelected chairman of his party in 1957. Suspicious of Tanner's attempts to oust Urho Kekkonen from the presidency, in October 1961 Soviet leader Nikita Khrushchev staged the so-called Note Crisis in which he demanded that Finland reaffirm its neutrality. This secured the reelection of the incumbent president after his quick moves to placate the Soviets.

In 1963 Tanner retired from the chairmanship of the SDP. He died in Helsinki on 19 April 1966.

Tanzania

East African nation. Tanzania covers 364,898 square miles and is bordered by Uganda and Kenya to the north; Burundi, Rwanda, and Congo to the west; Mozambique, Zambia, and Malawi to the south; and the Indian Ocean to the east. A former German protectorate, subsequently under British administration after World War I, Tanzania achieved its current form in 1964, after Zanzibar and Tanganyika joined. Because the nation was a conglomeration that did not exist in 1945, there is no population data from that year. Tanzania's population was 12.3 million people in 1967, the first year of an official census.

In accordance with the 1885 Berlin Conference, a territory coinciding roughly with modern Tanzania was declared a German protectorate, while Zanzibar and Pemba became British protectorates. As a result of World War I, German East Africa, named Tanganyika in 1920, was placed under a League of Nations mandate, with Great Britain as the administering power. In 1922 the Tanganyika Civil Service Association (TCSA) was founded, and in 1929 the Tanganyika African Association (TAA) was created. In 1954, these groups merged into the singular Tanganyika African National Union (TANU), under the leadership of Julius Nyerere.

Since 1954, when TANU was allowed to function as a political organization, Nyerere's leadership turned it into the main political force in the country. From 1955 on, it also gained the support of the Tanganyika Federation of Labor (TFL), established by Rashidi Kawawa. Worried that TANU would agitate for independence, the British attempted to counterbalance the growing power of the organization by backing the Tanganyika United Party (TUP). Nevertheless, in the 1959–1960 general elections, TANU emerged as the winning political party, and Nyerere became chief minister and then prime minister when Tanganyika became independent in 1961. Kawawa became prime minister in 1962, and Nyerere went on to become president of the new republic.

Neighboring Zanzibar, after becoming a sultanate in 1963, witnessed the triumph of the Afro-Shirazi Party (ASP) under Abeid Karume, an ally of TANU, over the minority coalition that had been formed by the Zanzibar Nationalist Party (ZNP) and the Zanzibar and Pemba People's Party (ZPPP). In 1964, Tanganyika and Zanzibar formed a union, with the new political entity named Tanzania. Karume became vice president under Nyerere.

Communist-trained Zanzibar soldiers march in review past Tanzanian President Julius Nyerere (*left*) and Vice President Abeid Karume during ceremonies celebrating the fourth anniversary of the union of Zanzibar and Tanganyika, 12 January 1968. (Bettmann/Corbis)

Tanzania adopted a new constitution in 1965. Nyerere remained president of the now one-party state and held power until 1985. Over two decades, he oriented the country toward socialism, with the aim of self-reliance. He tried to achieve this through the exploitation of native agriculture, concentrating the means of production in the hands of workers; state control of industry, inculcating the spirit of *Ujamaa* (brotherhood) that opposed human exploitation; and the redistribution of income. He also eschewed foreign aid, arguing that it brought with it binding, long-term commitments. His socialist policies took written form in the 1967 Arusha Declaration.

In 1972, Kawawa was reappointed prime minister, and Karume was assassinated. Karume's successor, Aboud Jumbe, extended the powers of the ASP, and in 1979 the Supreme Revolutionary Council of Zanzibar adopted a separate constitution. In February 1977, TANU and ASP merged to form the Chama Cha Mapinduzi (CCM, Revolutionary Party) with Nyerere as chairman.

Deteriorating economic conditions saw half the members of the National Assembly lose their seats in the 1980 elections. In 1984, the presidential term was reduced to two years, giving more power to the National Assembly. The next year, Nyerere was forced to retire amid a serious economic crisis.

Nyerere staged something of a comeback, however, and was reelected chairman of the CCM for a five-year term in October 1987. In 1990, Nyerere's CCM initiated a broad campaign against government corruption. The issue of democracy, which had been raised several times since he left office, was raised once more in December 1991, when a presidential commission recommended the establishment of a pluralistic political system. Finally, in 1995, multiparty legislative elections were held, and a democratically elected parliament came into being.

U.S. Army general, chairman of the Joint Chiefs of Staff (JCS), ambassador, and presidential consultant. Born in Keytesville, Missouri, on 26 August 1901, Maxwell Taylor graduated from the U.S. Military Academy, West Point, in 1922 and was commissioned in the engineers. In 1926 he transferred to the field artillery. A talented linguist, he taught French and Spanish for five years at West Point before graduating from the Command and General Staff College, Fort Leavenworth, Kansas, in 1935. He then was an assistant military attaché in Japan.

Taylor graduated from the Army War College in 1940 and served on the staff of Army Chief of Staff General George C. Marshall and was promoted to lieutenant colonel. In July 1942, Taylor became chief of staff of the 82nd Airborne Division as a colonel. In December he was advanced to brigadier general and assumed command of the divisional artillery. He fought in Sicily and, in September 1943, carried out a mission behind enemy lines to Rome, determining that a planned airborne drop there was not feasible.

In March 1944, Taylor assumed command of the 101st Airborne Division. Promoted to major general in March 1944, he participated with his division in the Normandy invasion and then in Operation MARKET-GARDEN, the failed attempt to seize a crossing over the Rhine at Arnhem, in which he was wounded. He was in Washington when the Battle of the Ardennes (also known as the Battle of the Bulge) began on 16 December 1945 but rejoined his division on 25 December and fought with it in the remainder of that battle and in the Ruhr.

Davenport**
(1901–1987)

U.S. Army General Maxwell D. Taylor was one of America's most distinguished military leaders. During the Cold War, he was sharply critical of U.S. reliance on nuclear weapons at the expense of conventional forces and advocated flexible response for fighting limited wars. (Harry S. Truman Library)

In September 1945, Taylor became superintendent of West Point and initiated a number of curriculum changes. Between 1949 and 1951 he headed the Berlin Command. In 1951 he was promoted to lieutenant general and became deputy chief of staff for Operations and Training. In February 1953 he assumed command of the Eighth Army in Korea as a full general. He was then commanding general of the Army Forces Far East in 1954 and commander in chief of the Far East Command in 1955.

Taylor served as army chief of staff during 1955–1959. His views differed sharply from President Dwight D. Eisenhower's strategy of massive retaliation. Taylor urged greater emphasis on conventional forces and the ability to fight limited wars, which later became known as flexible response. Retiring in 1959, he expressed his views publicly in his book *The Uncertain Trumpet*, which caught the attention of John F. Kennedy.

President Kennedy brought Taylor from retirement to serve as his military advisor during 1961–1962. Taylor advocated the dispatch of 8,000 U.S. ground combat troops to the Republic of Vietnam (RVN, South Vietnam). Kennedy then appointed Taylor chairman of the JCS, a post he held during 1962–1964. Named by President Lyndon Johnson as ambassador to South Vietnam (1964–1965), Taylor urged escalation of the war through bombing of the Democratic Republic of Vietnam (DRV, North Vietnam) as a means to bring North Vietnam to the negotiating table. For the remainder of his life, he defended U.S. policies in Vietnam and blamed America's defeat there on the media.

He was president of the Institute for Defense Analysis during 1966–1969 and president of the Foreign Intelligence Advisory Board during 1965–1970. Taylor died in Washington, D.C., on 19 April 1987.

U.S. atomic scientist, known as the father of the hydrogen bomb. Born in Budapest, Hungary, on 15 January 1908 to a Jewish family, Edward Teller received his doctorate in theoretical physics from the University of Leipzig in 1930. He immigrated to the United States in 1935. During World War II he worked at Los Alamos, New Mexico, on the Manhattan Project, which produced the world's first atomic bomb in 1945. After the Soviets tested their first atomic weapon in August 1949, Teller strongly pushed for a hydrogen bomb program, which President Harry S. Truman authorized in January 1950.

Teller's advocacy of the hydrogen bomb alienated him from many other nuclear scientists, who did not see the need for such a weapon and worried that production of one would lead inexorably to a nuclear arms race. In late 1950 Teller left Los Alamos for the Lawrence Livermore Laboratory in California when he was not selected to head the hydrogen bomb project. He served as associate director of the laboratory during 1953–1958 and director during 1958–1960. While he was director, the lab worked on the nuclear warhead for the U.S. Navy's new Polaris missile.

In 1954, the Atomic Energy Commission (AEC) denied Robert Oppenheimer, head scientist on the Manhattan Project, a renewal of his government security clearance. Teller had testified at AEC hearings against Oppenheimer, furthering the rift between himself and much of the scientific community. Undeterred by this, Teller spent his life devoted to scientific advancement and was an advocate of strong national defenses. During the 1980s, he ardently supported President Ronald Reagan's Strategic Defense Initiative. Teller was awarded the Presidential Medal of Freedom in July 2003. He died in Stanford, California, on 9 September 2003.

Templer, Sir Gerald

(1898–1979)

British field marshal. Born in Colchester on 11 September 1898, Gerald Walter Robert Templer was educated at Wellington College and Sandhurst Military Academy in 1916, when he was commissioned in the Royal Irish Fusiliers. He then saw combat service in France. Between the world wars he served in both the Middle East and England and graduated from the Staff College in 1929. At the outbreak of World War II, he was assigned to the intelligence section in the War Office. In November 1940 he was appointed to command a brigade, and in April 1941 he took command of the 47th Division as a temporary major general. In September 1942 he commanded II Corps, part of the British home defense, becoming the youngest lieutenant general in the army. However, ten months later he requested command of a field division and reverted to major general. In October 1943 he was assigned command of the 56th Division in Italy, which he led at Volturno River, Monte Camino, and Anzio. He was sent home the following August to recuperate after being wounded when his vehicle hit a mine.

In 1945 Templer was named director of civil affairs/military government in the British occupation zone in Germany. The following year he returned to the War Office, where he served successively as director of Military Intelligence and vice chief of the Imperial General Staff. He was promoted to lieutenant general in April 1948 and to general in June 1950. In 1952, following two years as chief of the Eastern Command, he was personally chosen by Prime Minister Winston Churchill to become high commissioner in Malaya, then in the midst of the Malayan Emergency.

To restore order in Malaya, Templer selectively built on his predecessors' initiatives while insisting on strict discipline and implementation of reforms, most notably in the police, intelligence, and information services. This approach was closely associated with what became known as the hearts and minds philosophy of counterinsurgency. By the time of his departure in 1954, the insurgents had essentially been defeated. He subsequently served as chief of the Imperial General Staff from 1955 to 1958 and was promoted to field marshal in November 1956. Templer died in London on 25 October 1979.

World War II and the attendant postwar settlements produced major territorial changes. In Europe, Germany was divided into four occupation zones, as was the capital city of Berlin. In a few years, these gave way to the Federal Republic of Germany (FRG, West Germany) and the German Democratic Republic (GDR, East Germany). Germany was not reconstituted as a whole nation until 1990 and the end of the Cold War.

Germany lost all territory that it had taken during the war. France secured the small border areas of Tenda and Briga. France also temporarily secured control of the coal-rich Saar region. Paris sacrificed efforts to secure the Saar permanently in return for a rapprochement with Bonn. Following a plebiscite in November 1955 in which Saarlanders voted two to one to reject internationalization, the Saar joined West Germany in 1957.

Territorial Changes after World War II

East Germans drive through Checkpoint Charlie in Berlin as they take advantage of relaxed travel restrictions to visit the Federal Republic of Germany (FRG, West Germany), November 1989. (U.S. Department of Defense)

Poland's postwar borders had been the topic of much rancor and debate in the wartime meetings of Allied leaders at Tehran (November–December 1943) and Yalta (February 1945). Germany lost all of former East Prussia to the Soviets and Poles. The Soviet Union annexed Königsberg (renamed Kaliningrad), Memel (now Klaipėda), and northern East Prussia, with the remainder of the province going to Poland. West of the former Polish corridor, Germany was forced to cede to Poland all German territory up to the Oder and Neisse Rivers as well as the city of Stettin east of the Oder. The Western powers agreed to only a temporary administration of this territory, pending a formal German peace treaty. Nonetheless, the arrangement became permanent and was formally recognized as such in the signing of a peace treaty with Germany in 1991.

Territory taken from Germany and given to Poland was to compensate that country for the loss of much of its eastern territory to the Soviet Union. The Western powers had agreed at Yalta that the Soviet western frontier should be the old Curzon Line, set as the boundary between Poland and Russia by a commission of the Western powers in 1919. The settlement of Poland's postwar frontiers thus moved Poland west, but it also eliminated the old Polish corridor and the territorial division of Germany that had been the stated cause of the German invasion of Poland in 1939, marking the beginning of World War II in Europe.

Without treaty or agreement by the Western powers, the Soviet Union also annexed the Baltic states of Estonia, Latvia, and Lithuania (which had been extended eastward in 1939 to include Vilnius). The Soviets had forcibly annexed these three states in 1940. Finland was forced to cede to the Soviet Union the Karelian Isthmus and the Arctic seaport of Petsamo (now Pechenga). This latter gave the Soviet Union a frontier with Norway. The Soviet Union also secured from Finland a fifty-year lease on a naval base at Porkkala.

The Allies agreed in 1943 that Czechoslovakia, declared a belligerent state on the Allied side, was to be returned to its pre-1938 Munich Agreement frontiers, but in November 1944, with the Red Army in occupation, a self-proclaimed council met in sub-Carpathian Rus' (which the Paris Peace Conference had awarded to the new state of Czechoslovakia in 1919 in order to provide a land link with Romania) and declared its desire to be reunited with the "Soviet Ukrainian motherland." This "voluntary" action was confirmed by a bilateral treaty between the Soviet Union and Czechoslovakia in June 1945.

In east-central Europe, the victorious powers rejected Hungary's claims to retain control of Transylvania. That area was returned to Romania, and Hungary shrunk back to its 1919 Treaty of Trianon borders, with the exception of a small bit of land south of the Danube near Bratislava, which went to Czechoslovakia.

Romania recovered its prewar western boundary, with the return of Transylvania. In the 1947 Treaty of Paris, however, it was forced to yield to the Soviet Union both Bessarabia and northern Bukovina. Romania was also compelled to recognize the loss in 1940 to Bulgaria of the southern Dobruja, including the Danubian port of Silistra.

Italy's frontiers were also redrawn. In addition to losing some small territory to France, the 1947 treaty recognized the Yugoslavian acquisition of all former Italian land east of the Adriatic Sea. This included the Dalmatian city of Zadar (Zara) and the Adriatic islands of Cres (Cherso), Lošinj (Lusino), and Lastovo (Lagosta) as well as the long-contested city of Rijeka (Fiume) and, to the north, western Slovenia and part of Istria. The chiefly Italian city of Trieste was initially declared a free territory and was administered by Anglo-American forces. Trieste was finally incorporated into Italy in 1954. The 1947 treaty also awarded Italy's Dodecanese Islands to Greece, and Italy lost sovereignty over its North African colonies of Libya, Ethiopia, Eritrea, and Italian Somaliland.

In Asia, the victorious Allies had agreed early on that Japan would be reduced to its home islands. At the Yalta Conference, in return for a Soviet pledge to enter the war against Japan "two or three months" after the defeat of Germany, the Allies agreed that the Soviet Union would receive South Sakhalin Island (lost by Russia to Japan following the 1904–1905 Russo-Japanese War), concessions in the port of Darien, the return of Port Arthur as a Soviet naval base, and control over railroads leading to these ports. The Kurile Islands, which had never been in Russian possession, also passed to the Soviet Union. In the early 1950s, the Soviet Union returned to the People's Republic of China (PRC) the various concessions granted to it in Chinese territory.

Also as a result of World War II, China regained sovereignty over Manchuria, Taiwan (Formosa), and the Pescadores Islands, while Outer Mongolia continued to be independent of China. In effect, these concessions sanctioned the replacement of Japanese imperialism with Soviet domination, but the Western leaders believed this a necessary evil to secure timely Soviet entry into the Pacific war. The allies also agreed that Korea would in due course be restored to independence. Soviet forces were to disarm Japanese forces north of the 38th Parallel, while American forces would do the same south of the 38th Parallel.

The former German islands mandated to Japan after World War I now passed to U.S. control. These were the Gilbert, Caroline, and Northern Mariana Islands. They became a U.S. Trust Territory in 1947. The Japanese islands of Iwo Jima and Okinawa were taken from Japan but were restored in 1968 and 1972, respectively. Guam, taken by the United States in 1898 and occupied by Japan during the war, was restored to U.S. control. It became an incorporated territory of the United States in 1950. The United States granted independence to the Philippines in 1946.

Other territorial changes occurred indirectly as a result of the war. Within a few years of the end of the war, decolonization had wrought great changes in Africa, Asia, and the Middle East. The former French colonies of Lebanon and Syria retained the independence they had gained during the war, for instance. Jordan became a sovereign state in 1946. The European powers, spurred by the horrors of the Holocaust, also supported the creation of a Jewish national homeland (Israel) in the former British mandate of Palestine. This initiative, which was mediated by the United Nations (UN) in 1948,

remains one of the most controversial territorial changes stemming from World War II.

Independence came gradually to African and Asian nations, and not without conflict. This movement was largely a result of the Atlantic Charter of August 1941 that called for the self-determination of peoples; pressure on the colonial powers by the Soviet Union and the United States; the occupation of Asian territories by Japan; and the weakened positions of Britain, France, Belgium, and the Netherlands immediately after the war. Within a decade of the end of the war, these circumstances would lead to the dismantling of most of the European colonial empires and to more than a few wars.

Terrorism

The 11 September 2001 terrorist attacks on the United States brought the issue of terrorism to the forefront of global consciousness, yet politically motivated violence is nothing new. During the Cold War, the instances of both domestic and international terrorism were ample, with no region of the world free from its dangers. And while terrorism is rightfully considered a great modern evil, to ignore the fundamentally political nature of such violence is to miss the central point of its occurrence, especially within the context of the ideological, postcolonial politics of the Cold War.

In very general terms, terrorism involves the use of violence (or the threat thereof) against mainly civilian targets for political ends. The goal is to either coerce a government into radically altering policy or to intimidate the public into abandoning support for the existing regime. Specific definitions of terrorism vary depending on the particular governmental or scholarly agendas, and terrorists themselves often claim to be revolutionaries, reluctant warriors, or freedom fighters. Additionally, some scholarship—primarily

leftist in orientation—seeks to define virtually all military action as terrorism, but to do so only obfuscates the issue. Illegitimate state-sponsored violence can more appropriately be classified as either war crimes or genocide.

Terrorism throughout the Cold War impacted all regions of the world, but it can best be grouped into three distinct yet overlapping categories: the nature of Cold War competition made ideological groups, predominantly Marxist groups, most prevalent; several prominent ethnonational separatist groups must be considered; and a host of Middle Eastern terrorist groups emerged, most of which were initially motivated by Arab nationalist causes but became increasingly Pan-Islamic or religiously based as the Cold War evolved. In addition, state-sponsored terrorism was an aspect of the Cold War, but it is an issue that deals more with sources of funding and support for terrorism rather than being a motivating factor for political violence.

Widespread student revolts in Europe and the United States in the late 1960s signified the ascendancy of the New Left, which was young, radical, and founded upon an ideology that was revolutionary rather than reformist. The terrorists who emerged from this movement had romantic notions of working-class struggles, even if they themselves were almost exclusively from middle-class backgrounds.

Typical of this lack of proletarian credentials was the Weather Underground Organization (also known as the Weathermen) in the United States. An offshoot of the Students for a Democratic Society (SDS), the Weathermen were essentially embroiled in an identity crisis, motivated by boredom and a desire for excitement. This was in direct contrast to members of the Black Panthers, who as products of America's inner cities were more authentically radical and could more genuinely connect their struggle with the plight of the oppressed in the developing world.

In Europe, several groups established a sort of European International, a loose but coordinated federation of leftist groups united against North Atlantic Treaty Organization (NATO) imperialism. These groups often received logistical and matériel aid from the Soviet Union via its East European satellites. In the Federal Republic of Germany (FRG, West Germany), the Red Army Faction (RAF), also known as the Baader-Meinhof Gang, grew out of a rejection of postwar capitalist consumerism but also considered itself the champion of the oppressed developing world. Aligned with the RAF was France's Action Directe (AD). Together these two groups sought to establish a network of West European revolutionaries who would fight on behalf of developing-world victims of Western imperialism. The Italian Red Brigades was also included in this milieu, but it went further by attempting to form alliances with terrorists in Ireland and Spain (whose causes were entirely

An automobile destroyed in the street outside a Renault office building bombed in September 1985. The French group Action Directe (AD) claimed responsibility for the bombing in Issy-les-Moulineaux and La Defense, Paris. (Jacques Langevin/Corbis Sygma)

Terrorist Organizations by Home Country

<i>Group Name</i>	<i>Home Country</i>
Weather Underground Organization	United States

National Liberation Front	Algeria
Hezbollah	Iran
Kurdistan Workers' Party	Kurdistan
Abu Nidal Organization	N/A
Palestinian Liberation Organization	Palestine
Popular Front for the Liberation of Palestine	Palestine
Black September	Palestine

different in nature). An organization known as November 17 (N17) followed the Marxist, anti-Western model in Greece but had an additional and more specific grievance against the United States, which they blamed for the Turkish occupation of Cyprus. In Eastern Europe, however, strong police states effectively negated any chance for the rise of such revolutionary movements.

The Japanese Red Army (JRA) shared N17's explicit anti-Americanism. Founded in large part upon a rejection of the United States–Japan Security Treaty, the JRA had explicit ties to European terrorists but also maintained connections with Middle Eastern terrorists. The JRA was more internationalist in its worldview than its European counterparts.

Communist revolutionary fervor was quite evident in Latin America, where virtually every nation was affected. Uruguay, Argentina, Brazil, and Venezuela were all plagued with guerrilla armies, but in contrast to European terrorism, violence in Latin America was founded upon genuine peasant uprisings. A more organized urban guerrilla warfare substituted for the clandestine student-oriented groups in Western Europe. Colombia watched guerrilla warfare quickly turn from revolutionary insurgency into the narco-terrorism that defines the Revolutionary Armed Forces of Colombia (FARC) today, whereas in Peru, Sendero Luminoso (Shining Path) remains and is often cited as the prototype of a Marxist insurgency group. Shining Path can also be likened to the many ethnonational groups, but their claims in this regard were always secondary to the group's revolutionary goals.

In the United States, Western Europe, and Latin America, the revolutionaries overestimated the salience of their Marxist ideology, and as a result they never received significant public support. Russian revolutionaries Vladimir Lenin and Leon Trotsky had warned against the use of revolutionary terrorism because, they believed, it lacked a genuine connection to the working-class struggle. The radical terrorists of the late 1960s favored immediate action. In

the end, because of often indiscriminate violence, such movements tended to reduce rather than increase popular support for the Left.

The second category of Cold War terrorism, ethnonational separatists, typically operated within an existing state but made irredentist claims based on the shared perception that the territory was the group's ancestral homeland. During the Cold War, many of these groups claimed some form of Marxist solidarity, but in fact their true motivations were entirely nationalistic. Ethnonational groups have been far more prolific than their ideological counterparts, and their longevity has been generally greater. In several cases, however, they have operated in democratic nations, which limited the amount of public sympathy they received, even among coethnics.

Perhaps the earliest Cold War example of this type of terrorism are the Zionist terrorists of the Irgun and Stern Gang, who undertook terrorist operations against both British and Arab targets in Palestine prior to the creation of the state of Israel in 1948 but disbanded after 1948 because such clandestine groups are unnecessary once they achieve their goal.

One of the more recognizable of all terrorist groups is the Irish Republican Army (IRA), perhaps because its demand that Northern Ireland be reunified with the Republic of Ireland calls into question two of the pillars of Western Cold War dogma: the pluralist assumptions of representation and self-determination. Similarly, Euzkadi ta Askatasuna (ETA, Basque Homeland and Liberty) seeks an independent state in the Basque region of Spain (and a small portion of France), but their suppression under Spanish dictator Francisco Franco and Spain's subsequent granting of semiautonomy to the region lessened the appeal of their cause.

It is inexplicable that the most deadly of all terrorist groups, the Liberation Tigers of Tamil Eelam (LTTE, Tamil Tigers), is relatively unknown. The LTTE seeks to annex the northern portion of Sri Lanka, a territory they claim as the Tamil homeland. It is estimated that the Tamil Tigers have killed more than 50,000 people to date, most notably two world leaders, Indian Prime Minister Rajiv Gandhi in 1991 and Sri Lankan President Ranasinghe Premadasa in 1993.

Equally inexplicable is that there is one terrorist group that was entirely successful in achieving its political goals, which were anticolonial rather than separatist. The National Liberation Front (FLN) managed to drive French colonial forces out of Algeria and established itself as the new Algerian government.

While it is true that most, if not all, ethnonational separatist groups have relied on one another in a type of international network of matériel support, it is a mistake to conclude from this that during the Cold War they were not completely autonomous. Connections and mutual support existed, but this was not international terrorism as it is properly defined.

The third category of Cold War terrorism, Middle Eastern terrorism, is perhaps the most difficult to define because violence in the Middle East has been based on a combination of ideology, Arab nationalism, and what is aptly described as political religion. Contrary to popular belief, much Middle

It is estimated that the Tamil Tigers have killed over 50,000 people to date, most notably Indian Prime Minister Rajiv Gandhi in 1991 and Sri Lankan President Ranasinghe Premadasa in 1993.

Eastern terrorism has until relatively recently been limited to Arabs attacking other Arabs. Palestinians have attacked Jordanians, Iraqis and Syrians have fought one another, and the Lebanese Civil War pitted Iranian and other Shiite Muslims against Lebanon's Christian majority as well as Sunni Muslims. Iranian support gave rise to Hezbollah (Party of God), which in a 1983 act of international terrorism killed 241 U.S. servicemen in a truck bombing at a Marine barracks in Beirut. Thus, the distinction between terrorist typologies is easily blurred.

One group that especially typifies the difficulty in categorizing Middle Eastern terrorist groups is the Kurdistan Workers' Party (PKK), which is at once Marxist, separatist, and Arab nationalist (not Islamic) in orientation. There is also the Abu Nidal Organization (ANO), which operated much like a terrorist contractor or gun for hire and was often employed by one Middle Eastern interest against another.

However, the more obvious and virulent strain of such violence is that between Arabs and Jews. After World War II, several hundred thousand Palestinians (estimates range from 500,000 to more than a million) were forcibly removed from their homes to facilitate the creation of Israel. Thus, it is no surprise that much Middle Eastern antipathy is aimed at Israelis and Americans, who are seen as Israel's unstinting benefactor.

Throughout the Cold War, the most prominent of these groups was the Palestine Liberation Organization (PLO) and its ancillary organization, the

Armed police drop into position on a terrace directly above the apartments where members of the Israeli Olympic team were being held hostage by Arab Black September terrorists. The attack ended in a shootout with German police. Munich, 5 September 1972. (Bettmann/Corbis)

Popular Front for the Liberation of Palestine (PFLP). While there had been prior attacks against Israeli settlements and minor border skirmishes, Palestinian groups began their campaign in earnest after the 1967 War and the Israeli occupation of the West Bank. The PLO acted as an umbrella organization, receiving funds from Arab oil states and channeling them to its secondary partners. Most notably, Black September, a commando unit of the PLO and PFLP, was responsible for the deaths of eleven Israeli athletes at the 1972 Munich Olympics. This event effectively brought the Palestinian cause as well as international terrorism to the attention of the global community. Objectively, though, Palestinian terrorism has been highly ineffective. Any tactical/operational successes were mitigated by Israeli (and others') counter-measures. Yet Palestinian terrorism was effective in unifying among the Arab peoples the anti-Israeli and anti-American sentiments that continue today.

While the universal hope was that the end of the Cold War would usher in a new era of peace, the fall of the Soviet Union simply eliminated the financial support and ideological validation for one particular type of terrorism. It did nothing, however, to alter the nature of the grievances of the working classes or the genuinely oppressed, and it actually may have removed some constraints on violence, allowing terrorists to become more global and deadly in scope. Indeed, Middle East-based terrorism expounding political religion as its ideological basis may have been aided and emboldened by the end of the Cold War. Whereas both the Soviets and Americans sought to restrain violence in the Middle East during the Cold War, with the Soviet Union gone, an important countervailing force has been lost. Politically motivated violence has not abated but instead has merely changed forms.

point of the American war in Vietnam. Beginning early on 30 January 1968, the Vietnamese new year (Tet) truce was broken when Viet Cong forces attacked 13 cities in the central region of the Republic of Vietnam (RVN, South Vietnam). By the end of the day on 31 January, the communists had attacked 5 of 6 cities, 36 of 44 provincial capitals, and 64 of 245 district capitals. In one of the boldest attacks, a VC platoon managed to penetrate the grounds of the U.S. embassy in Saigon for several hours. Although U.S. troops repelled the incursion, this bold challenge to American power in the heart of Saigon gained wide publicity, especially in the U.S. press.

In heavy fighting over the next several days, all the attacks throughout South Vietnam were countered by U.S. and Army of the Republic of Vietnam (ARVN, South Vietnamese Army) forces. The communist attackers incurred heavy casualties. The most bitter and prolonged fighting occurred in the city of Hue, where the communists made a major investment of forces, and in Cholon, the Chinese section of Saigon. In these locations fighting raged for weeks, and in Hue much of the city was destroyed.

Militarily, the Tet Offensive failed to achieve Hanoi's military objectives. PAVN commander General Vo Nguyen Giap, although not completely in agreement with the decision to launch the offensive, believed that the plan might break the bloody stalemate between his troops and the large American expeditionary force. By launching a general offensive of simultaneous attacks throughout South Vietnam, the Democratic Republic of Vietnam

(DRV, North Vietnam) hoped that the ARVN would collapse and that South Vietnamese civilians would join the VC in a general uprising against Saigon. With its puppet government overthrown, the North Vietnamese government reasoned, the United States would be unable to continue the war. Initially, the scheme worked well. In several well-conceived diversions by Giap's troops, including the siege of the Khe Sanh Marine base, he lured several U.S. units to outlying areas. Meanwhile, he secretly supplied VC units and moved them into position for attacks on the cities and towns.

One of the myths of the Tet Offensive is that it caught U.S. and ARVN forces by surprise. The U.S. command anticipated the offensive but not its timing and intensity. U.S. commanders did not think that the communists would alienate the South Vietnamese population by attacking during Tet, nor did they anticipate that the communists would mount an offensive with all their available forces. As the offensive unfolded, however, the ARVN fought surprisingly well, no uprising occurred, and the PAVN and VC suffered perhaps 45,000 casualties, half of the force engaged. The VC units were so decimated that troops from North Vietnam had to take over most of the combat operations for the remainder of the war.

The offensive compounded problems for the South Vietnamese government, as it dramatically increased the number of refugees. It also proved to be both a strategic and public relations success for the South Vietnamese government, because the magnitude of the attack led Washington to begin a reassessment of costs and objectives in the war. Spokesmen for President Lyndon B. Johnson's administration, including the commander of U.S. forces in Vietnam, General William Westmoreland, had claimed right before Tet that the end of the war was in sight, but the offensive led many to challenge that claim. Westmoreland saw in the Tet Offensive an opportunity and requested 206,000 additional troops to mount a decisive counteroffensive. When news of his request appeared in the *New York Times*, however, many Americans interpreted it as an act of desperation and began demanding an end to the escalation. President Johnson, stunned by the ferocity and scope of the offensive and counseled by a number of his advisors against a widening of the war, denied Westmoreland's request.

In a nationally televised address on 31 March 1968, Johnson announced to a stunned nation that he was limiting the bombing of North Vietnam, calling for negotiations, and bowing out of the 1968 presidential election. The Tet Offensive did not end the American war, but it dramatically contradicted the Johnson administration's optimistic claims that the war was all but won. It also helped contribute to Richard M. Nixon's close victory in the November 1968 election. Although the fighting in Vietnam continued for another four years, the Tet Offensive marked a watershed in America's involvement in the war as well as in the tenor of American politics.

Thailand

Southeast Asian nation covering 198,455 square miles, roughly the size of France. Thailand is bordered by Burma (Myanmar) to the north and west, Laos to the northeast, Cambodia due east, and Malaysia and the Gulf of Thailand to the south. In 1945 the nation had a population of roughly 19 million people. The only Southeast Asian country never colonized, Thailand largely avoided the divisions that consumed other states in the region. It was nonetheless center stage during the Cold War as America's forward base against communist expansion. Despite communist victories throughout Indochina, Thailand became a relatively stable, noncommunist, and prosperous country.

Thailand allied with Japan during World War II, but its position was ignored by the United States, which instead recognized an exile government in Washington. The United States also opposed Allied demands on Thailand after the war, protecting it from European colonialism. American interests developed further with the communist revolution in China and the Korean War (1950–1953). Concerned that Southeast Asia would fall to communism like dominoes, Washington began economic and military aid programs in the region. The Americans also sponsored strong anticommunist leaders. In Thailand, this brought back to power Phibun (Phibunsongkhram), who ruled during 1938–1944 and 1948–1957. Washington valued Phibun's anti-communism, ignored his previous ties to Japan, and welcomed the return of his military rule.

In 1950 Thailand joined the U.S. Military Defense Assistance Program. President Harry S. Truman then sent a Military Advisory Assistance Group to Bangkok. By 1953 American aid to Thailand exceeded \$56 million per year. Washington also helped Thailand secure the first World Bank loan in Southeast Asia and funded extensive expansions of Thai transportation and communication networks. This aid led to an intimate relationship predicated on the containment of communism. For the United States, Thailand represented a stable ally and a base for military operations in the region. Thailand hosted myriad clandestine operations through which the United States

Deeply reverent of the monarchy and Buddhist faith, most Thais considered communism anathema.

established logistical and intelligence networks during the Vietnam War. Thailand also became the headquarters of the Southeast Asia Treaty Organization (SEATO).

For Thailand, the United States represented more than a wealthy benefactor. Economic incentives unquestionably motivated Thai leaders. Connections with Washington also legitimized military government. However, the Thais were no mercenaries. Communism threatened not only the country but also Thai culture. Deeply reverent of the monarchy and the Buddhist faith, most Thais considered communism anathema. Moreover, behind communist threats loomed the ancient specter of Chinese domination. Countering these concerns necessitated close relations with the Americans.

Particularly worrisome to Thailand was chaotic Laos, which by the early 1960s was partly controlled by the communist Pathet Lao. To help navigate the labyrinthine world of Lao politics, the United States depended on Thai Prime Minister Sarit Thanarat (1958–1963). Part Lao, Sarit wielded considerable influence in the region. He also supported factions without American support, as he did in troubled Cambodia. To secure neutrality in both countries, the United States required Thai assistance, which was difficult given Bangkok's concern about its neighbors.

Another threat manifested itself in a communist insurgency in Thailand's remote northeastern region. Although smaller than other Southeast Asian movements, the insurgency alarmed Thai and U.S. officials. Concerned about Laos and disenchanted with SEATO, Sarit lobbied Washington for a bilateral security agreement. In March 1962, President John F. Kennedy's administration responded with the Rusk-Thanat Agreement, which was not, however, a formal alliance, much to Thai dismay.

Based on the agreement, 6,500 U.S. Marines landed in Thailand in May 1963 when communist advances in Laos precipitated a tense standoff along the Mekong River. Although war was averted and U.S. forces were quickly withdrawn, the deployment led to expanded military facilities and operations in Thailand, with air bases taking top priority. During 1960–1966 six major bases were built with U.S. assistance. During December 1965–November 1968, 1,500 weekly bombing runs originated in Thailand, 80 percent of ordnance dropped on the Democratic Republic of Vietnam (DRV, North Vietnam) and Laos in Operations ROLLING THUNDER and BARREL ROLL, respectively.

Thai officials continually denied existence of the bases and maintained that the 25,000 U.S. servicemen in Thailand by 1967 were simply advisors. In fact, Thailand was very much part of the American war in Vietnam. Under Prime Minister Thanom Kittikachorn (1963–1973), 11,000 Thai soldiers—15 percent of the armed forces—served in Vietnam, while approximately 22,000 fought in Laos, comprising much of the strength of irregular forces there. Thailand also hosted American servicemen on leave, generating \$22 million annually in revenues from rest and relaxation facilities.

Congressional scrutiny ultimately undermined U.S.-Thai relations. So too did failure in Vietnam. In 1966 Thai leaders considered dialogue with Hanoi and Beijing and by 1969, resigned to U.S. disengagement, sought an

Demonstrating students hurling tear gas canisters back at Thai Army tanks attempting to disperse them on 14 October 1973. Antigovernment riots that left 400 people dead toppled the ten-year-old military regime of Field Marshall Thanom Kittikachorn. (Bettmann/Corbis)

independent regional policy. That August, Thanom announced the end of Thai participation in Vietnam and asked President Richard M. Nixon to remove U.S. forces from Thailand.

However, many covert Thai operations continued. Some American soldiers remained, and Thai air bases were still used. Many Thais resented this presence, especially while Nixon pursued *détente* with China and peace talks with North Vietnam. Demands for foreign policy change and domestic reform culminated in violent protests in October 1973. Only through the intervention of King Bhumipol was major conflict averted. Thanom fled the country in the fall of 1973, and a new civilian government opened talks with Hanoi and Beijing. After the fall of Saigon and Cambodia in 1975, another revolution developed in October 1976, bringing military government back to Thailand.

The communist threat, however, had subsided, and the 1978 Vietnamese invasion of Cambodia and the 1979 Sino-Vietnamese War revealed serious divisions between communists. Moreover, the insurgency in Thailand waned. Thereafter, economic development became the priority, and Thailand in the 1980s underwent a radical transformation, becoming one of Asia's economic tigers. Security and prosperity led to democratic reforms, which became the focus of the 1990s.

With a more homogeneous population, Thailand avoided ethnic tensions seen elsewhere in Southeast Asia. Buddhism and the monarchy undoubtedly helped stabilize Thai politics. Shrewd diplomacy and the economic benefits of U.S. aid also factored into Thailand's success. Indeed, it emerged from the Cold War more unified and prosperous than most Southeast Asian nations.

Thatcher, Margaret (1925–)

British politician and prime minister (1979–1990). Born in Grantham, Lincolnshire, on 13 October 1925, Margaret Hilda Roberts attended Kesteven and Grantham High School for Girls, then read chemistry at Somerville College, Oxford, becoming president of the Oxford University Conservative Association. Upon graduation in 1947, she worked as a research chemist and in 1951 was called to the bar as a lawyer. In 1951 she married Denis Thatcher, a wealthy businessman.

After two failed attempts, in 1959 Margaret Thatcher won election to Parliament as Conservative member for Finchley. In 1961 she was parliamentary secretary at the Ministry of Pensions and in 1970 secretary of state for education and science under Edward Heath until his government lost the 1974 election to Harold Wilson's Labour Party. The following year, Thatcher became Conservative leader, the first woman to head either major British political party, and after four years, during which she broke decisively with the centrist consensus on the mixed economy and welfare state that had dominated all British governments since 1945, led her party to electoral victory over Labour Prime Minister James Callaghan in 1979. This was the first of three successive general election triumphs for Thatcher, the others occurring in 1983 and 1987.

As British prime minister—the first woman to hold that position—Thatcher used monetarist measures to moderate the prevailing high inflation of the 1970s, cut taxes dramatically, trim back the welfare state, privatize many nationalized industries, and drastically curtail the power of labor in bitter confrontations with major trade unions. Far more ideological than her predecessors, she accepted double-digit unemployment rates, which peaked at 3 million in the early 1980s, and the consequent short-term political unpopularity as the inevitable price of such policies.

Strongly anticommunist in outlook, while still in opposition in 1976 Thatcher had assailed Soviet policies for opposing “genuine détente” through intervention in Angola and opposed any weakening of the North Atlantic Treaty Organization (NATO). Dubbed the “Iron Lady” by the Soviet press, she accepted the sobriquet with pride and worked to strengthen British defenses and repair strained relations with the United States. She consciously modeled herself on Winston Churchill, another maverick Conservative prime minister who supported tough foreign policies. Her uncompromising rhetoric, strong principles, and forceful personality soon made her a major international figure, admired by conservatives and often reviled by liberals.

From early 1981, Thatcher worked closely with U.S. President Ronald Reagan, whose political views on both domestic and international issues coincided almost exactly with her own, and the two soon developed a warm friendship. Internationally, she almost always backed the United States, even when Reagan’s fiercely antiterrorist and anticommunist policies toward such countries as Libya, Nicaragua, and Chile generated considerable domestic and foreign criticism. She did, however, break with Reagan over his 1983 invasion of Grenada, a British Commonwealth country, and refused to endorse the economic sanctions that the U.S. Congress imposed, albeit without Reagan’s backing, on apartheid South Africa. She consistently backed NATO, endorsing the controversial 1979 decision to deploy nuclear-armed intermediate-range cruise missiles in Western Europe and replace Britain’s Polaris submarine fleet with modern Trident II submarines. In doing so, she ignored protests, including the revival of the Campaign for Nuclear Disarmament and the encampment of protestors for several years outside the American air base of Greenham Common, Berkshire. Splits within the Labour Party over defense and British membership in NATO contributed to Thatcher’s subsequent reelection victories.

While taking a tough line on defense and rearmament, initially Thatcher concentrated on economic and domestic issues, leaving her foreign secretary, Lord Carrington, responsible for handling such thorny issues as negotiating a settlement in Zimbabwe (Rhodesia) in 1980 that replaced the state’s break-away white government with one dominated by Africans. From 1982, however,

Known as the “Iron Lady,” Margaret Thatcher was Britain’s first woman prime minister (1979–1990). As leader of the Conservative Party, Thatcher was a strong ally of U.S. President Ronald Reagan. (Corel)

when against much advice she chose to send a military expedition to the South Atlantic to regain the British-controlled Falkland Islands after their seizure by Argentina, Thatcher became far more active in international affairs. She played a major part in negotiating the 1984 Joint Declaration whereby, against her own initial instincts, Britain agreed to return Hong Kong to the People's Republic of China (PRC) in 1997. Always somewhat suspicious of the European Community (EC), she did not withdraw Britain from membership but undertook hard bargaining to ensure that Britain's overall budgetary contributions to the EC declined substantially.

During the early 1980s, Thatcher's relations with Soviet leaders Leonid Brezhnev, Yuri Andropov, and Konstantin Chernenko were frosty. Meeting Mikhail Gorbachev in December 1983 shortly before he became Soviet Communist Party secretary, she quickly developed a rapport with him and urged Reagan to give credence to Gorbachev's calls for major reductions in nuclear and conventional forces as well as his attempts at economic reform. Interestingly, fearing that Gorbachev's political survival was precarious and that more hard-line Soviet officials might well replace him, Thatcher was more cautious than Reagan in sanctioning such reductions, including the 1987 Intermediate-Range Nuclear Forces (INF) Treaty, and urged the Western alliance to proceed relatively slowly. She was therefore somewhat uncomfortable with the sweeping agreements that Reagan and Gorbachev reached at Reykjavík in 1986, a meeting that, like several others between Gorbachev and Presidents Reagan and George H. W. Bush, she did not attend.

Well-founded doubts over the effectiveness of the Strategic Defense Initiative (SDI) system of antinuclear defenses that Reagan favored made Thatcher reluctant to dismantle both nuclear weapons and antinuclear defenses. Memories of German involvement in two world wars also led her to unavailingly oppose the unification of the German Democratic Republic (GDR, East Germany) and the Federal Republic of Germany (FRG, West Germany). In the summer of 1990, she reportedly urged President Bush to remain firm in opposition to the seizure of Kuwait by President Saddam Hussein of Iraq, support that many believed contributed to Bush's decision to launch a war against Iraq the following year, a conflict in which British forces participated.

In November 1990, Conservative opposition to Thatcher's domestic policies, especially the highly unpopular new poll tax, created a rebellion within her own party that forced her from office. Ennobled as Baroness Thatcher, she then published several volumes of memoirs and speeches, made numerous public addresses, and somewhat ineffectively attempted to pressure her successors to follow her policies. She opposed any further strengthening of the European Union (EU) but strongly supported the continuation and enlargement of NATO. She also established a foundation to promote and encourage her free enterprise and antisocialist political views. In failing health by the early twenty-first century, in June 2004 she nonetheless insisted on attending her old friend Reagan's funeral and burial services, for which she had recorded a eulogy lauding his domestic and international achievements. Although her own country lacked the superpower status of

the United States, much of her praise of Reagan's courage, determination, and political skills was equally applicable to Thatcher herself.

British counterinsurgency expert. Born on 12 April 1916 in Charlwood, Robert Grainger Ker Thompson was educated at Marlborough and Sidney Sussex College, from which he graduated in 1938. Later that same year he was posted as a Malayan Civil Service (MCS) cadet. During 1942–1944 he served as Royal Air Force liaison officer with Orde Charles Wingate's Chindits, rising to wing commander. In 1946 he returned to the MCS as assistant commissioner of labor in Perak. During the Malayan Emergency (1948–1960), he was closely involved with the successful effort to defeat the insurgents, and he advanced up the MCS ranks, becoming permanent secretary for defense in 1959.

In September 1961, now retired from the MCS, Thompson went to the Republic of Vietnam (RVN, South Vietnam) as head of a small British Advisory Mission (BRIAM) to President Ngo Dinh Diem. Thompson established cordial relations with the Americans, but he was unable to convince the Vietnamese to adopt the approach that had worked in Malaya, and BRIAM was

Thompson, Sir Robert
(1916–1992)

subsequently dissolved in 1965. Later that year he was hired as a consultant by the RAND Corporation and wrote *Defeating Communist Insurgency*, which compared Malaya and Vietnam and established principles for defeating similar insurgencies. He severely criticized President Lyndon B. Johnson's Vietnam War strategy, adopted in 1966, as a failure to understand the nature of the war. In *No Exit from Vietnam* (1968), Thompson explained how the Americans' flawed policy had led to the January 1968 Tet Offensive. In 1969 he was hired as an independent observer by President Richard M. Nixon, whose new strategy for Vietnam was more attuned to Thompson's ideas. Thompson remained an observer until the collapse of South Vietnam in April 1975. However, his disillusionment with the 1973 Paris Agreement led him to conclude that the lack of American will to enforce it was the ultimate cause of defeat. Thompson died on 16 May 1992 in Winsford, England.

Thorez, Maurice

(1900–1964)

French politician and leader of the French Communist Party (PCF) during 1930–1964. Born in Noyelle-Godault in the Pas-de-Calais region of northern France, the son of an impoverished coal miner, on 28 April 1900, Maurice Thorez attended only a few years of primary school before he became a coal miner at age twelve. He joined the PCF in 1920, became a local party secretary in 1923, and rose to secretary-general of the party in July 1930. He would lead the PCF until his death in 1964, taking a staunchly Stalinist line and resisting the currents of reform associated with Eurocommunism in Italy and other European countries.

Thorez was elected to the French Chamber of Deputies in 1932 and served until 1939. In 1934, he abandoned the class-against-class strategy of the 1920s and adopted a new policy of cooperation with the socialists, a shift that culminated in communist support for the Popular Front government of Léon Blum following the legislative elections of 1936. The key objectives of the policy shift were to block the spread of fascism to France and to support the Soviet Union internationally.

With the conclusion of the nonaggression pact of 23 August 1939 between Germany and the Soviet Union and the outbreak of World War II barely a

Maurice Thorez, leader of the French Communist Party, October 1947. (Bettmann/Corbis)

week later, the PCF adopted a new political line dictated by the Comintern that denounced the war as a clash of rival imperialisms. Thorez was mobilized into the French Army but, on Comintern orders, deserted and made his way to Moscow, leaving Jacques Duclos in charge of the party. Thorez remained in Moscow until November 1944, even as the PCF, following the June 1941 German attack on the Soviet Union, emerged as a leading force in the French Resistance.

After the French liberation in August 1944, Thorez was once more elected to the French Chamber of Deputies and served as minister and deputy prime minister in the tripartite (communist-socialist-Christian Democratic) governments of November 1945–November 1947. With the establishment of the Cominform in September 1947, Soviet leader Josef Stalin effectively compelled the PCF once more to turn sharply to the Left. Thorez subsequently confessed that the PCF had erred in cooperating with other political forces, and he mobilized the party to combat French participation in the Marshall Plan and the North Atlantic Treaty Organization (NATO).

In December 1950, Thorez suffered a stroke and went to Moscow for treatment. He returned to France in April 1953, following the death of Stalin

the previous month. Thorez strongly resisted Soviet leader Nikita Khrushchev's de-Stalinization campaign when it was launched in late 1956, not least because Thorez himself had established a personality cult patterned after Stalin's that went back to his 1937 fictionalized autobiography *Fils du Peuple* (Son of the People).

Thorez strongly opposed General Charles de Gaulle's return to power in May 1958, calling for unity with the socialists that paved the way for the union of the Left in the 1980s. Throughout Thorez's tenure, the electoral base of the PCF remained remarkably constant. The party received 28.6 percent of the vote in the national elections of 1946, 25.6 percent in 1951, and 25.7 percent in 1956. This support fell to 18.9 percent in 1958, following de Gaulle's return to power, but rebounded to 21.7 percent in 1962. Thorez died on 12 July 1964 while en route to a vacation at a dacha on the Soviet Black Sea coast.

Threshold Test Ban Treaty

(1974)

The Threshold Test Ban Treaty (TTBN), signed on 3 July 1974 between the United States and the Soviet Union, set limitations on underground nuclear tests. The TTBN followed the 1963 Partial Test Ban Treaty (PTBT). The TTBN limited the size of any nuclear test by setting a ceiling threshold of 150 kilotons for any underground nuclear test. This limit was designed specifically to prevent both the Soviets and Americans from developing warheads that would allow for a first-strike capability. Treaty terms included provisions for exchange of data and designation of the test sites. Complementing the TTBN was the Peaceful Nuclear Explosions (PNE) Treaty, signed in April 1976.

Critics of the TTBN focused on Soviet violations; the 150 kiloton limit, which many regarded as too high; and the lack of adequate verification procedures. Following agreement on the latter in July 1990, the U.S. Senate ratified both the TTBN and the PNE in December 1990.

A large public plaza in Beijing, capital of the People's Republic of China (PRC), Tiananmen Square, literally meaning "Gate of Heavenly Peace," has been the site of student movements since the 1919 May Fourth Movement. The Tiananmen Square protests of 15 April–4 June 1989 were of the utmost importance in both their domestic and international contexts. The protests began on 15 April when Beijing's students gathered in the square, mourning the death of Hu Yaobang, former secretary-general of the Chinese Communist Party (CCP) during 1980–1987. That Hu was ousted from office in January 1987 because of his sympathetic stance toward the prodemocracy student movement of 1986 helped transform mourning activities into a series of nationwide student demonstrations. Students renewed their calls for immediate democratization and demanded direct dialogues with senior leaders. The movement employed mass sit-ins, boycotts of classes, public forums, bicycle demonstrations, and hunger strikes.

On 4 May 1989, organized prodemocracy demonstrations occurred in fifty-one Chinese cities. Other sectors also expressed their discontent with the CCP. Coincident with the visit of Soviet leader Mikhail Gorbachev in mid-May, the protests received global media coverage.

The worldwide attention and escalation of the student movement irritated PRC leaders. The handling of students' demands renewed the factional struggles between the liberal reformers and the conservatives, whose origins dated to 1979, when the paramount leader Deng Xiaoping introduced a market economy and open-door policy to modernize China. This time, the struggle was personalized by the liberal reformist CCP Secretary-General Zhao Ziyang and the conservative hard-liner Premier Li Peng. Zhao preferred a conciliatory stance, arguing that the protest was of a patriotic nature and that political reform should be accelerated to facilitate economic modernization. Li, by contrast, insisted on clear-cut coercive measures to disperse the demonstrators and restore stability.

Although away from the front line since the early 1980s, Deng remained highly influential as the chairman of the Central Military Commission. Fearing that his economic program would be jeopardized, he supported Zhao's soft-line, accommodating posture. The government's dialogues with students, however, proved fruitless. With no sign that the protests would soon end, Deng's patience was exhausted, and he decided to adopt Li's hard-line approach.

Tiananmen Square (4 June 1989)

Student democracy demonstrators carry a severely wounded comrade away from Tiananmen Square in Beijing amid the Chinese military crackdown that began on 3 June 1989. (Corbis/David Turnley)

On 2 June, Yang ordered a military crackdown on the student-demonstrators and the clearance of Tiananmen Square.

On 20 May 1989, Li declared martial law in Beijing, ordering the People's Liberation Army (PLA) to clear Tiananmen Square on the condition that no bloodshed occur. Owing to the students' blockade, the army stopped on the outskirts of Beijing city, resulting in a stalemate for the rest of the month. Meanwhile, the government was preoccupied with two issues: preparing a change in leadership to end the factional struggles and regaining Tiananmen Square to end the protests. On 28 May, Zhao was placed under house arrest and was replaced by Jiang Zemin, the party secretary of the Shanghai Municipal Committee, whose decisive action in closing down a newspaper for reporting the Tiananmen Square protests drew the conservatives' attention.

After consulting retired elder statesmen such as Li Xiannian, Bo Yibo, and PRC President Yang Shangkun, Deng finally agreed on more forceful means to end the standoff, implying the clearance of the square at all costs. On 2 June, Yang ordered a military crackdown on the student demonstrators and the clearance of Tiananmen Square on the grounds that an alleged counterrevolutionary riot was fermenting and that continued instability would retard economic reform. On 4 June at midnight, the PLA marched into the square, and by dawn it had fulfilled its orders, thereby ending the seven-week-long protests. Because of a press blackout, the estimated deaths and injuries on that night vary from 240 to 10,000.

To prevent a recurrence, on 9 June the government ordered the arrest of all student leaders and activists. Some leaders, such as Wang Dan, were arrested and sentenced to

long prison terms, while others such as Chai Ling and Wuer Kaixi fled abroad. On 10 June, the PRC claimed that a total of 468 "troublemakers" had been arrested and that calm had been restored in Beijing.

The PRC's use of the PLA to suppress the student demonstrations stunned the world. Some contemporaries labeled the incident the Tiananmen Massacre. Foreign condemnations, including those from the Soviet bloc, flooded in, followed by a number of punitive sanctions, including the suspension of arms sale to China, the linking of human rights issues to the PRC's entry into the World Trade Organization (WTO), and economic embargoes. From a broader perspective, the legacy of the Tiananmen Square protests was twofold. In the PRC, the protests enabled the conservatives to gain the upper hand. In November 1989, Deng relinquished his remaining post to Jiang, passing the ruling power to the third generation, and his economic modernization was slowed down. In the Cold War context, there is a consensus that the Tiananmen Square protests in some ways inspired the liberation of Eastern Europe from Soviet control, precipitating the Cold War's end.

Tibet

A provincial-level administrative region of the People's Republic of China (PRC) since 1951, officially known as the Xizang Autonomous Region, with the capital at Lhasa. Tibet covers an area of 461,700 square miles and is located in southwestern China. It is bordered on the south by Myanmar, India, Bhutan, and Nepal; on the west by India; and on the east and north by the PRC. It had a 1945 population of some 4–5 million people.

With the introduction of Indian Buddhism in the seventh century, Tibet grew into an independent theocracy. In the seventeenth century, the Yellow Hat sect gained supremacy and practiced Lamaism, a hierarchical organization of Tibetan Buddhist monks (lamas). Atop the hierarchy was the Dalai Lama, both the spiritual and political head of Tibetans. Just below him was the Panchen Lama.

Isolated Tibet was forced to open itself to the world in 1904 by the British, who sought to secure a trade route to China and erect a buffer against Russian expansion into British India, bordering on the south of Tibet. In 1907 Britain, Russia, and China agreed on Chinese sovereignty over Tibet and pledged noninterference in Tibetan affairs. Tibet declared its independence in late 1911 after the overthrow of China's ruling Qing dynasty. Although the two post-Qing successors, the Nationalist Chinese (1912–1949) and the Chinese communists since 1949, refused to acknowledge Tibetan independence, Tibet's resumption of Lamaism remained undisturbed, strengthening Tibetans' visions of lasting independence.

A year after the PRC's birth in October 1949, Chinese communist leaders sent 80,000 troops into Tibet in October 1950. Unable to defend his people, the fourteenth Dalai Lama unsuccessfully appealed to the United Nations (UN), the United States, Britain, and India for assistance. In May 1951, the Tibetan government reluctantly accepted the PRC's 17-Point Agreement for the Peaceful Liberation of Tibet, which instituted a joint Chinese-Tibetan authority. This promised Tibetans apparent autonomy.

To modernize and continue the socialist revolution, during the early 1950s PRC officials implemented a number of measures that brought Tibetan

A Chinese soldier keeps watch in a village in Tibet. China sent troops into Tibet in 1950 and controlled it thereafter. (Corel)

autonomy into question. These modernization efforts included land reform, heavy industrialization, the introduction of secular education, the opening of Tibet through construction of nationwide communication networks, and a purge of anti-PRC officials. Tibetans found these measures antithetical to their traditional practices of feudalism and socioeconomic simplicity and threatening to Tibetan homogeneity. Tibetans, who considered themselves a unique race, responded with a series of anti-Chinese revolts, transforming the Tibet question into an interethnic dispute between Tibetans and the Han Chinese.

Meanwhile, the U.S. Central Intelligence Agency (CIA) capitalized on Tibetan disaffection to advance American strategic interests. In early 1956, the CIA began to provide military training to Tibetan rebels. In autumn 1957, the CIA launched a covert operation by air-dropping into Tibet U.S.-trained Tibetan rebels along with American-made weapons and radios. This Tibetan-CIA operation led to a full-scale rebellion in Lhasa in March 1959. Chinese leaders deployed 40,000 troops to put down the rebellion, resulting in nearly 8,700 Tibetan deaths and the exile of the Dalai Lama to India. To resolve the Tibet question, the PRC named the tenth Panchen Lama as Tibet's acting head while concurrently preparing Tibet as an autonomous administrative region. In 1965, the PRC replaced Tibet's theocracy with a Chinese communist administration, making it an Autonomous Region.

With CIA assistance, the Dalai Lama and 80,000 followers settled in northern India, where they founded the Government of Tibet in Exile at Dharamsala. The Dalai Lama internationalized the Tibet question by appealing to the UN, successfully securing two Tibet resolutions in 1961 and 1965 denouncing the PRC's violation of human rights in the March 1959 rebellion. Since then, the Dalai Lama has pursued an active posture in international affairs, championing Tibet's independence and self-determination, human rights, and peace and freedom.

After 1959, the Americans reversed their previous indifference to the Tibet question and publicly supported Tibetan independence. The CIA remained active in Tibet, chiefly in intelligence gathering, especially concerning the PRC's nuclear program in the neighboring Xinjiang Province. In Tibet, the anti-Chinese movement continued after the 1959 rebellion, and the PRC has responded with periodic crackdowns. The Cultural Revolution (1966–1976) marked the low point of the Tibetan-Chinese relationship, during which religious practices were condemned, monasteries were destroyed, and monks and nuns were persecuted. This triggered a massive exodus of Tibetans to India, Nepal, and Bhutan.

Two breakthroughs regarding the Tibet question were realized in the 1970s. First, to facilitate the Sino-American rapprochement, the CIA dimin-

ished its assistance to Tibetan rebels beginning in 1969. This ended altogether in 1974. Shortly before the establishment of formal Sino-American diplomatic relations, in 1978 the U.S. government recognized Tibet as part of China, thus reducing the issue to an internal Chinese affair. Second, PRC leaders moderated their policy toward Tibet after 1976. On the one hand, the government implemented a number of reforms to modernize Tibet, intending to win Tibetans' approval by raising their living standards. To curb Tibetan rebels, the PRC allowed a certain degree of religious freedom while also relocating huge numbers of Han Chinese to Tibet, intending to keep Tibetans under control through assimilation. The Tibetan cause attracted support and publicity from a number of international celebrities, such as the American movie star Richard Gere. In the 1990s, a dramatic dispute over which of two young boys was the rightful candidate to succeed as Panchen Lama, the second most influential Tibetan Buddhist figure, damaged Sino-Tibetan relations.

On the other hand, the PRC signaled its willingness to resolve the Tibet question with the Tibetan government-in-exile. Negotiations between the PRC and the Dalai Lama's exiled government began in 1979 but broke off in 1988 due to irreconcilable differences. In the early twenty-first century, the Tibet question remained unresolved.

Hungarian politician, prime minister (1945–1946), and president of Hungary (1946–1948). Born in Losonc on 18 November 1889, Zoltán Tildy studied theology at the Protestant Theological Academy in Pápa, Hungary, then worked as a protestant minister and teacher until 1946. In 1930 he had co-founded the Independent Smallholders' Party, becoming its chairman in 1945. His engagement with politics and the cause of rural welfare dated back to 1917, when he joined the National Independence and Peasant Party.

Following the November 1945 elections, Tildy was chosen premier, leading the coalition government until 31 January 1946. On 1 February 1946 he became the president of the newly declared republic. However, in August

Tildy, Zoltán
(1889–1961)

1948 he was forced to resign after his son-in-law Viktor Csornoky was arrested, charged with spying for the West, and executed. Tildy remained under house arrest until May 1956.

During the 1956 Hungarian Revolution, Tildy acted as minister of state in Imre Nagy's short-lived reform government. Following the failed revolution, Tildy was imprisoned for six years for his role in the 1956 uprising. Because of advanced age and poor health, he was released in April 1959. Tildy died in Budapest on 4 August 1961.

Tito, Josip Broz (1892–1980)

Yugoslav communist leader, major figure in the Yugoslav resistance during World War II, and leader of Yugoslavia. Born on 7 May 1892 into a peasant family in the village of Kumrovec in Croatia on the border with Slovenia (then part of Austria), Josip Broz was one of fifteen children of a Croat blacksmith and a Slovene mother. Much of his early life remains obscure. With little formal education, he became a metalworker and machinist. Active in the Social-Democratic Party, he was drafted into the Austro-Hungarian Army in 1913. He fought in World War I and rose to the rank of sergeant, commanding a platoon in a Croatian regiment before being captured in 1915 on the Russian Front.

While in the camp, Broz became fluent in Russian. Released following the March 1917 Revolution, he made his way to Petrograd, where he joined the Bolsheviks but was imprisoned until the Bolsheviks took power in October 1917. He fought on the communist side in the Russian Civil War but returned to Croatia in 1920 and helped organize the Yugoslav Communist Party (YPJ). Rising rapidly in responsibility and position, he became a member of the YPJ Politburo and Central Committee. It was at this time that he took the pseudonym of "Tito" to conceal his identity. He was imprisoned from 1929 to 1934. In 1937 Stalin appointed Tito to head the YPJ as its secretary-general. Tito knew little of communist ideology, but Stalin was interested in loyalty.

Following the German invasion of Yugoslavia in April 1941, Tito took command of the communist Partisan resistance movement with the twin goals of fighting the Axis occupiers and then seizing power in Yugoslavia once the Allies had won. Tito and the Partisans did not hesitate to attack German garrisons, sparking retaliation and the execution of many more innocent hostages

than Germans slain. Tito's Partisans became archrivals of the Serb-dominated Četniks (Chetniks) led by General Draža Mihajlović, minister of war in the Yugoslav government-in-exile in London. The Četniks eschewed the types of attacks undertaken by the Partisans, rightly fearing German reprisals. In a controversial decision that had far-reaching repercussions for the future of Yugoslavia, in 1943 the British government, which headed the Allied effort to assist the Yugoslav resistance, shifted all support to the Partisans.

By the end of the war, the Partisans had grown to a force of 800,000 people and had in fact liberated most of Yugoslavia themselves, placing Tito in a strong bargaining position with Stalin. Tito attempted to annex the southern provinces of Austria, moving Yugoslav forces into Carinthia, but was prevented in this design by the timely arrival of the British V Corps and was convinced to quit Austrian territory in mid-May 1945.

Tito extracted vengeance on the Croats, many of whom had been loyal to the Axis, as had many Slovenes. Perhaps 100,000 people who had sided with the Axis occupiers were executed by the Partisans without trial within weeks of the war's end. The majority of German prisoners taken in the war also perished in the long March of Hate across Yugoslavia.

With the support of the Red Army, Tito formed the National Front and consolidated his power. Although superficially there appeared to be a coalition government in Yugoslavia, Tito dominated. In the November 1945 elections for a constituent assembly, the National Front headed by the Partisans won 96 percent of the vote. The assembly promptly deposed Peter II and proclaimed a republic. Yugoslavia's new constitution was modeled on that of the Soviet Union. Tito elaborated the twin ideas of national self-determination for Yugoslavia's nationalities and a strong, centralized communist party organization that would be the sole political expression of each national group's will. Under Tito, Yugoslavia became a federal republic, a beneficial change for a country that had suffered severely from rivalries among its various peoples. Tito also nationalized the economy and built it on the Soviet model.

Following the war, Tito had General Mihajlović and some other leading Četniks put on trial under trumped-up charges of collaboration with the Germans. Despite vigorous Western protests, they were executed in July 1946. Equally destructive of European goodwill was the sentencing of Archbishop Aloysius Stepinac to life imprisonment for his anticommunist role during the war.

For thirty-five years, Tito held Yugoslavia together by ruling as a despot. In a departure from his past record of sharing hardships with his men, once

Dedicated Yugoslav communist Josip Broz Tito led the Partisan guerrilla movement against the German occupiers of his country during World War II. Tito then crushed all opposition and ruled Yugoslavia until his death in 1980. (Library of Congress)

in power he developed a taste for a luxurious lifestyle. He muzzled dissent, but repression and fear of outside powers, chiefly the Soviet Union, solidified his rule.

In 1948 Yugoslavia was expelled from the international communist movement. The break sprang in large part from Tito's desire to form under his leadership a Balkan confederation of Yugoslavia, Albania, and Bulgaria. There were also differences with Moscow over Yugoslav support for the communist side in the Greek Civil War, as Moscow lived up to its bargain with Winston Churchill during the war not to contest British control in Greece.

The break with Moscow and fears of a Russian invasion led Tito to build up a large military establishment. In this he was assisted by the West, chiefly the United States. By the time of Tito's death in 1980, the Yugoslav standing army and reserves totaled 2 million men. To protect his freedom of movement, Tito also joined Yugoslavia to the Non-Aligned Movement, and in the 1960s he became a leader of this group along with Gamal Abdel Nasser of Egypt and Jawaharlal Nehru of India.

Before the break, Tito was as doctrinaire as Stalin. After the schism, Tito became more flexible. He allowed peasants to withdraw from cooperative farms and halted the compulsory delivery of crops. He decentralized industry by permitting the establishment of workers' councils with a say in running the factories. He permitted citizens more rights in the courts and limited freedom of speech, and he opened cultural ties with the West and released Archbishop Stepinac (although he was not restored to authority). In 1949 Tito even wrote an article in the influential American journal *Foreign Affairs* titled "Different Paths to Socialism," giving birth to polycentralism.

By 1954, however, reform had ended. Tito reacted sharply to Milovan Djilas's proposal to establish a more liberal socialist movement in the country that would in effect turn Yugoslavia into a two-party state. Djilas's book, *The New Class* (1957), charged that a new class of bureaucrats exploited the masses as much as or more than their predecessors. Djilas was condemned to prison. Meanwhile, financial problems multiplied. By the end of the 1970s, inflation was surging, Yugoslavia's foreign debt was up dramatically, its goods could not compete in the world marketplace, and there were dramatic economic differences between the prosperous North and impoverished South that threatened to break up the state.

As long as Tito lived, Yugoslavia held together. In 1974, Tito had set up a complicated collective leadership. The constitution of that year provided for an association of equals that helped to minimize the power of Serbia, diminish Yugoslavia's ethnic and religious hatreds and rivalries, and keep the lid on nationalism. There was a multiethnic, eight-man State Presidency representing the six republics and two autonomous regions. Each of the six republics had virtual veto power over federal decision making. Djilas claimed that Tito deliberately set things up so that after his death, no one would ever possess as much power as he did.

Tito died in Ljubljana on 4 May 1980. With the collapse of the Soviet Union and Eastern Europe and the end of the threat of Soviet invasion and

with the discrediting of communism, the federal system that Tito had put together came apart in bloodshed and war.

Bulgarian politician and prime minister. Born in Klenovik, Bulgaria, on 10 December 1920, Stanko Todorov attended only primary school and then apprenticed as a tailor. By age sixteen, he was politically active and had joined both the leftist Worker Youth Federation (RMS) and the tailors' union. Todorov served in the Bulgarian Army in World War II during 1941–1943 but deserted and joined the illegal Bulgarian Communist Party (BCP). He was a key leader in the September 1944 rebellion that formally ended Bulgaria's monarchy and established the People's Republic of Bulgaria.

Later in the 1940s, Todorov remained active in the RMS and BCP, holding increasingly prominent positions in both organizations. During 1952–1957 he served as minister of agriculture. In 1954 he was elected to the BCP's Central Committee and in 1957 became its secretary. During 1959–1962 he served as deputy chairman of the Council of Ministers, led the National Planning Commission, and represented Bulgaria in the Comecon. By 1962 he was also a full member of the Politburo.

In 1971, BCP chief Todor Zhivkov became the new Bulgarian head of state, which left Todorov as prime minister and head of the Council of Ministers. Over the next ten years, he improved relations with the Federal Republic of Germany (FRG, West Germany) in an attempt to stimulate trade with the West. He resigned as council president and prime minister in 1981 to become parliamentary president. In 1988 he was ousted from the Politburo. By then, he had become a proponent of Mikhail Gorbachev's perestroika policies although favoring a more gradual approach than that of the Soviet Union. Todorov's support of perestroika no doubt marginalized him within the BCP. As communist regimes began to fall in Central Europe, he was reelected to parliament in 1990. His health quickly failed, however, and

Todorov, Stanko
(1920–1976)

he withdrew from public life within months of election. Todorov died in Sofia on 17 December 1996.

Tökés, László (1952–)

Protestant minister of Hungarian ancestry residing in Transylvania (Romania) who helped trigger the overthrow of the Romanian government of Nicolae Ceaușescu in 1989. Born on 1 April 1952 in Cluj, Romania, László Tökés graduated from the Protestant Theological Institute in 1975. During 1975–1984 he worked as an assistant pastor in Brașov and Dej. In 1984 he was discharged from his duties for political reasons.

In 1986 Tökés was reinstalled in Timișoara, first as chaplain and then as pastor of a small Hungarian Reformed church. In November 1989 the Reformed Church of Romania, under pressure from the Romanian Communist Party, decided to banish him from Timișoara and threatened him with deportation. Residents of Timișoara soon began gathering outside Tökés's residence to demonstrate their support for him. On 15 December 1989, the police broke through the crowd, seized Tökés, and exiled him to Mineu, Romania. The crowd then moved to the main square of the city, where the demonstration evolved into a full-scale assault against the Romanian communist government during 16–20 December 1989, interrupted by military intervention that left 122 dead. Rioting there led to violence in Bucharest, culminating in the collapse of the communist regime in Romania on 22 December.

In 1990 Tökés was appointed bishop of the Királyhágómellék Diocese in Romania and commenced doctoral studies at the Theological Academy in Debrecen, Hungary. During 1990–1991 he studied in the United States. He is the honorary president of both the Democratic Union of Ethnic Hungarians in Romania and the Hungarian World Federation. In recognition of his commitment to democracy and the role he played in Romanian politics, in 1999 the Hungarian government awarded Tökés the Grand Cross of the Republic of Hungary.

Archbishop of Prague. František Tomášek was born in Studénka, Moravia, on 30 June 1899, the son of a teacher. He served in the Austro-Hungarian Army during World War I, after which he entered the Roman Catholic seminary in Olomouc. He was ordained in 1922. He received two doctorates in theology from and taught at the Theological Faculty of Saints Cyril and Methodius in Olomouc before the Germans and later the communists closed the school in 1940 and 1948, respectively.

Shortly after Tomášek became bishop of Buto and auxiliary bishop of Olomouc in 1949, Czechoslovak authorities arrested him on antigovernment

Tomášek, František
(1899–1992)

Archbishop František Tomášek, Sofia, Bulgaria, 1968. (Miroslav Zajíc/Corbis)

charges and sent him to a labor camp. Following his release in 1954, he served as a parish priest until 1965. The Czechoslovak government permitted him to attend the Vatican Council II in Rome during 1962–1965.

When the communists refused to allow Archbishop Josef Beran to return to Prague from Rome in 1965, Tomášek became the apostolic administrator of the archdiocese. He supported the 1968 Prague Spring reforms, attempted to revitalize the Roman Catholic Church in Czechoslovakia, and urged religious freedom. After the Warsaw Pact invasion ended the Prague Spring, he discreetly sought concessions from the government and openly criticized Charter 77, much to the dismay of Czechoslovak dissidents.

In 1976 Pope Paul VI secretly named Tomášek cardinal and archbishop of Prague, publicly releasing the news in 1977. With the election of Pope John Paul II in October 1978, Tomášek attacked the government-sanctioned organization of priests in Czechoslovakia and, in 1985, led the celebrations of the 1,100th anniversary of the death of St. Methodius.

In 1988, Tomášek supported a petition demanding religious freedom in Czechoslovakia and actively backed the 1989 Velvet Revolution by celebrating the first televised mass in Czechoslovakia, on 21 November 1989. In 1990 he hosted John Paul II's visit to Czechoslovakia. Tomášek retired in 1991 and died in Prague on 4 August 1992.

Tonkin Gulf Incidents and Resolution

(August 1964)

On 2 August 1964, Democratic Republic of Vietnam (DRV, North Vietnam) torpedo boats attacked the U.S. Navy destroyer *Maddox* while it was on a DESOTO electronic intelligence–gathering patrol in international waters in the Gulf of Tonkin some 28 miles off the North Vietnamese coast. This was probably the consequence of two Republic of Vietnam (RVN, South Vietnam) PT boat attacks on 31 July, a fact unknown to Captain John Herrick of the *Maddox*. The South Vietnamese PT boat raids were part of OPLAN (operations plan) 34A harassment activities run by the Military Assistance Command, Vietnam (MACV), against North Vietnam.

Captain Herrick sought approval from commander of U.S. forces in the Pacific Admiral Ulysses Grant Sharp to terminate his patrol. Sharp feared that this might call into question U.S. resolve or the right to steam in international waters, and he secured permission from the Joint Chiefs of Staff

(JCS) to strengthen the patrol by adding a second destroyer, the *Turner Joy*, to Herrick's command.

On 3 August another OPLAN 34A raid took place, and on the next night Herrick reported a possible torpedo boat attack on the two destroyers. Almost all of those on the two destroyers believed that an attack of up to two hours had occurred, but there were no visual sightings of North Vietnamese patrol craft in the area. Only hours after learning of the American claim of a second attack, the North Vietnamese government issued a public denial, a position that it has maintained ever since.

In February 1968, U.S. Secretary of Defense Robert S. McNamara testified before the Senate Foreign Relations Committee in closed session and said that he had "unimpeachable" proof of a second attack. In November 1995, however, he met with General Vo Nguyen Giap, former North Vietnamese defense minister, in Hanoi. Giap confirmed the first attack, which he said was the work of "a local coast guard unit," but he denied that there had been any second attack. He also charged President Lyndon Johnson's administration with a deliberate plan to fabricate the attack in order to seek the approval of Congress for the war.

Undoubtedly, there was no attack on 4 August. The reports of it are probably attributable to stormy weather, evasive maneuvering, and inexperienced and fatigued radar and sonar operators. On the other hand, there is no evidence to support Giap's charge that the Johnson administration knowingly faked the incident to escalate the war. It was a genuine mistake rather than a deliberate deception.

In Washington, President Johnson and U.S. military leaders did not want the North Vietnamese leadership to equate lack of U.S. response with lack of resolve, especially as Johnson was then locked in an election campaign against Republican hawk and airpower advocate Senator Barry Goldwater. Secure in his belief of an attack, Johnson also wanted to be able to announce a U.S. military response on the evening television news. Despite a radio message from Herrick that "review of action makes many reported contacts and torpedoes fired appear doubtful" and a later message to Sharp that "details of action present a confusing picture," on 5 August Johnson ordered Operation PIERCE ARROW, a retaliatory U.S. Navy strike against North Vietnamese coastal naval facilities.

As it turned out, Johnson's public announcement came before some of the U.S. aircraft from the carriers *Ticonderoga* and *Constellation* had reached their targets—oil storage tanks and torpedo boat bases at Thanh Hoa, Hoa Ngu, Vinh, and Quang Khe. U.S. aircraft flew sixty-four sorties. Two planes were shot down, with one pilot killed and the other captured.

Even before the incidents, Johnson had told congressional leaders of his intention to seek a resolution of support for his Southeast Asia policy. Such a request reached Congress on 5 August. Two days later, Congress passed the Tonkin Gulf Resolution by a vote of 416–0 in the House and 88–2 in the Senate.

The resolution styled North Vietnamese attacks on U.S. ships as "part of a deliberate and systematic campaign of aggression . . . against its neighbors

U.S. President Lyndon B. Johnson signs the Tonkin Gulf Resolution on 10 August 1964. Apart from annual military appropriations, the Tonkin Gulf Resolution was the closest Congress came to authorizing the president to conduct the war in Vietnam. (National Archives and Records Administration)

and the nations joined with them in the collective defense of their freedom.” It authorized the president to take those steps necessary “to repel any armed attack against the forces of the United States and to prevent any further aggression.” It also held that the United States regarded the maintenance of peace and security in Southeast Asia as “vital to the national interest and to world peace” and was thus “prepared, as the president determines, to take all necessary steps, including the use of armed force, to assist any member or protocol state of the Southeast Asia Collective Defense Treaty requesting assistance in defense of its freedom.”

In effect what became known as the Tonkin Gulf Resolution gave Johnson blanket authority to wage war in Vietnam without a formal declaration of war. Contrary to later charges, the implications of the resolution were fully, albeit briefly, aired before the vote.

Following the public revelation of President Richard M. Nixon’s clandestine bombing of Cambodia, Congress rescinded the resolution in June 1970. In 1973, Congress passed the War Powers Act, which quite specifically prescribed the president’s power to wage war and the role of Congress in any such endeavor. Unlike the *carte blanche* wording of the Tonkin Gulf Resolution, the War Powers Act was very deliberate in its attempt to avoid another Vietnam.

Touré, Ahmed Sékou

(1922–1984)

Nationalist African premier (1958) and president (1959–1984) of the Republic of Guinea. Born in Faranah, Guinea, on 9 January 1922 to a poor family, Ahmed Sékou Touré worked for the postal service and helped organize a union of its workers in 1945, which he then headed. In 1952 he became the head of the *Partie Démocratique de Guinée* (PDG, Democratic Party of Guinea). In 1954 he was elected president of the General Confederation of

African Workers, and in January 1956 he was elected mayor of the capital city of Conakry and Guinea's representative to the French National Assembly. In November 1957 he became vice premier of Guinea, and in July 1958 he became premier.

In May 1958, the French Fourth Republic had collapsed and Charles de Gaulle came to power. The new constitution of the Fifth Republic established the French Community in place of the former French Union, and de Gaulle called on the French African states to vote on the new constitutional arrangement. A vote of no would mean independence. With much of French Africa desperately poor and dependent on aid from Paris, the vote was expected to be favorable.

Touré opposed membership in the French Community, however. He claimed that "dignity" was more important, and that there could "be no dignity without true liberty." The community would still mean a degree of French control, and as Touré put it, "We prefer poverty in freedom to riches in slavery." The charismatic Touré helped sway the vote in Guinea. On 28 September 1958, Guinea was the only state in French Africa to vote against the constitution. The negative vote was by an overwhelming 95 percent majority.

Guinea received its independence on 2 October 1958. In national elections that same year, Touré's PDG won fifty-seven of sixty seats. He became president of Guinea in January 1959. He then pushed through a new constitution that made the PDG the sole legal political party.

Touré immediately moved Guinea into the socialist camp. Relations with France deteriorated and were broken off altogether in 1965, not to be renewed until 1975. In 1978 French President Valéry Giscard d'Estaing undertook a state trip to Guinea, and Touré reciprocated with a visit to Paris in 1982.

Touré sought to follow a nonaligned foreign policy. Thus, during the Cuban Missile Crisis of 1962, he refused to allow Soviet aircraft to refuel in Guinea during flights to Cuba. At the end of the 1970s, he established closer relations with the Muslim world and cemented relationships with those states and with Islamic organizations. His hold on power was weakened by two assassination attempts, in June 1969 and April 1971. Constantly reelected president (for the fifth time in 1982), Touré was visiting Saudi Arabia when he became ill from a heart ailment. He preferred to go to the United States for treatment and died in Cleveland, Ohio, on 24 March 1984.

Triad

U.S. strategic nuclear force comprised of three components: manned bombers, land-based intercontinental ballistic missiles (ICBMs), and submarine-launched ballistic missiles (SLBMs). The nuclear delivery capability of the United States originally relied upon the long-range bomber force of the Strategic Air Command (SAC). During the late 1950s, the strategic delivery force began to expand to include U.S. Air Force–controlled ICBMs and the U.S. Navy's SLBMs. The early triad structure was a natural evolution of new technological capabilities, but military planners also developed a strong strategic rationale based on the realities of each type of weapon system and the need to create a stable deterrent force structure.

The manned bomber force was the most accurate delivery platform. Additionally, bombers provided the most flexibility. Aircraft could be launched or forward-deployed as a show of force, and having a crew in the loop allowed bombers to be recalled or redirected while in flight. The bombers could also conduct visual assessments of targets or search for specific types of targets in a general area to counter new or mobile targets. But bombers had major vulnerabilities. They could be attacked before they launched, especially by missiles, and the aircraft were relatively vulnerable to air defense systems. Bombers were also relatively slow, taking many hours to deliver nuclear weapons over intercontinental ranges.

The ICBM force provided the capability for rapid strikes against enemy targets, with flight times of approximately thirty minutes, and the ability to maintain a large percentage of the force in a high-alert status. Although the land-based missiles were potentially vulnerable due to their fixed locations, they could be launched relatively quickly before being hit and were often placed in hardened silos for protection. Mobile ICBM options were developed in response to improved Soviet accuracy but were not deployed. Early ICBMs were much less accurate than bombers, although the differences were significantly reduced over time. The submarine force was the most survivable of the three systems. Although communications with the submarines were initially a concern and accuracies were initially below those of the other two legs of the triad, these performance issues were steadily rectified over time.

The triad's offensive capability was melded together in the Single Integrated Operations Plan by the Joint Strategic Target Planning Staff, which was

colocated with SAC headquarters. The use of different weapons delivery platforms complicated the defensive preparations of the Soviet Union, the primary target of American strategic nuclear planning. More importantly, the varying characteristics of the three weapons systems made an effective enemy attack, especially a surprise attack, much more difficult. Although the Soviet force structure was also referred to as a triad, that structure was much less balanced and relied heavily on land-based ICBMs, with a secondary capability in SLBMs, and a limited long-range bomber force. The American triad and its contribution to nuclear deterrence was the foundation of geopolitical stability and military balance during the Cold War.

Italian city at the northern head of the Adriatic Sea near the border with Yugoslavia (now Slovenia and Croatia) whose sovereignty was hotly contested between Italy and Yugoslavia. Securing Trieste from the Austro-Hungarian Empire was one of the main objectives of Italian intervention in World War I, which explains the emotion bound with its name among many Italians. Mainly surrounded by hills that have limited its size, Trieste became important when it was occupied at the end of World War II by the Yugoslav Partisans, led by veteran communist Josip Broz Tito. Meanwhile, the British and Americans pushed the 2nd New Zealand Armored Division to Trieste to prevent Yugoslavia from securing full control of the city's important harbor. Some observers saw in this development the first sign of the forthcoming Cold War.

The Yugoslav occupation elicited violence against the majority Italian population and against noncommunist Slovenians, but an agreement brokered between the British and Tito's representatives on 8 August 1945 restored at least partial order. The former Italian territory now under Yugoslav control was divided into two areas by the Morgan Line. The British and Americans occupied the western zone comprising Trieste Harbor, and the Yugoslavs controlled the eastern territory, which contained important strategic natural resources such as mercury, bauxite, and coal.

Trieste

Trieste straddled two worlds: the Eastern communist bloc and the Western democratic bloc. Certainly, the Soviet Union supported communist Yugoslavia's claims on the region. For their part, the Allies actually encouraged Tito in the sense that they assisted him economically and diplomatically following his 1948 break with the Soviet Union.

The Yugoslavs reinforced their troop presence in the area, and in 1951 the Italians deployed the first groups of former partisans in a covert stay-behind organization known as "O," which later would be integrated into the Gladio organization under the control of the Central Intelligence Agency (CIA) and the North Atlantic Treaty Organization (NATO).

In the Paris Peace Treaty signed on 10 February 1947 between Italy and the Allies, Yugoslavia secured the Istrian Peninsula, forcing some 250,000 Italians to abandon the area and find refuge in Italy. The Trieste area was designated a Free Territory under the administration of the United Nations

(UN). Meanwhile, Yugoslavs killed perhaps 10,000 Italians in the *foibe* (karstic sinkholes), which were effective natural cemeteries.

Because neither Italy nor Yugoslavia could agree on a governor for Trieste, the area was divided into area “A” (from Duino to Trieste) and area “B” (Capodistria to Cittanova). On several occasions, the Italian population of Trieste protested against the Allied occupation, resulting in civilian fatalities when British troops overreacted to the demonstrations. At the same time, Yugoslavia continued to threaten the annexation of area “B.”

According to some historians, the Italian government mounted covert paramilitary operations in Istria that were designed to discourage Yugoslavia’s aspirations and plans regarding annexation. The Trieste crisis also played an important role in Italian domestic politics because it fueled Italian right-wing movements. Several youth organizations volunteered to mount strong protests against Tito and the Allied occupation of the city.

Finally, an agreement was signed in London on 10 May 1954 stipulating that Istria was to be administered by Yugoslavia and Trieste by Italy, with mutual respect of minority rights. This led to the Anglo-American withdrawal of troops from Trieste, which now passed to Italian sovereignty. On 10 December 1975, Italy and Yugoslavia signed the Osimo Treaty that finalized the border permanently with only a few slight modifications.

The dissolution of Yugoslavia after the Velvet Revolution of 1989–1990 did not change the Trieste situation. In June 1991, war broke out in the former Yugoslav territories, which led to the end of the Yugoslav federal state, as Croatia and Slovenia gained their independence. Both declared that they would respect the Yugoslav state’s legacy and would therefore honor the Osimo Treaty. Italian Foreign Minister Emilio Colombo expressed Italy’s satisfaction with this decision.

1943 from the University of Montreal and a master's degree in political economy from Harvard University in 1945. After working chiefly as a lawyer and law professor, he was elected to the Canadian House of Commons in 1965. In 1967 he became both minister of justice and attorney general in the Lester Pearson cabinet. In 1968, Trudeau became prime minister and leader of the Liberal Party. With the exception of a brief ten-month interlude during 1979–1980, he remained prime minister until 1984, casting a long shadow on Canadian politics that endures to this day.

As prime minister, Trudeau sought increased independence from U.S. political and economic hegemony. As such, his government frequently parted company with the United States on foreign policy. In 1970 the Trudeau government officially recognized the People's Republic of China (PRC), and Trudeau embarked on a lifelong campaign for nuclear disarmament, leading efforts to ensure nuclear nonproliferation. Also in 1970, faced with terrorist attacks by the radical Quebecois separatist group Front de la libération de Québec (Liberation Front of Quebec), Trudeau briefly invoked martial law to diffuse the crisis. Although quite popular, he weathered several political storms throughout the 1970s, many of which revolved around economic policy.

As with other Western nations in that era, Canada experienced periods of high unemployment and inflation, made worse by the 1973–1974 oil crisis.

Perhaps Trudeau's most significant impact as it relates to the Cold War was to distance Canada from the Western orbit so as to become more involved in the developing world. In doing so, the Trudeau government left Canada's armed forces chronically underfunded, much to the chagrin of the United States and the North Atlantic Treaty Organization (NATO). By the late 1970s, Trudeau's vision of a quasi-neutral Canada was shaken by its NATO partners, who had begun to suggest that if Canada did not wish to participate in collective security, then Europe might look elsewhere when it came to trade. Thus, in the early 1980s small increases in defense spending were implemented to mollify the Europeans and Americans. In 1983, however, when he undertook his Peace Initiative, convinced that the world stood at the brink of nuclear war, he once more raised the hackles of Canada's defense partners. Trudeau retired from politics in 1984 and died on 28 September 2000 in Montreal.

President and dictator of the Dominican Republic (1930–1938, 1942–1952). Born in San Cristóbal on 24 October 1891, Rafael Leónidas Trujillo received only a rudimentary education. Trained by U.S. Marines during the American occupation of the Dominican Republic (1916–1924), he rose in 1925 to the rank of colonel in the National Guard, which the Americans had helped establish. In 1927 he was promoted to the rank of brigadier general.

Trujillo came to power in 1930 after a coup against President Horacio Vásquez. Almost immediately, Trujillo put in place a repressive dictatorial regime and promoted a cult of personality that rivaled any of the world's worst despots. He tried to modernize the country, but widespread graft and corruption in his government blunted the effort. In an attempt to "lighten" the population, he invited Jews to immigrate to the Dominican Republic and ordered the purging of Haitian workers. During 1937 alone, he was responsible for the deaths of some 15,000 Haitians.

Trujillo, a rabid anticommunist, allowed the Dominican Communist Party (PCD) to exist until 1947, when at the suggestion of the United States he outlawed the party. He gained financial support from the United States and other Western nations to modernize the Dominican Republic but also siphoned off vast amounts of government funds for his personal use. Through his extended family—much of which reaped a small fortune from his financial shenanigans—Trujillo controlled most of the nation's industry and commerce. It is worth noting that while he held the presidency in name for some eighteen years, he was firmly in control at all times, preferring to work behind the scenes while a pliant puppet occupied the post of president. Trujillo enjoyed the support of the island's powerful "100 Families" until 1960, when he ordered the three socialite Mirabal sisters killed for their part in a plot against him.

The year 1960 also saw Trujillo lose the support of some of his powerful international patrons, including the United States. His henchmen were nearly successful in assassinating Venezuelan President Rómulo Betancourt in 1960, forcing the United States to withdraw much of its support to the Dominican Republic. On 30 May 1961, members of the Dominican military assassinated Trujillo in Ciudad Trujillo (Santo Domingo). His son Ramfis tried

to assume power but was exiled following a coup. Nonetheless, Trujillo's supporters continued to exercise power in the country until well beyond the Cold War era. Joaquín Balaguer, who had served under Trujillo, secured the presidency several times until the United Nations (UN) brokered a deal forcing him to step down permanently in 1996.

Truman, Harry S.
(1884–1972)

U.S. senator (1935–1944), vice president (January–April 1945), and president (1945–1953). Born in Lamar, Missouri, on 8 May 1884, Harry S. Truman worked as a construction timekeeper, bank teller, and farmer before seeing combat in World War I as an artillery captain in France. He then opened a clothing store in Kansas City, but it soon failed, leaving him with large debts. He won election as county judge in 1922 with the backing of the political machine of Tom Pendergast in nearby Kansas City. Truman's record of efficiency and fair-mindedness earned him considerable praise. A Democrat, he was elected to the U.S. Senate in 1934, where colleagues appreciated his hard work, modesty, and amiability. Reelected in 1940, he gained national prominence during World War II as chair of a Senate committee investigating corporate waste, bureaucratic incompetence, contractor fraud, and labor abuse in the defense industry.

Truman, the surprise choice for the vice presidential candidate on President Franklin D. Roosevelt's successful 1944 reelection ticket, had no international experience when he assumed the presidency upon Roosevelt's death in April 1945. Truman closely guarded his authority and took actions that were decisive and at times impulsive. This was especially true in foreign affairs, where he immediately faced the challenge of emerging discord with the Soviet Union. As a senator, Truman had favored wartime aid to the Soviets but suggested shifting U.S. support to the Nazis once communist forces had the advantage. Only days into his presidency, he sharply rebuked Soviet Foreign Minister Vyacheslav I. Molotov, sternly lecturing him about trying to dominate Poland. This contretemps was a harbinger of Truman's hard-line policy toward the Soviet Union.

In July 1945, Truman and Soviet leader Josef Stalin met at the Potsdam Conference but did not reach agreement on any major issues. While there, the president received word that the test explosion of an atomic bomb had

succeeded, although he only made an ambiguous reference about this to Stalin. Truman subsequently ordered atomic attacks on two Japanese cities in August. His justification was to save lives, but he may have also used Hiroshima and Nagasaki to intimidate the Soviets and keep them out of the Pacific war. Just before Japan surrendered, the Soviets entered the war in the Pacific, resulting in Korea's division into two zones of occupation. Truman rejected Stalin's request for a similar arrangement in Japan, appointing General Douglas MacArthur to implement sweeping reforms there under complete U.S. control. After 1947, a reverse course in U.S. policy transformed Japan into an anticommunist bulwark in Asia and a security partner of the United States in the Cold War.

Meanwhile, Truman struggled to end the civil war in China between the Guomindang (GMD, Nationalists) and the Chinese Communist Party (CCP) led by Mao Zedong. Late in 1945, Truman sent General George C. Marshall to negotiate a cease-fire and a political settlement, which never took hold. Marshall returned home in early 1947, became secretary of state, and advised Truman to disengage from China. By then, Truman had decided to implement the containment policy against the Soviet Union.

Truman's application of pressure at the United Nations (UN) had forced Soviet withdrawal from Iran in 1946. His Truman Doctrine speech in March 1947 called for U.S. aid to any nation resisting communist domination. Congress then approved Truman's request for \$400 million for Greece (to suppress a communist insurgency) and Turkey (to check Soviet advances). A proposal in June 1947 to help Europe avert economic collapse and keep communism at bay led to the Marshall Plan, an ambitious and successful endeavor that helped reconstruct war-torn economies.

Stalin's reaction to Truman's successes greatly intensified the Cold War, beginning early in 1948 with the communist coup in Czechoslovakia. The Soviets then blockaded West Berlin to force U.S. and British abandonment of the city, but Truman ordered an airlift of food and supplies that compelled Stalin to restore access one year later. Countering the Soviet threat led to the 1949 creation of the North Atlantic Treaty Organization (NATO) and a U.S. commitment of military defense for Western Europe. Truman sent U.S. troops and huge amounts of military assistance across the Atlantic, but he refused to replicate this policy in China, resisting Republican pressure to expand support for Jiang Jieshi's Nationalist regime. This led to charges that Truman had allowed disloyal American diplomats to undermine the Nationalists and lose China after the communists triumphed in October 1949. The Soviet explosion of an atomic bomb that September only increased popular anxiety in the United States. As fears of internal subversion grew, Truman appeared to be

Democrat Harry Truman became president of the United States in April 1945 following the death of President Franklin Roosevelt. Truman oversaw the end of World War II, took the decision to drop the atomic bomb, and decided to come to the aid of the Republic of Korea (ROK, South Korea) in June 1950. In many ways, his policies helped to shape the postwar world. (Library of Congress)

soft on communism when Senator Joseph R. McCarthy, an obscure Wisconsin Republican, charged that 205 communists worked in the State Department.

Early in 1950, Truman approved development of a hydrogen bomb but initially refused to implement National Security Council Report NSC-68, which called for massive rearmament. He would not approve NSC-68 until September of that year. When the Democratic People's Republic of Korea (DPRK, North Korea) attacked the Republic of Korea (ROK, South Korea) in June, Truman committed troops because he believed that Stalin had ordered the invasion and that inaction would encourage more expansionist acts. He then ordered military protection for Chiang's regime on Taiwan and greater support for the anticommunist efforts of the British in Malaya and the French in Indochina. Even before MacArthur, whom he had named UN commander, had halted the invasion, Truman approved an offensive into North Korea that provoked Chinese intervention. Truman's courageous decision to recall MacArthur in April 1951 for trying to widen the war was highly unpopular but won acclaim from most military observers and European allies. Armistice talks began in July 1951 but deadlocked after Truman refused to force repatriation of communist prisoners. Unable to end the Korean War, he had made the Cold War more dangerous and intense with the implementation of NSC-68, military strengthening of NATO, and the rearming of the Federal Republic of Germany (FRG, West Germany).

Truman left office in January 1953 and returned to Independence, Missouri, to write his memoirs. He died on 26 December 1972 in Kansas City, Missouri.

Truman Doctrine

(12 March 1947)

U.S. foreign policy doctrine enunciated by President Harry S. Truman that formally committed the United States to fight communist expansionism

abroad. On 12 March 1947, President Truman addressed a joint session of Congress and stated: "I believe that it must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures." He was of course referring to communist "pressures" and thereby committed the United States to uphold the containment policy, which pledged that all necessary measures would be taken to check the spread of communism and Soviet influence.

The catalyst for the Truman Doctrine had been Britain's February 1947 announcement that it could no longer afford to provide military or financial support to Greece and Turkey. This meant that these nations might fall to communism, and this was especially true for Greece, whose pro-Western government was fighting a communist guerrilla insurgency in the northern part of the country.

The eastern basin of the Mediterranean, including the Middle East, had historically been under British influence since the nineteenth century. The area was still important to Britain after World War II, but it took on great importance in light of the developing Cold War. Soviet presence in the region would jeopardize the ability of the Western powers to launch strategic air strikes on the Soviet Union from bases in the area. The defense of the region had been a British preserve and rested on British military bases, the largest of which was in Egypt. British power was declining, however, while at the same time Soviet activity in the region seemed on the increase.

The Soviet Union had demanded that the Turkish government change the rules governing ship movements through the Dardanelles and allow it to participate, along with other Black Sea nations, in the defense of the straits. The U.S. interpretation of the Soviets' demand was that they intended to secure hegemony over Turkey, build bases there, and then gain control over Greece. From there it could dominate much of the Middle East and the eastern Mediterranean. The demand in itself was of relatively minor importance because it was made in the form of a diplomatic note, not supported by any explicit or implicit military threats.

For planners in Washington, there seemed to be a power vacuum in the region, the result of Britain's declining strength. Britain was providing military aid to Turkey, but the U.S. Joint Chiefs of Staff (JCS) thought that because of its strategic importance and in order to increase its ability to meet Soviet aggression, the United States should increase its economic and military aid to Turkey. As long as the British furnished military assistance, however, the Truman administration would provide only economic aid.

American attitudes toward the situation in Turkey were linked to the situation in Greece. Like Turkey, Greece was considered a barrier between the Soviet Union and the Mediterranean. The struggle in Greece was not one inspired by the Soviet Union but rather resulted from conflict between rightists seeking to restore the monarchy who were also failing to tackle the grave economic situation and left-wing parties seeking to install a communist regime. Washington, however, chose to view the Greek Civil War through the lens of the Cold War. A loss in Greece to the communists would not only

result in a victory for the Soviets but, it was argued, would also open the entire region to communist subversion. Thus, the Americans could not tolerate the establishment of a communist regime in Athens whether or not it was inspired by Moscow. Despite the shortcomings of the anticommunist Greek government, the Truman administration now moved to provide assistance to it. The decisive turning point came with London's announcement in February 1947 that Britain would be unable to continue its support to Greece and Turkey. It was obvious to U.S. State Department officials that the United States had to fill the breach. While preparing the draft legislation for the 1947 Greco-Turkish aid package, however, Undersecretary of State Dean Acheson found it difficult to justify the assistance request for Turkey, as it was not under a direct threat from either the Kremlin or an indigenous communist insurgency. Acheson also knew that Congress was in no mood to approve a large foreign aid request without proper justification, as it was engaged in efforts to curtail spending and pay down the national debt accrued during World War II. Also, Moscow was issuing conciliatory messages, further reducing the incentive in Congress to take strong measures against the Soviet Union.

Truman and his advisors, determined to provide military and economic assistance to both Greece and Turkey, had to find a way to sell this foreign aid package to Congress. Just prior to Truman's speech, Acheson described to the congressional leadership in stark terms the implications of Soviet domination over the eastern Mediterranean and the worldwide geopolitical consequences of such a scenario. In response, Republican Senator Arthur H. Vandenberg, a formerly steadfast isolationist, informed Truman that if he were to present his request to Congress in the manner that had been used by Acheson, he and the majority of Congress would support the aid deal. As a result, Truman's request for a \$400 million aid package earmarked for Turkey and Greece was presented in the Cold War terms of a struggle "between alternate ways of life," marking the emergence of the Truman Doctrine, which came to represent a concerted long-term effort to resist communist aggression around the world. Vandenberg kept his promise. The Greco-Turkish aid package was speedily approved.

Program launched by U.S. President Harry S. Truman requiring federal employees to take an oath of loyalty to the government, which enabled federal agencies to investigate employees and, if warranted, dismiss them for activities considered suspect. In the first years after World War II, as fears of malevolent Soviet power abroad and communist subversion at home mounted, the politics of anticommunism became a potent weapon. Charges that Soviet spies or disloyal Americans were serving in important government posts began to circulate, and the Truman administration was powerless to stop the largely untruthful allegations. Soon, a Red Scare set in, and Truman felt obliged to take action to quell the resultant paranoia.

The Democrats lost control of Congress to the Republicans in 1946, putting great pressure on Truman, a Democrat. At the same time, the House Un-American Activities Committee (HUAC) was uncovering alleged communist subversion in nearly all American institutions, including the government. Under political pressure from the Republicans and the right wing of his own party, Truman ordered the Department of Justice to develop a list of possibly subversive government employees, who were then required to sign a loyalty oath. Truman unwittingly added to the general atmosphere of paranoia by feeding the flames of anticommunist fervor.

The Loyalty Program established by Executive Order 9835 on 21 March 1947 mandated that all federal employees be subjected to background checks and sign a pledge of loyalty to the U.S. government. To aid in this endeavor, loyalty boards in each of the federal agencies were created. These boards performed security checks and background investigations. The loyalty review boards investigated more than 3 million federal workers, of whom roughly 3,000 were forced to resign or lost their jobs without indictment. Truman personally fired 212 executive-level employees. Soon, the loyalty oath program spread to other government agencies, especially in education.

At the time, the program seemed to some, at least, to be a violation of civil liberties and an infringement on Americans' constitutionally guaranteed rights. In the federal government, employees lost their right to openly criticize U.S. foreign policy, own books on socialism, or attend certain foreign films. In 1951, under Executive Order 10241, if the government had "reasonable" grounds for believing that a person was disloyal, it could fire that person.

When Truman left office in January 1953, McCarthyism was in full swing. Truman's Executive Orders 9835 and 10241 and Public Law 733 were precedents for Executive Order 10450 on 17 April 1953, which President Dwight Eisenhower used to purge additional alleged subversives or security risks from the government. As a result, 600 federal workers resigned, and 1,500 more were fired.

In 1947, Julia Steiner of the Los Angeles County Library System, along with two unions, tried to obtain an injunction prohibiting supervisors from asking employees about reading interests, political views, or past associations.

Truman Loyalty Program (1947)

The loyalty review boards investigated more than three million federal workers, of whom roughly 3,000 were forced to resign or lost their jobs without indictment.

This challenge became the first of thirty-three cases to eventually challenge the entire Loyalty Program. From the 1950s into the late 1960s, a series of court cases gradually dismantled the various elements of the Truman-Eisenhower loyalty oath programs, largely on procedural grounds. But the concept of a loyalty oath was not overturned.

In 1972 the U.S. Supreme Court reaffirmed the legitimacy of loyalty oaths, which remain in use, most commonly by licensing boards and in public education. While the issue of such oaths has become muted, it is clear that Truman's original 1947 action helped set the stage for the corrosive politics and excesses of the McCarthy era (1950–1954) and the attendant civil liberty violations that ensued.

Tuđman, Franjo

(1922–1999)

Yugoslav military officer and first president of the Republic of Croatia (1990–1999). Born in Veliko, Trgovišće, in the Kingdom of Serbs, Croats, and Slovenes (now Croatia) on 14 May 1922, Franjo Tuđman attended secondary school in Zagreb and graduated from the Military Academy in Belgrade in 1957.

Tuđman worked in the Yugoslav Ministry of National Defense during 1945–1961, becoming one of the youngest generals in the Yugoslav Army in 1960. He left active military service the next year and began a new career as head of the Institute for the History of the Labor Movement of Croatia (1961–1967). During 1963–1967 he was also an associate professor of history at Zagreb University, where he earned a doctorate in political science in 1965.

Tuđman was a member of the Socialist Republic of Croatia's parliament during 1965–1969. After participating in the Croatian Spring movement, he

was imprisoned for two years beginning in October 1972. He was again imprisoned during 1981–1984 for his political activities aimed at Croatian independence.

In 1989 Tuđman was one of the founding members of the Croatian Democratic Union (HDZ). After the HDZ won the first democratic elections in 1990, he joined the parliament, which designated him president of the new Republic of Croatia. In 1991 Tuđman led his country to full independence from Yugoslavia and in the subsequent war with Serbia, which lasted until 1995 and claimed thousands of lives.

Tuđman was reelected president in direct elections in 1992 and 1997. His regime was characterized by both significant human rights abuses and political repression. In 1995 he signed the Dayton Agreement but refused to cooperate with the International Criminal Tribunal. Tuđman died on 10 December 1999 in Zagreb.

North African nation. The Republic of Tunisia, an overwhelmingly Sunni Muslim nation, covers 63,170 square miles, about twice the size of the U.S. state of South Carolina, and had a 1945 population of approximately 3 million people. Tunisia borders Algeria to the west, Libya to the south, and the Mediterranean Sea to the east and north. Until the late nineteenth century, Tunisia had been dominated by various larger powers as well as Arab and Berber dynasties. In 1881, the French signed an agreement with the bey, the local Tunisian ruler, establishing a French protectorate there. Prior to that, Tunisia had been part of the Ottoman Empire. Tunisian culture was greatly affected by the long period of French colonial rule, which did not officially end until 1956.

Following World War II, a strong nationalist movement in Tunisia engaged in a protracted struggle against French colonial rule. On 20 March 1956, following arduous, delicate, and behind-the-scenes negotiations, an independence protocol was signed by French Foreign Minister Christian Paul Francis Pineau and Tunisian Prime Minister Tahar ben Amara. On 25 July 1957, the Tunisian Constituent Assembly ousted the bey, Muhammad VIII al-Amin, who was sympathetic to France and had long been unpopular;

Tunisia

declared the formation of the Tunisian Republic; and elected Habib Bourguiba as president.

Bourguiba, who ruled until 1987, was decidedly pro-Western in his ideas and foreign policy. He also maintained cordial relations with France. As he tried to transform Tunisia into a modern, democratic state, he was backed by the majority of young, Westernized Tunisian intellectuals. His main political support came from the well-organized Neo-Destour Party, which he had founded in 1934, that constituted the country's chief political force.

Bourguiba was not without political rivals, however. Early in his presidency, he was strongly challenged by Salah ben Youssef, who leaned toward Egypt and Pan-Arabism and who championed the continuation of Tunisia's ancient Islamic traditions. Youssef was generally supported by conservative, wealthy urbanites and traditionalist Muslims.

The constitution of Tunisia was introduced in 1959 and amended in 1988. It provides for a presidential system not unlike that of the current French Fifth Republic. The president is elected by popular vote for a five-year term, while the prime minister is appointed by the president.

During the Cold War, Tunisia aligned itself squarely with the West and was considered a strong American ally. During the June 1967 Arab-Israeli War, for example, Bourguiba refused to sever relations with the United States

over its support of Israel, despite considerable pressure to do so from other Arab states.

In spite of its support of Western-style democracy, the Bourguiba regime exerted strong, centralized authority. The economy was closely controlled by Tunis, and as fears of Islamic fundamentalism increased, especially after the late 1970s, the government increasingly relied on censorship and illegal detentions to smother radical movements. Bourguiba's heavy-handedness and frail health combined to bring about his ouster on 7 November 1987 during a bloodless coup led by General Zine al-Abidine Ben Ali, who succeeded him as president.

In recent years, under Ben Ali's tenure, Tunisia has taken a moderate, nonaligned stance in its foreign relations. Domestically, it has sought to diffuse rising pressures for a more open political system while at the same time dealing with increased Islamic fundamentalist activities and growing anti-Western sentiments. These efforts have resulted in significant government-sponsored repression and a deteriorating human rights record.

Tunisia's principal industries have been agriculture, mining, tourism, and light manufacturing. Petroleum is the chief mineral resource. Government control of economic affairs, while still heavy, has gradually moved toward privatization, simplified tax codes, and a more prudent approach to debt management. Since the late 1990s, Tunisia's economy has witnessed significant growth, which has begun to attract foreign investment. In 1995, Tunisia also signed an agreement with the European Union (EU) to remove trade barriers over the next decade. Broader privatization, increased government efficiency, and further reductions in the trade deficit are among the challenges that still lie ahead.

Straddling both Europe and Asia Minor, Turkey occupied an important strategic position during the Cold War. With an area of 300,948 square miles,

Turkey

Turkey is larger than the U.S. state of Texas. European Turkey borders Greece and Bulgaria to the east and north, while in Asia Minor it shares common borders with Georgia to the northwest, Armenia and Iran to the east, and Syria and Iraq to the south. Its 1945 population was some 18.79 million people, while at the end of the Cold War in 1990 it had grown to some 56.47 million people.

In the early-modern period, the Ottoman Empire controlled the Balkans and on two occasions threatened Vienna. The empire also dominated the Middle East and North Africa. Turkish power receded in the nineteenth century, however. Regarded as the “Sick Man of Europe,” the Ottoman Empire was forced to yield most of its territory in the Balkans. The empire was also on the losing side in World War I and suffered substantial territorial losses, especially in the Middle East.

Turkey became a republic in October 1923 with the abolition of the sultanate. Domestically, Turkey had been a secular state since 1924, but it was hardly a democracy. Only one political group, the Republican People’s Party, was permitted.

The father of modern Turkey, Mustafa Kemal, known as Atatürk (“the father of the Turks”), mounted a successful military effort against the Greeks, whose army had occupied western Anatolia (including Izmir/Smyrna) after World War I. Atatürk also carried out a rapid and enforced Westernization, insisting on strict separation of religion and state. In 1924 religious instruction in the schools was forbidden. Turkish replaced Arabic as the national language, and the nation adopted Roman letters. Islamic law was abolished in favor of a new civil code.

Atatürk died in 1938. Premier İsmet İnönü, his closest associate, succeeded him as leader of the nation and the Republican People’s Party. İnönü was reelected president in 1943. He and other Turkish leaders were determined to maintain Turkish neutrality in World War II. They kept the large Turkish Army mobilized, alarmed by the ambitions of Germany and the Soviet Union and especially concerned that the two might combine against Turkey. Italian ambitions in the Balkans were also a concern.

Once the Germans controlled the Balkans, in June 1941 Ankara signed a Treaty of Territorial Integrity and Friendship with Germany that offered economic concessions. İnönü, however, strongly resisted pressure from Berlin to enter the war on its side. As soon as the Allies were ascendant, Turkey resumed its pro-Western position, although it also resisted pressure from the United States and Britain to join them in the war. Not until February 1945 did Turkey declare war on Germany, and this was done to assure membership in the United Nations (UN).

Following the war, the Soviet Union applied tremendous pressure on Turkey in an effort to annex Kars and Ardahan. These two northeastern Turkish provinces had long been in contention between the two states. Moscow also demanded a share of control over the defense of the straits connecting the Black Sea to the Mediterranean (the Bosphorus, Sea of Marmara, and the Dardanelles).

Soviet pressure on Turkey along with the communist threat to Greece led to the 1947 Truman Doctrine and U.S. aid. Turkey sought to join the North Atlantic Treaty Organization (NATO) at its founding in 1949 but was rebuffed. Not until Turkey hinted that it might pursue a neutral course was it admitted to NATO membership, along with Greece, in 1952.

In fulfillment of its obligations to defend the West, Turkey sent a brigade to fight on the UN side in the Korean War (1950–1953). There, Turkey established an excellent combat record. Turkey also provided bases to the United States for communications intelligence gathering on the Soviet Union and in 1955 joined the Baghdad Pact.

Internally, Turkey struggled to achieve a Western economy and style of government. After World War II, İnönü allowed the formation of a genuine second political party. The 1946 elections were held so abruptly, however, that the new Democratic Party, led by Celal Bayar, lacked time to organize properly and was only able to secure 63 of 465 seats.

In the 1950 elections, by contrast, the Democratic Party won a landslide victory, taking 408 seats to only 69 for the Republican People's Party. Bayar became the president, with Adnan Menderes as premier. The Democratic Party held power until 1960 and emphasized private enterprise. Under the leadership of Menderes, Turkey embarked on an economic development program. Agrarian reform had already been introduced by the previous regime, but the Menderes government continued the process of breaking up the large estates, government holdings, and ecclesiastical lands and transferring these to the peasants. It also sought to introduce modern farming methods, with agricultural production doubling over the next decade. As more than 80 percent of the Turkish population lived in the countryside, the benefits of these reforms, including new roads and rural electrification, provided a powerful base for the Democratic Party. Some state-owned industries were also turned over to private ownership, and new factories were built to produce sugar, textiles, cement, and steel.

Rapid development, however, brought both large government deficits and inflation. Some \$3 billion in U.S. aid as well as loans from Europe drove up both prices and the cost of living. As its unpopularity increased in the cities, the Menderes government began to restrict political liberties. It won an easy election victory in 1954, but only repressive measures kept it in power thereafter. Then, in 1957, all other Turkish political parties combined against the government. The government struck back by declaring this illegal and denying the opposition access to the media.

In May 1960 the Turkish armed forces stepped in, seizing power. The armed forces repeated this process two more times, in 1971 and in 1980.

Voter placing ballot in box during voting in Istanbul, Turkey, 1950. Following the legalization of multiple political parties in 1946, the Democratic Party, which promoted political and economic liberalism, quickly rose to power and dominated the Turkish government throughout the 1950s. (Library of Congress)

Much to its credit, each time the army also peacefully relinquished power. General Cemal Gürsel headed the new government, made up chiefly of younger army officers. In 1961 the government submitted for voter approval a new constitution that established a bicameral parliament and proportional representation, along with a constitutional court. New elections gave the Republican People's Party 173 of 450 seats in the national assembly, and İnönü became premier. Unfortunately, the system of proportional representation led to many small blocs in parliament and political stalemate. At first the Republican People's Party and the Justice Party (successor to the Democrat Party) shared power, but in 1962 İnönü formed a new ministry made up of members of the Republican People's Party and smaller political parties. The Cuban Missile Crisis of October 1962 affected Turkey, for as part of the settlement President John F. Kennedy agreed to remove obsolete U.S. Jupiter missiles from Turkey.

Seemingly intractable problems remained in regard to a large foreign debt and annual budget deficits. Help came in the form of a \$100 million loan from a consortium of twelve nations. Turkey also benefited from admission as an associate member of the European Economic Community (EEC) in 1963. The Turks resented the fact that they could not secure full membership, a consequence not only of Turkey's economic problems but also of concerns among many West Europeans that Turkey was a Muslim nation.

Early in 1965, the Justice Party brought down the government in a vote of no-confidence, and İnönü again relinquished power. Elections later that year gave the Justice Party 240 seats and the Republican People's Party only 134 seats of 450 in the assembly. Süleyman Demirel became premier. The Justice Party continued to draw the bulk of its support from the countryside, conservative Muslims, and part of the middle class, while the Republican People's Party drew its support chiefly from the cities.

In March 1971, with Turkey sharply polarized between Right and Left and strikes occurring, the military again seized power. The generals modified the constitution, and in October 1973 new elections brought an odd coalition of leftists and Islamists to power.

A crisis with Greece over the island of Cyprus complicated matters. In July 1974, Greeks on the island seized power in order to reunite Cyprus with Greece. The Turkish government appealed to the British for a joint military intervention, but London refused. That same month, Turkey sent 40,000 troops to northern Cyprus. They drove out some of the Greeks there and occupied 37 percent of the island. Turkish troops remain on the island, with Ankara claiming that they are there to protect the Turkish Cypriot community. Talks to resolve the impasse have been unsuccessful, and the Turks have set up a de facto Turkish Cypriot state. With Greece and Turkey longtime enemies, concern remained through the Cold War and afterward that these two NATO members might go to war with each other. The Turks believed that their allies, particularly the United States, had let them down, and by the mid-1960s Ankara was distancing itself a bit from Washington and seeking improved ties with Moscow. A U.S. embargo on the sale of arms to Turkey plunged relations between the United States and Turkey to a new low.

Turkey benefited from the Islamic Revolution in Iran and the Soviet invasion of Afghanistan, both in 1979. That same year the United States substantially increased its assistance to Turkey. Aid went from \$300 million a year to \$500 million. The United States also continued to maintain military bases in Turkey.

For most of the 1970s, the government was run by the left-of-center Republican People's Party headed by Bülent Ecevit or, at the end of the decade, Demirel's rightist Justice Party. As neither party was able to win a majority in parliament, both were forced to form uneasy alliances with smaller parties and independents. Meanwhile, many of Turkey's fundamental problems went unaddressed.

In September 1980 the army, led by Chief of Staff General Kenan Evren, again took power. The junta dissolved parliament, suspended the constitution and some civil liberties, and arrested Premier Demirel and more than

100 other politicians. The army also arrested thousands of suspected terrorists and executed a number of them. The army's action had again been sparked by political infighting; neglect of the nation's serious economic problems, including an inflation rate of nearly 100 percent a year; and right- and left-wing terrorists who had killed more than 2,000 people in 1980 alone. The generals were particularly concerned with the rise of Islamic fundamentalism in view of recent events in Iran.

The army takeover led to Turkey's expulsion from the Parliamentary Assembly of the Council of Europe, a halt in negotiations with the EEC, and investigations by the European Commission on Human Rights in Strasbourg. But General Evren saw himself as a leader in the mold of Atatürk. In 1982 Evren became president for a seven-year term in a referendum that was also a vote for a new constitution. The referendum received a 92 percent favorable vote. The new constitution was framed to increase presidential powers and, in the case of the Grand National Assembly, the Turkish parliament, to encourage the development of a stable two-party system.

In the 1983 parliamentary elections, the party favored by the military, the Nationalist Democratic Party, came in third. The big winner was the Motherland Party, led by Turgut Özal, that won an absolute majority in the Grand National Assembly, the first party to enjoy such power since the 1960s. Özal put the nation back into financial order and created a free market economy. In 1985 Turkey was readmitted into the Council of Europe. There was some resentment toward the West, with Turkey's leaders believing that their allies had failed to appreciate the situation that had necessitated military rule.

In 1989 there was a crisis with neighboring Bulgaria when that country drove out many members of its Turkish minority (1.5 million people out of a total population of 10 million) into Turkey. Turkey did benefit from the crisis over Iraq's seizure of Kuwait. Özal was quick to join his country to the anti-Saddam Hussein coalition, but Turkey suffered economically. By November 1990, rigid enforcement of the economic blockade had cost Turkey an estimated \$3 billion in revenues, chiefly from shutting down an oil pipeline through the country.

Turks resented the phobia expressed by many Americans and West Europeans toward its Muslim identity and what it perceived as a lack of support for Ankara's efforts to stamp out demands for autonomy by its Kurdish minority (20 percent of the country's overall population) in southern Turkey. This was evident in Operation STEEL CURTAIN in March 1995, when Turkey sent 35,000 troops into the Kurdish zone of northern Iraq in an effort to trap several thousand guerrillas and halt cross-border raids by the Marxist Kurdish Workers' Party (PKK). The PKK had been fighting for more than a decade in southeastern Turkey to establish a separate Kurdish state. More than 15,000 people had been killed since 1984, and Turkey mounted the military campaign in an effort to wipe out the movement. Economic problems in the cities also led to a rise in Muslim fundamentalism, perhaps the greatest threat to the secular Turkish state. At the end of the Cold War,

Turkey nonetheless remained committed to NATO and sought to become a full-fledged member of the European Community.

The Turkish armed forces consist of the Territorial Army, Navy, Air Force, and the Gendarmerie. The last is used for policing duties in rural areas. Turkey's armed forces played important roles during the Cold War both in Turkish domestic developments and internationally.

The Turkish military remained fully mobilized during World War II. Following Soviet pressure on Turkey at the end of the war and the country's alliance with the West, Turkey sent a brigade to fight in the Korean War. Commanded by Brigadier General Tahsin Yazici, the brigade was attached to the U.S. 25th Infantry Division and secured an enviable reputation for its fighting ability. Turkish military involvement in the Korean War helped improve the Turkish image in the West. However, Turkey did not become a member of the North Atlantic Treaty Organization (NATO) until February 1952.

With NATO membership, the role of the Turkish armed forces changed from protecting the country and safeguarding Westernization to active involvement in NATO. Turkey received substantial military assistance from the United States to modernize its armed forces and achieve NATO compatibility. The army also saw itself as the guarantor of law and order in the nation, and three times it seized power: in 1960, 1971, and 1980. Each time, once order had been restored and much to its credit, the military voluntarily relinquished power back to an elected civilian government.

Turkey, Armed Forces

Turkish troops in Korea crowd into a landing craft, which will carry them to a waiting transport that will take them home, 9 August 1953. (U.S. Department of Defense)

In the late 1960s, with the rise of tension with Greece over Cyprus, Turkey began a military modernization effort aimed at producing its own warships, landing ships, and other military equipment. In 1974, when Greeks on Cyprus tried to bring about union of the island with Greece, Turkish forces invaded the island. Some 35,000 troops were deployed in the operation, which seized 37 percent of the island. Some 30,000 Turkish troops remain in northern Cyprus.

Turkish military intervention in Cyprus led the U.S. Congress in February 1975 to impose an embargo on the sale of military equipment to Turkey. As a result, the Turkish government declared the suspension of the 1969 U.S.-Turkish Defense Cooperation Agreement and announced that the Turkish armed forces would have complete control and jurisdiction over American bases and installations in Turkey. A new Defense Cooperation Agreement was concluded on 26 March 1976, but the U.S. embargo continued until 1978.

In 1985, Turkey embarked on an ambitious ten-year, \$10 billion military modernization program. In 1990, Turkey had an army of approximately 800,000 men, the second-largest standing force in NATO, plus several hundred thousand more in the reserves. Resentment toward the United States lingered, especially over the 10–7 rule imposed by Washington. The rule required that Greece receive \$7 in U.S. military aid for every \$10 for Turkey.

The Turkish Army consists of four armies, ten army corps, two mechanized infantry division headquarters, one infantry division, one infantry training division, fourteen mechanized infantry brigades, fourteen armored brigades, twelve infantry/domestic security brigades, five commando brigades, and five training brigades. The Turkish Air Force is composed of nineteen fighter squadrons as well as two reconnaissance, five training, six transport, one tanker, and eight surface-to-air missile (SAM) squadrons. It has the largest number of F-16 fighters after the United States. The Turkish Navy deploys twenty-one frigates, twenty-two mine countermeasures support ships, twenty-one cruise missile gunboats, thirteen submarines, fifty-two landing craft, twenty-three naval patrol airplanes and helicopters, and one amphibious Marine Corps brigade.

The Turkish armed forces can field an army corps of 40,000–50,000 troops for joint operations on very short notice and can transfer a force of five to six battalions over a long distance in limited time through night and day airborne assault. In the wake of the Cold War, the Turkish armed forces actively participated in United Nations (UN) peacekeeping activities in such locations as Bosnia-Herzegovina, Kosovo, and Afghanistan.

The February 1956 meeting of the governing body of the Communist Party of the Soviet Union (CPSU) that formally denounced Stalinism. Theoretically the ruling body of the CPSU, the party congress was usually a pro forma, ceremonial event. However, the Twentieth Party Congress, held in Moscow, was a watershed in the history of international communism and the Cold War. In his celebrated so-called secret speech, First Secretary of the CPSU Nikita Khrushchev revealed to dumbstruck delegates that the late Soviet leader Josef Stalin was a bloodthirsty criminal responsible for systematic killing and mass terror instead of a wise and beneficent ruler to be adored and idolized.

Khrushchev delivered his speech in the very early hours of 25 February 1956 to a closed session of the congress from which all foreign delegates had been excluded. Khrushchev himself was largely responsible for the decision to issue a stinging denunciation of Stalin's rule. It had been opposed by the overwhelming majority in the presidium, who did manage to prevent the incorporation of the speech into Khrushchev's formal, open report. Khrushchev limited his comments to Stalin's use of terror against "loyal communists" after 1934. Revelation of Stalin's "violations of socialist legality" (the term "crimes" was avoided) was restricted to abuses against the party elite. Khrushchev went on to speak approvingly of Stalin's struggle against Trotskyist and Bukharinist "oppositionists" in the 1920s and during the industrialization drive. Khrushchev did not question the one-party system, land collectivization, or the command economy, all of which he sought to preserve.

In spite of these limitations, the speech was a political bombshell, exposing the mechanism of terror and the system of arbitrary rule that had dominated the Soviet Union for thirty years. Khrushchev employed dozens of government papers and a wealth of detail to document the brutal character of Stalin's reign of terror. One such document, which Khrushchev read aloud, was a letter from a Politburo member whose spine was broken by his interrogator. Khrushchev convincingly demonstrated that the history of the CPSU under Stalin consisted of a pattern of criminal acts, unlawful mass deportations of non-Russian peoples, political errors such as the break with Josip Broz Tito's Yugoslavia, inept leadership, the methodical falsification of history directed by Stalin himself, and the abandonment of Leninist principles of collective leadership in favor of the cult of personality. In short, Khrushchev entirely debunked the mystical aura that surrounded Stalin.

The allegedly secret speech, deliberately leaked to a Western correspondent through a former Komitet Gosudarstvennoi Bezopasnosti (KGB) official, has long overshadowed the rest of the Twentieth Party Congress's proceedings. Yet Khrushchev's 14 February open speech on peaceful coexistence

Twentieth Party Congress (February 1956)

with the West was almost as significant. He jettisoned the classic thesis of Marxism-Leninism, namely that war with the West was inevitable as long as capitalism survived. He also called for nonviolent competition between capitalism and communism; argued that communism would inevitably prevail over capitalism because it was a fairer system; acknowledged that there were different transitional forms from capitalism to socialism, including the parliamentary route of free elections; and insisted that the Soviet Union did not seek to export revolution.

The implications of Khrushchev's secret and public speeches reinforced each other with overwhelming effect. On the one hand, Stalin's authoritarian methods were discredited; on the other hand, a peaceful, parliamentary road to socialism was acclaimed. For authoritarian communist parties such as those in Albania, the People's Republic of China (PRC), and the Democratic People's Republic of Korea (DPRK, North Korea), this was heresy, but for others, such as Poland's, it was liberating. The nation most profoundly affected by the Twentieth Party Congress was Hungary. Within the Hungarian Workers' Party, a movement seeking greater democratization and national independence soon gathered momentum. In July 1956, Hungary's first secretary of the Central Committee, Mátyás Rákosi, was dismissed. In early October, László Rajk and other Hungarian victims of the 1949 Stalinesque trials were paid tribute, and in late October the new regime of Imre Nagy replaced that of Ernő Gerő. Unfortunately, however, the Budapest uprising of 1956 was soon quashed by the Soviet Army.

The Twentieth Party Congress did not reverberate only in Eastern Europe. It also shattered the chimera of ideological continuity between 1917 and 1956. In so doing, it created the possibility for a new, more independent direction for world communist movements.

U

Burmese nationalist and prime minister (1948–1956, 1957–1958, 1960–1962). Born in Wakema on 25 May 1907, U Nu secured a BA degree from the University of Rangoon in 1929 and served as headmaster and superintendent of the Pantanaw National High School. In 1936 he was expelled from the University of Rangoon law school along with fellow nationalist Aung San for his anti-British political activity. Imprisoned in 1942 by British authorities, Nu was released upon the Japanese occupation of Burma. He subsequently served as foreign minister in the Baw Maw Japanese-sponsored puppet government while retaining links with resistance guerrillas.

Following the war, Nu became vice president of the Anti-Fascist People's Freedom League (AFPFL) and was also unanimously elected president of the Constituent Assembly in June 1947. When Aung San, then deputy chairman of the interim government, was assassinated in the summer of 1947, Nu succeeded him at the colonial governor's request. Nu worked to hasten Burmese independence and signed the independence treaty with British Prime Minister Clement Attlee on 17 October 1947. Nu began serving as independent Burma's first prime minister on 4 January 1948 while introducing parliamentary democracy.

Nu was immediately confronted with a war-ravaged economy, communist subversive activity, and ethnic strife. Burma's neutrality in the Chinese Civil War was compromised when Chinese Guomindang (GMD, Nationalist) troops launched raids from Burmese territory, forcing Nu's government to lodge a protest with the United Nations (UN). He resigned in 1956 and returned to power in 1957 but was ultimately forced to yield to General Ne Win and the Burmese military in 1958, which headed a caretaker

government until April 1960. Nu returned to power when his party won the February 1960 elections, but civil unrest persisted. This instability enabled Ne Win to stage a coup on 2 March 1962.

Nu was imprisoned until 1966 and then fled in exile to Bangkok, where he attempted to organize a prodemocratic, anti-Ne Win movement under the United National Liberation Front in 1969. Nu shifted his base of operations to India during 1974–1980 and, on assurances from Ne Win, returned to Burma (now Myanmar) in 1980. Following increased government repression, on 8 August 1988 Nu announced the establishment of a largely symbolic provisional government. In 1989 he was arrested and was kept under house arrest until 1992. Nu died in Yangon (Rangoon) on 14 February 1995.

U Thant

(1909–1974)

Burmese politician and secretary-general of the United Nations (UN) during 1961–1971. Born in Pantanaw, Burma, on 22 January 1909, U Thant worked as an educator and freelance journalist before going into government service. During 1947–1957 he served as press director of the government of Burma, director of national broadcasting, secretary to the Ministry of Information, secretary of projects in the Office of Prime Minister, and executive secretary of Burma's Economic and Social Board. In 1957 he became Burma's representative to the UN. He quickly became a leading figure in the UN effort to broker a solution to the war in Algeria. As a moderate neutralist, he was elected to complete the term of UN Secretary-General Dag Hammarskjöld, who died in a September 1961 plane crash.

As secretary-general, Thant preferred quiet diplomacy and tended to rely more heavily on superpower initiatives than had his predecessor. But he could also be quite forceful in policy implementation, as in the case of the UN effort to end the secession crisis involving the Congolese province of Katanga. When U.S. President John F. Kennedy sponsored a plan for national reconciliation in the Congo, Thant adopted the idea, which became known as the U Thant Plan. It was Thant's decision to send UN forces into Katanga on two occasions, once in November 1961 and again in December 1962, that finally ended the secession of Katanga and helped reunify the Congo.

In other crises, Thant helped facilitate negotiations between the Netherlands and Indochina over West New Guinea in 1962, sent a UN observation

mission to Yemen in 1963, and initiated a 1963 fact-finding mission to North Borneo (and Sarawak) regarding its recent inclusion in the Federation of Malaysia. His most notable successes included sending UN peacekeeping forces to Cyprus in 1964 and his 1965 brokering of a cease-fire in the 1965 Indo-Pakistani war over Kashmir.

At the height of the Cold War, however, Thant's efforts were at times marginalized. In the midst of the 1962 Cuban Missile Crisis, he sent identical appeals to President Kennedy and Soviet leader Nikita Khrushchev to end the crisis. Those appeals were ignored. Thant's attempts after 1963 to sponsor negotiations among the United States, the Democratic Republic of Vietnam (DRV, North Vietnam), and the Soviet Union were continually rebuffed by Presidents Lyndon B. Johnson and Richard M. Nixon. Thant made his most controversial decision as UN secretary-general in 1967, when Egyptian President Gamal Abdel Nasser asked him to withdraw the UN Emergency Force from the Sinai. Believing that he had little choice but to pull out the UN troops, Thant unwittingly opened the way for the Six-Day War, ultimately weakening the UN's role in the Middle East. He retired from the UN in December 1971, at the end of his term of office. Thant died on 25 November 1974 in New York City.

Burmese politician U Thant served as secretary-general of the United Nations during the turbulent period of 1961–1971. (Corel)

A period of heightened Soviet-U.S. tensions precipitated by the Soviet Union's 1 May 1960 downing of an American U-2 reconnaissance plane that was clandestinely taking high-altitude photographs of Soviet defense installations. The plane's wreckage, together with the confession of the captured pilot, offered irrefutable proof of previously unacknowledged American surveillance of the Soviet Union. The incident increased international tensions

and caused Soviet leader Nikita Khrushchev to cancel a much-anticipated summit with U.S. President Dwight D. Eisenhower.

Because the closed nature of Soviet society made it difficult to determine that nation's military capabilities, in 1954 Eisenhower secretly ordered the fabrication of a small number of special reconnaissance aircraft, built by Lockheed and dubbed the U-2, to secretly overfly the Soviet Union. The U-2 was an engineering marvel, essentially a glider outfitted with a jet engine and capable of flying at 70,000 feet and more than 4,000 miles without refueling. On 4 July 1956, civilians under contract with the Central Intelligence Agency (CIA) began piloting U-2 aircraft on twenty-four missions over the Soviet Union, taking photographs and gathering other electronic data. The U-2 overflights showed that the Soviets had been exaggerating their bomber and missile capabilities. Eisenhower feared that revelation of the flights could be considered a hostile action, but he believed that the need to obtain intelligence outweighed the potential risks of the U-2 program.

Although initial studies suggested that the Soviet Union's defenses would be incapable of reliably tracking or attacking the U-2s at their normal flying altitude, the planes were nevertheless monitored closely and were frequently targeted by Soviet interceptors and surface-to-air missiles (SAMs). The Soviets lodged objections with the United States after the early flights but did

not complain publicly, probably because of their reluctance to acknowledge their inability to destroy the planes.

In February and March 1960, having authorized only four overflights since 1958, Eisenhower approved two missions for the coming weeks. Although he was worried about harming East-West rapport on the eve of a summit among American, Soviet, British, and French leaders scheduled to begin on 16 May in Paris, he was convinced of the need to gather details about recent Soviet intercontinental ballistic missile (ICBM) developments before the meeting. Midway through the second of these flights, the U-2 jet piloted by Francis Gary Powers was shot down by Soviet air defenses, and he parachuted into Soviet hands. The Soviets also collected—largely intact—the camera and other remnants of the plane.

To Khrushchev, this overflight was a particular affront because it occurred on a communist holiday (May Day) and because he saw it as an intentional presummit provocation. Correctly assuming that the United States did not know that the Soviets had captured Powers and secured incriminating aircraft components, Khrushchev set out to embarrass the Eisenhower administration. After the United States announced that the downed plane was a weather research aircraft, the Soviet leader publicly revealed the damning evidence to the contrary and announced his intent to try Powers for espionage. The eventual confirmation of the Americans' activities and their attempts to cover them up created an international sensation and torpedoed the forthcoming Paris summit.

Eisenhower tried to explain the overflights as regrettable infringements upon Soviet sovereignty that were nonetheless necessary to understand Soviet military capacity. He hoped that the summit would continue as planned and thus allow his presidential term to conclude on a high note by building upon the improved relations that had resulted from Khrushchev's celebrated 1959 visit to the United States. Some of Eisenhower's advisors thought that the CIA had been ill-prepared for the possibility of a downed plane and failed to advise the president of the likelihood of an interception, especially given persistent Soviet efforts to achieve such. Some aides proposed that Eisenhower avoid responsibility by claiming that the overflights occurred without his authorization, a suggestion the president rejected because it would improperly place blame on subordinates and would incorrectly suggest that underlings had the latitude to authorize such significant activity. Some officials, not privy to the details of what to do if captured, blamed Powers for allowing himself to be taken prisoner and too readily admitting to his activities.

While it is more difficult to assess Soviet reactions, many U.S. analysts believe that Khrushchev shared Eisenhower's quest for relaxed relations but faced resistance from hard-liners in the Kremlin. This forced Khrushchev to balance anger with interest in a rapprochement, although he did lash out against Pakistan and Norway, nations that he knew had facilitated some U-2 missions. When he arrived in Paris putatively for a preliminary meeting, he made it clear that he would not assent to the formal convening of the summit without a public apology from Eisenhower. The U.S. leader refused, although he renounced any further aircraft overflights. This stance was unacceptable

The U-2 was an engineering marvel, essentially a glider outfitted with a jet engine and capable of flying at 70,000 feet and more than 4,000 miles without refueling.

to Khrushchey, who therefore refused to participate in the summit and canceled arrangements for Eisenhower's state visit to the Soviet Union.

Although global reaction varied as to which party was responsible for the meeting's failure (some believed that Khrushchey exaggerated his position for propaganda purposes), Eisenhower considered it a great loss. After an August 1960 show trial, Powers was sentenced to ten years' imprisonment. In February 1962, however, he was traded for Colonel Rudolf Abel, a Soviet spy being held in U.S. custody. Subsequent investigations determined that Powers had acted properly during his mission and time in captivity. By the late summer of 1960, U.S. photographic intelligence of the Soviet Union began to rely on secret orbiting satellites that passed over Soviet territory. Because they traveled through space, international law did not consider them violations of sovereign airspace.

U-2 Overflights of the Soviet Union

In the early days of the Cold War, British and American aircraft and U.S. balloons flew over Soviet territory to obtain otherwise unavailable details about Soviet military capabilities. While most of these overflights were known to the Soviets, none of them were acknowledged to be reconnaissance missions until the United States took belated responsibility for a U-2 spy plane shot down over the Soviet Union on 1 May 1960. The use of piloted aircraft to obtain detailed intelligence information was supplanted shortly thereafter by orbiting space satellites.

The closed nature of Soviet society allowed the West little understanding of Soviet military preparations at the Cold War's onset. There was great concern in the West about a possible surprise Soviet attack on Europe, North America, or elsewhere, particularly after September 1949 and the detonation of the first Soviet atomic weapon. Thus, American and British officials considered aerial reconnaissance a military necessity, albeit potentially provocative and a violation of Soviet airspace.

Beginning in 1949, various types of specially modified aircraft took high-altitude photographs of Soviet air bases and other defense installations or

A Lockheed U-2 Dragon Lady spy plane in flight. (U.S. Air Force)

used radar to map strategic areas. Some aircraft also recorded electronic signals emanating from Soviet radar stations and other facilities, allowing them to be precisely located and their specific functions determined. Hundreds of these risky flights were undertaken. One program operated occasionally just inside Soviet borders. Other flights routinely penetrated further into Soviet airspace. In one particularly ambitious effort in 1956, twenty-one U.S. Air Force reconnaissance aircraft flew 156 missions over Siberia in the course of seven weeks, including one mission that involved six RB-47E aircraft flying abreast in broad daylight. All returned safely.

In other instances, however, the Soviet Union and its allies reacted with hostility to such incursions. From 1949 to 1969, sixteen American planes were shot down and 163 crew members killed. The Soviets also lodged vigorous diplomatic protests, but the British and American governments claimed that the aircraft were engaged in weather research or other innocuous activities and had not intentionally crossed into Soviet territory.

In order to reduce dangers to crewmen and decrease the likelihood of interceptions, the United States briefly used high-flying unmanned balloons to supplement its photographic intelligence efforts. In Project GENETRIX during January and February 1956, 516 balloons were sent aloft from the Federal Republic of Germany (FRG, West Germany), Scotland, and Turkey. The balloons were carried by the prevailing winds higher than the maximum ceiling of most Soviet interceptor aircraft. After leaving Soviet airspace, exposed film canisters were ejected and then recovered in midair by awaiting aircraft. Only thirty-four GENETRIX film loads were recovered and produced

In one particularly ambitious effort in 1956, twenty-one U.S. Air Force reconnaissance aircraft flew 156 missions over Siberia in the course of seven weeks.

usable photographs. The balloons carrying the remainder either failed, descended prematurely, traveled off course, or were shot down. This short-lived balloon program nonetheless provided an understanding of high-altitude wind currents, Soviet radars, and interception techniques. All were details helpful in preparing for U-2 overflights of the Soviet Union that were to begin a few months later.

In 1954, the Central Intelligence Agency (CIA) placed intelligence operative Richard W. Bissell in charge of developing and operating the secret U-2 spy plane. The U-2 was designed by Kelly Johnson, of the Lockheed Corporation, who had also designed many other aircraft, including the P-38 and F-104 fighters. The U-2, the first prototype of which was launched in 1956, was a reconnaissance aircraft with photographic and electronic surveillance capabilities designed to overcome limitations posed by other planes. The exceedingly light plane was modeled after a glider and was equipped with a jet engine, allowing it to fly at very high speeds. With a maximum speed of more than 530 mph, the U-2 cruised at 70,000 feet—beyond the range of Soviet fighters or surface-to-air missiles (SAMs)—and could travel more than 4,000 miles on a single load of fuel. These features made the plane seemingly immune to attack and maximized intelligence gathering.

President Dwight D. Eisenhower approved the first U-2 mission over the Soviet Union on 4 July 1956. The unarmed aircraft were operated by the CIA and flown by former U.S. Air Force pilots under contract with the CIA. Civilian rather than military aircraft and crews were used so that if the Soviets learned about the flights, they might consider them less threatening. This thinking proved prescient, because the Soviets tracked nearly every U-2 incursion, finally downing one with near misses by three SAMs detonated below the aircraft on 1 May 1960. The Soviets retrieved a substantial amount of the aircraft's wreckage and equipment. Coupled with the capture of pilot Francis Gary Powers and his admission of the flight's purpose, the downing of the U-2 forced the United States to concede publicly that it had been conducting aerial reconnaissance of the Soviet Union, although the scope and extent of the effort were not specified.

The data gathered by the U-2 and other reconnaissance programs was an enormous intelligence windfall that helped shape Western military planning and diplomacy at the time. For example, for the limited number of individuals privy to such information, the data helped confirm the absence of a missile gap between the Soviet Union and United States. The persistent overflights also may have influenced the advent of certain Soviet armaments. For example, the prospect of countering increasingly higher- and faster-flying planes required the development of more capable fighter interceptors and anti-aircraft weapons. This, in turn, led the United States to rely more on reconnaissance satellites invulnerable to these arms.

Uganda

East African nation covering an area of 91,135 square miles, about twice the size of the U.S. state of Pennsylvania. The Republic of Uganda borders the Democratic Republic of the Congo to the west, Sudan to the north, Kenya to the east, and Rwanda and Tanzania to the south. Uganda's economy was largely agricultural, and its major exports included coffee and cotton. The nation demonstrated the defining influence of European colonialism on African national boundaries. Formerly part of the British Empire, Uganda gained its independence in 1962. The history of the nation during the Cold War serves as an excellent example of the difficulties faced by much of post-colonial Africa, including instability, internal division, authoritarian government, and civil war.

In the decades after World War II, European colonialism quickly faded, creating dozens of new states by 1970. In Britain's African possessions, local resistance movements accelerated the independence process. The Mau Mau rebellion in Kenya in the early 1950s led the British to plan for the gradual independence of their African colonies over a period of two to three decades. However, further unrest in Malawi and East Africa in 1959 and 1960 forced them to expedite the process. As a result, Uganda and other nations acquired independence in the early 1960s without the established institutions necessary for a stable transfer of power. This institutional weakness, coupled with the multiethnic character of the new nations, created a serious threat of internal conflict.

Uganda's situation at the time of independence appeared promising. Prime Minister Milton Obote presided over the various groups within the country. The largest of these, the Buganda, enjoyed semiautonomous status in their homeland of Buganda; a role for their traditional ruler, the Kabaka; and a separate parliament, the Lukiiko. Obote sought greater power, however,

and in 1966 he dissolved the National Assembly and produced a new constitution concentrating authority in his own hands. During the same period, he acted against the autonomy of the Buganda, removing the authority of the Kabaka and sending troops against the parliament. He formally eliminated the separate status of Buganda in 1967.

Obote had appointed Idi Amin head of the army in 1966. Amin, a former member of the British colonial army, had risen in status as a result of independence and the lack of trained officers in Uganda. In 1971, he took advantage of Obote's absence from the country and staged a successful coup with the support of the military. As a result of Obote's concentration of power, no institution existed to stand in Amin's way. Amin acted ruthlessly and began the systematic elimination of Obote's supporters. Because Obote's roots lay with the Langi and Acholi tribes of northern Uganda, Amin also ordered the wholesale slaughter of those groups. Over the eight years of his regime, hundreds of thousands of people were killed, as Amin eliminated anyone who appeared to oppose him.

As a former subject of British colonialism, Amin also sought to act against imperialism and its vestiges. He delighted in humiliating the remnants of Uganda's British community. More importantly, in 1972 he expelled much of the Asian population, immigrants from other areas of the British Empire (mostly India) who had gone to Uganda during the years of British rule. Asians were resented because of their prosperity and because the British had given them preferential treatment. Amin gained popularity by forcing them to leave and confiscating their property. He used the proceeds of the seizures to buy the support of the army. The departure of as many as 60,000 Asians, including much of the business and professional sectors, took a catastrophic toll on the already fragile economy.

Amin also tried to make a mark on the world stage as an opponent of Western imperialism. He purchased weapons from the Soviet Union and secured support from Saudi Arabia and Libya. His most well-known venture involved his participation in the hijacking of an Air France flight on 27 June 1976. Pro-Palestinian terrorists seized the plane and forced it to fly to Entebbe Airport in Uganda, where they held 105 Israeli and Jewish passengers hostage (the non-Jewish passengers were released) and demanded the release of prisoners held by Israel. The Israelis agreed to negotiate but used the time to plan a daring rescue attempt. Two hundred Israeli soldiers landed at Entebbe, killed the terrorists, and successfully recovered the hostages on 3 July. Three hostages died in the operation. In the process, Amin's force of Soviet MiG fighters was destroyed.

In 1979, in an attempt to retain control of the army, Amin allowed the looting of parts of northern Tanzania. When the Tanzanian Army responded with an invasion of Uganda, Amin was forced into exile in Saudi Arabia. Obote resumed power in 1980, but his electoral victory was contested, and violence quickly broke out. Like Amin, he used ruthless force to eliminate his opponents. Again, thousands were killed. When Obote fell from power in 1985, Uganda lay in ruins, gutted by twenty years of authoritarian rule and internal violence. In 1986 Yoweri Museveni was declared president amid a

chaotic power struggle and continues to serve in that position. In the years following his election, Uganda's economy experienced an impressive recovery. Museveni cracked down on corruption and invested millions in education and public health. Despite Uganda's economic miracle, it remains one of Africa's poorest countries.

Ukraine

Former Soviet republic located in Eastern Europe that declared its independence from the Soviet Union on 24 August 1991. Ukraine had an estimated 1945 population of nearly 40 million people and covers 233,089 square miles, making it roughly twice the size of the U.S. state of Arizona. Ukraine is bordered by Belarus to the north; Russia to the north, northeast, and east; the Sea of Azov and the Black Sea to the south; Moldova and Romania to the southwest; and Hungary, Slovakia, and Poland to the west. Throughout history, Ukraine's position as a strategic frontier region has brought repeated invasions and constantly shifting borders as well as a rich cultural heritage.

The country's geographic position on the southwestern border of the Soviet Union clearly gave it a vital role during the Cold War. Throughout the Cold War, Ukrainians had the distinction of being the largest European population without an independent state. It is impossible to understand the role of Ukraine and the Ukrainians during the Cold War without at least some passing reference to pre-Cold War Ukrainian history. The most important aspects of this relevant to the Cold War period include Ukraine's position as a battleground of empires and ideas and the country's long and often troubled association with Russia. During the 1917 Russian Revolutions and ensuing civil war, Ukrainians attempted to establish an independent state, which was ultimately defeated by the Bolsheviks. Ukrainian lands were thereby divided between Poland and the newly established Soviet Union in the early 1920s.

The political, economic, and social upheavals of the revolutionary era in Ukraine were followed by the forced collectivization of agriculture under Soviet dictator Josef Stalin, which resulted in a devastating man-made famine that claimed the lives of millions of Ukrainians during 1932–1933. This demographic and humanitarian disaster was then quickly succeeded by extensive purges of the Ukrainian Communist Party, which led to further population losses especially among the educated elite.

In September 1939, in the wake of the German invasion of Poland and in accordance with the terms of the Molotov-Ribbentrop Pact, Stalin moved Soviet forces into eastern Poland, which was largely inhabited by Ukrainians and Belarusians. Ukrainians suffered tremendously during the war, and Ukraine became one of the major sites for the extermination of European Jewry during the Holocaust. The reunification of the two parts of Ukraine under Soviet rule in 1939 was made permanent at the end of World War II when the Western Allies accepted Stalin's plan to move Poland's border with Germany significantly west to compensate for the loss of western Ukraine and western Belarus.

Ukrainian resistance to both Nazi and Soviet rule during the war, led by both the Organization of Ukrainian Nationalists (OUN) and the Ukrainian Partisan Army (UPA), continued well into the 1950s, until a combination of internal friction and Soviet countermeasures resulted in the defeat of the insurgents. Polish and Soviet armed forces undertook extensive anti-insurgency operations, which were accompanied by ethnic cleansing throughout the border regions.

Ukraine figured prominently in the early stages of the Cold War, as Stalin attempted to ensure a large Soviet presence at the newly created United Nations (UN). Despite Western refusal to allow Stalin's demand that each of the Soviet republics enjoy individual representation at the UN, Ukraine and Belarus were granted seats in the UN General Assembly. Ukrainian diplomats were completely subordinated to the policies laid down by the Soviet leadership in Moscow, however.

Throughout the 1950s, the Ukrainian Diaspora, many Ukrainians had become refugees during World War II, attempted to draw attention to the situation in their homeland, most notably through the founding of the Anti-Bolshevik Bloc of Nations (ABN), which had ties to other organizations representing the subject nationalities of the Soviet Union.

During the late 1940s and the 1950s, Ukraine underwent extensive social, political, and economic change. Shifting borders, enormous loss of life, and extensive wartime destruction of both the industrial and agricultural infrastructure created difficult living conditions in the Ukrainian countryside as well as in the major cities. Nevertheless, by the 1960s Ukraine had begun to recover economically, and living standards were on the rise. Politically, however, the situation in Ukraine remained tense, especially in the aftermath of the 1968 Soviet invasion of Czechoslovakia, which quashed the Prague Spring and increased Ukrainian dissatisfaction with Soviet rule. An active dissident movement opposed to Soviet rule developed in Ukraine, and many activists were arrested and sentenced to long terms of imprisonment in the gulags.

By the 1970s, Ukrainian political, social, and economic life mirrored trends elsewhere in the Soviet Union and also suffered under Soviet leader Leonid Brezhnev's Era of Stagnation. A Brezhnev loyalist, Volodymyr Shcherbitsky, replaced the leader of the Ukrainian Communist Party, Petro Shelest, and restored obedience to Moscow. This state of affairs continued well into the 1980s, until the advent of Mikhail Gorbachev as general secretary of the

Demonstrators marking the fifth anniversary of the 1986 Chernobyl nuclear power plant disaster. (Chuck Nacke/Time Life Pictures/Getty Images)

Communist Party of the Soviet Union (CPSU) in 1985. A major catalyst for change in Ukraine was the April 1986 nuclear disaster at the Chernobyl nuclear power plant in the north of the country near the border with Belarus. The immediate impact of Chernobyl was to irradiate large parts of the surrounding area and its population, creating a human and environmental tragedy of unprecedented proportions. Gorbachev's failure to adequately respond to Chernobyl drew increased attention to the failings of the Soviet system. Soon, there were increased calls for dramatic reform throughout Ukraine.

As Gorbachev's glasnost and perestroika reforms developed and as people in the Soviet Union, including Ukraine, were freer to discuss the issues confronting Soviet society, a nascent democratic movement, called the Rukh National Movement for Perestroika (also known as the People's Movement), was formed in Ukraine by the Writers' Union in 1989. Rukh led the drive for reform and eventually Ukrainian independence. Shcherbitsky was removed as leader of the Ukrainian Communist Party and was replaced by Leonid Kravchuk, who went on to become Ukraine's first president. In the March 1990 Supreme Soviet elections, Rukh and its allies did relatively well at the polls. By July 1990, the Ukrainian Supreme Soviet, in defiance of Moscow and the central Soviet authorities, declared the economic and political sovereignty

of Ukraine. This tense and anomalous situation of being a sovereign country within the Soviet Union was finally resolved in August 1991 in the aftermath of the failed coup attempt against Gorbachev. On 24 August 1991, Ukraine declared itself fully independent.

Ulbricht, Walter (1893–1973)

Head of the German Democratic Republic (GDR, East Germany) during 1949–1971. Born in Leipzig on 30 June 1893, Walter Ulbricht was the son of a tailor, and both his parents were members of the German Social Democratic Party (SPD). After serving in the German Army during World War I from 1915 to 1918, Ulbricht migrated to the radical wing of the party during the German Revolution of 1918–1919 and became a founding member of the German Communist Party (KPD).

In 1924, Ulbricht left Germany to attend Communist International (Comintern) courses in Moscow. On his return in 1926, he was elected to the state parliament of Saxony. He subsequently won election to the national parliament in 1928 and served there until 1933. He fled Germany when Adolf Hitler came to power, moving first to Paris and then to Prague. Ulbricht also fought with the International Brigades on the Republican side in the Spanish Civil War. He then fled to Moscow in 1938.

In the Soviet Union during World War II, Ulbricht and many other national communist leaders trained in preparation for their return after the war. Ulbricht returned to Germany with the Soviet Red Army in 1945 and established his group as the core of the revived KPD. Supported by the Soviet Military Administration, Ulbricht and Wilhelm Pieck negotiated a merger with the SPD in the Soviet zone of Germany, forming the Socialist Unity Party (SED). Ulbricht emerged as secretary-general of the party and led the drive to embed Soviet-style policies. When the East German government was formed in October 1949, the leading role of the SED was enshrined in the constitution and Ulbricht became deputy premier.

Ulbricht worked behind the scenes but was generally acknowledged as the real power within East Germany. Along with Willi Stoph, Ulbricht managed a purge of the SED, leaving hard-line communists in all the key positions

in both the party and the government. He adopted hard-line Stalinist policies, promoting rapid industrialization and the collectivization of agriculture.

After the death of Stalin in 1953, it appeared that Ulbricht might fall from power when he refused to implement reforms suggested by the new Soviet leadership. His intransigence sparked riots in East Berlin and across East Germany on 16–17 June 1953, and Red Army tanks had to be called in to restore order.

Ironically, the threat of rebellion wedded the Soviet leadership more firmly to Ulbricht. He was one of the main forces behind the 1955 formation of the Warsaw Treaty Organization, designed to counter the North Atlantic Treaty Organization (NATO) and the perceived Western threat to East German government. When Pieck, who had been elected president of East Germany in 1949, died in 1960, Ulbricht assumed the title of head of state. Not until after the construction of the Berlin Wall in August 1961 did he institute even limited reforms.

The New Economic System of 1963 was designed to free up market forces within East Germany while maintaining the SED's constitutional grip on political power. Instead, the economy stagnated, and critics of the SED regime who might have immigrated to the Federal Republic of Germany (FRG, West Germany) now emerged within East Germany. Ulbricht refused to compromise, and when Warsaw Pact forces entered Czechoslovakia to suppress the reforms of the Prague Spring, Ulbricht dispatched a division to assist. By 1970, however, it was clear that he was out of touch and out of favor among the East German leadership. Erich Honecker, long recognized as the "crown prince" of the SED, effectively organized Ulbricht's ouster in 1971. Ulbricht remained as head of state, but Honecker became secretary-general of the SED and the real power in East German government.

Ulbricht died in the Berlin suburb of Döllnsee on 1 August 1973. His legacy is that of a true Cold Warrior who clung to Stalinist policies regardless of cost. His insistence on collectivization and industrialization in the 1940s and 1950s nearly broke the fledgling state's economy. By 1961, Ulbricht's regime was forced to imprison its own citizens behind the Berlin Wall. Because of such decisions, East Germany remained largely isolated under his regime, a symbol of the deep divisions of the Cold War.

See Soviet Union

United Kingdom

In the early 1960s, former U.S. Secretary of State Dean Acheson controversially stated that Britain had “lost an empire and failed to find a role.” Britain’s post-1945 foreign policies were driven by the desire to maintain, insofar as possible, great-power status, which made it crucial to forge a special relationship with the United States whereby Britain could obtain economic and military assistance from the United States, not least in implementing anti-Soviet policies in Europe. Although Britain was usually the closest U.S. ally, British leaders often found galling their new disparity in status, as the United States replaced Britain as the world’s strongest power.

By 1943, British leaders were apprehensive that when World War II ended, Soviet military power and territorial holdings would be greatly enhanced, allowing the communist Soviet Union to dominate much of Eastern Europe. In October 1944, British Prime Minister Winston Churchill negotiated an informal percentages agreement with Soviet Premier Josef Stalin whereby the two leaders delineated their countries’ respective spheres of influence. At the February 1945 Yalta Conference, Churchill and U.S. President Franklin D. Roosevelt both acquiesced in effective Soviet domination of most of Eastern Europe. The three leaders also agreed to divide Germany into three separate occupation zones, to be administered by their occupying military forces but ultimately to be reunited as one state. In April 1945, Churchill unavailingly urged American military commanders to disregard their existing understandings with Soviet forces and take and—he apparently hoped—retain Berlin, the symbolically important German capital.

Churchill’s successor as prime minister, Labour Party leader Clement Attlee, and his foreign secretary, Ernest Bevin, a firmly anticommunist trade

unionist, were equally strong advocates of a policy of firm resistance to Soviet expansion in Europe. Their position, however, was one of relative weakness, as Britain ended the war near bankruptcy, heavily indebted to the United States for Lend-Lease aid—obligations canceled in return for British pledges to dismantle the sterling area—and faced with heavy and expensive military commitments in Germany, Japan, and Greece and around its far-flung empire. London's foreign debt increased sevenfold during the war, standing at £13.3 billion in June 1945. To finance the war, the British had liquidated most of their overseas investments, and the country was running a substantial adverse balance of trade, while wartime bombing had badly damaged existing factories and plants, squeezing Britain's export capacities. In addition, the new Labour government sought to institute ambitious social welfare policies. Without U.S. assistance, Attlee and Bevin believed, Britain's foreign policy goals would remain unattainable.

In 1945, Britain still ruled the greatest empire in history, significant portions of which in Asia were regained in the last months of the war. Budgetary considerations and the desire to allay American anticolonialist sentiment mandated the speedy jettisoning of much of the empire, as did the Labour Party's stated anti-imperialist outlook and the strength of nationalist sentiment, especially in India. In February 1946, Attlee proudly announced plans to grant that country full independence in the near future. This occurred in August 1947, with the largely Muslim northwestern and northeastern provinces choosing to separate from the predominantly Hindu remainder, leaving what became Pakistan. Within a few years, Burma followed suit, although Britain retook and retained for some years those Asian colonies—Malaya, Singapore, and Hong Kong—whose continued possession and administration remained economically profitable.

British initiatives and prompts were highly significant to the making of early U.S. Cold War policies. Conscious of British weakness, especially vis-à-vis the newly menacing Soviet Union, with its power now ensconced across Central and Eastern Europe to the Elbe, Attlee sought to encourage the United States to maintain a close Anglo-American alliance. He was privy to and endorsed Churchill's intention to sound these themes in a major address in the United States, which Churchill did in his famous February 1946 "Sinews of Peace" speech (also known as the "Iron Curtain" speech) at Fulton, Missouri.

By late 1946, budgetary problems left British leaders little alternative but to reduce expensive military commitments. They chose to do so in Greece and Turkey. Greece was facing a major internal communist insurgency, while Turkey was experiencing heavy Soviet pressure for rights to the strategic Dardanelles straits. Attlee and Bevin privately informed President Harry S. Truman and Secretary of State George Marshall of their intention to withdraw sometime before the public announcement, which became the occasion for Truman's February 1947 speech (known as the Truman Doctrine), placing U.S. aid to Greece and Turkey in the broader context of a worldwide anticommunist strategy.

The harsh winter of 1946–1947 caused economic difficulties and generated unrest across Western Europe, bringing further British pleas for U.S.

Marshall Plan aid benefited all segments of society. Here, new machinery financed under the plan helps the T. S. Cunningham Nylon Factory in Scotland increase production. The new production rate is represented by the five stockings on the table, while the old rate is shown in the single stocking, held by the women. (National Archives and Records Administration)

aid. This helped to generate the Marshall Plan, a coordinated program for European economic recovery. British acquiescence in the merging of their and the American occupation zone of Germany and the area's inclusion in the Marshall Plan were contributing factors in the 1948–1949 Berlin Blockade. Attlee and Bevin, already instrumental in establishing a Western European Union defense pact under the March 1948 Treaty of Brussels, urged that only if the United States itself joined a defensive pact would Europe feel secure. This in turn led to the North Atlantic Treaty, signed in Washington in April 1949 by the United States, Canada, and ten West European states. The members of the resultant North Atlantic Treaty Organization (NATO) pledged to come to each other's defense should one be attacked.

By 1950, major differences existed between the United States and Britain on Asian policy over Hong Kong, Indochina, anticolonialism, and especially

the new communist People's Republic of China (PRC). Britain, unlike the United States, pragmatically accorded the PRC almost immediate recognition and traded extensively with it. The Korean conflict gave British leaders an opportunity to demonstrate their continuing loyalty and regain the international status that Britain's economic problems and the 1949 devaluation of the pound had eroded. Due to Bevin's poor health and eventual death, during the Korean crisis Attlee was central to British policymaking. Urged on by his ambassador in Washington, Sir Oliver Franks, in July 1950 Attlee overrode his reluctant chiefs of staff and committed British troops to the American-led United Nations (UN) forces.

British officials welcomed the massive American enhancement of NATO forces that quickly resulted from the Korean conflict. Fearful, however, of UN commander General Douglas MacArthur's bellicose rhetoric on the potential use of nuclear weapons, they welcomed his removal. Churchill, who regained office in 1951, rejoiced when his old colleague Dwight David Eisenhower, former World War II commander of Allied forces in Europe, became president of the United States in 1953. Fearful of the destructive consequences of nuclear war, especially since both the Americans and the Soviets were developing thermonuclear weapons and since Eisenhower's New Look defense strategy relied primarily upon nuclear rather than conventional forces, Churchill urged Eisenhower to seek rapprochement and arms control agreements with the Soviet Union—advice that reinforced Eisenhower's own proclivities and contributed to his search for coexistence with the new Soviet general secretary, Nikita Khrushchev. Although Eisenhower probably only used this as a convenient excuse to justify his own pre-existing inclinations, he cited Churchill's refusal in 1954 to join the United States in mounting air strikes to relieve beleaguered French forces at Dien Bien Phu as the reason that the American government declined to intervene there and help the French continue the conflict.

In 1956, nonetheless, Eisenhower made Britain's reduced status and dependence upon the United States humiliatingly apparent. In 1953 the nationalist Gamal Abdel Nasser took power in Egypt. Initially, he sought both military and economic aid from the United States, but the Israeli lobby pressured Congress to deny aid, whereupon Nasser obtained arms from the Soviet bloc. This, in turn, led U.S. Secretary of State John Foster Dulles in 1956 to rescind an earlier American pledge to provide Nasser with funding for his Aswan Dam project, whereupon Nasser nationalized the Suez Canal, co-owned by the British and French governments. While joining Dulles in negotiations to resolve the crisis, Britain and France secretly collaborated with Israel on war against Egypt to regain the canal, mounting an invasion in early November 1956, just prior to the U.S. presidential election. Dulles and Eisenhower exerted financial and military pressure on all three powers to withdraw, which they eventually did, but the episode greatly embittered Anglo-American relations.

Anthony Eden's successor as prime minister, the half-American Harold Macmillan, an old wartime colleague of Eisenhower's who was also connected by marriage to John F. Kennedy, valiantly attempted to restore the

relationship. From 1957 to 1962, the two countries signed a series of defense agreements on the sharing of nuclear information, according Britain exclusive rights to use American nuclear technology in return for U.S. rights to deploy military weapons on British bases. The United States also promised Skybolt missiles and then sold Polaris missiles to Britain. In addition, in 1959 Eisenhower finally committed the United States to defend the British colony of Hong Kong, once an embarrassing colonial survival, now a free world bastion.

As they became increasingly embroiled in both the Middle East and Asia, American leaders perceived Britain's military forces and imperial holdings as useful adjuncts to their own undertakings. Between 1948 and 1960, British troops successfully suppressed a communist insurgency in Malaya, after which the country received its independence. Plagued by various financially and militarily burdensome nationalist and guerrilla movements in many of Britain's African colonies, in 1960 Macmillan publicly announced that in response to "winds of change," Britain would speedily grant independence to its remaining colonies, a pledge largely fulfilled by 1970. During the 1960s, growing U.S. military involvement in Vietnam helped to divide the United States from its European NATO allies, all of whom ignored forceful American requests to commit military forces to the conflict, in part because of strong domestic political opposition and major antiwar protests.

Britain did, however, provide intelligence information and logistical support to U.S. forces in Vietnam. In addition, British Prime Minister Harold Wilson cited British anticommunist efforts in Malaysia and Indonesia as major contributions supplementing American efforts elsewhere in Southeast Asia. President Lyndon B. Johnson's administration deplored Britain's 1967 decision to withdraw British military forces east of the Suez and the near-contemporaneous devaluation of the pound, which undercut U.S. efforts to maintain the post-World War II Bretton Woods international exchange system of fixed-rate currencies. Johnson was nonetheless grateful these had not come earlier.

Wracked by major economic and social problems for much of the 1970s, Britain was less significant to American foreign policy, and the relationship languished. Conservative Prime Minister Edward Heath (1970–1974) looked toward Europe, not the United States. He finally succeeded in negotiating British entry into the European Economic Community (EEC) in 1973, after two earlier failed attempts during the 1960s. Many believed that this marked a permanent reorientation of British foreign policy in favor of Europe at the expense of both the United States and the British Commonwealth. The Labour government that replaced Heath in 1974 faced serious internal problems, including a strong party faction favoring withdrawal from NATO. So severe were British economic difficulties that in 1976 the country had to seek a substantial and humiliating loan from the International Monetary Fund (IMF). This was granted only in return for major cuts in British public spending.

In 1979, however, the right-wing Conservative Party politician Margaret Thatcher won election as prime minister. She was determined to restore

British greatness and the free market and was staunchly anticommunist and pro-American in outlook. The more jovial but equally ideological Ronald Reagan, elected U.S. president in November 1980, admired and respected her as an intellectual soul mate. They soon forged a close political and personal friendship. Initially, the two embarked on firmly anti-Soviet policies, cutting social welfare spending but increasing defense budgets. In the 1982 Falklands War, Thatcher's determination to resist Argentine seizure of British-owned islands won Reagan's admiration and ultimately received significant military and intelligence support from his administration. The two governments cooperated closely on defense and other issues. Thatcher was the only European leader to support Reagan's 1986 bombing of the Libyan capital of Tripoli, an action taken in retaliation for alleged terrorist activities. She also overrode substantial domestic opposition to stationing short- and intermediate-range American nuclear-armed cruise missiles on British soil, symbolized by the camp that antinuclear protestors established in 1980 and maintained for several years outside Greenham Common Air Base in Berkshire.

After the reformist Mikhail Gorbachev became Soviet general secretary in March 1985, Thatcher met with him and urged Reagan to have faith in his expressed desire to moderate the Cold War. Her prompts apparently weighed heavily with Reagan in his own subsequent meetings with Gorbachev, which began the process of Soviet-American rapprochement that eventually brought an end to the Cold War. When Iraqi dictator Saddam Hussein annexed Kuwait in 1990, Thatcher reputedly helped to persuade President George H. W. Bush, Reagan's successor, to stand firm. Her successor, John Major, dispatched the second-largest military contingent—after that of the United States—to the consequent 1991 Persian Gulf War.

This pattern continued even after the Cold War ended, with Britain the most reliable military ally of the United States. Having forged a close relationship with President William "Bill" Clinton, British Prime Minister Tony Blair developed an equally strong bond with President George W. Bush, breaking with much of his own Labour Party to join the war against Iraq in 2003. Regardless of political affiliation, and temporary estrangements notwithstanding, from 1945 onward most British prime ministers looked to the United States as their perennial and most reliable ally.

United Kingdom, Armed Forces

During the Cold War, Britain's Royal Air Force (RAF) paralleled the narrowing in focus of Britain's overseas commitments and the reduction of its armed forces. Two predominant forces that shaped the RAF were sharp downsizing and spiraling technological sophistication, which combined to transform the 1945 great power air arm into the only second-tier air force capable of global operations by 1991.

The RAF's contraction from its World War II end strength of 1 million men to only 89,000 by 1991 had a number of important effects. Foremost, the end of conscription in 1960, coupled with ever more complex aircraft, accelerated the professionalization of the service. Additionally, fewer resources and Britain's narrowing strategic interests eliminated most overseas postings outside the United Kingdom after the withdrawal from east of the Suez in 1967.

The growing technological sophistication of airpower also decisively shaped the postwar RAF. The advent of jet technology and swept wings in the 1940s, supersonic flight, electronic warfare, British nuclear weapons and variable-geometry aircraft in the 1950s, and terrain-following flight in the 1960s presented too hostile an environment for most of the British aeronautical industry. Radical downsizing and consolidation reduced Britain's industry to a handful of companies. The cancellation of the TSR.2 in 1965 forced cooperation with allied powers in projects such as the Jaguar and Tornado or wholesale adoption of American weapon systems such as the F-111 and C-130. Despite the evisceration of Britain's aeronautical industry, the RAF remained capable of applying cutting-edge technology and by 1991 was one of only a handful of powers capable of worldwide operations with precision munitions.

The initial role of the RAF in the postwar world emanated from its heritage as a strategic bombing force. Following a 1947 decision to develop an independent nuclear program, the RAF engaged in a tortuous process of developing both usable weapons and the platforms capable of delivering them. Britain achieved the former in a test at the Monte Bello Islands in 1952, but the latter turned out to be more problematic. Although Lincolns (upgraded wartime Lancasters) and Washingtons (U.S.-loaned B-29s) provided an interim nuclear delivery capability, they were ultimately unsatisfactory in the long run. A ten-year development cycle resulted in a generation of swept-wing, all-jet V-bombers—the Valiant, Vulcan, and Victor—that by 1957 were only marginally capable of penetrating Soviet air defenses. An attempt to evade Soviet surface-to-air missile (SAM) systems by switching

United Kingdom, Air Force

Despite the evisceration of Britain's aeronautical industry, the RAF remained capable of applying cutting-edge technology.

from high- to low-altitude penetration exceeded the design capacity of the V-bombers and mandated their phased withdrawal from frontline strategic service beginning in 1964. That together with the cancellation of the Anglo-American Skybolt tactical missile that was to extend the V-bomber's strike range and the offer of the U.S. Polaris submarine-launched ballistic missile (SLBM) to the Royal Navy (RN) all but ended the RAF's strategic role.

As a result, in a general overhaul reflecting changed missions and resource constraints, the RAF drastically reorganized at the end of the 1960s. The dissolution of Bomber and Fighter Commands in 1968 and the creation of the Strike Command was followed by the RN's Polaris-equipped submarines formally assuming responsibility for the British nuclear deterrent in 1969.

Despite the eclipse of the RAF's strategic role, both before and after 1969 it played an active part in almost every British military operation. After teaming with the U.S. Air Force in the 1948–1949 Berlin Airlift, the RAF successfully aided in defeating insurgencies in Malaya, Cyprus, and Kenya. The strength required for the former precluded large-scale conventional involvement in the Korean War. While fighting instability in erstwhile colonies during the 1950s, the RAF also participated in Britain's military campaign during the 1956 Suez Crisis, effectively destroying the Egyptian Air Force in two days. Smaller conventional operations punctuated the 1960s, including the defense of Kuwait in 1961, extended deployments to contain Indonesia during 1963–1966, and the evacuation of Aden in 1967, a part of the overall withdrawal from east of the Suez.

The slow pace of the 1970s erupted into a major independent campaign in 1982 against Argentina over the Falkland Islands. Operation CORPORATE, which featured joint RN-RAF operations more than 8,000 miles from Britain and required robust logistics, highlighted the RAF as the only European air force still capable of projecting force outside the region. During the 1991 Gulf War, the RAF again showed its prowess by adapting low-level, high-speed delivery techniques developed for the European theater to destroy Iraqi air defenses. Both the RAF's 6,000-plus sorties and extensive Special Air Service operations were a critical component of the Coalition's swift victory. The RAF's performance in the Gulf War underscored its role as a uniquely capable Cold War force that adroitly projected regional and global airpower to advance British and allied interests.

The period of the Cold War was punctuated by a number of small wars for the British Army. British troops were deployed in conflicts around the world, including Java and Sumatra (1945), India (1945–1948), Palestine (1945–1948), Malaya (1948–1960), Korea (1950–1953), the Suez Canal (1951–1956), Kenya (1952–1960), Cyprus (1955–1959), Aden and Radfan (1955–1967), Borneo (1962–1966), Oman (1969–1976), the Falkland (Mariana) Islands (1982), and the Persian Gulf (1990–1991). During this period, the British Army was awarded a total of twenty-three battle honors for action in the Korean War, the Falklands War, and the Persian Gulf War.

Following World War II, Britain found itself weighed down by its postwar obligations, colonial holdings, and the outbreak of the Cold War. The British Army of the Rhine, comprising some 50,000 troops in three divisions, participated in the Allied occupation of Germany. An additional 3,000 troops were stationed in divided Berlin. There was often a colonial/Cold War overlap, such as when Britain faced problems with the Soviet Union in Germany while dealing with independence movements in India, Palestine, and Malaya.

The British Army at the close of World War II numbered 2.931 million men. By August 1947, it had shrunk to a little more than 750,000 men. Even so, the peace dividend was limited. Although military spending dramatically decreased in the initial postwar years, imperial overstretch combined with the Cold War led to defense expenditures taking up a significant portion of the total British budget; indeed, in the period 1948–1954, defense allocations took up 22–42 percent of the aggregate budget. It was not until 1960 that conscription was ended, leading to a volunteer army of roughly 165,000 men, including 19,000 officers. During this time, the annual expenditure for arms was £1.6 million.

The times placed great stress on the British Army, occasionally leading to outbreaks of rebellion among the troops. For example, in 1946 at Muar Camp near Kuala Lumpur in Malaya, 258 men of the 13th Battalion Parachute Regiment, many of whom were veterans of the D-Day invasion, mutinied over living conditions. That same year, there was a Royal Air Force mutiny of nearly 50,000 men at bases in India, Ceylon, Singapore, and the Far East. The servicemen's complaints included dissatisfaction with working conditions as well as disagreement over British imperialism.

In 1946, anti-British riots broke out across India. For five days in August 1946, six British battalions skirmished with violent mobs in Calcutta, and hundreds of Indians were killed. Violence spread to Bombay, Delhi, and the

Punjab region. India finally gained its independence on 15 August 1947, and six months later the last of the British soldiers departed, dramatically ending more than two centuries of British occupation. London now no longer controlled the Indian Army, reducing by half the troops it had available for colonial policing.

The Middle East also proved to be a policing problem. As Zionists worked toward establishing a Jewish homeland, British forces fought to restrict the flow of refugees from Europe to Palestine, provoking a violent response. The British 1st Infantry Division had to be reinforced by the 6th Airborne Division and the 3rd Infantry Division. Some of these reinforcements were diverted from European security duties in the Federal Republic of Germany (FRG, West Germany). Ironically, some of the rebels had been part of the British-trained Jewish Brigade Group, which during World War II had fought in Italy under the British Eighth Army.

During the Korean War (1950–1953), the postwar British Army peaked at more than 440,000 men. Sixteen battalions of British infantry participated in the fighting. Armored and artillery units also played a key role. Britain's only role in the Vietnam War that followed was to provide a jungle-warfare training team in Malaya.

In Egypt, a British presence protected the Suez Canal, an occupation that was also met with resistance. During 1950–1956, more than 50 British servicemen were killed, leading to retaliatory incidents. In March 1956, the last of the British troops left the Suez Canal zone. When Egyptian President Gamal Abdel Nasser nationalized the British-owned Suez Canal Company, the British government called up 20,000 reservists and bolstered its forces in the eastern Mediterranean. Israel, France, and Britain then combined to attack Egypt but were pressured by the United States and the United Nations (UN) to withdraw.

In 1961, Kuwait became independent and was immediately threatened by the Iraqi regime under General Abdul Kassem, leading to the deployment of British troops. The incident was a prelude to the Persian Gulf War three decades later, when British forces totaled 45,000 men. In the 1982 Falkland (Marianas) War, a British task force of 27,000 personnel arrived in the Falkland Islands on 117 ships and defeated an Argentine garrison of 12,000 men.

In the various deployments and military operations of the Cold War era, more than 3,500 British soldiers were killed and an additional 17,000 wounded. Following the end of World War II, 1968 marked the first year in which no British soldiers died in combat. The postwar tally shows that the British Army suffered 223 dead and 478 wounded in Palestine, 489 dead and 961 wounded in Malaya, 865 dead and 2,589 wounded in Korea, 12 dead and 69 wounded in Kenya, 79 dead and 414 wounded in Cyprus, 12 dead and 63 wounded in Suez, 59 dead and 123 wounded in Malaysia, 52 dead and 510 wounded in Aden, 225 killed and 777 wounded in the Falklands, and 87 dead and 1,700 wounded in the Persian Gulf.

During the Cold War, the British Army primarily tended to unrest in its former colonial holdings, problems that were directly and indirectly related to the larger struggle between the East and the West. Britain's resolve to commit troops around the world in crisis situations played a role in containing communism by limiting opportunities for Kremlin designs. By the time of the 1991 Persian Gulf War, when Britain partnered with the United States in opposing Saddam Hussein, the Soviet Union had practically reached its end as leaders of the West proclaimed a new world order.

United Kingdom, Navy

The United Kingdom's Royal Navy (RN) was gradually streamlined and downsized during the Cold War, shifting its strategic capability from that of a surface fleet to one that primarily employed submarines and antisubmarine warfare. In 1945 Britain still maintained naval bases around the world. Its domestic fleet bases were located at Portsmouth, Devonport, and Chatham. There was also a dockyard at Rosyth in Scotland. Overseas bases were situated in Malta; Ceylon; (Trincomalee); Singapore; and Simonstown, South Africa (near Capetown), with Gibraltar and Bermuda serving as dockyards. In 1954, the navy had more than 600 vessels and a regular force strength of 117,700. By 1991, its active-duty force had been downsized to 60,000. During 1950–1990 there were major reductions in the number of aircraft carriers (from 12 to 3), cruisers (from 29 to 0), destroyers/frigates (from 280 to 51), and conventional submarines (from 66 to 9).

The financial realities of waging the Cold War had a major impact on Great Britain beginning in 1951, the year after the outbreak of the Korean War, when military expenditures doubled. At that time, British troops were already in Malaya and Hong Kong in response to perceived communist threats. The RN was a major participant in the Korean War, utilizing aircraft carriers (the *Glory*, *Ocean*, *Theseus*, and *Triumph*); cruisers (the *Birmingham*, *Belfast*, *Jamaica*, *Kenya*, and *New Castle*); destroyers (the *Charity*, *Cockade*, *Comus*, *Consort*, and *Cossack*); frigates (the *Alacrity*, *Black Swan*, *Heart*, *Morecome Bay*,

Mounts Bay, and *Whitesand Bay*); a hospital ship (the *Maine*); and other vessels. RN aircraft employed in Korea included the *Sea Fury*, *Firefly*, and *Seafire*.

Prior to the Korean War, the RN experienced several incidents in the Mediterranean and the Far East. In 1947, the Mediterranean Fleet had attempted to stem the tide of illegal Jewish immigrants from Europe to Palestine. In 1949, the destroyers *Saumarez* and *Volage*, during a show of force against the communists, struck mines off the coast of Albania, resulting in the loss of forty-four lives. Also in 1949, the frigate HMS *Amethyst* came under attack by Chinese communist forces when it patrolled up the Yangtze River. In 1951, the RN responded to the Anglo-Iranian oil dispute by imposing a blockade on the port of Abadan to prevent oil from being exported.

In 1956 Britain, France, and Israel carried out a coordinated attack on Egypt. During the Suez Crisis, the RN dispatched the aircraft carriers *Eagle*, *Albion*, and *Bulwark* to the Canal Zone. In that conflict, the *Ocean* at Port Said launched the first helicopter-borne amphibious landing in history. The Suez Crisis revealed serious shortcomings in Britain's military reach and indicated that it was no longer able to undertake major unilateral military action. Britain's military position was also affected by the hydrogen bomb. A Defence White Paper of April 1957 concluded that "the role of naval forces in total war is uncertain." Conscription came to an end that same year, and greater reliance was placed on nuclear weaponry. The same year, after successfully lobbying the United States to amend its Atomic Energy Act, British officials were able to purchase from the Americans a nuclear propulsion plant for the first British nuclear-powered submarine, HMS *Dreadnought*.

The *Dreadnought*, commissioned in 1963, represented a new strategy. From this point in the RN, traditional aircraft carriers declined in importance. HMS *Ark Royal*, the last such vessel, was decommissioned in 1978. Beginning in 1980, smaller carriers—the *Invincible*, *Illustrious*, and *Ark Royal*—transported helicopters and vertical-lift Sea Harrier jets. Beginning in the 1970s, a Polaris submarine fleet of four boats—the *Resolution*, *Repulse*, *Renown*, and *Revenge*—also strengthened Britain's nuclear capability. Each submarine could carry sixteen missiles armed with nuclear warheads with a striking range of 2,500 nautical miles.

Despite naval spending cuts during the 1960s and 1970s, defense costs remained high, and by the early 1980s there was pressure for an even leaner military. On 25 June 1981, Secretary of State for Defence John Nott submitted to Parliament "The United Kingdom Defence Programme: The Way Forward." This report recommended a strategic emphasis on Europe, in conjunction with North Atlantic Treaty Organization (NATO) forces, with less emphasis on global capability. Since the British Army and the Royal Air Force were already largely oriented toward West European defense, the brunt of the cuts was earmarked for the RN. Fortunately for the government of Prime Minister Margaret Thatcher, the crisis in the Falklands broke out prior to the implementation of this new approach.

In 1982, Britain went to war with Argentina over the Falkland Islands. It was Britain's first engagement with a modern navy since 1945 and proved a challenging undertaking, as it was fought 8,000 miles from the British Isles.

Royal Navy Resolution-class submarine, 1966. The Resolution-class were the first British strategic ballistic missile submarines and carried the Polaris missile. (Art-Tech)

During the Falklands War, the RN provided essential reach and support for a British expeditionary force to reconquer the islands from Argentina. In all, the United Kingdom committed 117 ships and 27,000 personnel, led by Rear Admiral John “Sandy” Woodward. On 2 May 1982, the British nuclear-powered submarine *Conqueror* torpedoed and sank the Argentine cruiser *General Belgrano*. Under Argentine Air Force attack with French-made Exocet missiles, Britain lost the Type 42 destroyers *Sheffield* and *Coventry*, the Type 21s *Antelope* and *Ardent*, the landing ship *Sir Galahad*, and the container ship *Atlantic Conveyor*. British war dead tallied 255, with another 777 wounded. The war prompted British officials to reconsider their drastic downsizing of the RN.

In 1991, Britain began replacing the Polaris submarine-launched ballistic missiles (SLBMs) with larger Tridents. With the end of the Cold War, aside from the submarine-missiles deterrent, the RN’s primary role has been antisubmarine warfare, which was aided by three antisubmarine warfare carriers lifting Sea King antisubmarine and early warning helicopters.

Multinational organization established in 1945 and designed to promote four primary objectives: collective security, international economic and cultural cooperation, multilateral humanitarian assistance, and human rights. The creation of the United Nations (UN) represented an attempt by the World War II Allies to establish an international organization more effective than the interwar League of Nations, which had failed to mitigate the worldwide economic depression of the 1930s or prevent a second world war. UN architects were heavily influenced by the belief that during the 1930s, nationalist policies, economic and political rivalries, and the absence of international collaboration to help resolve outstanding disputes had contributed substantially to the outbreak of World War II.

Even before the United States officially joined the war effort, in the early months of World War II U.S. Secretary of State Cordell Hull established a departmental planning group for the purpose of creating the UN. At a meeting off the Newfoundland coast in August 1941, American President Franklin D. Roosevelt and British Prime Minister Winston Churchill included a broad proposal for an international security system in the Atlantic Charter, which was their declaration of overall war objectives.

On 1 January 1942, the governments of twenty-six nations fighting Germany, Italy, and Japan issued the Declaration by the United Nations affirming their alliance against the Axis powers and also stating their commitment to liberal war objectives, as set forth in the Atlantic Charter, and the restoration of the principles of international law. In 1943, both houses of the U.S. Congress also passed resolutions demanding the creation of a postwar international security organization in which, they implied, their own country should take the leading role that it had abdicated in the League of Nations. Meeting in Moscow in October 1943, foreign ministers of the four leading Allied powers—the United States, Great Britain, the Soviet Union, and China—

Executive authority rested with the eleven-member UN Security Council, which would have five permanent members: Britain, France, the United States, Russia, and China.

signed the Declaration of Four Nations on General Security, committing their nations in general terms to the creation of a postwar international organization.

More specific proposals came out of the Dumbarton Oaks Conference held in Washington, D.C., from August to October 1944 in which thirty-nine nations participated. These recommendations represented a compromise between the ideas of Roosevelt and other devotees of *realpolitik*—that agreement between the Big Four Allied powers, “the four policemen,” must be the foundation of postwar international security—and more idealistic popular visions of a world in which all powers, great and small, enjoyed equal status and protection. The Dumbarton Oaks Conference agreed to create a bipartite UN modeled on the earlier League of Nations but reserving ultimate authority to the dominant Allied states. Any peace-loving state that was prepared to accept the terms of the UN Charter would be eligible to apply for membership. All member states would be represented in the UN General Assembly, which would debate, discuss, and vote on issues that came before it. Executive authority rested with the eleven-member UN Security Council, which would have five permanent members: Britain, France, the United States, Russia, and China. The remaining Security Council representatives were drawn from other UN states, all of which would serve two-year terms in rotation. Besides providing an international security mechanism, the UN was also expected to promote international cooperation on economic, social, cultural, and humanitarian issues.

Membership of the United Nations

<i>Year Joined</i>	<i>Countries</i>
1945	Argentina, Australia, Belarus, Belgium, Bolivia, Brazil, Canada, Chile, China, Colombia, Costa Rica, Cuba, Denmark, Dominican Republic, Ecuador, Egypt, El Salvador, Ethiopia, France, Greece, Guatemala, Haiti, Honduras, India, Iran, Iraq, Lebanon, Liberia, Luxembourg, Mexico, Netherlands, New Zealand, Nicaragua, Norway, Panama, Paraguay, Peru, Philippines, Poland, Russia (Soviet Union), Saudi Arabia, South Africa, Syria, Turkey, Ukraine, United Kingdom, United States, Uruguay, Venezuela
1946	Afghanistan, Iceland, Sweden, Thailand
1947	Pakistan, Yemen
1948	Myanmar
1949	Israel
1950	Indonesia

1981	Antigua and Barbuda, Belize, Vanuatu
1983	Saint Kitts and Nevis
1984	Brunei
1990	Lichtenstein, Namibia
2002	East Timor

At the February 1945 Yalta Conference, the Allies—at Soviet insistence—agreed that each permanent Security Council member should enjoy veto power over all General Assembly decisions. The Soviet Union also obtained separate representation for Belorussia (Belarus) and Ukraine. The Yalta Conference further agreed on a UN trustee system to administer both former League of Nations mandatory territories—originally colonies taken from Germany and Turkey after World War I—and areas seized from the Axis powers when the current war ended.

The Yalta Conference formally invited all Allied and most neutral powers to attend a conference that would open in San Francisco on 25 April 1945 to establish the UN. Representatives of fifty-one nations attended this gathering, which ended on 25 July 1945, and hammered out the details of the UN

Charter, which accorded smaller states slightly more authority than had the original Dumbarton Oaks proposals. The charter incorporated the International Labor Organization (ILO), established under the original 1919 League of Nations Covenant. To pursue its stated nonsecurity objectives, the charter also created the United Nations Economic, Social and Cultural Organization (UNESCO), together with an eighteen-member Economic and Social Council, a Trusteeship Council, an International Court of Justice, and the UN Secretariat, which administered the organization. By the end of 1945, all fifty-one states represented at San Francisco had ratified the UN Charter. In 1946 the body held its first session in London and in 1947 moved permanently to the United States, where its headquarters was completed soon afterward in New York City.

So vast were the mandate and responsibilities of the UN that much regarding its future role remained open when it was founded in 1945. As is not uncommon with bureaucracies, additional agencies proliferated, and its structure gradually became more complex. As former colonies won independence and large states were sometimes partitioned into smaller units, by the end of the twentieth century the membership had expanded from the original 51 member states to close to 200. As the number of members soared, the Security Council grew from 11 to 15 members, and the Economic and Social Council rose first to 27 members and eventually to 54. By the mid-1990s, the UN system embraced fifteen specialized institutions, among them the ILO, the International Monetary Fund (IMF), the World Bank Group, UNESCO, and the World Health Organization (WHO); two semiautonomous affiliates, including the International Atomic Energy Authority (IAEA); fifteen specific organizations established by and responsible to the General Assembly; six functional commissions; five regional commissions; and seventy-five special committees. By the mid-1990s, more than 29,000 international civil servants worked for the UN in its New York headquarters and its subsidiary offices in Geneva and Vienna.

The UN soon became an arena for Cold War contests and disputes in which the major powers tested their strength, while third world nations came to see the UN as a forum where, given their growing numbers, the concerns of less-developed countries could be voiced and made effective, especially in the General Assembly, which was empowered to discuss all international questions of interest to members. In the Cold War context, the UN became a venue in which the Western and communist camps contended for power. Despite its stated security role, the organization proved remarkably unsuccessful in defusing the growing tensions that, during the second half of the 1940s, rapidly came to divide the former World War II Allies such that the Western powers of Britain, France, and the United States were soon fiercely at odds with the Soviet Union.

With UN endorsement, in 1948 the Republic of Korea (ROK, South Korea) established a pro-Western and noncommunist government, while the communist Democratic People's Republic of Korea (DPRK, North Korea) failed to win UN recognition. A much greater test of strength came after the communist takeover of Mainland China in October 1949, when the United

The People's Republic of China (PRC) is formally seated at the United Nations in 1971. At the same time, the world body expelled the Republic of China (ROC, Taiwan), heralding the de facto end of world recognition of Taiwan as representing China. (Corel)

States vetoed Soviet-backed efforts to transfer UN representation for China from the rejected Guomindang (GMD, Nationalist) government—which still controlled the island of Taiwan—to Mao Zedong's new People's Republic of China (PRC). In protest against the veto, the Soviet delegation withdrew from the UN, a boycott that was maintained for several months. Only in 1970 did the PRC win UN membership and China's Security Council seat.

When the UN was founded, it was anticipated that peacekeeping and the restoration of international security and order, if necessary by military means, would be among its major functions. Under Article 43 of the UN's charter, member states were originally expected to agree to make specified military forces available to the UN for deployment under the organization's control, for use on occasions when military intervention was required to maintain or reestablish international peace and security. In practice, no nation signed any such agreement relinquishing control of any military forces to UN authority.

The Soviet boycott permitted the United States in June 1950 to win UN endorsement for military intervention in Korea after North Korean forces invaded South Korea. Subsequent Soviet attempts later that year to veto the continuation of UN intervention in Korea were blocked when the United States persuaded the General Assembly, where it possessed a majority, to pass the Uniting for Peace Resolution, allowing the assembly to recommend

measures to member states to implement the restoration of international peace and security. The Korean War was the only occasion until the 1990–1991 Persian Gulf War on which the UN itself intervened militarily to restore the status quo. In practice, the United States provided the bulk of troops involved, although other North Atlantic Treaty Organization (NATO) allies, most notably Britain and Canada, provided substantial forces, as did Australia and New Zealand. The fact that the stalemated Korean War lasted for approximately three years, despite all UN efforts at mediation, illustrated the limitations of the peacekeeping functions of the organization.

Between 1945 and 1988 the UN did, however, undertake eleven limited peacekeeping operations, deploying an Emergency Force of troops—usually from states such as Canada, Colombia, Sweden, Norway, and Pakistan that were not permanent members of the Security Council—at the request and on the territory of at least one nation involved in a conflict or crisis in efforts to maintain peace. The first such occasion was the Suez Crisis of October 1956, when British, French, and Israeli forces attacked Egypt. The UN responded to a request from Egypt’s President Gamal Abdel Nasser by sending a contingent of 6,000 lightly armed personnel to oversee truce arrangements and the withdrawal of the invading forces. Although such arrangements were supposedly neutral, in practice the UN normally acted on the request of one party or the other in a dispute, and its forces often came to be identified with that side. When UN forces were dispatched to the Congo for several years in the early 1960s, they were soon perceived as working closely with Lieutenant General (and future president) Joseph Mobutu Sese Seko and against Prime Minister Moïse Tshombe, a situation that soon led to increased casualties among UN forces.

Apart from such peacekeeping efforts, the UN responded to most international crises, such as the successive Arab-Israeli wars, with calls for cease-fires and truces and offers of mediation. After the failure to implement the Geneva Accords of 1954, which mandated the unification of Vietnam after nationwide elections, the UN refused to admit either the northern or southern Vietnamese states as members. From the late 1950s to the early 1970s, successive UN secretary-generals nonetheless made repeated though unavailing efforts to negotiate a peace settlement in Vietnam. The UN verbally condemned the Soviet invasions of Hungary in 1956 and Czechoslovakia in 1968 and the imposition of martial rule in Poland in 1981. Often, too, the UN embargoed the shipment of military equipment to states at war, although the effectiveness of such sanctions varied according to the willingness of member states to enforce them.

The UN General Assembly was the arena for some of the most significant pronouncements and dramatic confrontations of the Cold War. In 1953, President Dwight D. Eisenhower delivered his “Atoms for Peace” address before the assembly, calling for international cooperation to develop peaceful uses for nuclear energy. More tense occasions included those when the flamboyant Soviet leader Nikita Khrushchev openly defied the Western powers, and U.S. representative Adlai Stevenson’s challenge to his Soviet counterpart in October 1962 to confirm the presence of Soviet missiles in

Cuba. During the Cuban Missile Crisis, UN Secretary-General U Thant offered to mediate a settlement, an offer that President John F. Kennedy might have accepted had his own efforts proved unsuccessful. More embarrassingly for the United States, during the American-backed Bay of Pigs invasion attempt against Cuba in April 1961, Stevenson initially denied that his country was involved, a statement that he was later forced to retract. The UN generally encouraged all international efforts toward arms control and provided the arena for the negotiation of the 1968 Treaty on the Non-Proliferation of Nuclear Weapons, the 1972 Biological and Toxin Weapons Convention, and the 1992 Convention on the Prohibition of the Development, Production, Stockpiling, and Use of Chemical Weapons.

The rapid increase in UN member-states during the 1950s and 1960s, largely the result of decolonization, brought growing numbers of African and Asian representatives to the General Assembly. In 1964, African, Asian, and Latin American nations formed the Group of Seventy-Seven, whose numbers eventually grew to 120 states from third world or developing nations and who frequently voted as a bloc and constituted more than a two-thirds majority of the General Assembly. Cuba, the *bête noire* of successive American presidents, took a prominent role in this grouping. The group's concerns focused primarily on economic issues (including the global distribution of wealth, resources, and power), the Arab-Israeli conflict, and South Africa rather than the Cold War *per se*. These concerns nonetheless frequently put them at odds with the United States, while the Soviet Union endorsed most Group of Seventy-Seven positions. It was largely at the group's instigation, for example, that the UN in 1970 expelled the Republic of China (ROC, Taiwan), admitting the PRC in its place, and sought to impose international economic sanctions on countries such as Israel, Rhodesia (subsequently Zimbabwe), and South Africa that defied UN resolutions. Western moral authority within the UN was also affected by the revelation in the late 1970s that as a young man during World War II, the Austrian-born UN Secretary-General Kurt Waldheim had belonged not just to the Nazi party but also to a military unit that had committed atrocities in Yugoslavia. No secretary-general since Waldheim has been of European origin.

Faced with declining influence in the UN and from the mid-1960s finding itself on the winning side less than 50 percent of the time in General Assembly votes, from the late 1960s onward the United States became decidedly less enthusiastic toward the organization. In the mid-1970s, U.S. representative to the UN Daniel Patrick Moynihan chose to adopt more confrontational tactics, aggressively putting forward his country's position and its commitment to the values of liberty and democracy. For the rest of the 1970s his successor, Andrew Young, nominated by President Jimmy Carter, was more conciliatory, but under President Ronald Reagan UN Ambassador Jeane Kirkpatrick once again adopted a confrontational stance, fiercely defending American values and the U.S. commitment to authoritarian but noncommunist regimes and assailing the communist position around the world. In Nicaragua, the United States not only supported the Contras who sought to undermine the left-wing Sandinista government but also defied

the International Court of Justice by mining the harbor of Managua, the capital. In 1985, distaste for the organization's policies, outlook, and management led the United States to withdraw from UNESCO, an action that the United Kingdom and Singapore soon emulated. Even more significantly, citing financial mismanagement and inefficiency, in 1985 the United States, which normally contributed at least 25 percent of the UN's budget, declined to pay a substantial portion of its assessed contribution, a decision reversed only in the mid-1990s.

The announcement in 1988 by Soviet President Mikhail Gorbachev that his country intended to renounce the "use or threat of force" as an "instrument of foreign policy" and to cut dramatically its military forces in Eastern Europe marked the beginning of a new era for the UN. Initially skeptical, U.S. leaders gradually came to credit Gorbachev's good faith. The Soviet Union and the United States were no longer at odds in the Security Council, and the Group of Seventy-Seven could no more rely automatically on Soviet, or subsequently Russian, support. Between 1988 and 1994, the Security Council undertook twenty peacekeeping operations, while the UN helped to bring about a settlement of the Iran-Iraq War and to facilitate Soviet withdrawal from its lengthy and fruitless intervention in Afghanistan. The UN also encouraged negotiation by the Soviet Union and the United States of wide-ranging arms control agreements that, by the mid-1990s, had massively reduced the numbers of nuclear weapons each side deployed on its own soil and elsewhere.

Although less controversial and publicized than its efforts to maintain peace and resolve international conflicts, at all times many of the UN's energies were devoted to economic, social, cultural, and humanitarian efforts, including the eradication and prevention of disease, environmental and climatic issues, human rights, women's and children's rights, immigration, education, the care of refugees, and measures to combat such transnational problems as international dealings in human beings and the narcotics trade. The UN was perhaps most successful in promoting joint international action on humanitarian, economic, social, and environmental issues that transcended national boundaries and demanded concerted international action, such as food and hunger, health, trade policies, social justice, women's rights, pollution, and other ecological concerns. The ending of the Cold War facilitated UN endeavors to promote such objectives by removing some of the East-West barriers to their successful implementation.

Although sometimes derided as ineffective and handicapped in international crises by its reliance upon military forces contributed by member states, the UN often provided a valuable forum for the quiet exchange of views and the promotion of humanitarian and social goals. On occasion, it also conveniently furnished a useful alternative channel of communications among powers whose diplomatic relations were otherwise limited or even nonexistent. While never as effective in terms of resolving international conflicts as its founders envisaged, the UN proved considerably more successful than its predecessor, the League of Nations, in attracting and retaining as members most of the world's major as well as minor states, whose continuing

A United Nations doctor examines a baby under a mango tree, Mzizima, Uganda, 1967. (Corel)

membership implicitly bestowed authority and legitimacy upon the organization's statements and actions. Although often hampered by Cold War antagonisms, during the forty-five years from 1945 to 1990 the UN played a significant role in moderating Cold War tensions and defusing at least some international crises, providing an arena in which disputes could be non-violently resolved.

United States

The United States of America, arguably the world's most influential nation during the second half of the twentieth century, is located on the North American continent. With a 1945 population of approximately 140 million, the United States is bordered to the north by Canada and to the south by Mexico and the Gulf of Mexico. Its eastern borders are defined by the Atlantic Ocean and its western borders by the Pacific Ocean. The United States, including its territories of American Samoa and Guam in the Pacific Ocean and Puerto Rico and the U.S. Virgin Islands in the Caribbean Sea, has an area of 3.539 million square miles, making it the fourth-largest country in the world.

In World War I, the United States was a reluctant belligerent, not entering the war until April 1917, some thirty-two months after the conflict began. It emerged from the Great War in a position of preponderant economic and political strength, having been spared completely the devastation that had been wrought on the other major belligerents. Despite its putative policy of neutrality during much of the war, its economy had also benefited handsomely from the sale of war matériel and other goods to its allies, chiefly France and

Great Britain. By the end of the war, in fact, New York City had supplanted London as the world's chief financial center.

At the end of World War I, U.S. President Woodrow Wilson attempted to construct a New World Order, one in which future military conflagrations would be unlikely and in which all nations would participate on a more-or-less equal footing. Wilson's internationalism policy was predicated upon three tenets. First, the postwar order was to be based upon a free-market liberal capitalist system, modeled after the United States, in which the United States would play a central role. Second, new international economic arrangements were to stress free trade, equal access to markets, and the reduction of ruinous competition. And third, international arrangements and the peace would be enforced by a supranational body known as the League of Nations—the precursor to the post-World War II United Nations (UN)—to which all nations would belong and contribute. Wilson, who referred to the League of Nations as “an alliance to end all alliances,” had clearly envisioned an activist, proactive role for U.S. foreign policy. But his vision remained just that—a vision.

The U.S. Senate refused to ratify the Treaty of Versailles and by doing so refused to sanction U.S. membership in the League of Nations. Thus, the United States never participated in the body, and by the late 1920s Republican-led administrations had turned American foreign policy into one of unilateral, limited internationalism rather than multilateral internationalism. The onset of the Great Depression saw the United States become even more isolationist, so much so that Congress passed a series of Neutrality Acts to keep the nation out of a future war. Only with the obvious aggression of Nazi Germany in the late 1930s was President Franklin D. Roosevelt able to wrench his nation off the path of neutrality and isolationism, and even then it took the December 1941 Japanese attack on Pearl Harbor to bring the nation into the war, more than two years after it had begun.

World War II silenced all but the most intransigent American isolationists. The war proved that isolationism had only invited aggression and that if a third world war was to be avoided, the United States had to take the lead in international affairs, essentially filling the vast power vacuums left in the war's wake. In 1945, America was in a unique position to do just that.

Unlike all the other major World War II belligerents, the American homeland had been left entirely undamaged, and its industrial capacity, which grew exponentially throughout the war, was capable of providing much of the world's manufactured goods. While once-mighty empires such as that of the British had been brought low because of the war, the United States emerged from the war as the world's most powerful nation. Its war casualties were comparatively small, it boasted the most technologically advanced armed forces in history, and it alone possessed the atomic bomb. And although the Soviet Red Army may have had numerical superiority at war's end, the Soviet Union was no match for American economic and military power. Before World War II had ended, U.S. policymakers had already begun to plan for the post-war world, which included the establishment of the UN, another supranational organization in which the United States would, this time, play a pivotal role.

The United States took on the role of leader of noncommunist nations in the Cold War and vied with the communist powers, most prominently the Soviet Union, for influence in decolonized and third world countries. For Americans, the Cold War was a military, political, economic, and ideological contest between democracy and totalitarianism, between capitalism and communism. Yet in establishing anticommunist alliances, the U.S. government sometimes backed undemocratic governments that did not share American ideals of democracy and freedom but were anticommunist and willing to cooperate with U.S. diplomatic aims. The Cold War was the primary focus of American foreign relations and military policy for more than four decades, and as such it also influenced American politics, society, and culture.

Even before the end of World War II, American policymakers feared Soviet expansion into Western Europe and Asia. Soon after the war, deteriorating relations between East and West, the drawing of what British Prime Minister Winston Churchill termed the Iron Curtain, and the imposition of communist governments in Eastern Europe bolstered these fears. In 1947, President Harry S. Truman declared that the United States would assist any free nation in opposing takeover by hostile powers, serving as one of the earliest public announcements of the U.S. containment policy to prevent the spread of communism. This commitment, known as the Truman Doctrine, was to be the operative anticommunist policy for the duration of the Cold War, in the process making the United States the world's policeman. The Marshall Plan, also announced in 1947, represented a massive U.S. effort to rebuild Western Europe's war-torn economies and in so doing construct a citadel against Soviet encroachments in the region.

International developments in the late 1940s and early 1950s stoked Americans' fears of the global reach of communism, reinforced U.S. determination to counter it, and fueled the post-World War II defense buildup and nuclear arms race. In 1948, Congress reinstated the Selective Service Act, which until 1973 required all eligible young men to register for military service. The Soviet-led Berlin Blockade (1948–1949) fortified Americans' suspicions of communist expansionism in Europe. In 1949, the United States entered into the North Atlantic Treaty Organization (NATO), a security pact with Canada and West European nations committing all signatories to come to the defense of any one attacked by a hostile power—implicitly understood to be the Soviet Union. This was a radical departure in U.S. foreign policy, as the nation had not been part of any permanent military alliance since the Revolutionary War in the late eighteenth century. A few months later, Americans grimly received the news of the triumph of Mao Zedong's communist forces in China, fast upon the heels of the shocking revelation that the Soviets had obliterated the U.S. atomic monopoly by exploding their first A-bomb in September.

This development led the Americans to embark on the construction of a thermonuclear—or hydrogen—bomb in January 1950, which was successfully detonated in 1952. In April 1950, Truman's National Security Council (NSC) produced a report, NSC-68, advocating a massive military buildup to prevent the spread of communism and to demonstrate U.S. determination

Secretary of State Dean Acheson signing the North Atlantic Treaty on behalf of the United States, 4 April 1949. (NATO Photos)

to meet communist expansion head-on. Truman did not act on the report's recommendations until after the outbreak of the Korean War in June 1950. Within hours of the attack by the Democratic People's Republic of Korea (DPRK, North Korea), he committed U.S. troops to the fight via the UN. The Korean War lasted three years and caused the loss of nearly 37,000 American lives. Korea also forced Truman to implement the prescriptions in NSC-68, resulting in a huge military rearmament program and the permanent stationing of troops in both Asia and Western Europe.

Cold War events overseas greatly influenced American domestic politics. Although anticommunism was no stranger to the United States, it exploded after World War II. War hawks and Truman critics accused his administration of losing China to the communists and branded the Democrats as soft on communism. In February 1950, Senator Joseph R. McCarthy helped perpetuate the second American Red Scare of the twentieth century (the first one occurred in the immediate aftermath of World War I) by charging that communists had infiltrated the highest levels of the U.S. government. Although his tactics were abhorrent and his charges mostly scurrilous, McCarthy

created a four-year-long anticommunist witch-hunt—subsequently dubbed “McCarthyism”—that ruined myriad careers and stifled political discourse. Simultaneously, investigations of former State Department official Alger Hiss and the atomic espionage trial of Julius and Ethel Rosenberg contributed to Americans’ notions that fellow citizens might indeed be aiding a communist takeover from within the United States.

The Cold War also influenced American society and culture. Hundreds of thousands of people relied on the defense industry for employment between the 1950s and 1980s. For example, aerospace companies under contract by the U.S. government burgeoned in southern California, stimulating a mass migration to the region. Soon, a new defense economy, or military-industrial complex, had transformed the nation by attracting millions of people from the old industrial heartland of the Northeast and Midwest to the new industrial areas of the South and Southwest. This major demographic shift resulted in a realignment of political power, moving it farther west and south. It is little coincidence that since 1964, America has had three presidents from Texas, two from California, and two from the Deep South. In the declining cities of the North, however, urban decay, deindustrialization, high unemployment, and a diminishing tax base resulted in the creation of a permanent underclass of people unable to access reputable educational opportunities or decent jobs. Military service was expected of able young men, millions of whom served overseas in hot and cold wars in the 1950s and 1960s.

U.S. civil defense authorities asked all Americans, including housewives and children, to prepare for the possibility of nuclear war by storing food-stuffs, building homemade fallout shelters, and ducking and covering in the event of atomic attack. The Cold War shaped not only work opportunities and civic duties but also ideas about gender relations, family, and home life. For Americans, modern suburban life featuring fashionable furnishings, the latest appliances and gadgets, and a resplendently chromed automobile symbolized the superiority of the American way of life over that of communism. During the 1950s and 1960s, suburbs of cities both large and small sprang up like mushrooms in damp soil. Indeed, in American thought at the time, the ideal suburban family—with the father as sole breadwinner and the wife as dutiful homemaker and mother—had to be protected and encouraged at almost any cost. Not surprisingly, advertisements, movies, and—most famously—television promoted this alleged domestic ideal. Indeed, the family unit itself was believed to be a powerful defense against the communist subversion that Americans worried would take root in a disordered society characterized by the rejection of traditional gender roles and family arrangements. The nuclear family and an idealized home also symbolized security in an age of anxiety concerning nuclear conflict. Television sets, which proliferated in the 1950s, occasionally broadcast programs on the evils of communism, Soviet spies, and the possibility of nuclear warfare.

Because of their nation’s superpower status and its role as the leader of the anticommunist world, Americans were aware that the peoples of other nations paid attention to how they behaved at home and abroad. The excesses of McCarthyism and the trial and execution of the Rosenbergs caused

Two women volunteers demonstrate meal preparation from canned goods in an emergency fallout shelter set up at the National Canners Association convention in Chicago, 1961. (National Archives and Records Administration)

those in other nations to question whether the United States actually guaranteed its citizens the constitutional rights it held up to the world as evidence of its moral authority. The civil rights movement, which gained momentum in the mid-1950s, also drew international attention to how the United States treated its African American population. The Soviets as well as U.S. allies and citizens in nonaligned nations closely followed the Montgomery Bus Boycott (1955–1956) and the attempt of nine African American students to integrate into a Little Rock, Arkansas, all-white high school in 1957. Onlookers in other nations condemned America's racist Jim Crow laws and violence against people of color and asked whether the United States could truthfully proclaim itself the beacon of democracy when it tolerated such patently unjust treatment of its own citizens.

Concerns about white Americans' conduct abroad also intensified in the 1950s. The widely read 1958 novel *The Ugly American*, by Americans William J. Lederer and Eugene Burdick, portrayed U.S. foreign service employees as boorish and ignorant of Southeast Asian languages and customs and argued

Internationally,

against communism.

that their incompetence endangered U.S. Cold War policies and even pushed potential allies toward the communist camp. To counter global negative perceptions of Americans, the U.S. government attempted to project a positive image of itself through cultural diplomacy, including informational pamphlets, student exchanges, international exhibitions, and jazz concerts.

By the dawn of the 1960s, McCarthyism was largely a thing of the past, although anticommunist policies and sentiments remained strong. In his 1960 presidential campaign, President John F. Kennedy sharply criticized President Dwight D. Eisenhower's administration as being weak in its fight against communism. In less than three years, Kennedy's administration demonstrated a tough and bellicose (if not always successful) anticommunist posture in its botched attempt to overthrow Cuban leader Fidel Castro in the April 1961 Bay of Pigs invasion, clashes with the Soviets over Berlin in the summer of 1961, nuclear brinkmanship with the Russians over the installation of nuclear missiles in Cuba in October 1962, and the dramatic increase of U.S. military advisors assisting the Republic of Vietnam (RVN, South Vietnam). Kennedy's successor, Lyndon B. Johnson, while expanding the role of the government in protecting public welfare and promoting civil rights, sought to carry on Kennedy's tough anticommunist policies. Congress's August 1964 Gulf of Tonkin Resolution authorizing Johnson to enlarge the role of the United States in fighting the communist Democratic Republic of Vietnam (DRV, North Vietnam) provoked a massive escalation in the Vietnam War. Johnson's Vietnam War policies were expensive and divisive. By 1968, America was being torn apart by a burgeoning antiwar movement, race riots, political assassinations, and a virtual clash of cultures between the old ruling elite and the new generation of politically active college students and other young adults.

In American culture and society in the 1960s, irreverent critiques of Cold War dogma became popular. Joseph Heller's novel *Catch-22* (1961) ridiculed the armed forces as ineffectual and its missions as self-destructively irrational. Kurt Vonnegut's *Cat's Cradle* (1963) satirized the assumption that science ensured progress, portraying a nuclear scientist's invention intended to benefit the military as a threat to the existence of humankind. Among those who criticized the U.S. military engagement in Vietnam were many youths who had grown up practicing duck and cover exercises at school, reading textbooks that uncritically lauded the United States as the heroic leader in the crusade against the evils of communism, and watching films and television programs that depicted devious communists outwitted by resourceful American heroes. The counterculture movement, which influenced and was heavily influenced by anti-Vietnam War and antidraft activists, also rejected the consumerism and militarism of American society.

Despite challenges to the Cold War consensus forged in the previous decades, anticommunist attitudes persisted throughout the 1960s. Many Americans, whom President Richard M. Nixon termed "the silent majority," resented the hippies, protestors, and radicals who were seen as destroyers of the American way of life and backed conservative domestic and foreign policies. Although all the major candidates for president in 1968 had promised to

remove U.S. troops from Vietnam, many Americans supported the continued air war against the Democratic Republic of Vietnam (DRV, North Vietnam) in the early 1970s. Despite his pledge to end the war quickly, Nixon did not remove American troops from Vietnam until the beginning of his second term in 1973. Internationally, however, the Vietnam War cost the United States much of its credibility in global affairs and its claim to moral leadership in the struggle against communism. It also fueled anti-Americanism worldwide.

The 1970s saw détente between the United States and the Soviet Union, the end of the Vietnam War, and the normalization of relations with the People's Republic of China (PRC), which was recognized by President Jimmy Carter's administration in 1979. In the wake of the destructive Watergate scandal, which forced Nixon from office, Americans wrestled with the role of their nation internationally and the conduct of their government at home. The takeover of the Republic of Vietnam (ROV, South Vietnam) by the communist nationalists on the heels of the hasty American departure from Saigon in April 1975 made many Americans wonder why their nation had invested so much money, so many lives, and so many years to preserve a small, volatile nation on the other side of the world.

The costs of the war were indeed high, and ultimately the United States had not achieved its goal of preventing the reunification of Vietnam under communist rule. The disclosure of America's secret bombings in Cambodia and Laos, reports of war atrocities committed by U.S. forces, Nixon's ignominious resignation in August 1974, the fall of South Vietnam, and revelations about nefarious activities by the Federal Bureau of Investigation (FBI) and the Central Intelligence Agency (CIA) at home and abroad badly shook the American psyche. At the same time, skyrocketing oil prices, inflation, unemployment, and a stagnant economy seemed to show that the American Dream was becoming a nightmare by the end of the 1970s. The public mood turned inward, more concerned about problems at home than abroad.

Cold War tensions flared once more when Soviet forces invaded Afghanistan in December 1979 in an effort to uphold a pro-Soviet government there. President Carter had initially envisioned a foreign policy that emphasized the advancement of human rights rather than a harsh anti-communist stance entailing accelerated defense spending. The Soviet invasion, however, galvanized him to demonstrate U.S. opposition to Soviet expansionism by supporting the Afghan resistance, suspending arms limitation talks with the Soviets, placing embargoes on sales of grain and technology to Russia, reinstating registration for the draft, and boycotting the 1980 Summer Olympics in Moscow. To make matters worse, the United States was gripped by the Iran Hostage Crisis between November 1979 and January

Cars lined up at a gas station in California on 9 May 1979, the first day of gas rationing following the Arab oil embargo. (UPI-Bettmann/Corbis)

1981, which only seemed to prove America's international weakness and Carter's inability to solve thorny foreign policy issues. Although it must be said that Carter was largely a victim of circumstances beyond his control, he nevertheless bore the brunt of Americans' frustration with a reeling economy and international crises.

Carter lost the 1980 presidential race to Ronald Reagan, who simultaneously ushered in a sometimes frighteningly militaristic anticommunism and uplifting pro-American rhetoric. In condemning the Soviet Union as an evil empire, Reagan revived in many Americans the belief in the United States as the champion of freedom and justice in the world, which appealed to those still galled by the U.S. failure in Vietnam, its loss of status in the world, and a flagging economy. In Reagan's first term as president, his administration pushed through billions of dollars of cuts to social programs, tax cuts, and major increases in defense spending.

While many Americans supported the nuclear buildup—including in 1983 Reagan's proposed Strategic Defense Initiative (SDI), nicknamed "Star Wars," a space-based system to shield the United States from incoming nuclear missiles—as necessary to counter Soviet power, others were alarmed. In June 1982, 750,000 people gathered in New York City's Central Park to

protest the accelerating nuclear arms race. Apprehension over the possibility of nuclear destruction emerged in many cultural forms during the 1980s, including the controversial television movie *The Day After* (1983), which graphically depicted a nuclear attack on a Midwestern city, showing the instant vaporization of humans, slow death by radiation poisoning, and the collapse of society. Popular music and literature served as additional outlets for fears of nuclear annihilation. Prince's 1983 song "1999" advocated enjoying life to its fullest as nuclear war loomed. Doug Coupland's 1991 novel *Generation X: Tales from an Accelerated Culture* depicted an unambitious group of friends in their twenties, living in the southern California desert to escape from the consumerist society of the 1980s, as deeply troubled by fears of nuclear destruction and radiation.

The mid-1980s, however, saw a rapid deceleration in Cold War tensions. The personal rapport between Reagan and Mikhail Gorbachev, who became general secretary of the Communist Party of the Soviet Union (CPSU) in 1985, inspired international optimism that perhaps the two superpowers could find solutions to their differences and step back from the nuclear abyss. Summits between the two leaders yielded an agreement in 1987 for mutual inspections of nuclear arms. Between 1989 and 1991, Reagan's successor, George H. W. Bush, and Gorbachev negotiated momentous economic and arms reduction agreements.

In the aftermath of the Cold War, those who study it continue to pursue answers to many questions. Was the

Soviet Union as expansionist as American policymakers in the 1940s assumed? Might the United States have learned to coexist with communist states, or was conflict unavoidable? To what extent were pro-Soviet agents working in the United States as spies and saboteurs? Access to archival sources in the former Soviet Union as well as declassified U.S. historical documents are helping scholars to answer these questions.

Why the Cold War ended remains the subject of lively debate. Some analysts primarily credit U.S. resolve, demonstrated by a mighty (and massively expensive) defense, a steadfast opposition to communist ideology, and economic strategies that thwarted Soviet expansion over the decades. The costs to the Soviets of countering U.S. power, according to this view, contributed greatly to the demise of the Soviet Union. Other scholars give greater weight to economic and political problems inherent in the Soviet system and to Gorbachev's reforms. While Cold War triumphalists claimed that the fall of the Soviet Union proved the superiority of capitalism and democracy over communism, others pointed to U.S. failures to adhere to its own proclaimed democratic principles over the course of the Cold War, such as its covert and possibly illegal operations to help remove governments in Iran (1953), Guatemala (1954), and Chile (1973) and the subversion of the U.S. constitutional process in the Iran-Contra Affair (1984–1986).

In the early twenty-first century, remnants of the Cold War persist in U.S. foreign relations. The U.S. government still refuses to recognize the Cuban government of communist Fidel Castro. The PRC's human rights abuses and suppression of democracy continued to trouble Americans, although Sino-American relations, especially in trade, had improved. North Korea, perhaps the last lonely outpost of the Cold War, remained intractably bellicose.

United States, Air Force

The U.S. Army Air Forces (AAF) ended World War II as the largest and most powerful air force in the world. By the end of the conflict, the AAF comprised some 2.4 million personnel in 16 separate air forces (12 of them overseas) and 243 groups (later designated as wings). The important role played by the AAF in the war helped bring about realization of the goal long sought by its leaders of an independent air force.

The National Security Act, passed by Congress and signed into law by President Harry S. Truman in July 1947, established the U.S. Air Force (USAF) as an independent armed service. The USAF established three major combat commands in the United States: the Strategic Air Command (SAC), the Tactical Air Command (TAC), and the Air Defense Command (ADC). The concept of strategic bombardment, which the AAF had embraced in World War II, continued to receive emphasis, and under General Curtis E. LeMay, SAC became the dominant USAF command. It controlled the long-range bomber force and the nation's nuclear delivery capability. SAC also assumed responsibility for aerial tankers to extend the strike range of the bombers. SAC gained responsibility for intercontinental ballistic missiles (ICBMs) when they entered the U.S. force structure in the late 1950s.

Created in 1946, the ADC and TAC were initially merged into the Continental Air Command in December 1948 but were separated two years later. The USAF used TAC and theater commands overseas to conduct aviation missions in support of theater operations, including air superiority, ground attack (close air support and interdiction), reconnaissance, and airlift in the

THE NO-FLY ZONE WAR, 1991 – 2003

Military Air Transport Service (MATS). MATS demonstrated its importance during the 1948–1949 Berlin Airlift.

First Secretary of the Air Force Stuart Symington (1947–1950) and air force leaders argued for a 70-wing air force, but budget retrenchment following World War II led to aggressive force reductions, resulting in an actual force structure of 48 wings. Nonetheless, because of the perception of airpower and atomic weapons as a war-winning combination, the USAF became the dominant service in terms of funding and political support, and SAC was clearly the most influential command in the U.S. defense establishment during the 1950s. The onset of the Korean War (1950–1953) brought significant improvement and increased spending for more personnel and new aircraft, leading to a 235-wing force in 1956.

Airpower did play a key role in the Korean War. It was certainly one of the most important factors in enabling United Nations Command (UNC) personnel to stand at the Pusan Perimeter until the United States could effect its military buildup and take the offensive. Propeller-driven Boeing B-29 Superfortress bombers destroyed the industrial base of the Democratic People's Republic of Korea (DPRK, North Korea) and soon ran out of meaningful targets. U.S. airpower continued to savage North Korean and, later, Chinese supply lines and exacted a heavy toll on their ground personnel. Communist Mikoyan-Gurevich MiG-15 interceptor aircraft, initially flown by Soviet pilots, however, forced the UNC to abandon strategic daytime bombing. The Lockheed F-80 Shooting Star, the first U.S. mass-produced jet

A U.S. Air Force North American F-86 Sabre jet launching 5-inch rockets. America's first swept-wing jet and the world's first air-superiority fighter, the Sabre played an important role in the Korean War. (U.S. Air Force)

aircraft, and the more capable Republic F-84 Thunderjet proved no match for the MiG-15, although on 8 November 1950 an F-80 did shoot down a MiG-15 in the first clash between jet aircraft in history. A worthy opponent for the MiG appeared in the North American F-86 Sabre, hastily rushed to Korea. These two jet aircraft were well matched, but the F-86s racked up an impressive kill ratio thanks to superior pilot training.

Top USAF leaders nonetheless concluded that the Korean War had been an anomaly, and they continued to invest significant resources in SAC programs. SAC's first strategic bomber was the propeller-driven Boeing B-50 Superfortress, introduced in 1947. Basically a vastly improved B-29, it was certainly outclassed by jet aircraft. In 1948 the Convair B-36 Peacemaker six-engine bomber entered service. With a gross weight of 410,000 pounds, it was the world's largest aircraft. The B-36 was also the world's first intercontinental bomber and was capable of carrying up to 72,000 pounds of munitions. It remained in service until 1959. The first four-engine American jet bomber was the North American B-45 Tornado. Produced beginning in 1948, it served in Korea in a reconnaissance role and was in service for a decade. The Boeing

B-47 Stratojet medium bomber was one of the most important of USAF aircraft. Sleek and futuristic and the first swept-wing bomber ever in production, the B-47 entered service in 1951. Boeing's follow-on aircraft to the B-47, the B-52 Stratofortress, entered service in 1955. The Stratofortress has been in service for more than fifty years. Certainly one of the most important aircraft ever produced, it was capable of carrying a 40,000-pound payload 8,800 miles. B-52s are closely identified with the Cold War and played a leading role in the Vietnam War, even acting in support of ground operations. They are best remembered, however, for their role in the December 1972 Christmas Bombing of Hanoi and Haiphong. In 1960, SAC received the sleek Convair B-58 Hustler. In service for a decade, the large delta-configuration B-58 was capable of a speed of 1,385 mph—the world's first supersonic bomber.

The Vietnam War saw the USAF carry out operations in direct support of ground troops but also conduct the highly publicized bombing of North Vietnam (Operations ROLLING THUNDER, LINEBACKER I, and LINEBACKER II) and the secret bombing of Laos (Operations BARREL ROLL and STEEL TIGER) and Cambodia (Operation MENU). The interdiction campaigns were frustrating in that they never could completely halt the infiltration of men and supplies by the Democratic Republic of Vietnam (DRV, North Vietnam) into the Republic of Vietnam (RVN, South Vietnam), but they certainly did make it much more difficult for the communist side in the war and kept many North Vietnamese troops and weapons out of South Vietnam. The campaigns did reveal the limitations of airpower in nonconventional warfare, however. U.S. airpower, to include the U.S. Navy and the U.S. Marine Corps, did play an important role in such battles as the action in the Ia Drang Valley, the 1968 Tet Offensive, and the siege of Khe Sanh, and certainly airpower was a key factor in North Vietnam's invasion of South Vietnam in the Spring or Easter Offensive of 1972.

In 1957, the United States launched its first ICBM, and shortly thereafter SAC also controlled nuclear-armed ICBMs. By the end of the 1960s, SAC controlled more than 1,000 ICBMs as the number of nuclear-capable bombers dwindled. The bombers and ICBMs combined with the navy's submarine-launched ballistic missiles (SLBMs) to create the triad nuclear deterrence force. Coordination in targeting and the development of the nuclear Single Integrated Operations Plan was the responsibility of the Joint Strategic Target Planning Staff, collocated at Offutt Air Force Base with SAC headquarters. SAC was disestablished on 1 June 1992, following the end of the Cold War. Its nuclear planning and command and control role continued in the Unified Command, U.S. Strategic Command, and its operational forces were dispersed to other USAF major commands: bombers and missiles to Air Combat Command (missiles later moved to Space Command) and tankers to Air Mobility Command.

In the early Cold War years, the offensive capability of SAC was complemented by extensive USAF air defense forces. The ADC was responsible for the interceptor fighters dedicated to the defense of the continental United States. The command also directed the early warning radar system and the command and control structure that coordinated all air defense resources,

A worthy opponent
for the MiG
appeared in the
North American
F-86 Sabre, hastily
rushed to Korea.

including resources provided by other services in an emergency. The ADC became the U.S. component of the North American Air Defense Command (NORAD), and the ADC commander normally served simultaneously as the NORAD commander as well. As space systems became increasingly important to warning and defensive operations, the USAF renamed the command the Aerospace Defense Command in 1968. The ADC was headquartered at Ent Air Force Base, Colorado, and then at Peterson Field, Colorado. The ADC was inactivated in March 1980, and its functions were dispersed to other major commands, primarily SAC, TAC, and, eventually, Space Command.

Prominent interceptor aircraft flown by the USAF in this period included the Northrop F-89 Scorpion and the Lockheed F-94 Starfire. These aircraft entered service in 1950 and served for a decade, bringing radar intercept capabilities for night and bad weather operations. The North American F-86D Sabre of 1951 was the first USAF single-seat all-weather jet interceptor. The North American F-100 Super Sabre appeared in 1954 and served until 1979. It was the first USAF fighter to cruise at supersonic speeds and was designed as an interceptor. The Lockheed F-104 Starfighter appeared in 1958 as an interceptor but ended its career as a ground attack aircraft. The second generation of air defense systems included the McDonnell Douglas F-101B Voodoo, Convair F-102 Delta Dart, and Convair F-106 Delta Dagger interceptors.

The TAC was established in 1946 to control and train forces that would work with U.S. Army units in theater operations. TAC's primary missions were securing air superiority and providing support to the ground forces through close air support, interdiction, and reconnaissance missions. TAC was merged into the Continental Air Command in 1948. In December 1950, the USAF returned TAC to major command status, reflecting the demands of the Korean War on theater air resources. TAC was headquartered at Langley Air Force Base in Virginia. The USAF converted TAC to Air Combat Command in 1992 as part of the post-Cold War reorganization.

The F-80, F-84, and F-86 were among the first jet fighters. They were followed in the 1950s by day-fighter designs that had a secondary ground-attack role, especially the Super Sabre and the Starfighter. Over time, both the F-100 and the F-104 became primarily ground-attack platforms. In the mid-1960s, the USAF adapted the navy-designed McDonnell Douglas F-4 Phantom as a multirole aircraft to perform the air superiority and ground-attack roles. The McDonnell Douglas F-15 Eagle was the first USAF design specifically for air superiority. It entered service in 1974 and saw extensive service in the 1991 Gulf War. It also performed brilliantly for the Israeli Air Force. The General Dynamics F-16 Fighting Falcon of 1980, conceived as a lightweight multirole complement to the F-15, combined air-to-air and ground-attack capabilities.

Fighter-bomber, attack, and reconnaissance aircraft included the Thunderjet of 1947. It saw extensive service in a variety of missions during the Korean War. Reflecting the nuclear-oriented force structure of Dwight D. Eisenhower's presidency, the USAF embraced the Republic F-105 Thunderchief fighter-bomber as a supersonic nuclear weapons delivery system. In a conventional bombing role, it bore the brunt of the air war over North Vietnam.

The superb Phantom entered service in 1960 and served extensively in Vietnam, where it established an enviable combat record. The Phantom remained in service throughout the Cold War period. The General Dynamics F/FB-111 Aardvark of 1968 was the first operational combat aircraft with a swing-wing. Finally, mention must be made of the F-117A Nighthawk stealth fighter. In appearance unlike any other aircraft and making use of radar absorbent materials, the triangular-shaped F-117A appeared in 1983 and first saw action in the 1989 U.S. invasion of Panama. It also participated extensively in the Gulf War, hitting targets with great precision. Of reconnaissance aircraft, Lockheed produced perhaps the world's two best in the Cold War: the U-2 (1956) and the SR-71 (1964).

Of major USAF overseas commands, the two most important were the United States Air Forces in Europe (USAFE) and the Pacific Air Forces (PACAF). USAFE was established in August 1945 and served as the air force component of the U.S. European Command. USAF theater forces in the Pacific were initially organized as the Far East Air Forces. In 1957, the designation shifted to Pacific Air Forces. PACAF was the USAF component of the U.S. Pacific Command.

Airlift emerged as a vitally important function during World War II. This continued in the Cold War. In 1948, the Air Force Air Transport Command and the Navy Air Transport Service were merged to create MATS, which was charged with providing all necessary airlift support to the U.S. military. The USAF changed MATS to the Military Airlift Command (MAC) in 1966. MAC became the air force component to U.S. Transportation Command, the unified command responsible for moving and sustaining U.S. combat forces. In addition to military aircraft, MAC managed contracted airlift and the Civil Reserve Air Fleet (CRAF), which provided an additional surge airlift capacity in national emergencies. MAC was headquartered at Scott Air Force Base, Illinois. During the post-Cold War USAF reorganization in 1992, MAC was renamed Air Mobility Command and gained control of the tanker aircraft that had previously been assigned to SAC.

McDonnell Douglas provided a large number of transport aircraft in this period. Among these were the workhorse C-47 Skytrain (the military version of the DC-3); the C-54 Skymaster (the civilian DC-4), the first four-engine U.S. military transport; the C-74 Globemaster, at its introduction in 1945 the world's largest transport plane; the C-118 Liftmaster (the DC-6 in civilian service); the C-124 Globemaster, the USAF's first strategic cargo plane; and the C-133 Cargomaster. Lockheed also provided noteworthy Cold War transport aircraft, including the C-121 Super Constellation, the C-130 Hercules, and the C-141 Starlifter, in 1965 the world's first all-jet air transport aircraft. Lockheed's giant C-5 Galaxy entered service in 1969 and held the title as

the world's largest operational aircraft for more than fifteen years. The twin-engine Fairchild C-119 Flying Boxcar entered service in 1949 and served with distinction in Korea and in Vietnam. Tanker aircraft include the McDonnell Douglas KC-10 Extender and Boeing KC-135 Stratotanker.

The USAF was heavily involved in the development of space systems from its origin as a separate service and became the lead agency for space launches, working closely with other government agencies, especially the Central Intelligence Agency (CIA) and the National Reconnaissance Office, to develop a wide range of space-based capabilities. Initially, the development and launch of satellite systems were the responsibilities of the Air Research and Development Command (ARDC), which also dealt with aircraft and other weapons system designs. The USAF redesignated ARDC the Air Force Systems Command (AFSC) in 1961. The rapidly increasing importance of space led the USAF to establish the Air Force Space Command in September 1982. Air Force Space Command provided launch support and operational control of space platforms and became the lead agency for U.S. military space activities. It also assumed some of the ADC component functions in NORAD and in 1985 became the air force component of the U.S. Space Command.

The USAF relied on a number of supporting major commands to develop and sustain its capabilities. The Air Force Logistics Command (AFLC, Air Matériel Command until 1961) provided supply and maintenance support. In the post-Cold War reorganization of 1992, the USAF merged the AFLC and the AFSC into Air Force Matériel Command. An additional important command for the USAF was Air Training Command (ATC), the organization that provided all of the formal training for USAF personnel, including flying training for pilots and navigators and technical training for all career fields. The USAF later renamed the ATC the Air Education and Training Command.

USAF doctrinal emphasis on deep attacks in pursuit of decisive effects often placed it in conflict with the other services, which believed that airpower should be used in a support role to assist the surface forces in traditional campaigns against enemy surface forces. In addition to seeking decisive offensive victories, USAF doctrine emphasized the importance of technological dominance and the need for pursuing advanced capabilities. As the Cold War ended, USAF theater airpower and space power, developed to deter and if necessary engage Soviet power, was nonetheless highly effective in providing the foundation for victory in Operation DESERT STORM, the 1991 campaign to liberate Kuwait from Iraqi occupation.

The end of the Cold War brought a considerable decline in USAF strength. In 1987 the USAF had 171 wings, 7,245 active duty aircraft, and 607,000 personnel. By 1991 these numbers had fallen to 153 wings (115 wings

by 1995), 4,710 aircraft, and 388,100 personnel. Air National Guard (ANG) and Air Force Reserve (AFR) totals experienced similar declines, from 263,000 to 181,000 personnel.

The U.S. Army emerged from World War II as the best-armed, most-mobile, best-equipped, best-supplied, most-educated, and highest-paid army in history. Immediately following the end of the war, President Harry S. Truman supported a measured reduction from 8.2 million to 1.5 million men, but domestic political pressures resulted in an army drawdown to fewer than 591,000 personnel in ten divisions and five regiments by June 1950. The 1947 National Security Act, designed to unify the nation's armed forces and decrease interservice rivalries, established the U.S. Air Force as independent from the army and designated the army as having primary responsibility for land-based operations.

Despite streamlining of command structure in the late 1940s, low budgets contributed to a dramatic decline in army combat effectiveness. By 1950, few of the army's ten divisions were fully capable of deployment outside the

The U.S. Army emerged from World War II as the best-armed, most-mobile, best-equipped, best-supplied, most-educated, and highest-paid army in history.

continental United States. Four understrength, poorly trained, and inadequately equipped divisions were in occupation in Japan, while 80,000 men were in Germany.

The Korean War began in June 1950. American advisors and troops rushed from Japan helped purchase just enough time to prevent Democratic People's Republic of Korea (DPRK, North Korea) forces from completely overrunning the Republic of Korea (ROK, South Korea) before substantial forces could be sent from the United States. This also presented serious difficulties, as the army was stretched thin trying to keep up its guard in Europe with the formation of the North Atlantic Treaty Organization (NATO) in 1949.

The war revealed the appalling state of the U.S. military, especially the army, which had undergone major cutbacks under Defense Secretary Louis Johnson, who favored the air force over both the army and navy. Troops were often sent into combat without proper training, and equipment was both obsolete and inadequate. The buildup in Korea was made possible only by calling up reserve and National Guard units, which also had the effect of securing experienced combat veterans. Most of the weaponry employed by the army in Korea was of World War II vintage.

Massive U.S. artillery fire and airpower helped to offset Chinese numbers. The war also saw the army carry out extensive experimentation with the helicopter for medical evacuation but also for resupply and the movement of troops. In addition, the war speeded up desegregation of the army. During the conflict, the defense budget quadrupled, and the army grew dramatically in size. By 1953, army strength stood at twenty divisions and eighteen regiments with a total of 1.5 million personnel. The Korean War also acted as a stimulus to research and development programs, which brought new weapons into the field in the latter 1950s and early 1960s, and ensured that the United States maintained a significant military establishment. After every previous conflict, the United States had largely disarmed.

With an armistice in Korea in July 1953, the new administration of President Dwight D. Eisenhower sought to shift emphasis to nuclear deterrence in the so-called New Look policy (popularly known as "more bang for the buck"). By 1958, army strength had again decreased, this time to fifteen divisions. Under the New Look, the army prepared to use flexible but short-range nuclear munitions to offset the greater manpower of potential enemies in Europe and Asia. In the mid-1950s, the army developed the Jupiter and Nike missiles as well as artillery systems capable of firing nuclear munitions. In order to increase survivability and mobility on nuclear battlefields, the army introduced the M41, M47, and M48 tanks, reestablishing four armored divisions by 1956.

Structurally, because nuclear weapons could easily destroy concentrated groups of soldiers, the army reorganized its units into decentralized and autonomous pentomic divisions, consisting of five battle groups, that could operate independently or join together to provide mass and firepower. By 1958, the army had divided all of its infantry and airborne divisions into pentomic structures.

In the early 1960s, political events in Latin America as well as the Berlin Crises and the Cuban Missile Crisis intensified the Cold War. President John F. Kennedy's administration became concerned with combating the domino effect of encroaching communism while providing a more balanced approach to military threats. This strategy, known as flexible response, called for an increase in the army's conventional force structure to provide a nonnuclear response to future threats. It also emphasized counterinsurgency warfare.

In the 1960s, Secretary of Defense Robert S. McNamara spearheaded a wholesale reorganization of the army that consolidated redundant structures and decreased inefficiencies. Largely due to previous programs coming to fruition, the army received the M60 machine gun and the M60 tank and replaced its outdated M-1 Garand rifle with the M-14 and a few years later the M-16. The army also abandoned the pentomic division structure and established traditional three-brigade Reorganization Objective Army Divisions (ROADs), including mechanized divisions equipped with the M113 armored personnel carrier. While the army's doctrine for its ROADs centered on fighting in nonnuclear battlefields, its primary focus remained linear battles in the European theater.

As the Soviet Union and the United States approached nuclear parity, however, the army also began to prepare to counter a newly emerging threat of guerrilla-style communist insurgencies. In 1961, Kennedy significantly increased the size and scope of Special Forces units for counterinsurgency operations. Special Forces soldiers became expert in the tactics, techniques, and procedures of both defeating guerrilla movements and training indigenous soldiers, particularly as special advisors in Vietnam.

America's involvement in Vietnam, which had begun with support for the French in the Indochina War (1946–1954), rapidly escalated with the renewal of the insurgency in the late 1950s. President Kennedy sent only advisors and helicopters, but in mid-1965 his successor, Lyndon B. Johnson,

introduced U.S. ground troops. The war gradually escalated, and at peak strength in early 1969 the United States had 543,400 men in Vietnam.

For the U.S. Army, the Vietnam War meant adapting to an assortment of new challenges. Enemy force capabilities ranged from squad-sized local Viet Cong units employing guerrilla tactics to well-trained North Vietnamese Army regiments and divisions supported by conventional artillery assets. The enemy could slip into local population centers and the jungle underbrush, which made locating him difficult. Additionally, enemy forces often compensated for their comparative lack of firepower by fighting at night and establishing well-placed ambushes, booby traps, and mines.

The army adapted to these challenges by employing a mixture of new tactics and new weapon systems to fight in this nonlinear battlefield. The Vietnam War also saw the United States make extensive use of the helicopter, and in August 1965 it introduced in Vietnam the 1st Air Cavalry Division, which was entirely air mobile. Helicopter operations significantly improved the ability to mass, reinforce, and withdraw forces if necessary in remote areas not easily accessible to ground transportation.

Despite the army's overwhelming success in pitched battles with North Vietnamese regulars, the United States failed to secure victory in Vietnam. It had concentrated on big-unit actions and body counts rather than on pacification programs as measurements of success.

The army emerged from Vietnam in terrible condition. The war exacted a shocking toll on both discipline and morale. Racial problems abounded as did insubordination, and a general permissiveness led to careerism or "ticket-punching" among the officer corps and an abrogation of authority by noncommissioned officers. During the mid-1970s, all branches of the armed services, but particularly the army, suffered from underfunding and congressional and executive neglect.

The army sought an all-volunteer force. Its Volunteer Army Project (VOLAR), begun in 1970, received President Richard Nixon's warm support. He embraced the plan as a means of ending middle-class opposition to his Vietnam War policies, and he abolished the draft in 1973. The U.S. armed forces, including the army, became all-volunteer.

Recruiting standards were upgraded, and discharge programs helped to rid the army of drug users and those unsuited for military life. In 1975 the army insisted on a high school diploma for its recruits. It also began a massive educational program to eradicate perceived and actual racial discrimination. The number of African American officers increased, and promotion boards ensured that minorities were promoted equally based on percentages of numbers of those serving. Other initiatives such as barracks renovation and involving enlisted men by seeking their ideas on how to improve quality of life ended many irritants of the draft era. Another major change was allowing women increased opportunities in occupational specialties, although supposedly not in combat units. Army chief of staff General Creighton Abrams (1972–1974) and Secretary of Defense Melvin Laird (1969–1974) also did much to create a total force policy that restructured the entire army to make it impossible for political leaders to commit the army to war without mobi-

lizing its reserve components. This was successively the case in the Persian Gulf War, the Balkans, Afghanistan, and Iraq.

As the Vietnam War faded, the army refocused its attention on what had always been considered the most significant threat: a potential Warsaw Pact invasion of Western Europe. The 1973 Arab-Israeli War convinced U.S. Army leaders that new advances in the lethality of tank munitions, artillery, and wire-guided antitank weapons created dramatic advantages for defenders in a conventional mechanized war. Technologically, these new advances required the army to modernize its antiquated equipment and develop a new tank, infantry fighting vehicle, and helicopter. Doctrinally, in 1976 the army emphasized establishing an active defense policy, an elastic strategy comprised of battle positions organized in depth that focused on firepower and attrition.

It was not until the advent in 1981 of President Ronald Reagan's administration, which focused on directly confronting Soviet capabilities in Europe, that the army received full modernization funding. The M1 Abrams Main Battle Tank, supported by the Bradley Infantry Fighting Vehicle, became the basis of maneuver warfare. In 1982, under the direction of General Donn Starry, the army adopted the AirLand Battle doctrine. Designed to deter the Soviet Union, AirLand Battle revolutionized army doctrine by shifting emphasis from defensive to offense operations and employing maneuver warfare that involved coordination of joint forces, especially close air support. Units

would train to strike hard and fast to disrupt and attack the enemy's critical second-echelon forces. The U.S. Army proved the effectiveness of its training, doctrine, and equipment-modernization efforts shortly after the Cold War ended during the one hundred-hour ground offensive against Iraq in the 1991 Persian Gulf War.

At the end of the Cold War in 1991, U.S. Army strength stood at 739,594 active duty and close to 1.085 million Army Reserve and National Guard personnel.

United States Commander in Chief, Europe

Established on 1 August 1952, the United States Commander in Chief, Europe (USCINCEUR) is responsible for executing the military and defense policies of the United States by ensuring that combat-ready forces from the U.S. Army, Navy (including Marines), and Air Force are in the region. These forces may conduct operations alone or in concert with other countries. When originally formed, the area of responsibility included Europe from the North Cape in Norway south to the Mediterranean Sea as well as North Africa and Turkey. The area was eventually expanded to include the Middle East as far south as Saudi Arabia, east to Iran, and south to include Africa all the way to the Cape of Good Hope in South Africa.

The officer in this position also serves as Supreme Allied Commander Europe (SACEUR). Because the flag officer serving at USCINCEUR also serves as the SACEUR, the Deputy Commander in Chief, Europe (DCINCEUR), has the authority to make decisions and direct U.S. military

matters for the USCINICEUR. The first USCINCEUR was General Matthew B. Ridgway, who served during 1 August 1952–11 July 1953.

American foreign information/media service agency responsible for the propagation and dissemination of anticommunist propaganda, the circulation of news and other information to Eastern bloc nations, and the arrangement of certain cultural and educational exchanges during the Cold War. The United States was the last major power to engage in permanent foreign propaganda operations in support of political and cultural objectives. This reluctance changed abruptly after the 1941 Pearl Harbor attack. In 1941 President Franklin D. Roosevelt created the Office of War Information (OWI), whose mission was to publicize American policies to overseas audiences. The agency mounted the largest overseas propaganda operation of all the major combatants, including the Voice of America (VOA) shortwave radio network as well as the establishment of information centers on all continents. These activities set the tone and organizational structure of the OWI's Cold War successor, the United States Information Agency (USIA).

The OWI was shut down shortly after the end of World War II. Its operations were drastically reduced and transferred to the Department of State. By 1948, however, Cold War concerns led Congress to authorize a sharp expansion of the program. Congress also approved the U.S. Educational and Cultural Exchange Act of 1948, which gave permanent status to an overseas information (and propaganda) effort.

In 1953, President Dwight D. Eisenhower decided to transfer the program from the State Department to the new USIA. This decision was motivated in large part by Republican campaign promises to give greater attention to propaganda operations as part of a coordinated political and military effort that would roll back the Soviet threat. The agency's budgets were later increased to provide for more VOA broadcasting facilities, including programs in more than forty languages.

Although VOA radio was the USIA's best-known operation to most Americans, the bulk of the agency's operations took place at its 275 overseas posts. Known locally as the United States Information Service (USIS), the posts were

United States Information Agency

an extension of the local American embassy, although they were usually located outside the embassy building, often on a main street. The most visible USIS activity was a street-front library. In many Asian, African, and Latin American cities, these were the first open-shelf libraries from which books could be checked out and taken home. As a result, they were often so crowded with students and other information seekers that patrons had to make advanced reservations to be admitted.

USIS centers provided a wide variety of other media and cultural activities. These included a daily news file on American events, transmitted overnight from Washington and then sent in translated form to local newspapers and other media outlets. By 1960, the USIA was also the largest periodical publisher in the world, with magazines in twenty languages and twenty-two newspapers in fourteen languages. Their combined circulation at the time was 110 million copies.

The best known of the agency's publications was *America Illustrated*, published in Russian and distributed in the Soviet Union under a cultural agreement that provided for reciprocal sale of a Soviet magazine, *Soviet Life*, in the United States. Sales of *Soviet Life* languished, however, largely because of its heavy-handed propaganda approach, typically featuring happy peasants and brawny steelworkers in heroic poses as they filled their production

quotas. *America Illustrated* was more eclectic, and its wide-ranging descriptions of American life made it hugely popular among Soviet readers. Each issue became a black market item, with copies resold or rented until they became too tattered to read.

The USIA was also a major producer of foreign exhibits, films, and television programs. One of its television projects was a Spanish-language soap opera, *Nuestro Barrio* (Our Neighborhood), chronicling daily life in an unnamed Latin American city. The series was popular throughout Latin American nations, where it was telecast on local stations, bringing a subtle message of American support for social and economic progress.

The majority of observers agree that the USIA's most effective operation was its management of academic and cultural exchanges to and from the United States. In 1940 there were fewer than 20,000 foreign students in American colleges and universities. By 1999, this number had risen to more than a half million. The USIA was the leading American agency in recruiting foreign students and helping process their admission to American colleges. It also played a major role in administering the best known of the exchange programs, the Fulbright scholarships, awarded to more than a quarter million American and foreign academics and students since 1947.

Another exchange effort identified up-and-coming young foreign leaders and brought them to the United States for a tour that included a personalized itinerary to visit wherever they wanted to go or to meet whomever they wanted to meet. Participants in these tours included Britain's Tony Blair and Margaret Thatcher, Egypt's Anwar Sadat, Germany's Willy Brandt, India's Indira Gandhi, and Tanzania's Julius Nyerere. More than forty participants in the program became heads of government in the years after their visits.

A definitive assessment of the USIA's effectiveness is difficult to make. Famed television journalist Edward R. Murrow, who was a director of the agency in the 1960s, once told a congressional committee that no cash register rang when someone overseas viewed the United States more positively as the result of a USIA message. The agency's role, he said, was to state the American case as clearly as possible. He also believed that USIA should participate in the early formation of foreign policy decisions, stressing the importance of overseas public opinion in implementing policy. Indeed, in the later decades of the Cold War, the agency did play an increasingly significant role in foreign policy decisions.

With the collapse of the Soviet Union in 1991 and the easing of tensions with the People's Republic of China (PRC), the USIA's role as a Cold War agency was altered. In 1999, President Bill Clinton transferred its functions to the State Department where, under the new rubric of public diplomacy, the USIA deals with the complex public-opinion challenges created by the resurgence of international terrorism.

United States–Japan Security Treaty (8 September 1951)

Security and defense treaty, signed on 8 September 1951, guaranteeing U.S. defense of Japan from armed external aggression and internal insurrection. The United States–Japan Security Treaty was signed simultaneously with the Treaty of Peace with the Allied powers, which together restored full sovereignty to Japan. The Security Treaty granted the United States the right “to dispose of United States land, air, and sea forces in and about Japan” in order “to contribute to the maintenance of international peace and security in the Far East and the security of Japan against armed attack.” It also stipulated that U.S. forces “may be utilized to put down large-scale internal riots and disturbances in Japan.”

The United States–Japan Security Treaty differed from other defensive arrangements entered into by the American government, such as the U.S.–South Korea and the U.S.–Philippines treaties, in that Japan did not have an obligation to defend U.S. territory. This fundamental difference is explained by limitations placed on postwar Japan’s military structure, which was only allowed to exercise the right of self-defense under the war renunciation clause established in the Japanese constitution of 3 May 1947. Japan’s limited military capabilities turned the Security Treaty into a rather asymmetrical agreement in that the United States would provide military protection in return for basing rights in Japan.

This asymmetry engendered Japanese criticism of the treaty, which was considered one-sided and unfair. The Japanese government was concerned about the risk of becoming involved in an American military confrontation in the Far East, despite the fact that the treaty did not obligate the Japanese to mutual defense. In addition, the “internal disturbance” clause raised Japanese suspicions that the agreement essentially retained vestigial remnants of the postwar U.S. occupation period.

After a review process in the late 1950s, Japan and the United States concluded a Treaty of Mutual Cooperation and Security on 19 January 1960. The asymmetrical nature of the original Security Treaty remained relatively unchanged in the 1960 revision, as it granted U.S. forces the use of “facilities and areas in Japan” for “the security of Japan and the maintenance of international peace and security in the Far East.” However, the revision improved on the reciprocity of the Security Treaty.

First, it acknowledged Japan's obligation to maintain and develop its own capabilities to resist armed attack in conjunction with the U.S. obligation to defend Japan, recognizing that Japan now had an obligation to assist American forces in a future conflict involving Japanese territories. Second, the revised treaty introduced a consultative mechanism regarding the implementation of the agreement. Now, "the use of facilities and areas in Japan as bases for military combat operations" would be "subject to prior consultation with the Government of Japan." Third, it encouraged political and economic cooperation between the two signatories. Finally, and perhaps most important to the Japanese, the 1960 treaty eliminated the so-called internal disturbance clause and established a ten-year term for the treaty, subject to renegotiation upon notice of each party.

Marines are similar to soldiers in that their primary mission is to fight on land. However, the U.S. Marine Corps (USMC) is part of the Department of the Navy and serves in close coordination with the U.S. Navy. Thus, primary Marine Corps missions are amphibious invasions, noncombatant evacuation operations (NEOs), and internal security onboard ships. Moreover, Marines have traditionally guarded U.S. embassies.

During the Cold War, the USMC fought in Korea, Vietnam, Grenada, Panama, and the Persian Gulf. They were also involved in smaller-scale operations, such as interventions in both Lebanon and the Dominican Republic, NEOs from Cyprus and Cambodia, the *Mayaguez* Incident, and Lebanon. The USMC also stood prepared to wage a third world war against the Soviet Union by reinforcing Norway and Denmark's Jutland Peninsula.

The USMC drastically downsized as part of the demobilization following World War II, going from a peak of 485,053 personnel during the war to 107,000 by the late 1940s. Some politicians, including President Harry S. Truman, wanted to disband the USMC, as they thought that amphibious operations were obsolete in the atomic age and that the army could absorb the USMC's mission. However, the performance of the USMC in Korea in 1950 quelled this debate.

United States, Marine Corps

A U.S. Marine Corps combat patrol in the Republic of Vietnam (ROV, South Vietnam). (National Archives and Records Administration)

Marines took part in the desperate fighting along the Pusan Perimeter. They also spearheaded the amphibious landing at Inchon that turned the tide in the war in September 1950. Marines subsequently helped liberate Seoul in bloody house-to-house fighting. General Douglas MacArthur then ordered the Marines to seize Wonsan in an unopposed amphibious assault and simultaneous drive north to the Yalu River. The drive to the Yalu, however, brought Chinese intervention, and in late November 1950, some 100,000 men of the Chinese 9th Army Group cut off the 1st Marine Division near the Changjin (Chosin) Reservoir in bitter winter weather. Despite the desperate situation, in one of the great military withdrawals in all history, the Marines fought their way south, bringing out their wounded, dead, and equipment. The USMC later participated in United Nations Command (UNC) offensives, defense against the 1951 Chinese Spring Offensive, and UNC counteroffensives.

Following the Korean War, the USMC enjoyed a period of relative calm punctuated by smaller operations. In July 1958, following a request by the Lebanese government, President Dwight D. Eisenhower sent Marines to Beirut.

The Marines maintained general order there before being withdrawn in mid-October. The April 1965 Dominican Intervention saw the Marines evacuate more than 3,000 U.S. citizens during political upheaval there. Subsequently, more than 8,000 Marines and additional U.S. Army troops enforced the peace.

Marines also served as advisors to the Republic of Vietnam (RVN, South Vietnam). The USMC deployed its first operational unit, the Medium Helicopter Squadron 362, to Vietnam on 15 April 1962. The 9th Marine Expeditionary Brigade deployed to Vietnam as the first USMC ground combat unit on 8 March 1965. The Marines were deployed to the northern provinces of South Vietnam. Marines played a crucial role in defeating the January 1968 Tet Offensive, especially in retaking Hue. They also held the Khe Sanh base during a prolonged siege by Democratic Republic of Vietnam (DRV, North Vietnam) troops. The Marines were active in pacification programs, especially with their innovative Combined Action Platoons. Marine units began withdrawing from South Vietnam in 1970. All USMC ground and air operations in Vietnam ceased in June 1971. The final Marine role came in April 1975, when Marine units assisted with the evacuation of Americans and South Vietnamese during the fall of Saigon to communist forces.

The early 1970s marked a period of recovery for the USMC, which had been badly bruised during the decade-long Vietnam involvement. Once again, the USMC prepared for traditional amphibious operations missions. However, Marines did evacuate U.S. citizens from Cyprus in July 1974 and from Cambodia in April 1975. Conflict with Cambodia continued with the

capture of the U.S. ship *Mayaguez* and its crew on 12 May 1975. President Gerald R. Ford ordered in the Marines, who retook the ship three days later.

In 1983, President Ronald Reagan sent Marines to Lebanon to monitor the evacuation of the Palestine Liberation Organization (PLO). However, attacks on the Marines culminated in the 23 October 1983 suicide truck bombing of the office building holding the Marine headquarters. The blast killed 239 Americans, 220 of them Marines. Reagan pulled all American forces out by late February 1984 in large part because of this devastating attack. The USMC participated in Operation URGENT FURY, the U.S. invasion of Grenada in October 1983 ordered by Reagan. During the Iran-Iraq War (1980–1988), Reagan deployed Marines to help protect oil tankers in the Persian Gulf against attack, a mission that lasted from 1986 to 1989.

Marines also participated in the 1989 Panama invasion, Operation JUST CAUSE, securing key installations, seizing critical bridgeheads, controlling vital crossroads, and processing 1,200 captured Panamanians.

When Iraqi forces invaded Kuwait on 2 August 1990, President George H. W. Bush deployed the Marines to protect Saudi Arabia from an Iraqi incursion (Operation DESERT SHIELD). During the ground offensive (Operation DESERT STORM), in an advance on Kuwait City in the Battle of Khafji, Marine units easily repulsed two Iraqi armored columns in the largest tank battle in USMC history. Two Marine brigades feigned an amphibious landing from ships in the Persian Gulf, which fixed Iraqis in eastern Kuwait and facilitated the Coalition's western envelopment. Undoubtedly, the USMC played an important role during the Cold War.

The U.S. Navy's primary mission was, and is, to ensure the command of the seas. Command of the seas allows unfettered U.S. commerce and military sea

United States, Navy

lines of communication. Thus, the U.S. economy can continue to operate, and U.S. forces can move across the sea to foreign soil. Conversely, the U.S. Navy's command of the seas interdicts the maritime commerce and military activities by enemies of the United States. After Japan's formal surrender on the deck of the U.S. battleship *Missouri* on 2 September 1945, the U.S. Navy's mission to maintain command of the seas took many forms, from launching carrier strikes to diplomatic shows of force. During the Cold War, the navy fought in Korea, Vietnam, Lebanon, Grenada, Panama, and the Persian Gulf; enforced a quarantine of Cuba during the Cuban Missile Crisis; and helped prevent a communist Chinese invasion of Taiwan. The navy's submarines armed with nuclear missiles, which formed one leg of the U.S. strategic triad, also played a key role. Finally, if a president needed a show of muscle, he often sent a carrier task force to impress a foreign power or intimidate a potential adversary.

The U.S. Navy drastically downsized as part of the post-World War II general demobilization, shrinking from 3 million to 1 million sailors. It also ceased construction of more than 150 warships and several thousand small craft and decommissioned 2,600 others. Nevertheless, the navy's commitments were still immense, and the American government called upon the navy frequently. A show of force to deter a possible communist coup during the Italian elections of 1948 was one of the first examples of the navy in action during the Cold War. Twenty-five percent of the aircraft that participated in the Berlin Airlift belonged to the navy. Furthermore, U.S. Navy units protected Taiwan from the threat of a communist Chinese invasion.

After World War II, many U.S. political leaders believed that a large navy was no longer necessary. Thus, the U.S. Navy continually had to fight for funding for operations and new equipment. For example, twenty-seven days after taking office, on 23 April 1949 Secretary of Defense Louis A. Johnson canceled the navy's new 60,000-ton supercarrier *United States* without consulting either the secretary of the navy or the chief of naval operations. The navy argued that it needed the new supercarriers, as existing carriers were too small to handle multiengine jet aircraft capable of delivering nuclear weapons. Johnson, a former secretary of the air force, favored the B-36 bomber, but his decision precipitated a vicious battle over the roles of the services. The navy fought back against Johnson to the extent that some senior officers went to the press. The media referred to this fight as the Revolt of the Admirals.

Despite this temporary setback, the U.S. Navy was able to start construction of four frigates and three hunter-killer submarines. It also began development of new carrier aircraft capable of delivering nuclear weapons as well as development of nuclear ship propulsion. Especially important in the latter area was the work by Captain Hyman Rickover in developing nuclear power plants for submarines.

The U.S. Navy did not have a serious or prolonged fight to gain command of the seas during the Korean War, but it did play a vital role in the conflict. Naval air and gun support slowed the Democratic People's Republic of Korea (DPRK, North Korea) drive to conquer the Republic of Korea (ROK, South Korea) and assisted in maintaining United Nations Command (UNC)

The advent of nuclear weapons prompted the U.S. Navy to procure long-range aircraft capable of delivering the weapons from aircraft carriers. The North American AJ-1 Savage, pictured here in 1951, was the first U.S. Navy aircraft specifically designed for this purpose. (National Museum of Naval Aviation)

forces in the Pusan Perimeter. The navy transported X Corps in the Inchon amphibious assault and provided air and naval gunfire support. The navy also cleared mines from Korean harbors, including Wonsan, on the eastern coast of North Korea and it made possible the withdrawal of X Corps from Hungnam and other points on the northeastern coast of Korea following Chinese entry into the war at the end of 1950. The navy continued to provide key air and naval gunfire support for ground operations until the armistice on 27 July 1953.

The performance of the U.S. Navy during the Korean War demonstrated its key role in U.S. global security operations and led to more political support and funding, including new programs under National Security Council Report NSC-68. This included Forrestal-class supercarriers, new naval aircraft, and destroyers and guided-missile cruisers. The submarine *Nautilus*, the world's first nuclear-powered warship, entered active service in early 1955. The navy began development of submarine-launched ballistic missiles (SLBMs) in 1959, and USS *George Washington* made the first operational patrol armed with SLBMs in November 1960. The navy's nuclear submarines became one-third of the U.S. strategic triad, alongside intercontinental ballistic missiles

(ICBMs) and strategic bombers carrying nuclear bombs. During this period of rebuilding, the navy also supported the Marines in the Lebanon Intervention of 1958 and in the evacuation of U.S. civilians during the Dominican Intervention of 1965.

The Cuban Missile Crisis was a signal event in the Cold War, when the United States and the Soviet Union came closest to nuclear Armageddon. In October 1962, U.S. policymakers learned that Cuba, with Soviet assistance, was building medium-range ballistic missile (MRBM) sites. After much deliberation, President John F. Kennedy ordered the navy to impose a blockade of Cuba and prevent the Soviet Union from bringing in additional supplies and missiles for the MRBM launch sites. The navy enforced the quarantine and was prepared to conduct combat operations if necessary. After Soviet leaders backed down, Second Fleet warships closely monitored the dismantling of the Cuban MRBM threat to the continental United States.

After the crisis, the Soviets began building a balanced navy due to their inability to challenge the U.S. Navy during the Cuban Missile Crisis. While the U.S. Navy tried to develop enhanced strategic capabilities in the form of an extended-range Polaris missile and an improved submarine capable of launching ballistic missiles, another threat loomed on the horizon in the form of the Vietnam War.

U.S. Navy ships were involved in intelligence gathering (DESOTO patrols) in the Gulf of Tonkin off the coast of the Democratic Republic of Vietnam (DRV, North Vietnam) when on 1 August 1964 North Vietnamese torpedo boats attacked the destroyer *Maddox*. A second alleged attack on 4 August on the *Maddox* and another destroyer, the *Turner Joy*, almost certainly did not occur. President Lyndon B. Johnson nonetheless ordered retaliatory air raids against North Vietnamese coastal targets, and the U.S. Congress passed the Tonkin Gulf Resolution, authorizing the president to use U.S. military resources as he deemed fit in Vietnam.

The U.S. Navy's involvement in Vietnam took many forms. In Operation MARKET TIME, the navy executed offshore interdiction of North Vietnamese vessels seeking to infiltrate men and supplies into the Republic of Vietnam (RVN, South Vietnam) and, in Operation GAME WARDEN, it fought the communist Viet Cong for control of South Vietnam's vital and extensive river systems. Navy aircraft provided key air support to ground troops in South Vietnam from carriers off the coast of South Vietnam (Dixie Station). The navy also provided important gunfire support to operations near the coast as well as shelled North Vietnam, and it supported amphibious operations by U.S. and South Vietnamese forces.

U.S. Navy aircraft participated in Operation ROLLING THUNDER, the air war against North Vietnam, from carriers stationed off the coast of North Vietnam (Yankee Station). Washington's goals for ROLLING THUNDER were to halt the infiltration of men and supplies into South Vietnam and to force North Vietnamese leaders to abandon their support for the communist insurgency in South Vietnam and come to the negotiating table. Although the operation exacted a considerable toll on North Vietnam, it failed to achieve its goals. The cost was also high due to the sophisticated and growing North

Vietnamese air defense network. In thirty-seven months between 1965 and 1968, the navy lost 421 planes and 450 aviators. The navy also helped train personnel and then turned over substantial assets in vessels and equipment to the South Vietnamese Navy as part of the Vietnamization program.

Washington subsequently called upon the U.S. Navy to execute numerous other missions. The navy supported the evacuation of U.S. citizens from Cyprus in July 1974 and then from Cambodia and from South Vietnam in April 1975. The navy also assisted in operations to retake the *Mayaguez* and its crew when they were taken captive by the Khmer Rouge in Cambodia in May 1975.

The U.S. Navy struggled during Jimmy Carter's presidency as a consequence of the standoff between the president and Congress. Despite being a former naval officer, President Carter did not wish to expend large sums on the navy, while Congress sought to increase its funding. The election of Ronald Reagan as president in November 1980 led to a massive military buildup that revitalized the navy and saw it come close to Reagan's goal of 600 ships.

When President Reagan sent Marines into Lebanon in 1983, Arab attacks of Marine installations escalated, and the U.S. Navy provided naval gunfire support to thwart the attacks. Nevertheless, the suicide truck-bomb attack on the Marine barracks in Beirut effectively ended U.S. involvement in Lebanon in February 1984. The navy also provided key assistance in the Grenada Invasion of October 1983 and in the invasion of Panama during December 1989–January 1990.

During the Iran-Iraq War of 1980–1988, the belligerents began attacking oil tankers in the Persian Gulf. The U.S. Navy executed freedom of navigation operations to ensure U.S. access to oil from the Persian Gulf, clearly maintaining command of the sea. However, unique operational difficulties existed in a confined area such as the Persian Gulf. Iranian mines and anti-ship missiles were significant threats. A missile attack on USS *Stark* on 17 March 1987 killed 37 American sailors. In another major incident in the area, on 3 July 1988 the U.S. cruiser *Vincennes* mistakenly fired on an Iranian civilian jetliner, killing 290 passengers.

When Iraqi dictator Saddam Hussein's forces invaded Kuwait on 2 August 1990, President George H. W. Bush ordered the U.S. Navy to protect Saudi Arabia from potential Iraqi aggression in Operation DESERT SHIELD. Naval aircraft and gunfire assisted UN Coalition forces in significantly deterring Iraqi attacks. Navy Harpoon precision-guided missiles played a vital role in attacking Iraqi targets. Furthermore, U.S. Navy and Marine Corps aircraft made up 30 percent of the sorties flown in the resultant coalition war with Iraq, Operation DESERT STORM, that ultimately liberated Kuwait and crushed Iraqi forces.

The U.S. Navy had proven its indispensable mettle during more than forty years of Cold War tension and in countless hot wars between 1945 and 1991, when the Cold War officially ended.

Uruguay

Spanish-speaking South American nation covering 68,039 square miles, equivalent in size to the U.S. state of Washington. Uruguay, with a 1945 population of 2.26 million people, is bordered by Brazil to the north, Argentina to the west, and the Atlantic Ocean to the south and east. Uruguay enjoyed prosperity and financial stability in the early Cold War era. In a sense it was a showcase, as U.S. foreign policymakers advocated that Latin American nations open their economies to free trade and investment as a means of spurring economic growth, which is what Uruguay did.

Beginning in the mid-1950s, however, falling export earnings required cuts in imports of industrial materials as well as consumer goods. Despite assistance from the Alliance for Progress, the Uruguayan economy in the 1960s was weak, and inflation became uncontrollable. With economic problems came political problems. In response to the growing power of the Tupamaro urban guerrilla movement, on 13 June 1968 the government of Jorge Pacheco Areco curtailed public liberties and implemented security measures, maintained by the government intermittently through the 1980s. The Tupamaros aimed to overthrow the government and replace it with a socialist regime in the style of Fidel Castro's regime.

With rising anti-North American sentiment in the late 1960s, Washington feared that left-wing Latin Americans would use Uruguay as a base for operations throughout South America. Uruguay, with its open political culture and society, had traditionally provided a friendly environment for such activity. However, the U.S. government maintained a degree of influence over the Uruguayan military by giving military assistance through the Civic Action Program, which was implemented in a number of Latin American

nations and provided funding for the military to construct roads, schools, and other infrastructure projects in rural areas.

Until the early 1970s, U.S. officials took cordial relations with Uruguay for granted. With Salvador Allende's rise to power in Chile, however, and with the advent of guerrilla movements in the region, policymakers in Washington began to fear a leftward drift in South America. Two events in the early 1970s significantly shook U.S.-Uruguayan relations. First, the Tupamaros kidnapped two U.S. Agency for International Development (USAID) officials and killed one of them, Daniel Mittrone, in August 1970. Next, American officials feared that a left-wing coalition, the Frente Amplio (FA, Broad Front), would win the November 1971 elections. In the end, the FA fared poorly, and the traditional parties garnered the majority of the votes. Juan María Bordaberry of the Blanco Party was elected president.

During April–September 1972, a number of Tupamaros escaped from prison and assassinated military leaders. Because the General Assembly was investigating allegations of torture by the military and because the military disliked Bordaberry's choice of a civilian for defense minister, it forced Bordaberry to dissolve the Assembly in June 1973 and create a Council of State in its place that, along with the military, held effective power. Finally, the military forced Bordaberry to resign in June 1976. In July 1976 the military and Council of State appointed Dr. Aparicio Méndez president.

After 1973, Uruguay's military-controlled government became more anticommunist and pro-United States than its civilian predecessors. This thoroughly suited Washington. As was typical for U.S. relations with Latin America during the Cold War, the administrations of Presidents Richard M. Nixon and Gerald R. Ford supported Uruguay's military-controlled regime as a bulwark against communism. In part because of the revelations by the U.S. Congress of Central Intelligence Agency (CIA) activity in Cuba and Chile in the 1960s and 1970s, however, and because of human rights violations by the Uruguayan military regime—including torture, assassination, and imprisonment without trial—in September 1976 the U.S. Congress curtailed military assistance to Uruguay and other Latin American nations.

Beginning in the mid-1970s, a combination of Uruguayan religious (mainly Catholic) and secular activists worked to return Uruguay to democracy. These groups were heartened that President Jimmy Carter further reduced military assistance to a number of Latin American dictatorships.

Prodded by civilian activists, in 1980 the Uruguayan military drafted a new constitution, which was rejected in a plebiscite in November that same year. Méndez resigned in 1981, and the military appointed Gregorio Álvarez president in 1982. In 1984, military and civilian groups agreed

Uruguayan President Julio María Sanguinetti waves to the crowd during a parade following his election, 1 March 1985. (Carlos Carrion/Sygma/Corbis)

to elections, which were held that November. Colorado Party leader Julio María Sanguinetti won the presidency and took office in 1985. In keeping with its policy toward Latin America in the 1980s, Washington supported Uruguay's transition to democracy.

U.S. secretary of the army (1962–1964), deputy secretary of defense (1964–1967), and secretary of state (1977–1980). Born in Clarksburg, West Virginia, on 27 March 1917, Cyrus Vance graduated from Yale University in 1939 and from Yale Law School in 1942. He saw combat service in the Pacific as a naval gunnery officer during World War II, after which he joined the New York law firm of Simpson, Thacher & Bartlett, his professional base throughout his career.

Vance's first government assignment came in 1957 as special counsel to the Senate Preparedness Investigation Committee chaired by majority leader Lyndon B. Johnson. In 1961 Vance became general counsel to the Department of Defense, in which post he negotiated the release of Cuban prisoners after the abortive 1961 Bay of Pigs invasion, implemented a major restructuring of departmental organization, and modernized weapons and personnel systems.

Secretary of Defense Robert McNamara appointed Vance secretary of the army in 1962, and in that capacity he advised President John F. Kennedy to deploy federal troops to quell growing civil rights violence in the South. From January 1964 until June 1967, Vance was deputy secretary of defense, serving primarily as a troubleshooter in efforts to resolve difficulties with Panama in 1964 and the Dominican Republic in 1965 and to mediate the 1967 civil war in Cyprus.

Vance was initially a hawk on Vietnam. By mid-1966, however, he was skeptical of continued American air and ground escalation, and he left office disillusioned with American Vietnam policies. As one of the senior advisors, or "Wise Men," with whom President Johnson consulted after the communist Tet Offensive in January 1968, Vance recommended that the United States cease bombing and open peace negotiations. He then served as deputy to chief negotiator W. Averell Harriman in the fruitless 1968 Paris peace talks.

In 1971 Vance met future president and fellow Trilateral Commission member Jimmy Carter. Vance then served as a foreign policy advisor to Carter's 1976 presidential campaign and became his secretary of state. Suspicious of grand theories of geopolitical and strategic designs and of attempts

Vance, Cyrus Roberts
(1917–2002)

One of the ablest U.S. diplomats and troubleshooters, Cyrus R. Vance is shown here during a visit to Korea in February 1968. Vance was U.S. secretary of state during 1977–1980. (National Archives and Records Administration)

to discern linkages between different aspects of foreign policy, Vance believed that the international situation no longer fit the early Cold War bipolar model. Instead, he sought to adapt U.S. diplomacy to a more complicated and less schematic world. He was strongly committed to continuing the two previous administrations' policies of arms control and détente with the communist world, but he soon clashed with Carter's assertive national security advisor, the fiercely anti-Soviet Zbigniew Brzezinski.

Vance negotiated the 1979 Strategic Arms Limitation Treaty (SALT II) with the Soviet Union, imposing ceilings on the number of nuclear missiles and delivery vehicles and banning the introduction of new missile and antimissile systems. His other major accomplishments included the negotiation of the 1977–1978 treaties returning the Panama Canal to Panamanian ownership and operation, the 1978 Camp David Accords, the full normalization in 1978 of U.S. relations with the People's Republic of China (PRC), and the conclusion of a settlement in Rhodesia (Zimbabwe) that brought black majority rule in 1979.

On other issues, however, Brzezinski undercut Vance, especially after the 1979 Soviet invasion of Afghanistan caused a dramatic cooling between the two superpowers, and Carter increasingly favored Brzezinski's advice. In early 1980, Vance urged direct talks with the Soviets in an effort to resolve the Afghan crisis, but Carter refused. Vance's early hopes to normalize American relations with Cuba also fell victim to the deteriorating U.S.-Soviet situation

and to revelations that Cuban troops were deployed in Ethiopia. After Vietnam signed a treaty of friendship with the Soviet Union in November 1978, American efforts to reopen relations with Vietnam also stalled in part due to a massive outflow of refugee boat people and because of Vietnam's failure to resolve to America's satisfaction the issue of soldiers still missing in action.

In Iran, where growing popular discontent threatened the government's stability, Vance unsuccessfully advised the autocratic Shah Mohammad Reza Pahlavi that the introduction of genuine reforms was the best means to counter growing domestic unrest. In January 1979 the shah fled Iran, and an anti-American fundamentalist Muslim regime took power. Ten months later, on 4 November 1979, Iranian students sacked the American embassy in Tehran and took fifty-three Americans hostage. Vance believed that quiet diplomacy was the best means of freeing them, but Brzezinski insisted that the United States mount a dramatic rescue. On 11 April 1980, the National Security Council (NSC) met during Vance's absence and authorized a rescue mission, a decision that Vance unavailingly protested upon his return as foolhardy and poorly planned. In protest, he submitted his resignation on 21 April,

becoming only the third secretary of state to resign over a matter of principle. Three days later the rescue mission was aborted at the loss of eight American lives.

Vance returned to his law practice and in 1983 published his memoirs. He also accepted several further diplomatic assignments from the United Nations (UN). During the 1980s he helped to mediate the Nagorno-Karabakh conflict between Azerbaijan and Armenia and a peaceful end to white rule in South Africa. In the early 1990s he helped to broker a cease-fire in Croatia. Vance died in New York City on 12 January 2002.

(1899–1954)

General Hoyt S. Vandenberg, U.S. Air Force chief of staff.
(U.S. Department of Defense)

career—graduated in 1923 from the U.S. Military Academy, West Point, and immediately joined the U.S. Army Air Service. Selected in October 1927 as a flight instructor, until 1939 he rotated between teaching and taking advanced flying and staff courses.

In 1939 Vandenberg joined the Plans Division under Lieutenant General Henry H. “Hap” Arnold, chief of the U.S. Air Corps. Vandenberg’s excellent staff work directing the rapid air force expansion consequent to the start of World War II won him promotion to colonel in 1942. In the summer of 1942 he moved to Britain to work on air support for the forthcoming North African invasion. Promoted to brigadier general that December, he accompanied Major General James Harold Doolittle to Northwest Africa as his chief of staff, flying twenty-six combat missions and attending the 1943 Quebec, Tehran, and Cairo Conferences. In August 1944 Vandenberg took command of the Ninth Air Force of more than 4,000 aircraft that provided tactical support to Allied ground forces throughout the West European theater. He was promoted to major general in March 1945.

Following staff appointments in Washington, in 1946 Vandenberg became director of the Central Intelligence Group, forerunner of the Central Intelligence Agency (CIA), substantially expanding and centralizing its activities. Promoted to full general in October 1947 and appointed the newly independent U.S. Air Force’s vice chief of staff under General Carl “Tooe” Spaatz, six months later Vandenberg succeeded him. Almost immediately, the air force was confronted by the Berlin Blockade and for fifteen months sustained a massive airlift to keep West Berlin supplied. Vandenberg advocated a seventy-group air force, but President Harry S. Truman’s stringent budgetary policies initially restricted him to fifty-five or fewer. Vandenberg concentrated resources on developing strategic air offensive capabilities, ably presenting air force views in the heated 1949 controversy over the U.S. Navy’s strategic deterrent role, and strongly supported development of the hydrogen bomb.

When the Korean War began in June 1950, the air force quickly established air superiority in Korea and provided vital support to United Nations (UN) ground forces. The war also brought the expansion that Vandenberg had long advocated, doubling the air force to 106 wings, although he furiously protested the decision to defer for several years after his June 1953 retirement a promised further increase to his ideal 143 wings. Vandenberg died in Washington, D.C., on 2 April 1954. His indefatigable efforts to build up the air force effectively ensured the United States a Cold War strategic striking strength far surpassing that of any other nation.

U.S. Senate resolution named for its sponsor, Senator Arthur H. Vandenberg, that embraced internationalism and collective security. The Vandenberg Resolution, passed on 11 June 1948, was a defining moment in the diplomatic history of the United States. Confronting the growing challenges of the Cold War, the U.S. Senate, using the United Nations (UN) Charter as a model, paved the way for American membership in a defensive alliance, the North Atlantic Treaty Organization (NATO), which was formed in 1949. Vandenberg's sponsorship constituted a revolution in American foreign policy, which had traditionally eschewed military alliances, and guaranteed America's pre-eminence in international affairs. All the more remarkable was Vandenberg's support, as he had been an ardent isolationist prior to World War II.

Vandenberg, a Republican from Michigan, had developed a keen interest in foreign affairs since the advent of World War II. He was a U.S. delegate to the UN Conference in San Francisco (1945) and to the meetings of the UN General Assembly in London and New York (1946); had served as American advisor during the meetings of the Council of Foreign Ministers in London, Paris, and New York (1946); was an American delegate to the Rio de Janeiro Conference that drafted the Rio Treaty on inter-American defense assistance; and, most critically, had chaired the Senate Foreign Relations Committee (SFRC) during 1947–1949.

On 11 April 1948, Secretary of State George C. Marshall and Undersecretary of State Robert M. Lovett initiated a series of conversations with Senator Tom Connally of Texas (the ranking Democrat on the SFRC) and Senator Vandenberg on the topic of the Soviet threat in general and the need for security in the North Atlantic in particular. Since March 1946, when former British Prime Minister Winston Churchill gave his "Sinews of Peace" speech (also known as the "Iron Curtain" speech) in Fulton, Missouri, relations

between the Western Allies and the Soviet Union had deteriorated badly. At the same time, the Canadian government was proposing the creation of a collective defense system for the West, with the British seemingly in support. The conversations and proposals ultimately led to Vandenberg championing American involvement in a politico-military alliance.

During April 1948, Vandenberg carefully prepared a resolution based on the precepts of the UN Charter. The six major clauses of the resolution were suspension of the veto on admitting new UN members and on concerns involving the peaceful settlement of international disputes, the establishment of bilateral or multilateral agreements to secure self-defense, involvement of the United States in such agreements that were in its national interests, the reinforcement of Article 51 of the UN Charter on the right to self-defense, reaffirmation of the role of the UN to secure world peace, and the need to strengthen the UN to render it more effective in its peacekeeping operations. The third component was perhaps the most significant, as it created a constitutional basis for the United States to enter into mutual defense agreements.

The Vandenberg Resolution (Senate Resolution 239 of the 80th Congress, 2nd Session) was approved by the Senate on 11 June 1948 by a vote of 64 to 4. The Vandenberg Resolution was a significant development in the history of the Cold War, as it provided a firm basis for American involvement in NATO.

Van Fleet, James Alward

(1892–1992)

U.S. Army general and commander of the Eighth Army in Korea (1951–1953). Born in Coytesville, New Jersey, on 19 March 1892, James Alward Van Fleet graduated from the U.S. Military Academy, West Point, in 1915. He

saw service in the 1916–1917 Mexican Punitive Expedition and in World War I, fighting with the American Expeditionary Forces. Between the wars he served in the infantry and as an instructor. In 1941, now a colonel, he took command of the 8th Infantry Regiment of the 4th Infantry Division, leading its assault on Utah Beach in the June 1944 D-Day Normandy invasion. Promoted to brigadier general and then to major general, during the drive against Germany Van Fleet led various divisions in heavy fighting at Metz, in the Ardennes, at Remagen, in the Ruhr, and in Austria.

After the war, Van Fleet served in the United States and Germany, and in early 1948 he became, as a lieutenant general, director of the Athens-based Joint U.S. Military and Planning Group advising the Greek government on suppressing communist rebels. Appointed to the Greek National Council, for two years he successfully directed the training and use of Greek military forces in that nation's civil war.

In April 1951 Van Fleet, now a four-star general, took command of the Eighth Army in the Korean War from General Matthew Ridgway, who had just replaced Douglas MacArthur as commander of the United Nations (UN) forces. For much of 1951, Van Fleet's troops saw fierce fighting, driving north in mid-1951 and again after peace talks stalled from August to October. Thereafter, he was restricted to maintaining frontline defensive positions, as the war became largely one of attrition and stalemate. He became increasingly frustrated when superiors repeatedly turned down his plans for major offensives, although in mid-1952 his forceful protests eventually persuaded them to authorize limited smaller operations against communist positions, assaults that proved largely fruitless. Serious ammunition shortages damaging to troop effectiveness and morale also irritated Van Fleet, although some blamed these on his prodigality with artillery barrages. He devoted much effort to reforming, rebuilding and strengthening the demoralized South Korean forces, who by late 1952 comprised almost three-quarters of his frontline troops.

In February 1953, shortly before the war ended, Van Fleet turned over the Eighth Army to General Maxwell D. Taylor before resigning from the army in protest in April 1953. The following month, Van Fleet published articles echoing MacArthur's assertions that had the political leaders uncompromisingly exercised American power, they could have achieved total victory in 1951. These charges delighted Republican critics but infuriated Ridgway, Taylor, and Army Chief of Staff General Lawton Collins.

In 1954 Van Fleet served as President Dwight D. Eisenhower's special envoy to the Far East. As a Defense Department consultant in the early 1960s, Van Fleet suggested that Adlai Stevenson's failure to defend the botched Bay

of Pigs invasion required his dismissal as his country's UN representative. Van Fleet died in Washington, D.C., on 23 September 1992. Like many great combat soldiers, he was an inspiring battlefield leader but deficient in broader diplomatic skills.

Vatican City

Independent city-state and seat of the Roman Catholic Church covering 108.7 acres within the city limits of Rome, Italy, on the west bank of the Tiber River. In 1945, Vatican City had an estimated population of 800 people. Residents of Vatican City include the pope, head of the worldwide Roman Catholic Church; numerous high-ranking and support Catholic clergy; and some nuns. As head of the Church and bishop of Rome, the pope is the absolute ruler of the city-state.

Vatican City has all the attributes of an autonomous state: citizenship, currency, postage, a flag, and a large diplomatic corps. It also has its own newspaper, *L'Osservatore Romano* (The Roman Observer), broadcasting facilities, and a railroad station. The political autonomy of the Vatican is guaranteed and protected by Italy via concordat.

The city-state has a civil government for conducting day-to-day business, run by a lay governor and a council who are all appointed by and responsible to the pope. The judicial system is essentially that of the Church, relying on canon law and several courts. There is a court of first instance, dedicated to both civil and criminal cases arising in the city. Over time, an elaborate Vatican bureaucracy has developed, called the Curia Romana, with the pope as head of state in charge of temporal as well as spiritual affairs. Although his power is absolute, the pope often relies on the College of Cardinals for advice as well as for the administration of church governance.

In the twentieth century, the emergence of communist parties and governments, officially committed to an ideology fiercely opposed to religion of every kind, presented challenges for the Vatican. In the case of Soviet Russia, the fact that the great majority of the population belonged to the official Russian Orthodox Church made it relatively simple for the Vatican to keep its distance from the Bolshevik state. In a number of countries that often had a radical and anticlerical tradition, Catholic clergy broadly discouraged parishioners from joining or working with local communist parties and opposed communist politicians almost on principle. During the bitter 1936–1939 Spanish Civil War, representatives of the Catholic Church generally supported Francisco Franco's Nationalist forces against the Republican government, which received assistance from Soviet communist operatives.

As World War II progressed, the Vatican under Pope Pius XII apprehensively watched the spread of Soviet power into East European states, where there were strong national Catholic churches in Germany, Poland, Hungary, and Czechoslovakia and smaller but substantial communions in Romania, Albania, Yugoslavia, and Bulgaria. From 1945 onward, the Vatican was forced to steer a middle path in the Cold War, balancing its genuine and deep-rooted antipathy toward communism against the need to seek to protect the status of those churches under communist rule. In Eastern Europe, Church

lands were often expropriated under communist-initiated land reform programs. Immediately after World War II, the Vatican took a strongly anti-Soviet line, appointing the staunchly anticommunist Hungarian nationalist Cardinal József Mindszenty as primate of Hungary in 1945, for example, and deploring the extension of communist rule well into Central Europe.

Throughout the Cold War, the Catholic Church also experienced pressure, especially from the United States, to favor the West and support its containment policies. Under Pope Pius XII, the Roman Catholic Church came out strongly against the Italian Communist Party in the 1948 elections, which hinged in part on whether Italy should align itself firmly with the Western alliance. However, by that time the Church also openly deprecated the division of Europe resulting from the containment policy, the Marshall Plan, and the North Atlantic Treaty Organization (NATO) military alliance, which threatened to isolate Catholics within the communist bloc from the remainder of the Church. In 1949, after the Romanian and Bulgarian governments effectively closed down their countries' Catholic churches and Mindszenty was arrested, convicted of treason, and imprisoned, Pius XII went so far as to threaten excommunication for Catholics who collaborated with communist regimes. In practice, by 1950 several stronger East European Catholic churches, including those in Hungary, Poland, and Czechoslovakia, reached formal or informal accommodation with the communist authorities. Even so, in the early 1950s the Czechoslovak Archbishop Josef Beran, Polish Cardinal Stefan Wyszyński, and Archbishop József Grösz of Hungary were all incarcerated. Other less prominent priests and bishops were arrested or executed, essentially because their respective governments perceived them as political threats. From the 1950s onward, the Vatican tended to employ quiet diplomacy rather than confrontational tactics to secure such individuals' release and to ensure that East European Catholics could still practice their faith. Such pragmatic practices sometimes, however, exposed Vatican officials to charges that they had abandoned principle in order to cravenly appease communist regimes.

Seeking to steer a middle course and to defuse the attractions of communism, from 1949 on well-publicized Vatican pronouncements deplored the growing emphasis on materialism, especially in the Western world, and supported social justice, welfare policies, and measures designed to aid impoverished nations around the world. Vatican Council II, held from 1962 to 1965—during which the popular and outgoing Pope John XXIII died, to be replaced in 1963 by the more austere but reformist Pope Paul VI—resisted an internal Church movement to condemn communism outright, emphasized the common good, and defended the right of all individuals to enjoy access to food, shelter, medical care, and social services. The pronouncements effectively demanded that capitalism transcend the profit motive and promote the well-being of the entire community. In 1967 and 1971 encyclicals, Paul VI also criticized the asymmetries of wealth and power that existed between rich, largely Western nations and poor nations, ascribing these in part to the legacy of colonialism. Although Ngo Dinh Diem, president of Vietnam from 1955 to 1963, was a Catholic, the Vatican refused to endorse

the U.S. position in the Vietnam War, instead making repeated though unsuccessful offers of mediation. The emergence in the early 1970s of liberation theology—Catholic teachings arguing that revolution and violent resistance to state power were sometimes acceptable in the interests of social justice—emboldened some priests, bishops, and nuns in Latin America and Africa to align themselves with leftist and radical movements against authoritarian governments. The Vatican refused to endorse this stance and in the 1980s appointed conservative bishops strongly opposed to liberation theology. The Church did, however, condemn states' forcible repression via such tactics as torture, rape, and murder of opponents. The most spectacular example of the latter was the 1980 assassination while celebrating mass in his own cathedral of Archbishop Oscar Arnulfo Romero y Galdámez of San Salvador.

In Asia, the post–World War II emergence of communist states, especially the People's Republic of China (PRC) in 1949, posed particular problems for the Roman Catholic Church, whose missions—in China dating back to the late sixteenth century—were heavily tainted by association with colonialism. Mao Zedong's China had expelled virtually all foreign missionaries by late 1952, in some cases accusing them of espionage. Many noncommunist Chinese also fled, some to Hong Kong and Taiwan, others farther afield. Some 70 percent of Chinese bishoprics were left vacant, allowing the Chinese Communist Party (CCP) to appoint self-elected and self-consecrated local bishops and establish a self-styled patriotic church independent of Vatican control. Under land reform programs, Catholic properties were often confiscated. Despite official religious toleration policies, Chinese Christians of all persuasions were viewed as a threat to communist control and were therefore liable to attract fierce persecution as rightists.

This attitude peaked during the 1966–1976 Cultural Revolution but continued sporadically thereafter. Although the officially sponsored church, the Chinese Catholics' Patriotic Association, existed, some Chinese Catholics and priests also kept in existence an underground church that maintained clandestine ties with Rome. The late twentieth century saw a great upsurge of all forms of religion in Mainland China. Some estimate that by the early twenty-first century the underground Catholic church had twice as many members as its officially sanctioned counterpart and that altogether China had 12 million Catholics.

Further complicating the situation, the Vatican maintained diplomatic relations with the Republic of China (ROC) on Taiwan, where there was a sizable Catholic community, and stated its intention to keep these intact, citing the fact that it had never broken such links with any state, even communist Cuba. The last Vatican ambassador to live in Taiwan was, however, recalled in 1971 after Taiwan's expulsion from the United Nations (UN). The PRC's move to more pragmatic policies from the mid-1970s onward brought sporadic though inconclusive negotiations between Chinese and Vatican officials, with other top Asian Catholic representatives often serving as intermediaries, aimed at a rapprochement and potential regularization of the status of the Chinese Catholic Church. These generally foundered on Chinese insistence that the Vatican cease to recognize Taiwan and refrain from any

interference in what the PRC considered its own internal affairs, including human rights and the treatment of Chinese Christians—conditions that the Vatican was unwilling to meet. In 2000 Pope John Paul II infuriated the PRC government by canonizing 120 Chinese and foreign Christians martyred in China and terminating promised negotiations for a rapprochement whereby the Vatican would end the protracted standoff in China and switch diplomatic recognition from Taipei to Beijing. Although tensions rose at times as local bishops and clergy publicly criticized PRC policies, Mainland China did respect the independence of the Vatican-affiliated Catholic churches in Hong Kong and Macau after those territories returned to China in 1997 and 1999, respectively, observing the provisions for religious freedom mandated in the handover agreements previously concluded with Britain and Portugal.

In Poland, the Roman Catholic Church was the leading national institution to survive German occupation. The Church hierarchy, by tradition decidedly independent of Rome, was prepared to work with the incoming communist regime if Church rights were respected. Acquiescence nonetheless did not necessarily imply approval, as demonstrated after the 1978 election of Archbishop Karol Wojtyła of Kraków, Poland, as the first non-Italian pope in more than four centuries. The charismatic John Paul II traveled tirelessly around the world, winning new adherents to the Catholic faith in the developing world, particularly Africa and Asia, and gaining immense personal respect and authority during his twenty-six-year papacy.

On an early visit to his native Poland in 1979, John Paul II quietly encouraged the leaders of the Solidarity labor movement to stand firm and work to challenge and undermine communist rule. Such pressures contributed to the eventual collapse of communism throughout Eastern Europe and in the Soviet Union. There were rumors that John Paul II's support for the Solidarity-orchestrated strike at the Gdańsk shipyard in 1980 so infuriated the Kremlin that in 1981 on Soviet orders the Bulgarian secret service organized an assassination attempt on his life that almost succeeded.

Pope John Paul II also apologized for past Catholic implication in anti-Semitic persecution of Jews. In the early twenty-first century, the Vatican and Russia nonetheless failed to open diplomatic relations. The Russian Orthodox Church would not sanction the Catholic demand to be allowed to proselytize in Russia, and Russian nationalists resented the pope's efforts to further the collapse of the Soviet Union. John Paul II nonetheless continued his predecessors' criticisms of unfettered market forces and materialism, charging that neither communism nor capitalism could meet humanity's spiritual needs unaided.

A social conservative, John Paul II also affronted many Western liberals by deprecating the pursuit of individual—especially women's—rights and sexual freedoms. Within the Catholic Church, his appointment of growing numbers of African, Asian, and Latin American cardinals, many of conservative, fundamentalist religious views, diluted the power of American and European liberals and meant that the influence of his own outlook would probably remain strong for many years after his death in 2005.

Roman Catholic ecumenical council convened in four separate sessions during 1962–1965. On 25 January 1959, Pope John XXIII announced his intention to call an ecumenical council for the Roman Catholic Church. Serious preparations for the council began in June 1959, when the pope sought advice and suggestions from 2,600 members of the Church's hierarchy in 134 countries. On 5 June 1960, John XXIII announced the formation of various

Vatican Council II (1962–1965)

On 23 September 1964, 15 women took their seats as auditors of the council, the first women to ever participate in a Roman Catholic ecumenical council.

commissions to prepare the documents to be debated during council sessions. In *Humanae Salutis* (Of Human Salvation), issued on 25 December 1961, the pope formally chartered the council and announced that it would be held at St. Peter's Basilica at the Vatican. In February 1962, the Holy See set the council's opening date for 11 October 1962.

Vatican Council II opened with a public session. In his address, John XXIII declared that the council was to meet the specific needs of the present-day Roman Catholic Church. He also emphasized that work must be undertaken to achieve unity with other Christians as well as with non-Christians. The council met for the first day of work on 13 October 1962 but adjourned after an hour. A group of progressive cardinals made a motion to adjourn so that national groups at the council had an opportunity to review the lists of names selected to serve on the ten commissions that would guide debate. The first session eventually debated issues relating to the structure and purpose of the liturgy, the church's relationship with the media, and a document calling for unity with Eastern churches. The ailing John XXIII closed the first session on 8 December 1962.

During the period between the sessions, the commissions met to draft documents to be voted on in the next session. John XXIII's death on 3 June 1963 ended all work until a new pope was elected. In his first message, Pope Paul VI, John XXIII's successor, promised that the council would continue and set the opening date for the second session for 29 September 1963.

In an opening address to the second session, the new pope outlined the four primary purposes of the council: to define the Church more fully, especially the role of bishops; to renew the Church; to restore unity among all Christians; and to "start a dialogue with contemporary men."

During the second session, the council's progress stalled over the document outlining the constitution of the Church. Among the questions raised by this document were the role of laypeople, the relationship with other churches, the importance of religious orders, and the relationship between church and state. Eventually work continued, and the council approved reforms of the liturgy, including the use of vernacular languages in the mass. A document on the use of modern communications media was also approved. The session debated a document stating that the Jews were not responsible for the death of Jesus, but the document was not approved before the second session closed on 4 December 1963.

The third session opened on 14 September 1964. Early in the session, the council approved a series of documents outlining the nature of the Church and the relationship between the Church and its people. On 23 September 1964, fifteen women took their seats as auditors of the council, the first women to ever participate in a Roman Catholic ecumenical council. The session continued the debate on ecumenical issues and the role of laypeople in the Church. During the debate over the position of the Church in the modern world, the pope told the council to remove discussion on artificial contraception from its agenda. A separate commission was studying the issue, and the pope did not want the council to vote in anticipation of the commission's decisions.

According to observers at the council, the third session was the most contentious. Before the session closed on 21 November 1964, the council approved documents on the Church in the modern world, ecumenism, and the relationship with the Eastern churches.

The fourth session opened on 14 September 1965. In his opening speech Paul VI announced that he would be visiting the United Nations (UN). He also announced his intention to establish a synod of bishops to advise him, part of an effort to increase collegiality within the Church hierarchy. The debate during the fourth session was wide-ranging. Documents were approved outlining religious freedom, the role of the Church in the modern world, and the relationship with non-Christian religions. The role of women in the Church was debated, as was the significance of Christian marriage. The law governing clerical celibacy was strengthened. An attempt to include a strong condemnation of communism was defeated. The council also emphasized the role of the common good in society and defended the rights of all individuals to enjoy access to adequate food, shelter, medical care, and basic social services, pronouncements that effectively expected capitalism to transcend the profit motive and promote the well-being of the entire community. The fourth session thus ended, and Vatican Council II officially closed on 8 December 1965.

South American nation covering 352,143 square miles, roughly a third larger than the U.S. state of Texas. With a 1945 population of approximately 4.25 million, the Republic of Venezuela is located on South America's northern coast and borders the Caribbean Sea to the north, Guyana to the east, Brazil to the south, and Colombia to the west. In 1830, Venezuela was proclaimed a republic. However, a string of dictatorial regimes followed that crippled the country's development. Under the government of Antonio Guzmán Blanco (1870–1888), a modern infrastructure was constructed, while foreign investment increased. During 1908–1935, Venezuela was governed by the brutal dictator Juan Vicente Gómez, who developed the nation's oil-exporting industry.

Venezuela

Following his death, a military junta took control until the leftist Rómulo Betancourt and his Acción Democrática (AD, Democratic Action) party seized the political initiative beginning in 1945.

During 1945–1948, the reformist government in Venezuela enacted policies that hurt U.S. economic interests. However, Washington supported the regime because it seemed a bulwark against economic nationalism and communism. Because the United States became a net importer of oil in 1947, interest in Venezuela was all the more pronounced.

In 1948, conservative military leaders overthrew the populist government. With Colonel Marcos Pérez Jiménez as head of state, the Venezuelan government suppressed popular dissent and became one of Washington's staunchest regional allies. As such, the U.S. government extended substantial military and economic support. Despite Washington's backing, however, a coup toppled the regime in early 1958, and elections were scheduled for the next year. Nevertheless, the Pérez Jiménez regime cast a long shadow on Venezuelan relations with the United States. In May 1958, anti-American riots erupted when U.S. Vice President Richard M. Nixon arrived on a state visit. Angry protestors practically overturned his car. After he returned home to a triumphal greeting, Washington accelerated the process of focusing more attention on the region.

Both a majority of Venezuelans and U.S. officials hoped to put the repression of the Pérez Jiménez years behind them and welcomed the election of Betancourt of the AD in February 1959. Betancourt had cut his political teeth as a student in the late 1920s when he had actively supported the ouster of Gómez. Betancourt's reformist vision resonated with New Deal liberals in the United States.

Although U.S. President John F. Kennedy's record of supporting democracies in Latin America was spotty, Kennedy supported Betancourt because he was a moderate reformer who led an oil-rich nation and valued harmonious relations with the United States. Indeed, reformist pro-American governments seemed the best antidote for preventing the spread of Fidel Castro's brand of communism. As Betancourt's tumultuous tenure in office proceeded, the U.S. government offered increasing support as part of the Alliance for Progress, despite the implementation of state-capitalist policies. A hotline was even set up between the White House and the Venezuelan presidential residence in Caracas. Betancourt served as president until 1964.

Of particular importance to U.S. officials was the Venezuelan military. American leaders perceived strong anticommunist militaries as the only sure defense against radical or communist takeovers in Latin America, and Venezuela was no different. During Betancourt's time in office, military aid accounted for \$64.5 million of the \$180.1 million in U.S. assistance. U.S. military assistance to Venezuela was critically important, because the fear of Castroism spreading to Venezuela seemed more tangible compared to the risk to the rest of the region. In 1963, the Venezuelans discovered a small cache of Cuban weapons hidden on an isolated stretch of coastline. The uncovering of this clumsy attempt to aid pro-Castro insurgents in Venezuela prompted the Organization of American States (OAS) to apply economic

In 1975, Puerto Miranda was the largest oil port in the Western world, capable of pumping 145,000 tons per day and receiving supertankers with a capacity of 80,000 tons. (Diego Goldberg/Sygma/Corbis)

sanctions against Cuba. In 1966, Venezuelan officials also captured four Cuban officers who were apparently training Venezuelan guerrillas.

There was one persistent sticking point in U.S.-Venezuelan relations. From the U.S. point of view, free trade and private investment were to be the engines of economic growth in Venezuela and ultimately of pro-American stability. But from Venezuela's viewpoint, free trade translated into lower prices for oil, its principal export, and thus deteriorating terms of trade for the import of finished goods. To garner additional income from oil exports, in 1960 Venezuela helped to organize the Organization of Petroleum Exporting Countries (OPEC). Although OPEC did not register on U.S. policymakers' radar screens until the 1970s when it burst on the world scene as a major economic player, its formation and maturation (aided by Venezuela throughout the 1960s) represented a significant challenge to U.S. influence in the world economy.

For years, Venezuela had sought a hemispheric preference for its imports to the United States, which the United States refused because worldwide oil supplies were plentiful. This preference would have allowed Venezuela to estimate the revenue flow from oil and create long-term economic development plans. Thus, once the energy crisis of the mid-1970s hit the United States, Venezuelan officials expressed little sympathy for their major purchaser of petroleum. However, because of the historically close relationship between

Venezuela and the United States, Venezuela stepped up exports of oil to a grateful United States during the 1973–1974 Arab oil embargo.

Relations between the United States and Venezuela cooled somewhat with the December 1973 election of the AD's Carlos Andrés Pérez. Arguing that the industrial world had used its economic power to take advantage of third world producers of primary products, Pérez took action to garner greater income from Venezuela's sale of oil and steel. These industries were nationalized on 1 January 1975.

Expropriation with an indemnity was made possible with the run-up in oil prices starting in late 1973. The higher prices gave Venezuela the capital to offer compensation for the nationalization. Despite the AD's leftist rhetoric, Venezuela (most particularly the elite) thought it important to offer compensation to the oil companies in order to stay on good terms with them and with the United States. Cordial relations with the companies and the United States were important because the South American nation was still dependent on the United States for high-technology items, finished products, and technicians. Although the expropriated companies were not entirely happy with the settlement, they ultimately accepted Venezuela's offer of compensation.

The early 1970s marked an important turning point in contemporary Venezuelan history. With increased revenue from oil sales, Venezuela transformed itself from a relatively impoverished nation to an important contributor of foreign assistance, even donating up to 12 percent of its gross domestic product (GDP) for foreign assistance to the developing world.

As petroleum prices slid in the mid-1980s and the Latin American debt crisis reverberated around the hemisphere, Venezuela entered a time of economic and political crisis, which included rioting in 1989 and two political coups in 1992. Venezuelan relations with the United States, however, remained close during the 1980s and early 1990s. In fact, Venezuela was the only developing nation to secure F-16 fighter aircraft from the United States in the 1980s. Although Venezuela worked with Mexico, Colombia, and Panama in the Contadora Group to help resolve deepening tensions between the United States and Nicaragua, the Venezuelans downplayed their participation by playing a quiet role in the process, as the U.S. pointedly frowned upon the Contadora Group.

Lower oil prices meant that Washington officials were less concerned with U.S.-Venezuelan relations. Crises in the Middle East in the early 1990s, however, again highlighted the importance of a large Western Hemispheric source of petroleum. Even as the Cold War faded away, and in part because of the large amount of U.S. investment in the nation and the continuing importance of a close supplier of petroleum, Washington officials and Venezuela still valued close relations.

U.S. code-breaking operation that revealed extensive Soviet spying in the United States during World War II and the early years of the Cold War. Beginning on 1 February 1943, the U.S. Army Signal Security Agency—commonly known as Arlington Hall and the predecessor organization to the National Security Agency (NSA)—began a secret program to decrypt and analyze thousands of encoded messages intercepted between Moscow and its diplomatic missions in the West. This program, which underwent at least a dozen code names, came to be known finally as Venona. In the course of decyphering the encoded diplomatic communications, the analysts uncovered evidence of espionage activities by the People's Commissariat of Internal Affairs (NKVD), the Soviet intelligence agency.

Gene Graebel, a former schoolteacher, began the project, and it took two years for Arlington Hall to break into the Soviet communications. Arlington Hall's Lieutenant Richard Halleck, a Signal Corps reserve officer who had been an archeologist at the University of Chicago, discovered weaknesses in the Soviet cryptographic system, namely that the Soviets were reusing some of the encoding in many of their messages. Halleck and his colleagues, many of whom were young women, went on to break into a significant quantity of Soviet trade traffic having to do with Lend-Lease and the Soviet Purchasing Commission. Cryptanalyst Meredith Gardner (a former language instructor at the University of Akron who spent twenty-seven years on the project) then employed these breakthroughs to decipher NKVD and Soviet Army General Staff Intelligence Directorate (GRU) communications, first breaking into these in December 1946. Arlington Hall worked in close collaboration with other U.S. agencies and the British MI5 intelligence agency, which joined the effort in 1948. Information provided by defecting Soviet cryptologist Igor Gouzenko also helped.

Among Venona's revelations were confirmation of the spying activities of Klaus Fuchs, David Greenglass, Bruno Pontecorvo, and Julius and Ethel Rosenberg. Venona also contributed to the unmasking of the Cambridge Five spy ring of British communist agents.

Soviet agents were able to inform the Komitet Gosudarstvennoi Bezopasnosti (KGB) of the Venona secret in 1948, after which Soviet communications became unreadable, but much valuable information was obtained. The Venona program continued until 1980. Beginning in July 1995, the NSA

Venona Project

made six public releases of Venona translations and related documents. The first of these dealt with Soviet efforts to secure information on U.S. atomic bomb research. The remainder are a variety of NKVD communications, most of them during World War II.

Vienna Conference

(3–4 June 1961)

Summit meeting between U.S. President John F. Kennedy and Soviet Premier Nikita Khrushchev in Vienna, Austria, on 3–4 June 1961. Shortly after Kennedy took office in January 1961, Khrushchev suggested a meeting with his American counterpart. After the embarrassing and abortive Cuban Bay of Pigs invasion in April, Kennedy's advisors were adamantly opposed to the conference, believing that Khrushchev would exploit the failed invasion either by berating the president or using it as a propaganda ploy. Kennedy rejected their advice.

Kennedy wanted the meeting to focus on a nuclear test-ban treaty and the neutralization of Laos, where a communist insurgency was threatening the government. The president believed that these agreements would be important steps toward easing Cold War tensions, which had grown more intense since the May 1960 U-2 Crisis. He also hoped that the summit might lead to a wider détente.

Khrushchev had little interest in a test ban and almost no interest in Laos, however. His primary concern was the fate of Berlin. He wanted an agreement that would stanch the flow of East Germans fleeing to the West via Berlin. His earlier attempt to pressure President Dwight D. Eisenhower into accepting a Berlin settlement by threatening to sign a peace treaty with the German Democratic Republic (GDR, East Germany), which would have given it full control of the city, had failed embarrassingly.

Following President Kennedy's death in 1963, his brother, Attorney General Robert F. Kennedy, reported that he had laid the groundwork for the summit during secret meetings with Khrushchev's conduit Georgi Bolshakov,

U.S. President John F. Kennedy and Soviet Premier Nikita Khrushchev meet in Vienna, Austria, for their summit on 3–4 June 1961. (John F. Kennedy Library)

a Soviet intelligence officer who worked undercover as a reporter. Kennedy later claimed that Khrushchev had used the correspondence to trick his brother into believing that he would limit the Vienna discussions to Laos and the test-ban treaty, which Khrushchev hinted could be verified by numerous on-site inspections. Robert Kennedy had not saved the messages, but the Soviets had. Their records verified that Khrushchev was not interested in either Laos or a nuclear test ban and that he had never agreed to on-site inspections. Instead, Khrushchev's notes to Kennedy focused on Berlin, reiterating his earlier threats.

Khrushchev's recalcitrance concerned the president. In hopes of making the summit a success, President Kennedy sent the attorney general to Bolshakov, offering concessions and assurances that he wanted a good working relationship. Shortly before leaving for Europe, the president severely injured his back, leaving him in constant pain throughout the conference. Many suggest that the president was not at the top of his form as a result. Shortly before leaving for Vienna, Khrushchev met with his advisors, berating those who suggested that he work seriously with Kennedy and telling them that the president was weak and would buckle under his threats.

The summit had no formal agenda, allowing the two men to roam from topic to topic. Kennedy told his aides that when he broached the subject of

the dangers of war through miscalculation, Khrushchev became almost uncontrollably hostile. The Soviet leader also rebuffed Kennedy's efforts to discuss the nuclear test ban, telling him that it "meant nothing" outside the context of total nuclear disarmament. Predictably, Khrushchev taunted Kennedy over Cuba. On Berlin, Khrushchev again threatened to sign a peace treaty if Kennedy did not agree to neutralize the city. Although Kennedy had been badgered, he did not back down.

The following day, Khrushchev hinted at possible future discussions concerning Laos, although no progress was made on the test ban. In his last meeting with the president that day, Khrushchev told Kennedy that he was going to give East Germany control over West Berlin's access routes, adding that if the United States used force to keep them open, there would be war. Kennedy icily replied, "Then there will be war, Mr. Chairman. It's going to be a very cold winter." Despite Kennedy's bold counterpunch, Khrushchev believed that he had sufficiently cowed the president.

Although Kennedy's aides told him that the meeting had been typical for Khrushchev, the president refused to believe it and began to prepare for war over Berlin. In a 25 July 1961 speech, Kennedy announced that he was dramatically expanding the armed forces, reinforcing Berlin, and calling for increased congressional appropriations for civil defense. The administration even advised Americans to build backyard bomb shelters.

Khrushchev soon realized that he had badly miscalculated by bullying Kennedy. Believing that Kennedy had lost control of his government to militarists, Khrushchev concluded that the only way to solve the Berlin Crisis and avoid a war was to construct the Berlin Wall. Nevertheless, largely because of Vienna, Khrushchev continued to believe that Kennedy was weak. It took the 1962 Cuban Missile Crisis to dispel that notion.

Viet Minh

Indochinese Communist Party (ICP) front organization. The Viet Nam Doc Lap Dong Minh Hoi (Viet Minh, or Vietnam Independence League) was

founded by Ho Chi Minh at the Eighth Plenum of the ICP in May 1941 as a means of mobilizing the Vietnamese population into a National United Front in order to defeat both the French and Japanese. As such, the Viet Minh served a tactical rather than a strategic purpose, for the ICP's ultimate objective remained the creation of a communist-dominated government in Vietnam. Consequently, during World War II, less stress was placed on class struggle, while more emphasis was placed on working with all elements of Vietnamese society, including those normally branded as class enemies.

The leaders of the Viet Minh placed particular effort on forming and training armed guerrilla detachments. When the Japanese surrendered in August 1945, the Viet Minh was the best prepared of all resistance groups to seize power. As a result, it was at the forefront of the August Revolution that followed. On 2 September 1945 in Hanoi, Ho declared Vietnam's independence and an end to the Nguyen dynasty. Soon thereafter, the dissolution of the ICP was officially announced, which ostensibly left the Viet Minh as the sole party apparatus.

The Viet Minh led the resistance effort following the outbreak of the Indochina War in late 1946. To rebuild the strength of the National United Front, since the broad mass of the Vietnamese population had come to identify it with the communist leadership, the Viet Minh was merged into the newly created Hoi Lien Hiep Quoc Dan Viet Nam (Lien Viet Front, or League for the National Union of Vietnam) in early 1951. The basic tactical elements of the front did not change, however, as the redesignation was made chiefly to accommodate communist revolutionary theory, which dictated that such a step was required when the historical situation was radically altered. The Lien Viet Front would also be reconstituted following the signing of the 1954 Geneva Accords, when it would be replaced by the Fatherland Front.

Concurrent with the creation of the Lien Viet Front, the ICP was publicly resurrected with a new name, Dang Lao Dong Viet Nam (Vietnamese Worker's Party), in order to recognize the growing Chinese communist influence on domestic policy and to reinforce the critical importance of gaining the support of the general Vietnamese population. These changes and the reasons for them notwithstanding, popular and historical accounts of the Indochina War have usually referred to the Vietnamese resistance forces throughout as the Viet Minh.

Vietnam

Southeast Asian nation and the easternmost state of Indochina. Vietnam is bordered by China to the north, Laos and Cambodia to the west, and the Gulf of Tonkin and the South China Sea to the east and south. It encompasses some 127,300 square miles, slightly larger than the U.S. state of New Mexico. Vietnam's 1945 population was roughly 24.5 million. During the course of the Cold War, the population more than doubled. By 1996 it had grown to 70 million. Vietnam contains at least fifty-eight distinct national groups, but 85 percent of the population is ethnically Vietnamese, rendering the country largely culturally and ethnically homogenous. The French identified the original aboriginal inhabitants—chiefly the Thai, Muong, and Meo peoples—as Montagnards (mountain people). Other important ethnic minorities are the Chinese and the Khmer (Cambodians). In 1967, there were about 1 million Chinese in Vietnam and perhaps 700,000 Khmer.

In 938, the Vietnamese freed themselves from more than 1,000 years of Chinese rule. It remains a source of great national pride that Vietnam then maintained its independence, defeating subsequent Chinese attempts to reestablish control. Vietnam is, however, unique among countries of Southeast Asia in having adopted many Chinese cultural patterns.

The French arrived in the second half of the nineteenth century, establishing control first over southern Vietnam (Cochin China) by 1867, then expanding it to central Vietnam (Annam) and northern Vietnam (Tonkin). The French also dominated Cambodia. In 1887 Paris created the administrative structure of French Indochina. Laos was added in 1893. Technically, only Cochin China was an outright colony. The others were protectorates, but French officials made all the key decisions.

Nationalism spread in Vietnam after World War I. The French crushed the moderates, with the result that the more radical Indochinese Communist Party (ICP) took over the leadership against the French. In September 1940, the Japanese arrived. Taking advantage of the defeat of France by Germany, Tokyo sent troops and established bases in Vietnam. Japan's move into southern Vietnam in July 1941 brought U.S. economic sanctions that led to the Japanese decision to attack Pearl Harbor.

During World War II, ICP leader Ho Chi Minh formed the Vietnam Independence League (Viet Minh) to fight both the Japanese and the French. By the end of the conflict, with Chinese and American assistance, the Viet Minh had liberated much of Tonkin. The French, meanwhile, planned an insurrection against the Japanese, but in March 1945 the Japanese arrested all the French soldiers and administrators they could find. There was thus a political vacuum at the end of the war, into which Ho moved. On

Ho Chi Minh, leader of the Viet Minh that fought against the Japanese and the French and president of the Democratic Republic of Vietnam (DRV, North Vietnam), shown here in October 1954. (Bettmann/Corbis)

HO CHI MINH CAMPAIGN, 1975

2 September in Hanoi, he publicly proclaimed the independence of the Democratic Republic of Vietnam (DRV, North Vietnam).

Acting in accordance with wartime agreements, British forces occupied southern Indochina, and Nationalist Chinese forces arrived in northern Indochina. Ho was able to secure the departure of the Chinese, while the British released the French prisoners in southern Indochina and allowed them to reestablish their control there. Appeals by Ho to the Soviet Union and the United States fell on deaf ears, and Ho, forced into negotiations with the French, concluded an agreement on 6 March 1946 with French diplomat Jean Sainteny.

In the Ho-Sainteny Agreement, the French recognized the independence of North Vietnam and agreed to a plebiscite in southern Vietnam to see if it wished to join the North Vietnamese government, while Ho allowed the return of some French troops to North Vietnam to protect French interests there. The collapse of subsequent talks in France led to the outbreak of fighting in November 1946. This occurred because the French wanted to reassert control over their richest colony; there was a long-standing mutual mistrust; and on 1 June 1946, without prior approval from Paris, French High Commissioner for Indochina Admiral Thierry d'Argenlieu issued a proclamation for an independent Republic of Cochin China.

The Indochina War lasted until 1954. The conflict was unpopular in France, and Paris never committed the resources necessary to win it. The war was lost for all practical purposes with the 1949 communist victory in China, for this gave the Viet Minh secure basing areas and supplies. In 1949, in part to win U.S. support, the French government negotiated the Elysée Agreement with ex-Emperor Bao Dai. The agreement officially granted independence to Vietnam. The new State of Vietnam was, however, a sham, completely dominated by the French until the end of the war.

With the French military defeat in the Battle of Dien Bien Phu in May 1954, the politicians in Paris shifted the blame onto the military and extricated France from the war. The July 1956 Geneva Accords granted independence to Vietnam, Laos, and Cambodia. Vietnam was to be temporarily divided at the 17th Parallel, pending national elections in two years to reunify the country.

In southern Vietnam, Catholic politician Ngo Dinh Diem took charge and brought a semblance of order. His power base rested on some 1 million northern Catholics who had relocated there after the Indochina War. In 1955 Diem staged a referendum, calling on the people of southern Vietnam to choose between Emperor Bao Dai and himself. Diem won the vote handily and proclaimed the Republic of Vietnam (RVN, South Vietnam), with himself as president. He held power until his assassination in November 1963. Claiming that he was not bound by the Geneva Accords, he refused to hold the promised elections, and U.S. President Dwight D. Eisenhower's administration supported this position. When the date for the elections passed, Viet Minh political cadres in South Vietnam resumed the armed struggle, this time against the Diem government. Diem, meanwhile, received substantial economic aid and increasing military assistance from the United States.

In North Vietnam, Ho and other leaders were not displeased with Diem's establishment of order in South Vietnam pending the national elections. North Vietnam did face serious economic problems, for while it contained the bulk of the industry, South Vietnam had most of the food. Ruthless moves against small landholders brought actual rebellion, crushed by the People's Army of Vietnam (PAVN, North Vietnamese Army) troops. When the Viet Minh began guerrilla warfare in South Vietnam, the North Vietnamese leadership voted to support this, beginning the Vietnam War. The war was extraordinarily costly to North Vietnam economically and in terms of casualties, but the desire to reunify the country overrode all other considerations. During the war, North Vietnam received substantial economic and military assistance from the communist bloc, including China but especially the Soviet Union.

The Vietnam War raged until 1975, although U.S. forces departed in early 1973. In April 1975, PAVN forces were victorious militarily, capturing the South Vietnamese capital of Saigon. Vietnam was now reunited, but under communist rule. In April 1976, general elections occurred for a single National Assembly. It met in June and the next month proclaimed the reunified country the Socialist Republic of Vietnam (SRV) with Hanoi as its capital. Saigon was renamed Ho Chi Minh City. In September 1977, Vietnam was admitted to the United Nations (UN).

The new Vietnam faced staggering problems. These included rebuilding the war-ravaged country, knitting together the two very different halves of the country with their opposing patterns of economic development, and providing for the needs of a burgeoning population. The Vietnamese Communist Party (VCP) retained its monopoly on power. Indeed, the constitution guaranteed it as the only legal force capable of leading the state and society.

Immediately after the war, the government also carried out a political purge in southern Vietnam, although it was nothing like the bloodbath feared and so often predicted by Washington. Thousands of former South Vietnamese officials and military officers were sent to reeducation camps for varying terms, there to be politically indoctrinated and to undergo varying degrees of physical and mental discomfort, even torture. The government also undertook a program to reduce the urban populations in south Vietnam, especially in Ho Chi Minh City, by far the nation's largest metropolitan area. People had fled to the cities during the war, and perhaps one-third of the arable land lay idle. The government established so-called New Economic Areas to develop new agricultural land and return other areas to cultivation.

The government sent some 200,000 of its citizens to work in the Soviet Union and Eastern Europe. They sent home an estimated \$150 million a year. Finally, the government introduced farm collectivization in south Vietnam and new regulations that governed business practices. These led to the collapse of light and medium industry. With the economy deteriorating, in 1981 the government introduced an incentive system. Peasants paid fixed rents for the use of the land and were able to sell surplus produce on the private market. Vietnam had no official ties with the United States, although both countries would have benefited economically had such a relationship been established early on.

Meanwhile, relations between Vietnam and Kampuchea (Cambodia) deteriorated, the result of traditional animosity between the two countries and Khmer Rouge persecution of its Vietnamese minority and its claims of Vietnamese territory. By 1977 there was serious fighting. The two states became proxies in the developing Sino-Soviet rivalry. Kampuchea was a client state of China, and Vietnam was a client state of the Soviet Union.

In December 1978, PAVN forces invaded Cambodia, and ultimately there were 200,000 Vietnamese troops there. The Khmer Rouge and other resistance groups fought back, receiving military assistance from China and the United States. Ironically, it was only the Vietnamese occupation that prevented the Khmer Rouge from returning to power and continuing its genocidal policies, and it was only thanks to the Vietnamese invasion that mass killings of Cambodians by the Khmer Rouge were confirmed.

China meanwhile threatened the Vietnamese government with force to punish Hanoi for the invasion of Kampuchea and Vietnamese treatment of its Chinese minority. Indeed, the Chinese People's Liberation Army (PLA) actually invaded Vietnam briefly during February–March 1979, but this short Sino-Vietnamese War did not force the Vietnamese to quit Cambodia. That came only from the great expense of the operation and its drain on the Vietnamese economy as well as the government's attendant isolation in the international community at a time when the nation desperately needed foreign investment. The Vietnamese leadership then decided to quit Cambodia, and by September 1989 all Vietnamese troops had departed.

The Vietnamese government continued to maintain an extremely large military establishment. In the mid-1980s it had 1.2 million people under arms, the world's fourth-largest armed force. This figure did not include numerous public security personnel. Military expenditures regularly consumed up to a third of the national budget. This and a bloated government bureaucracy consumed revenues badly needed elsewhere.

By 1986 the economy was in shambles. Famine—the result of failed farm collectivization and botched currency reform—and rampant inflation took their tolls. An economic growth rate of only 2 percent a year was outstripped by a 3 percent per year birthrate, one of the highest in the world. These developments brought striking changes at the December 1986 Sixth National Communist Party Congress. Among these were material incentives, decentralized decision making, and limited free enterprise. Many of the old hard-line leadership, including Pham Van Dong and Le Duc Tho, retired. Nguyen Van Linh, a proponent of change, became party secretary and the most powerful figure in the state.

Linh had overseen the tentative steps toward a free market economy that had helped southern Vietnam remain more prosperous than northern Vietnam. His reform program, known as *Doi Moi* (Renovation), produced results. It introduced a profit incentive for farmers and allowed individuals to set up private businesses. Companies producing for export were granted tax concessions, and foreign-owned firms could operate in Vietnam and repatriate their profits with a guarantee against being nationalized. Linh rejected opposition political parties and free elections, however.

Official ceremony in front of the Presidential Palace in Phnom Penh during the withdrawal of the Vietnamese occupation troops, 25 September 1989. (Jacques Langevin/Corbis Sygma)

Inflation dropped dramatically, production went up, and consumerism spread. But reform was uneven, inhibited by party bureaucrats and conservatives. Most advances came in the cities rather than in the countryside, where 80 percent of the population lived.

Toward the end of normalizing relations with the United States (achieved under President Bill Clinton in 1995), in 1987 the Vietnamese government released more than 6,000 military and political prisoners, including generals and senior officials of the former South Vietnamese government. Another incentive for the Vietnamese leadership to reach out to the West was the sharp reduction in Soviet aid, which ended altogether in 1991. The conservatives, however, used the collapse of communism in Eastern Europe to halt any movement toward political pluralism.

At the end of the Cold War, Vietnam was still plagued by serious problems. PAVN influence, despite a sharp decline in its size, remained strong. Divisions between northern and southern Vietnam also remained, and one of the highest birthrates in the world ate into economic gains. Annual per capita income (\$250 a year) was among the world's lowest. The central issue for the aging communist leadership was whether Vietnam could modernize using the Chinese model of economic liberalism while maintaining strict party control.

Vietnam War (1957–1975)

The Vietnam War grew out of the Indochina War (1946–1954). The 1954 Geneva Conference, ending the Indochina War between France and the nationalist-communist Viet Minh, provided for the independence of Cambodia, Laos, and Vietnam. Agreements reached at Geneva temporally divided Vietnam at the 17th Parallel, pending national elections in 1956. In the meantime, Viet Minh military forces were to withdraw north of that line and the French forces south of it. The war left two competing entities, the northern Democratic Republic of Vietnam (DRV, North Vietnam) and the southern French-dominated State of Vietnam (SV), each claiming to be the legitimate government of a united Vietnam.

In June 1954, SV titular head Emperor Bao Dai appointed as premier the Roman Catholic Ngo Dinh Diem, whom Bao Dai believed had Washington's backing. Diem's base of support was narrow but had recently been strengthened by the addition of some 800,000 northern Catholics who relocated to southern Vietnam. In a subsequent power struggle between Bao Dai and Diem, in October 1955 Diem established the Republic of Vietnam (RVN, South Vietnam), with himself as president. The United States then extended Diem aid, most of which went to the South Vietnamese military budget. Only minor sums went to education and social welfare programs. Thus, the aid seldom touched the lives of the preponderantly rural populace. As Diem consolidated his power, U.S. military advisors also reorganized the South Vietnamese armed forces. Known as the Army of the Republic of Vietnam (ARVN, South Vietnamese Army) and equipped with American weaponry, it was designed to fight a conventional invasion from North Vietnam rather than deal with insurgency warfare.

Fearing a loss, Diem refused to hold the scheduled 1956 elections. This jolted veteran communist North Vietnamese leader Ho Chi Minh. Ho had not been displeased with Diem's crushing of his internal opposition but was now ready to reunite the country under his sway and believed that he would win the elections. North Vietnam was more populous than South Vietnam, and the communists were well organized there. Fortified by the containment policy, the domino theory, and the belief that the communists, if they came to power, would never permit a democratic regime, U.S. President Dwight D. Eisenhower's administration backed Diem's defiance of the Geneva Agreements.

Diem's decision led to a renewal of fighting, which became the Vietnam War. Fighting resumed in 1957 when Diem moved against the 6,000–7,000 Viet Minh political cadres who had been allowed to remain in South Vietnam to prepare for the 1956 elections. The Viet Minh began the insurgency on their own initiative but were subsequently supported by the North Vietnamese government. The South Vietnamese communist insurgents came to be known as the Viet Cong (VC). In December 1960 they established the National Liberation Front (NLF) of South Vietnam. Supposedly independent, the NLF was controlled by Hanoi. The NLF program called for the overthrow of the Saigon government, its replacement by a "broad national democratic coalition," and the "peaceful" reunification of Vietnam.

In September 1959, North Vietnamese Defense Minister Vo Nguyen Giap established Transportation Group 559 to send supplies and men south along what came to be known as the Ho Chi Minh Trail, much of which ran through supposedly neutral Laos. The first wave of infiltrators were native southerners and Viet Minh who had relocated to North Vietnam in 1954. Viet Cong sway expanded, spreading out from safe bases to one village after another. The insurgency was fed by the weaknesses of the central government, by the use of terror and assassination, and by Saigon's appalling ignorance of the movement. By the end of 1958, the insurgency had reached the status of conventional warfare in several provinces. In 1960, the communists carried out even more assassinations, and guerrilla units attacked ARVN regulars, overran district and provincial capitals, and ambushed convoys and reaction forces.

By mid-1961, the Saigon government had lost control over much of rural South Vietnam. Infiltration was as yet not significant, and most of the insurgents' weapons were either captured from ARVN forces or were left over from the war with France. Diem rejected American calls for meaningful reform until the establishment of full security. He did not understand that the war was primarily a political problem and could be solved only through political means.

Diem, who practiced the divide and rule concept of leadership, increasingly delegated authority to his brother, Ngo Dinh Nhu, and his secret police. Isolated from his people and relying only on trusted family members and a few other advisors, Diem resisted U.S. demands that he promote his senior officials and officers on the basis of ability and pursue the war aggressively.

By now, U.S. President John F. Kennedy's administration was forced to reevaluate its position toward the war, but increased U.S. involvement was inevitable, given Washington's commitment to resist communist expansion

People's Army of Vietnam (PAVN, North Vietnamese Army) troops on the Ho Chi Minh Trail. A network of roads and trails that stretched from North Vietnam through eastern Laos to South Vietnam, the Ho Chi Minh Trail formed the main supply route for troops and equipment supporting Hanoi's war against the Republic of Vietnam (South Vietnam). (AFP/Getty Images)

and the belief that all of Southeast Asia would become communist if South Vietnam fell. Domestic political considerations also influenced the decision.

In May 1961, Kennedy sent several fact-finding missions to Vietnam. These led to the Strategic Hamlet program as part of a general strategy emphasizing local militia defense and to the commitment of additional U.S. manpower. By the end of 1961, U.S. strength in Vietnam had grown to around 3,200 men, most in helicopter units or serving as advisors. In February 1962, the United States also established a military headquarters in Saigon, when the Military Assistance and Advisory Group (MAAG) was replaced by the Military Assistance Command, Vietnam (MACV), to direct the enlarged American commitment. The infusion of U.S. helicopters and additional support for the ARVN probably prevented a VC military victory in 1962. The VC soon learned to cope with the helicopters, however, and again the tide of battle turned.

Meanwhile, Nhu's crackdown on the Buddhists led to increased opposition to Diem's rule. South Vietnamese generals now planned a coup, and after Diem rejected reforms, the United States gave the plotters tacit support. On 1 November 1963 the generals overthrew Diem, murdering both him and Nhu. Within three weeks Kennedy was also dead, succeeded by Lyndon B. Johnson.

The United States seemed unable to win the war either with or without Diem. A military junta now took power, but none of those who followed Diem had his prestige. Coups and countercoups occurred, and much of South Vietnam remained in turmoil. Not until General Nguyen Van Thieu became president in 1967 was there a degree of political stability.

Both sides steadily increased the stakes, apparently without foreseeing that the other might do the same. In 1964 Hanoi made three decisions. The first was to send to South Vietnam units of its regular army, the People's Army of Vietnam (PAVN), known to the Americans as the North Vietnamese

Army (NVA). The second was to rearm its forces in South Vietnam with modern communist-bloc weapons, giving them a firepower advantage over the ARVN, which was still equipped largely with World War II-era U.S. infantry weapons. And the third was to order direct attacks on American installations, provoking a U.S. response.

On 2 August 1964, the Gulf of Tonkin Incident occurred when North Vietnamese torpedo boats attacked the U.S. destroyer *Maddox* in international waters in the Gulf of Tonkin. A second attack on the *Maddox* and another U.S. destroyer, the *Turner Joy*, reported two days later, probably never occurred, but Washington believed that it had, and this led the Johnson administration to order retaliatory air strikes against North Vietnamese naval bases and fuel depots. It also led to a near-unanimous vote in Congress for the Gulf of Tonkin Resolution authorizing the president to use whatever force he deemed necessary to protect U.S. interests in Southeast Asia.

Johnson would not break off U.S. involvement in Vietnam, evidently fearing possible impeachment if he did so. At the same time, he refused to make the tough decision of fully mobilizing the country and committing the resources necessary to win, concerned that this would destroy his cherished Great Society social programs. He also feared a widened war, possibly involving the People's Republic of China (PRC).

By 1965, Ho and his generals expected to win the war. Taking their cue from Johnson's own pronouncements to the American people, they mistakenly believed that Washington would not commit ground troops to the fight. Yet Johnson did just that. Faced with Hanoi's escalation, in March 1965 U.S. Marines arrived to protect the large American air base at Da Nang. A direct attack on U.S. advisors at Pleiku in February 1965 also led to a U.S. air campaign against North Vietnam.

Ultimately more than 2.5 million Americans served in Vietnam, and nearly 58,000 of them died there. At its height, Washington was spending \$30 billion per year on the war. Although the conflict was the best-covered war in American history (it became known as the first television war), it was conversely the least understood by the American people.

Johnson hoped to win the war on the cheap, relying heavily on airpower. Known as Operation ROLLING THUNDER and paralleled by Operation BARREL ROLL, the secret bombing of Laos (which became the most heavily bombed country in the history of warfare), the air campaign would be pursued in varying degrees of intensity over the next three and a half years. Its goals were to force Hanoi to negotiate peace and to halt infiltration into South Vietnam. During the war, the United States dropped more bombs than in all of World War II, but the campaign failed in both its objectives.

In the air war, Johnson decided on graduated response rather than the massive strikes advocated by the military. Gradualism became the grand strategy employed by the United States in Vietnam. Haunted by the Korean War, at no time would Johnson consider an invasion of North Vietnam, fearful of provoking a Chinese reaction.

By May and June 1965, with PAVN forces regularly destroying ARVN units, MACV commander General William Westmoreland appealed for U.S.

More than 2,500,000 Americans served in Vietnam, and nearly 58,000 of them died there. At its height, Washington was spending \$30 billion per year on the war.

After a firefight, two soldiers of the U.S. 173rd Airborne Brigade wait for a helicopter to evacuate them and a dead companion. (National Archives and Records Administration)

ground units, which Johnson committed. PAVN regiments appeared ready to launch an offensive in the rugged Central Highlands and then drive to the sea, splitting South Vietnam in two. Westmoreland mounted a spoiling attack with the recently arrived 1st Cavalry Division (Airmobile) formed around some 450 helicopters. During October–November 1965, the 1st Cavalry won one of the war's rare decisive encounters in the Battle of Ia Drang and may have derailed Hanoi's hopes of winning a decisive victory before full American might could be deployed.

Heavy personnel losses on the battlefield, while regrettable, were entirely acceptable to the North Vietnamese leadership. Ho remarked at one point that North Vietnam could absorb an unfavorable loss ratio of ten to one and still win the war. Washington never did understand this and continued to view the war through its own lens of what would be unacceptable in terms of casualties. From 1966 on, Vietnam was an escalating military stalemate, as Westmoreland requested increasing numbers of men from Washington. By the end of 1966, 400,000 U.S. troops were in Vietnam. In 1968, U.S. strength was more than 500,000 men. Johnson also secured some 60,000 troops from other nations—most of them from the Republic of Korea (ROK, South Korea)—surpassing the 39,000-man international coalition of the Korean War.

VIETNAM WAR, 1964 – 1967

Terrain was not judged important. The goals were to protect the population and kill the enemy, with success measured in terms of body counts that, in turn, led to abuses. During 1966, MACV mounted eighteen major operations, each resulting in more than 500 supposedly verified VC/PAVN dead. Fifty thousand enemy combatants were supposedly killed in 1966. By the beginning of 1967, the PAVN and VC had 300,000 men versus 625,000 ARVN and 400,000 Americans.

Hanoi, meanwhile, had reached a point of decision, with casualties exceeding available replacements. Instead of scaling back, North Vietnam prepared a major offensive that would employ all available troops to secure a quick victory. Hanoi believed that a major military defeat for the United States would end its political will to continue.

Giap now prepared a series of peripheral attacks, including a modified siege of some 6,000 U.S. Marines at Khe Sanh near the demilitarized zone (DMZ), beginning in January 1968. With U.S. attention riveted on Khe Sanh, Giap planned a massive offensive to occur over Tet, the lunar new year holidays, called the General Offensive–General Uprising. The North Vietnamese government believed that this massive offensive would lead people in South Vietnam to rise up and overthrow the South Vietnamese government, bringing an American withdrawal. The attacks were mounted against the cities. In a major intelligence failure, U.S. and South Vietnamese officials misread both the timing and strength of the attack, finding it inconceivable that the attack would come during Tet, sacrificing public goodwill.

The Tet Offensive began on 31 January and ended on 24 February 1968. Poor communication and coordination plagued Hanoi's plans. Attacks in one province occurred a day early, alerting the authorities. Hue, the former imperial capital, was especially hard hit. Fighting there destroyed half the city.

Hanoi's plan failed. ARVN forces generally fought well, and the people of South Vietnam did not support the attackers. In Hue, the communists executed 3,000 people, and news of this caused many South Vietnamese to rally to the South Vietnamese government. Half of the 85,000 VC and PAVN soldiers who took part in the offensive were killed or captured. It was the worst military setback for North Vietnam in the war.

Paradoxically, it was also its most resounding victory, in part because the Johnson administration and Westmoreland had trumpeted prior Allied successes, and the intensity of the fighting came as a profound shock to the American people. Disillusioned and despite the victory, they turned against the war. At the end of March, Johnson announced a partial cessation of bombing and withdrew from the November presidential election.

Hanoi persisted, however. In the first six months of 1968, communist forces sustained more than 100,000 casualties, and the VC was virtually wiped out. In the same period, 20,000 Allied troops died. All sides now opted for talks in Paris in an effort to negotiate an end to the war.

American disillusionment with the war was a key factor in Republican Richard Nixon's razor-thin victory over Democrat Hubert Humphrey in the November 1968 presidential election. With no plan of his own, Nixon embraced Vietnamization, actually begun under Johnson. This turned over more

of the war to the ARVN, and U.S. troop withdrawals began. Peak U.S. strength of 550,000 men occurred in early 1969. There were 475,000 men by the end of the year, 335,000 by the end of 1970, and 157,000 at the end of 1971. Massive amounts of equipment were turned over to the ARVN, including 1 million M-16 rifles and sufficient aircraft to make the South Vietnamese Air Force the world's fourth largest. Extensive retraining of the ARVN was begun, and training schools were established. The controversial counter-insurgency PHOENIX program also operated against the VC infrastructure, reducing the insurgency by 67,000 people between 1968 and 1971, but PAVN forces remained secure in sanctuaries in Laos and Cambodia.

Nixon's policy was to limit outside assistance to Hanoi and pressure the North Vietnamese government to end the war. For years, American and South Vietnamese military leaders had sought approval to attack the sanctuaries. In March 1970 a coup in Cambodia ousted Prince Norodom Sihanouk. General Lon Nol replaced him, and secret operations against the PAVN Cambodian sanctuaries soon began. Over a two-month span, there were twelve cross-border operations, known as the Cambodian Incursion. Despite widespread opposition in the United States to the widened war, the incursions raised the allies' morale, allowed U.S. withdrawals to continue on schedule, and purchased additional time for Vietnamization. PAVN forces now concentrated on bases in southern Laos and on enlarging the Ho Chi Minh Trail.

In the spring of 1971, ARVN forces mounted a major invasion into southern Laos, known as Operation LAM SON 719. There were no U.S. advisors, and ARVN units took heavy casualties. The operation set back Hanoi's plans to invade South Vietnam but took a great toll on the ARVN's younger officers and pointed out serious command weaknesses.

By 1972, PAVN forces had recovered and had been substantially strengthened with new weapons, including heavy artillery and tanks, from the Soviet Union. They now mounted a major conventional invasion of South Vietnam. Hanoi believed that the United States would not interfere. Giap had fifteen divisions. He left only one in North Vietnam and two in Laos and committed the remaining twelve to the invasion.

The attack began on 29 March 1972. Known as the Spring or Easter Offensive, it began with a direct armor strike across the DMZ at the 17th Parallel and caught the best South Vietnamese troops facing Laos. Allied intelligence misread its scale and precise timing. Giap risked catastrophic losses but hoped for a quick victory before ARVN forces could recover. At first it appeared that the PAVN would be successful. Quang Tri fell, and rain limited the effectiveness of airpower.

In May, President Nixon authorized B-52 bomber strikes on North Vietnam's principal port of Haiphong and the mining of its harbor. This new air campaign was dubbed LINEBACKER I and involved the use of new precision-guided munitions (so-called or smart bombs). The bombing cut off much of the supplies for the invading PAVN forces. Allied aircraft also destroyed 400–500 PAVN tanks. In June and July, the ARVN counterattacked. The invasion cost Hanoi half its force—some 100,000 men died—while ARVN losses were only 25,000.

With both Soviet and Chinese leaders anxious for better relations with the United States in order to obtain Western technology, Hanoi gave way and switched to negotiations. Finally, an agreement was hammered out in Paris that December, but President Thieu balked and refused to sign, whereupon Hanoi made the agreements public. A furious Nixon blamed Hanoi for the impasse, and in December he ordered a resumption of the bombing, dubbed *LINEBACKER II* but also known as the December or Christmas Bombings. Although fifteen B-52s were lost, Hanoi had fired away virtually its entire stock of surface-to-air missiles (SAMs) and now agreed to resume talks.

After a few cosmetic changes, an agreement was signed on 23 January 1973, with Nixon forcing Thieu to agree or risk the end of all U.S. aid. The United States recovered its prisoners of war and departed Vietnam. The Soviet Union and China continued to supply arms to North Vietnam, however, while Congress constricted U.S. supplies to South Vietnam. Tanks and planes were not replaced on the promised one-for-one basis as they were lost, and spare parts and fuel were both in short supply. All this had a devastating effect on ARVN morale.

In South Vietnam, both sides violated the cease-fire, and fighting steadily increased in intensity. In January 1975, communist forces attacked and quickly seized Phuoc Long Province on the Cambodian border north of Saigon. Washington took no action. The communists next took Ban Me Thuot in the Central Highlands, then in mid-March President Thieu decided to abandon

Saigon falls to the People's Army of Vietnam (PAVN, North Vietnamese Army), April 1975. (Francoise de Mulder/Corbis)

the northern part of his country. Confusion became disorder, then disaster, and six weeks later PAVN forces controlled all of South Vietnam. Saigon fell on 30 April 1975, to be renamed Ho Chi Minh City. Vietnam was now reunited, but under a communist government. An estimated 3 million Vietnamese, soldiers and civilians, had died in the struggle. Much of the country was devastated by the fighting, and Vietnam suffered from the effects of the widespread use of chemical defoliants.

The effects were also profound in the United States. The American military was shattered by the war and had to be rebuilt. Inflation was rampant from the failure to face up to the true costs of the war. Many questioned U.S. willingness to embark on such a crusade again, at least to go it alone. In this sense, the war forced Washington into a more realistic appraisal of U.S. power.

The Vietnam War protest movement brought together numerous organizations and activists with different agendas under the unifying banner of opposition to the war. Initially, this opposition came from the Old Left, a group of traditionally socialist and pacifist groups. Representative of the Old Left was the War Resisters League (WRL), founded in 1923. By 1963, the WRL focused its protests on the expanding U.S. advisory effort in Vietnam.

On 16 May 1964, the WRL sponsored a demonstration in New York City during which twelve men burned their draft cards. Soon thereafter, leadership for the antiwar movement shifted to what became known as the New Left. One of the most prominent New Left groups was the Students for a Democratic Society (SDS), formed in 1960. The SDS first focused on domestic concerns but began expressing growing concern with the military-industrial-academic establishment and the Vietnam War.

In February 1965, the United States began bombing the Democratic Republic of Vietnam (DRV, North Vietnam), providing a unifying catalyst that brought a number of groups together in opposition to the war. However, the

Vietnam War Protests

focus of the movement shifted to college campuses. Beginning in March 1965, a series of nationwide college campus teach-ins were held, the first of them at the University of Michigan. On 17 April the SDS organized a march on Washington, D.C., in which 20,000 people participated.

As the U.S. effort in Vietnam escalated, the antiwar movement grew steadily, attracting new allies. Soon, social activists, celebrities, and musicians such as Abbie Hoffman, Timothy Leary, Allen Ginsberg, Jane Fonda, Jefferson Airplane, and others took up the antiwar cause. As the war intensified, other New Left groups such as the Catholic Peace Fellowship, the Emergency Citizens Group Concerned About Vietnam, and the National Emergency Committee of Clergy Concerned About Vietnam joined in the antiwar protests.

Martin Luther King Jr. and other civil rights leaders also began to denounce the war on moral grounds. By 1966, the antiwar movement gained strength and had formed an informal alliance with the civil rights movement. The movement received new support from former officials in the administrations of Presidents John F. Kennedy and Lyndon B. Johnson such as Arthur M. Schlesinger Jr. and John Kenneth Galbraith, who spoke out against the war. In Congress, a rising antiwar group led by Democratic Senators Wayne Morse, Mike Mansfield, and J. William Fulbright gained momentum.

As sentiment against the war grew, protests against the war took root abroad. In the Federal Republic of Germany (FRG, West Germany), numerous student-led demonstrations against the war occurred. In France, which had fought its own war in Indochina, demonstrations were reinforced by President Charles de Gaulle, who publicly declared that North Vietnam would ultimately win the war. There were antiwar protests throughout Europe, even in Great Britain, a staunch American ally. In Australia, which had sent troops to Vietnam, the antiwar movement paralleled that in the United States and grew rapidly. In communist bloc nations, students also took to the streets to protest America's war. Indeed, the international antiwar movement helped solidify and legitimize the American antiwar movement.

Back in the United States, the movement gained in strength as the number of American troops in Vietnam approached half a million. In 1967, the Spring Mobilization to End the War in Vietnam, a coalition composed of teachers, students, and Old and New Left organizations, sponsored mass demonstrations. As a result, on 15 April more than 130,000 antiwar protestors marched in New York and 70,000 protested in San Francisco. The most significant antiwar event of 1967 was October's march on the Pentagon. By then, the antiwar movement was crippling Johnson's presidency and threatening to paralyze the nation. Even some of Johnson's closest advisors began to question the war effort.

With public support for the war plummeting, Johnson fought back by overselling modest gains in the war. This set the stage for the stunning 30 January 1968 Tet Offensive debacle. By 31 January, communist forces in the Republic of Vietnam (ROV, South Vietnam) had attacked five major cities, thirty-six provincial capitals, and sixty-four district capitals. In one of the

A female demonstrator offers a flower to military police on guard at the Pentagon during an anti-Vietnam War demonstration, 21 October 1967. (National Archives and Records Administration)

boldest attacks, a Viet Cong (VC) platoon briefly penetrated the grounds of the U.S. embassy in Saigon. Although the communist forces were soundly defeated, the Tet Offensive demonstrated that Johnson had grossly overstated the war's progress, costing the government and the military the confidence of the American people. Now with fully half of all Americans opposed to the Vietnam War, the antiwar movement gained further momentum.

In March 1968, Johnson announced a halt to the bombing campaign and stood down for reelection. This did not, however, curtail the antiwar protests, which soon turned violent. Students occupied Columbia University's administration building and had to be forcibly evicted. Raids on draft boards began, during which protestors smeared blood on records and shredded files. Other demonstrations occurred at the offices and production facilities of Dow Chemical, the manufacturer of napalm. Perhaps the most widely publicized protests took place in the streets of Chicago outside the 1968 Democratic National Convention, resulting in a bloody confrontation between demonstrators and police.

During the 1968 elections, presidential candidate Richard Nixon claimed to have a plan to end the war. However, when casualties continued to mount and Nixon did not immediately scale the war back, antiwar critics turned their sights on the Nixon White House. A new round of demonstrations erupted in the fall of 1969. In October, a series of nationwide demonstrations was organized by the Vietnam Moratorium Committee (VMC). More than 100,000 people gathered in Boston Common. In November 1969, the VMC called a march on Washington, drawing some 500,000 participants. At this point, the antiwar leadership began to change. Clean-cut SDS leaders who had supported the 1968 peace candidate Eugene McCarthy were being eclipsed by movement leaders who favored more radical measures. This shift elicited a public backlash, as Americans, even those who opposed the war, became fearful and angry with the movement's radicalization.

The antiwar movement regained a measure of renewed solidarity in April 1970 when Nixon gambled that he could reduce U.S. troop strength in Vietnam by bombing communist sanctuaries in Cambodia. The result was a new round of college campus demonstrations. On 4 May 1970, Ohio National Guardsmen killed four students at Kent State University, unleashing a firestorm of student demonstrations around the country and virtually paralyzing America's college and university campuses. That same week, 100,000 people gathered to protest the killings in Washington.

The June 1971 publication of the Pentagon Papers won more converts to the movement. Nixon's decision to bomb North Vietnam in December 1972 set off a new round of protests at home and abroad. Nixon was denounced as a war criminal in Europe. Even the pope sharply criticized Nixon. This latest uproar did not substantially subside until January 1973, when the Paris Peace Accords had been signed, virtually ending America's Vietnam odyssey.

The antiwar movement revealed the sharp divisions in American society and encouraged the North Vietnamese to fight on long enough to break the back of the American war effort. The movement also greatly influenced the American political and military establishments and eroded support for both Johnson and Nixon. Finally, it is axiomatic that the movement had a significant impact on the Vietnam War's outcome.

Senior general in the People's Army of Vietnam (PAVN, North Vietnamese Army) during 1946–1972 and minister of defense of the Democratic Republic of Vietnam (DRV, North Vietnam) and later the Socialist Republic of Vietnam (SRV) during 1946–1986. Vo Nguyen Giap was born in An Xa, Quang Binh Province, in central Vietnam on 15 August 1911. He attended the Lycée Nationale in Hue but was labeled an agitator and expelled. He then worked for a time as a journalist, and he joined the secret Revolutionary Party for a New Vietnam.

Giap was arrested by the French in 1930 and was sentenced to two years' hard labor. Upon his release from prison, he studied at the Lycée Albert Sarraut at Hanoi, graduating in 1934. He then taught history and French at the Lycée Thuong Long. He also published a number of journals and newspapers, most of which were shut down by the authorities. In 1938 he earned a law degree from the University of Hanoi.

Giap joined the Indochinese Communist Party (ICP) in 1937. The ICP ordered him to southern China in 1940. He was forced to leave behind his wife and daughter, and in 1941 the French arrested his wife. She was subsequently tortured to death.

In China, Giap met Ho Chi Minh. Under Ho's orders, Giap returned to northern Tonkin, where he organized opposition to the French and became a leader of the Vietnam Independence League (Viet Minh), formed in 1942.

In December 1944 Giap formed thirty-four men into the Vietnam Armed Propaganda and Liberation Brigade, the beginnings of the PAVN. His troops underwent strict political indoctrination and military training. Giap was responsible for refining the rural revolutionary warfare theories of Mao Zedong that combined political and military activity into revolutionary warfare.

At the end of World War II, Giap became minister of the interior in the new North Vietnamese government formed in September 1945. He was subsequently named minister of defense with the rank of full general and command of all North Vietnamese military forces.

Giap led the Viet Minh against the French in the long Indochina War (1946–1954), in the course of which he built an army of nearly 300,000 men. He suffered heavy losses when he went over prematurely to major pitched battles against the French Army, but he achieved victory in May 1954 at Dien Bien Phu in the most important battle of the war.

Giap also led PAVN forces in fighting in the Republic of Vietnam (RVN, South Vietnam) after President Ngo Dinh Diem's refusal to hold the elections called for in 1956 by the 1954 Geneva Accords. Giap often engaged in intense debates with military commanders and political leaders over strategy. He generally cautioned patience, while others sought more aggressive action against South Vietnamese and U.S. forces. He opposed the 1968 Tet Offensive and was proven correct, as the offensive failed, producing high casualties for his own troops and no popular uprising in South Vietnam. However, the Tet Offensive also produced an unexpected psychological victory for Hanoi and led Washington to seek a way out of the war.

In 1972, Giap reluctantly ordered a massive invasion of South Vietnam in what became known as the Easter Offensive. Once again, he was proven correct when the South Vietnamese, supported by massive U.S. airpower, blunted the attack and inflicted heavy casualties on the North Vietnamese. Still, when the offensive was over, PAVN forces occupied territory that they had not previously controlled, and the subsequent 1973 peace agreement did not require their removal.

Sharp disagreements within the North Vietnamese leadership regarding Giap's military judgment led to him being stripped of his command of the PAVN, although he retained the post of minister of defense until 1986. His protégé, General Van Tien Dung, directed the final offensive in 1975 that resulted in the defeat of South Vietnam. Appointed to head the Ministry of Science and Technology, Giap opposed the 1978 Vietnamese invasion of Cambodia. In 1991 he was forced to give up his last post as vice premier in charge of family planning. After his retirement, the government designated Giap a national treasure.

Federal Republic of Germany (FRG, West Germany) politician, minister for regional and city planning (1972–1974), minister of justice (1974–1981), and mayor of West Berlin (1981). Born on 3 February 1926 in Göttingen, Hans-Jochen Vogel studied law at the University of Marburg, where he received his doctorate in 1950. That same year he joined the Social Democratic Party (SPD).

Vogel served in the Bavarian state chancellery during 1955–1958 and was head of the law division of Munich's municipal council during 1958–1960. He was also mayor of Munich during 1960–1972. In November 1972 he entered the Bundestag, where he stayed until 1981. He served again in the Bundestag during 1983–1994.

Under Chancellor Willy Brandt, Vogel became minister for regional and city planning in December 1972. In the Helmut Schmidt government, Vogel served as minister for justice during 1974–1981. The greatest challenge he faced as justice minister was the terrorist activities of the Red Army Faction, which sought to overthrow the government through the kidnapping and assassination of politicians, diplomats, and industrialists. He cooperated closely with Schmidt to crush the terrorists. By the time Vogel left office in January 1981, thirty-two people had been killed by terrorist attacks, while twenty-two terrorists had been sentenced to long-term imprisonments.

In January 1981, the Berlin House of Deputies elected Vogel governing mayor of West Berlin. After just four months, however, he was defeated in the general elections and resigned. During 1981–1983, he was SPD opposition leader in the Berlin House of Deputies. In 1983 he reentered the Bundestag, and in June 1987 a special party convention elected him SPD chairman, replacing the aging Brandt. Vogel resigned as SPD opposition leader in the Bundestag in November 1991 but retained his seat for another three years.

Voice of America

U.S. government global broadcasting service established in 1942. During the Cold War, the Voice of America (VOA) audience in the Soviet Union and Warsaw Pact countries grew to an estimated 52 million listeners a week. Principal languages beamed to that region and the Balkans over the years were Russian, Ukrainian, Polish, and English. Others included Albanian, Armenian, Azerbaijani, Bulgarian, Belarusian, Czech, Estonian, Georgian, Hungarian, Latvian, Lithuanian, Romanian, Serbo-Croatian, Slovak, Slovene, Tatar, Turkmenistani, and Uzbek.

From its inception in 1942 until the advent of multimedia in the 1990s, most VOA broadcasts were sent via shortwave with some medium-wave, or the standard AM, frequencies. Other delivery means included long-wave and occasional placement of recordings for rebroadcast by local radio outlets.

VOA Russia, which peaked at seventeen-hour broadcast days late in the Cold War, began transmissions on 17 February 1947 under the leadership of VOA Director Charles Thayer, a prominent American diplomat and Soviet affairs specialist. Programming of VOA services to the Soviet Union and Eastern Europe consisted of news, topical analyses, official U.S. policy statements, and a full range of features about life in America and the individual audience regions. A flagship program in Russian, *Events and Opinions*, was broadcast at the peak listening hour, midnight Moscow time. The offerings of it and other programs reflected American thought and ideas, democratic practices in a civil society, history, cultural developments, economic and scientific news, and music.

In English, VOA jazz impresario Willis Conover broadcast more than 10,000 programs (1955–1996). He inspired countless Russian and East European artists and others with what he called “the music of freedom.”

Communist governments feared the impact of the two principal U.S. networks, VOA and Radio Free Europe/Radio Liberty (RFE/RL), and the British Broadcasting Corporation (BBC). The BBC estimated that the Soviet cost of jamming Western broadcasts was more than \$900 million annually, considerably more than the combined budgets at the time of all American and British publicly funded international networks worldwide. The attempt to

block incoming broadcasts, in any case, was only partially effective.

European communist governments' jamming of VOA shortwave varied with the ebb and flow of East-West tensions and crises, within and outside the target countries. Jamming ceased beginning in 1963 and commenced again after the Soviets invaded Czechoslovakia in August 1968. Jamming was again curtailed in 1974 until shortly after the Soviet invasion of Afghanistan in December 1979. Jamming of VOA finally ended in 1987 as glasnost and perestroika took hold. Other countries blocking U.S.-funded broadcasts included Bulgaria, the German Democratic Republic (GDR, East Germany), Poland, the People's Republic of China (PRC), and Cuba.

Polish President Lech Wałęsa, in assessing the influence of Western broadcasts, said in 1997: "When it comes to radio waves, the Iron Curtain was helpless. Nothing could stop the news from coming through—neither sputniks nor minefields, high walls or barbed wire. The frontiers could be closed; words could not."

South African apartheid leader, prime minister (1966–1978), and president (1978–1979). Born in Jamestown, South Africa, on 13 December 1915, the son of an Afrikaner sheep farmer, Balthazar Johannes "John" Vorster studied law at South Africa's Stellenbosch University, graduating in 1938. After briefly clerking for a judge, he took up practice as an attorney. During World War II he was interned for more than two years because of his pro-Nazi sympathies.

**Vorster, Balthazar
Johannes**
(1915–1983)

In the 1953 all-white elections, Vorster was elected to parliament on the Nationalist Party ticket. In 1961 he was appointed minister of justice and of social welfare and pensions. As such, he organized a crackdown on the rising tide of black opposition to his government's apartheid plans. His suppression methods included detention without trial and the use of anticommunist legislation to quash government opposition.

After Prime Minister Hendrik Verwoerd's 1966 assassination, Vorster became the National Party leader and prime minister. His term in office was marked by a significant shift to the Right as his government tried to cope with deepening international isolation, the threat of sanctions, and the rising anger of the black majority. In July 1971 Vorster caused an international controversy when he announced that South Africa had acquired uranium-enrichment technology. Suspicions that South Africa possessed a nuclear bomb increased in the summer of 1977, following the alleged detection by Soviet satellites of a nuclear testing facility in the Kalahari Desert. Vorster's government never provided an explanation on the nature of the facility.

Pragmatic in his approach to foreign affairs, Vorster sought to end South Africa's estrangement from its regional neighbors. In 1974, under pressure from the United States, he convinced Rhodesian Prime Minister Ian Smith to accept that minority rule would end there. In 1976, again under pressure from the Americans, Vorster agreed that South African troops should enter war-torn Angola, marking the beginning of South Africa's twenty-year involvement in the Angolan Civil War.

The Angolan war strengthened the position of the military in South African politics and weakened Vorster's party position. In 1978 he was elected president, but he was forced to resign in 1979 because of a political scandal involving allegations of misappropriation of funds. Vorster died in Cape Town on 10 September 1983.

Vranitzky, Franz
(1937–)

Austrian banker, finance minister (1984–1986), and federal chancellor (1986–1997). Born on 4 October 1937 in Vienna, Franz Vranitzky studied inter-

national trade and commerce at the College of Commerce and graduated in 1960. In 1961 he joined the research staff of the Austrian Central Bank. In 1969 he received a doctorate in economics.

Active in Social Democratic politics since his student days, in 1970 Vranitzky became a financial advisor in the Ministry of Finance. In 1976 he was named deputy chairman of the board of directors of Creditanstalt Bankverein and in 1981 chairman of Länderbank. In 1984 Chancellor Fred Sinowatz appointed Vranitzky minister of finance. Following Sinowatz's resignation, in June 1986 Vranitzky became federal chancellor.

Vranitzky's tenure as chancellor was marked by strained Austro-American and Austro-Israeli relations over the 1986 election of Kurt Waldheim as president of Austria. Vranitzky continued Austria's policy of pursuing cordial economic and political relations with the Soviets and allowing Austria to serve as a transit point for emigrating Soviet Jews. He traveled to Moscow for a summit with Soviet leader Mikhail Gorbachev in October 1988 and oversaw Austria's hosting of the 1986–1989 Commission on Security and Cooperation in Europe (CSCE) Vienna Review Conference. In September 1989 Austria opened its borders to thousands of citizens from the German Democratic Republic (GDR, East Germany) who were trying to reach the Federal Republic of Germany (FRG, West Germany) via Hungary, thereby helping to precipitate the collapse of the East German regime.

From 1989 on, Vranitzky was increasingly preoccupied with adjusting to the implications for Austria, both positive and negative, of the collapse of communism in Eastern Europe and the Soviet Union. Large numbers of refugees and asylum seekers from the former Yugoslavia and other ex-communist states poured into the country, giving rise to a political backlash centered in Jörg Haider's Freedom Party of Austria. On the other hand, Austria stepped up its integration with Western Europe and moved out from under the constraints on its external freedom of action imposed by the 1955 Austrian State Treaty. Austria successfully negotiated entrance into the European Union (EU), which it formally joined on 1 January 1995. In addition to leading Austria's drive for EU membership, Vranitzky forged a new relationship with the North Atlantic Treaty Organization (NATO), as Austria joined the Partnership for Peace program in February 1995. Vranitzky resigned the chancellorship in January 1997. That same year, he was named special envoy of the Organization of Security and Cooperation in Europe to Albania.

Vyshinskii, Andrei Ianuarevich (1883–1954)

Soviet politician, chief prosecutor for Soviet leader Josef Stalin's show trials in the 1930s, and Soviet foreign minister (1949–1953). Born on 10 December 1883 in Odessa to a Polish family, Andrei Ianuarevich Vyshinskii fraternized with Marxists while at the University of Kiev studying law, and in 1920 he joined the Bolshevik Party. Working in the Soviet legal system, he demonstrated a talent for prosecuting alleged saboteurs and wreckers in the Shakhty Trial (1928) and the Industrial Party Trial (1930). In 1933 he became deputy prosecutor of the Soviet Union, further proving his skills in the creation and manipulation of evidence and the histrionic abuse of defendants. In the aftermath of the assassination of the Leningrad party boss Sergei Kirov in December 1934, Vyshinskii was involved in the secret trial of the Nikolayev-Kotolynov group, which was blamed for the murder.

Soviet Foreign Minister Andrei I. Vyshinskii. (Hulton-Deutsch Collection/Corbis)

The trial of the alleged conspirators in the assassination of Kirov led to the great show trials of 1935–1939 in which leading Bolsheviks were arrested, tortured, humiliated in court, and sentenced to death or imprisonment on the basis of fraudulent confessions. It was Vyshinskii, as chief prosecutor during 1935–1939 and faithful servant of Stalin, who dominated the trials with his wild, dramatic, vitriolic denunciations of the defendants and the use of falsified evidence. His reward was a seat in the Soviet parliament (1938) and the deputy premiership during 1939–1944.

After 1939, Vyshinskii's career was mainly in foreign affairs. He served as deputy foreign minister during 1939–1949 and then foreign minister during 1949–1953. Stalin had ousted Foreign Minister Vyacheslav Molotov after the humiliating setback of the failed Berlin Blockade (1948–1949).

Vyshinskii's tenure in office was singularly unremarkable. He made no major foreign policy decisions and was content merely to carry out Stalin's mandates. After Stalin's death in March 1953, Molotov assumed his old post, and Vyshinskii was cast aside. As a sort of consolation prize, Moscow's new collective leadership sent Vyshinskii to the United Nations (UN) in New York as a permanent Soviet delegate. There he became well known for his acerbic wit and scathing denunciations of the West and the

United States in particular. Vyshinskii died in New York City on 22 November 1954.

W

President of Austria and secretary-general of the United Nations (UN). Born in St. Andra-Wordern, Austria, on 21 December 1918, Kurt Waldheim entered the University of Vienna in 1937, intending to pursue a course of study that would lead to law and diplomacy, and earned a law degree in 1944. At the same time, during World War II he served as a junior officer in the German Army in the Balkans.

Waldheim entered the diplomatic service in 1945 and quickly rose through the ranks. He served as first secretary of the Austrian Legation in Paris (1948–1951) and worked in the Foreign Ministry in Vienna before being appointed as Austria's representative to the UN in 1955. Although he served only one year, the appointment marked the beginning of his long association with the UN.

After a stint in Canada (1956–1960), Waldheim again returned to Vienna, rising to the post of director-general for political affairs in 1962. Two years later, he was reappointed as Austria's representative to the UN. In 1968, he became minister for foreign affairs under Josef Klaus. Waldheim left the Austrian government in 1970 to serve as chairman of the Safeguards Committee of the International Atomic Energy Agency (IAEA). He became Austria's representative to the UN for a third time later that year.

Following an unsuccessful campaign for the presidency of Austria in 1971, Waldheim won election as secretary-general of the UN that December, succeeding U Thant. As secretary-general, Waldheim campaigned for peace around the globe. He traveled frequently to the Middle East, visited Cyprus several times, and attempted to establish peace talks among India, Pakistan, and Bangladesh. He took part in the Paris International Conference on Vietnam and presided over the opening session of the Geneva Peace Conference on the Middle East in 1973. In his second term, he

Waldheim, Kurt
(1918–2007)

Kurt Waldheim served as secretary-general of the United Nations from 1971 to 1982. He was elected president of Austria in 1986 despite concerns over revelations regarding his German Army service in World War II. (Austrian Press and Information Service)

negotiated, unsuccessfully, for the release of American hostages from Iran. The People's Republic of China (PRC) blocked his attempt to win a third term in 1981.

In 1986, Waldheim ran again for the post of president in Austria as the candidate of the Austrian People's Party (ÖVP). His campaign presented him as "a man the people trust" and emphasized his humanitarian role with the UN. Journalistic investigations into his background, however, uncovered evidence that he had been part of a German Army unit guilty of atrocities during World War II. Waldheim claimed that he had been on leave in Vienna when the crimes were committed and knew nothing about them.

Older Austrians rallied behind Waldheim, and he was elected president following a run-off election in June 1986. The decision proved troublesome, as the international community quickly ostracized Austria. Only the Vatican, the Soviet Union, a few nations in Eastern Europe, and some Arab states allowed Waldheim to visit as head of state. The opposition within Austria called for his resignation. Instead, the government launched its own inquiry into Waldheim's past.

The results of the investigation, released in February 1988, largely exonerated Waldheim. His response was to make a televised speech noting that the Holocaust was one of the most tragic events in history and, for the first time, admitting that Austrians had played a shameful role in it. Waldheim served the rest of his term in relative anonymity and chose not to run again in 1992. He died in Vienna on 14 June 2007.

Waldheim Affair (1986)

Allegations of involvement in Nazi atrocities against Kurt Waldheim, the former secretary-general of the United Nations (UN) who was running for president of the Austrian Republic. Waldheim began his second campaign to become president of Austria in late 1985. He had run unsuccessfully in 1971

but lessened the sting of that defeat by negotiating his election as secretary-general of the UN the following year. He served two terms as secretary-general and established a reputation as a man of peace. His attempt to win a third term in 1981 was blocked by the government of the People's Republic of China (PRC), however, and Waldheim retired to Vienna. He published his autobiography in 1985.

Despite Waldheim's presence, the Austrian presidential campaign of 1986 merited little international attention until *Profil*, an Austrian news magazine, printed a series of articles alleging that Waldheim had omitted crucial details about his service in the German Army during World War II in both his autobiography and in his presidential campaign. Waldheim's account claimed that although a junior officer in a German SA unit before 1939, he had spent most of the war in Vienna recuperating from wounds and studying law. *Profil* revealed evidence that Waldheim had spent considerable time on duty in the Balkans and in Salonika, Greece. Although the magazine did not accuse Waldheim directly, it did note that his unit had murdered Yugoslav partisans and deported Jews to concentration camps during his service. Waldheim responded by saying that he had no knowledge of any atrocities and had simply "done his duty as a soldier."

The affair quickly became the focus of the presidential election. Older Austrians generally supported Waldheim, claiming that Austria was a victim of Nazi aggression and an unwilling participant in the war. Younger Austrians, however, tended to be more suspicious and called for an open discussion of Austria's Nazi past. After heated debate and a run-off election, Waldheim emerged as president of Austria in June 1986, winning 54 percent of the vote.

His presidency put Austria in the international spotlight, but in a most unfavorable way. After an investigation by the U.S. Department of Justice, Waldheim became the first head of state ever placed on a watch list of undesirable aliens and was denied entry to the United States. Many other states also treated Waldheim as *persona non grata*, leaving Austria isolated internationally. Only the Vatican, the Soviet Union and its satellites, and a few Middle Eastern states that had received similar treatment allowed Waldheim to visit.

Amid growing tensions, the Austrian government launched its own investigation, which largely exonerated Waldheim. Where the U.S. report had concluded that there was "a *prima facie* case that Kurt Waldheim assisted or otherwise participated in the persecution of persons because of race, religion, national origin or political opinion," these new findings found no evidence that Waldheim had participated in war crimes. At the same time, the report concluded that as a translator in the unit, Waldheim must have had knowledge of the atrocities.

Waldheim remained in office after this ambiguous finding, claiming that he did so in the best interests of the Austrian people. He also went on Austrian television to plead his case. He admitted that Austrians had played some role in the Holocaust, which he described as one of the greatest tragedies in human history, and he condemned fanaticism and intolerance in all forms. The international community remained unmoved. Whether or not Waldheim

After an investigation by the U.S. Department of Justice, Waldheim became the first head of state ever placed on a watch list of undesirable aliens and was denied entry to the United States.

affected Austrian opinion is hard to say. He chose not to run for reelection in 1992. At the very least, Waldheim gave Austrians the chance to discuss a complicated past that had been kept under wraps for nearly fifty years.

Wałęsa, Lech (1943–)

Polish labor activist, Nobel Peace Prize winner (1983), and president of Poland (1990–1995). Born to a peasant family in the village of Popowo on 29 September 1943, Lech Wałęsa completed vocational school and from 1961 was employed as a car mechanic. During 1965–1967 he performed his mandatory service in the Polish Army.

Wałęsa then began work as an electrician in the Lenin Shipyard in Gdańsk. In December 1970, following government announcement of price increases, Wałęsa was one of the leaders in a strike at the shipyard. Arrested, he was convicted of antisocialist behavior and sentenced to a year in prison. On his release, he was elected to the new workers' council and acted as a voluntary work inspector. He also participated in various labor demonstrations and rallies.

In 1976, Wałęsa was fired from his job at the shipyard for collecting signatures on a petition to build a memorial to commemorate the 1970 casualties. He supported his family by taking temporary jobs. In 1978, together with Andrzej Gwiazda, Aleksander Hall, and other activists, Wałęsa took the lead in the organization of free, independent, noncommunist trade unions in the Baltic region. The security forces closely observed this activity. Wałęsa was often detained and arrested and could not find a permanent job.

In August 1980 Poland was struck by yet another wave of strikes. When this agitation reached Gdańsk, Wałęsa became the leader of the strike committee. As a result of the wave of strikes and negotiations with the communist government of Poland, he and the strike committee reached an agreement

with the government on 31 August that allowed workers to organize their own independent, noncommunist trade unions.

This was the beginning of the *Solidarność* (Solidarity) trade union. One year later, in 1981, Wałęsa became president of Solidarity, which was joined by some 10 million Polish wage earners, about 70 percent of the employed population. Solidarity became a vast movement that sought sweeping social and economic changes. Although there were voices raised against the Soviet Union and Poland's membership in the Warsaw Pact, Wałęsa and the Solidarity leadership never let the union drift fully into the political arena.

On 13 December 1981, with the Soviet Union threatening military invasion, Polish General Wojciech Jaruzelski proclaimed martial law, whereupon Wałęsa and other Solidarity leaders were arrested. Released in November 1982, Wałęsa returned to work at the Gdańsk shipyard and maintained contact with underground Solidarity leaders.

Although martial law ended in July 1983, not much had changed. With many of the legal restrictions continuing in place, Wałęsa refused to collaborate with the government. In October 1983, at the time virtually under house arrest, he was awarded the Nobel Peace Prize.

In 1989, faced with no economic improvement and a steadily worsening political climate in Poland, Jaruzelski agreed to talks with Wałęsa and his colleagues. These occurred during February–April 1989, with Wałęsa leading the opposition side. The two sides reached agreement allowing semifree national elections to be held in June 1989 that resulted in a new government under noncommunist Premier Tadeusz Mazowiecki, Wałęsa's choice.

With the collapse of communism in Eastern Europe and the end of the Cold War, Wałęsa, still head of the now-legal Solidarity labor union, traveled widely abroad and met with world leaders. In November 1989 he addressed a joint session of the U.S. Congress.

In national elections in December 1990, Wałęsa was elected president. His tenure as president was a mixed one, and his effort to make that office a strong one was only partially successful, bringing with it frequent clashes with premiers and parliament. He lost his bid for reelection in 1995. Wałęsa nonetheless remains one of the most important figures in twentieth-century Poland.

Lech Wałęsa led the Solidarity Trade Union movement in Poland and was later president of Poland from 1990 to 1995. (Embassy of the Republic of Poland)

Walker, Edwin Anderson (1909–1993)

U.S. Army general and controversial right-wing ideologue. Born in Center Point, Texas, on 10 November 1909, Edwin Walker graduated from the New Mexico Military Institute in 1927 and the U.S. Military Academy, West Point, in 1931. During World War II he led the so-called Devil's Brigade of commandos who fought at Anzio and in the invasion of southern France. By 1951 a colonel, Walker commanded an artillery unit in the Korean War, then commanded the Arkansas Military District. After *Brown v. Board of Education* (1954), he was tasked with desegregating Little Rock's Central High School. Although he himself adamantly opposed desegregation, he ordered his troops to protect from segregationist mobs nine African American students entering the high school. Promoted to major general in 1959, he commanded the 24th Infantry Division in Augsburg, the Federal Republic of Germany (FRG, West Germany).

In the early 1960s, Walker became embroiled in controversy after he developed a broad campaign to warn soldiers and civilians about the growing menace of communism. Its centerpiece was a propaganda program known as Pro-Blue that included everything from the scheduling of ultraconservative speakers to the distribution of voting guides, approved reading lists, and literature from the reactionary, right-wing John Birch Society. In April 1961 a U.S. Army investigation accused Walker of attempting to indoctrinate troops under his command with ultrarightist views and literature. Public pressure against him quickly mounted, with *The New York Times* and numerous other publications calling for his ouster. He resigned in November 1961, retiring as a major general.

Walker never fully capitalized on the fame generated by his brush-up with the U.S. Army. He frequently wrote and spoke on anticommunist and right-wing topics, but his only serious effort to gain elective office ended in defeat in the 1962 Texas gubernatorial primaries. Walker, who died in Dallas, Texas, on 31 October 1993, is perhaps best remembered as being Lee Harvey Oswald's first assassination target. Oswald shot at Walker but missed as the general sat at his desk in his Dallas home on 10 April 1963.

U.S. naval officer and spy. Born in Washington, D.C., on 28 July 1937, John Walker Jr. has been assessed as the most damaging Soviet spy in the United States during the Cold War. He actually headed a family of spies, including his son Michael Walker (b. 1962) and a brother, Arthur Walker (b. 1934). The other member of John Walker's espionage ring was his good friend and colleague Jerry Whitworth (b. 1939). All were members of the U.S. Navy, and their treachery involved the sale of vital navy secrets to the Soviet intelligence agency Komitet Gosudarstvennoi Bezopasnosti (KGB).

Walker graduated from high school but did not attend college. He enlisted in the navy in 1965 and was trained in electronic communications. By the date of his retirement in 1976, he had attained the rank of chief warrant officer. He served tours of duty on nuclear-powered submarines and worked shore assignments in San Diego, Norfolk, and Charleston. In the fall of 1967 he contacted the Soviet embassy in Washington, D.C., and in return for appropriate compensation offered his services to the KGB. For eighteen years he delivered to the Soviets Navy cryptological materials, including secret codes, key lists, and manuals on the internal operations of U.S. cryptographic equipment. Former KGB Major General Oleg Kalugin has estimated that Walker was paid at least \$1 million during his espionage career.

Walker enjoyed the considerable income that spying offered. Thus, upon retirement he found it necessary to recruit agents to provide him with the desired information. Walker's brother, Arthur, was a retired naval lieutenant commander and worked for the VSE (Value Systems Engineering) Corporation, which provided services to the navy. Arthur was able to provide his brother with material sought by the Soviets. John Walker's son Michael enlisted in the navy in December 1982. After an assignment on the U.S. aircraft carrier *Nimitz* in January 1984, he too became a source for secret material. Michael was placed in charge of the burn bag and could easily look for valuable documents on their way to destruction. He hid the selected material aboard ship until it could be delivered to his father. Perhaps John Walker's most valuable agent was not a family member but rather a former colleague and a senior chief radioman, Jerry Whitworth. During 1975-1979, Whitworth secured for Walker a wide range of secret material in cryptology. Whitworth's spying income was estimated to be about \$330,000.

John Walker was an unscrupulous person, an accomplished liar, a heavy drinker, and a womanizer. His former wife, Barbara Crowley Walker, knew of

**Walker, John
Anthony, Jr.**
(1937-)

Walker actually headed a family of spies, including his son, a brother, and his good friend and colleague Jerry Whitworth.

John Walker Jr., leader of the notorious spy ring bearing his name, is led from the Rockville, Maryland, detention center on his way to the U.S. District Court in Baltimore on 18 October 1985. One of the most damaging spies in U.S. history, Walker sold U.S. secrets to the Soviets for seventeen years. (Bettmann/Corbis)

his spying activity. Finally disenchanted by his corrupt behavior, she reported him to the Federal Bureau of Investigation in November 1984. Walker was placed under surveillance and was finally arrested while servicing a dead-drop zone in a rural area near Washington, D.C. His spy ring quickly unraveled upon his arrest. Walker and son Michael turned against Whitworth and bargained for a lighter sentence for Michael. Whitworth and Arthur Walker were left to the mercy of a judge and jury. On 7 November 1986, Michael Walker received a sentence of 25 years in prison. He was released on parole on 17 February 2000. Whitworth was given the harshest sentence: 365 years in prison and a \$410,000 fine. Arthur Walker received life imprisonment coupled with a \$250,000 fine. John Walker, the prime culprit and spy mastermind, received a life sentence.

Wallace, Henry Agard (1888–1965)

U.S. politician, New Deal administrator, and vice president of the United States (1941–1945). Henry Wallace was born on 7 October 1888 on his family's farm in Adair County, Iowa. His father was an amateur publisher whose magazine *Wallace's Farmer* became so influential that he served as agriculture secretary for Presidents Warren G. Harding and Calvin Coolidge. The younger Wallace broke with his family's Republican leanings and, as editor of the *Farmer*, endorsed Franklin D. Roosevelt for president in 1932. Wallace was subsequently rewarded with his father's old job in the Department of Agriculture. For the next eight years, he was a fiercely loyal member of the New Deal elite, using the powers of the Agricultural Adjustment Administration (AAA) and the Farm Security Administrations (FSA) to shore

up crop market prices and modernize small farm holdings. His visibility in office persuaded Roosevelt to choose him as his vice presidential running mate in 1940, despite the misgivings of conservative Democratic Party members who claimed that Wallace was too intellectual for the office. Such suspicions deepened during World War II as Wallace espoused an increasingly radical left-wing agenda, particularly in international matters, in which he was accused of being naïvely sympathetic toward the Soviet Union. A combination of southern Democrats and urban northeasterners prevented Wallace's renomination at the 1944 party convention, during which Senator Harry S. Truman was chosen instead. When Truman became president in April 1945, Wallace was shunted to the political sidelines with the post of commerce secretary.

Wallace refused to stay quiet, however, and soon became a leading critic of Truman's hard-line stance toward the Soviet Union, forcing the president to dismiss him in September 1946. Recognizing that his future as a prominent Democrat had ended, Wallace decided to run in the 1948 election as a third-party candidate on a platform that advocated socialist-style reform and racial integration at home and rapprochement with the Soviet Union's Eastern bloc abroad. Hawkish liberal organizations such as the Americans for Democratic Action (ADA) accused Wallace's neophyte party of being a communist front, an exaggeration but one that its leader did nothing to quash. Whether or not the Progressives were conscious fellow travelers, their opposition to the Truman Doctrine and the Marshall Plan on the grounds that they frustrated Russo-American amity was, by 1948, viewed as foolish utopianism. Wallace's national support slipped away under a barrage of criticism, and his 2.7 percent of the November 1948 vote left him in fourth place behind Strom Thurmond, a humiliating defeat that shattered the anti-Truman Left. Wallace withdrew from public life and spent his remaining years as a successful gentleman farmer. He died in Danbury, Connecticut, on 18 November 1965.

Wang Bingnan (1906–1988)

Chinese communist politician and foreign minister of the People's Republic of China (PRC). Born in Sanyuan, Shaanxi Province, Wang Bingnan joined the Chinese Communist Party (CCP) in 1925. He enrolled at the University of Berlin in 1931 and graduated in 1935, after which he returned to China and became chief assistant to Zhou Enlai. Throughout both the Sino-Japanese War (1937–1945) and the Chinese Civil War (1946–1949), Wang assisted Zhou in handling the CCP's liaison and foreign affairs.

Following the birth of the PRC in October 1949, Wang became director of the Foreign Ministry's Staff Office, a post he held until the end of 1954, and accompanied Zhou to the Geneva Conference in April 1954. In January 1955, Wang was appointed ambassador to Poland. As a result of the Bandung Conference in July 1955, he was named the Chinese representative to the Sino-American Ambassadorial Talks, the only direct diplomatic channel between the PRC and the United States since 1949. The talks began on 1 August 1955, and initially the negotiations went smoothly on the issue of the mutual release of nationals. However, they soon deadlocked over the status of Taiwan. The talks were suspended in December 1957 when the U.S. representative U. Alexis Johnson was recalled. The ambassadorial talks were resumed in September 1958 after the Second Taiwan Strait Crisis, with Wang remaining the Chinese representative.

In April 1964, Wang was appointed vice foreign minister. His tenure, which lasted until July 1975, coincided with the ultraleftist Cultural Revolution (1966–1976), and his previous overseas service invited revisionist criticism. In 1968, he was taken into custody and imprisoned until 1972. In August 1975 he was assigned to head the Chinese People's Association for Friendship with Foreign Countries, resuming his diplomatic activity as the head of Chinese delegations to many nations until he was elected chairman of the Organizing Committee for the International Peace Year 1986. Wang died on 22 December 1988 in Beijing.

Politico-military alliance among the Soviet Union and its East European satellite states. The multilateral Treaty of Friendship, Cooperation, and Mutual Assistance signed on 14 May 1955 in Warsaw, Poland, formally institutionalized the East European alliance system, the Warsaw Treaty Organization, known as the Warsaw Pact. The Warsaw Treaty was identical to bilateral treaties concluded during 1945–1949 between the Soviet Union and its East European client states to assure Moscow's continued military presence on their territory. The Soviet Union, Albania, Bulgaria, Romania, the German Democratic Republic (GDR, East Germany), Hungary, Poland, and Czechoslovakia pledged to defend each other if one or more of the members were attacked.

Warsaw Pact

The Warsaw Pact was created as a political instrument for Soviet leader Nikita S. Khrushchev's Cold War policy in Europe. The immediate trigger was the admission of the Federal Republic of Germany (FRG, West Germany) into the North Atlantic Treaty Organization (NATO) on 5 May 1955 and the Austrian State Treaty of 15 May 1955, which provided for Austrian neutrality and the withdrawal of Soviet troops. The creation of the Warsaw Pact sent important signals to both Eastern Europe and the West. On the one hand, the Soviet Union made clear to its satellite states that Austria's neutral status would not likewise be granted to them. On the other hand, Khrushchev allured the West with a standing offer to disband the Warsaw Pact simultaneously with NATO, contingent upon East-West agreement on a new collective security system in Europe.

The Political Consultative Committee (PCC) was established as the alliance's highest governing body, consisting of the member states' party leaders. The PCC met almost annually in one of the capitals of the Warsaw Pact states. On the military side, a unified command and a joint staff were created to organize the actual defense of the Warsaw Treaty states. Soviet Marshal Ivan G. Konev was appointed as the first supreme commander of the Warsaw Pact's Joint Armed Forces.

In its early years, the Warsaw Pact served primarily as a Soviet propaganda tool in East-West diplomacy. Khrushchev used the PCC to publicize his disarmament, disengagement, and peace offensives and to accord them a multilateral umbrella. The first concrete military step taken was the admission of the East German Army into the unified command, but not until the Berlin Crisis (1958–1961) was there a systematic militarization of the Warsaw Pact. The Soviet General Staff and the Warsaw Pact unified command prepared East European armies for a possible military conflict in Central Europe. In 1961, the Soviets replaced the old defensive strategy of Soviet leader Josef Stalin with an offensive strategy that provided for a deep thrust into Western Europe. In the early 1960s, the Warsaw Pact began to conduct joint military exercises to prepare for fighting a nuclear war in Europe. The new strategy remained in place until 1987. Despite *détente*, the militarization of the Warsaw Pact accelerated under Soviet leader Leonid Brezhnev in the 1970s.

Behind the façade of unity, however, growing differences hounded the Eastern alliance. Following Khrushchev's campaign of de-Stalinization, Poles and Hungarians in the fall of 1956 demanded a reform of the Warsaw Pact to reduce overwhelming Soviet dominance within the alliance. Polish generals issued a memorandum that proposed modeling the Warsaw Pact more after NATO, while Hungary's new Communist Party leader, Imre Nagy, declared his country's neutrality and plans to leave the Warsaw Pact. In November 1956, the Soviet Army invaded Hungary and soon crushed all resistance.

In 1958, Romania demanded the withdrawal from its territory of all Soviet troops and military advisors. To cover Soviet embarrassment, Khrushchev termed this a unilateral troop reduction contributing to greater European security. At the height of the Berlin Crisis (1961), the Warsaw Pact's weakest and strategically least-important country, Albania, stopped supporting the pact and formally withdrew from the alliance in 1968.

WARSAW PACT INVASION OF CZECHOSLOVAKIA, 1968

The Warsaw Pact was left in ignorance when Khrushchev provoked the October 1962 Cuban Missile Crisis. Only after the crisis was ended did East European leaders learn in a secret meeting that a nuclear war had been narrowly avoided. Romania reacted promptly to Moscow's nonconsultation in such a serious matter. In 1963, the Romanian government gave secret assurances to the United States that it would remain neutral in the event of a confrontation between the superpowers. In the same year, Romanian and Polish opposition prevented Khrushchev's plan to admit Mongolia into the Warsaw Pact.

In the mid-1960s the Warsaw Pact, like NATO, underwent a major crisis. The 1965 PCC meeting, convened by East Germany, demonstrated profound disagreements among Warsaw Pact allies on matters such as the German question, nuclear weapons' sharing, nuclear nonproliferation, and the Sino-Soviet split. In early 1966, Brezhnev proposed a Soviet plan to reform and institutionalize the Warsaw Pact. But resistance by Moscow's allies prevented the implementation of the scheme for more than three years.

In 1968, the Czechoslovak Crisis resulting from the Prague Spring seriously threatened the cohesion of the alliance. While the Soviet Union tried to intimidate Alexander Dubček's liberal Czechoslovak government with multilateral Warsaw Pact military maneuvers, the invading forces sent in on 20 August 1968 were mostly from the Soviet Union with token Polish, Hungarian, and East German contingents but no Romanian troops. Romania denounced the invasion as a violation of international law and demanded the

withdrawal of all Soviet troops and military advisors from its territory. It also refused to allow additional Soviet forces to cross or conduct exercises on its territory.

The consolidation that resulted from the PCC session in Budapest in March 1969 transformed the Warsaw Pact into a more consultative organization. It established a committee of defense ministers, a military council, and a committee on technology. With these three new joint bodies, the Warsaw Pact finally became a genuine multilateral military alliance.

In 1976, previous informal gatherings of the Warsaw Pact foreign ministers were institutionalized into a committee of ministers of foreign affairs. In the 1970s, consultations within Warsaw Pact bodies primarily dealt with the Council on Security and Cooperation in Europe (CSCE)

process. Despite détente, preparations for a deep offensive thrust into Western Europe accelerated and intensified during numerous military exercises. In 1979, a statute on the command of the alliance in wartime was finally accepted by all but Romania after a year-long controversy.

During 1980–1981, the Solidarity Crisis in Poland heralded the end of Moscow's domination of Eastern Europe. Yet it did not pose a serious threat to the Warsaw Pact's integrity. At first, Moscow was tempted to threaten the opposition with military exercises and, eventually, military intervention. To avoid the high political costs of such a move, however, Moscow in the end trusted that the loyal Polish military would suppress the opposition on its own. The imposition of martial law by General Wojciech Jaruzelski was a major success for Moscow, as it demonstrated that the Moscow-educated Polish generals were protecting the interests of the Warsaw Pact even against their own people.

During the renewed Cold War of the 1980s, internal disputes in the Warsaw Pact increased. Romania demanded cuts in nuclear and conventional forces as well as in national defense budgets. It also called for the dissolution of both Cold War alliances and for the withdrawal of both U.S. and Soviet forces from Europe.

The issue of an appropriate Warsaw Pact response to NATO's 1983 deployment of U.S. Pershing II and cruise missiles in Western Europe, matching Soviet SS-20 intermediate-range ballistic missiles (IRBMs) aimed at West European targets, proved to be most divisive for the Eastern alliance. In 1983, East Germany, Hungary, and Romania engaged in a damage control exercise to maintain their ties with the West, which they had established during the era of détente in the 1970s.

At the time of the Warsaw Pact's thirtieth anniversary in 1985, Mikhail Gorbachev became the new Soviet leader and improved the role of Warsaw Pact consultations on the desired nuclear and conventional cuts in the Eastern alliance. At the PCC meeting in Berlin in May 1987, he changed Warsaw Pact military doctrine from offensive to defensive. In the late 1980s, however, East Germany, Bulgaria, and—in a reversal of its earlier opposition—even

Romania proposed to strengthen the Warsaw Pact by improving its intrabloc political consultative functions.

After the fall of the Berlin Wall in 1989, East and West at first saw merit in keeping both Cold War alliances in place. In January and February 1991, however, Czechoslovakia, Hungary, Poland, and Bulgaria declared that they would withdraw all support by 1 July of that year. The Warsaw Pact thus came to an end on 31 March 1991 and was officially dissolved at a meeting in Prague on 1 July 1991.

Although aircraft carriers and submarines drew the headlines during the Cold War, nonaviation surface ships constituted the bulk of the world's navies and conducted most naval operations. The nature, size, and armament of those ships changed gradually as the Cold War advanced. Radar and torpedo technology limitations eliminated small coastal fast-attack craft that had proven effective against ships lacking radar during World War II. The aircraft carrier and the expense of operation drove the battleships out of service by 1960 and relegated World War II-era gun cruisers to the flagship role based on their ability to carry extensive communications suites.

In fact, in Western navies, fleet surface combatants served primarily as escorts that protected the aircraft carrier. Thus, air defense and antisubmarine warfare became their dominant missions. For most U.S. Navy cruisers, that meant carrying long-range surface-to-air missiles (SAMs), but the United States was the only country that could afford to operate such ships. Thus, the unarmored general-purpose destroyer was the mainstay of the world's surface fleets for most of the Cold War. The Soviet Union was the first country to equip these units with a surface-strike capability, and that development, combined with microminiaturization technology, drove the development and missions for nonaviation surface combatants during the Cold War's final years. Of course, there were also specialized surface ships such as logistics ships,

Warships, Surface

mine countermeasures, and rescue/salvage ships, which were critical to naval operations.

Having been reduced primarily to the limited roles of providing naval gunfire support for amphibious assaults and supplementing the aircraft carrier's close-in air defense, battleships became the first major surface combatants to go. Britain's last battleship, the *Vanguard*, was commissioned in 1946, but the Royal Navy scrapped eleven of its surviving pre-World War II battleships before 1949. The *Vanguard* and the four King George V-class units were decommissioned by 1957 and scrapped in 1960. Similarly, the United States decommissioned all of its pre-World War II battleships by 1948, and the remainder left service by 1960. Naval planners briefly flirted with the idea of converting the four Iowa-class units into massive air defense and nuclear missile strike platforms but abandoned the idea because of the costs involved in modifying the heavily armored hulls.

The United States briefly brought the Iowa-class battleship *New Jersey* into service for a year during the Vietnam War and then returned all four Iowa-class battleships into service in the early 1980s but spent millions of dollars modifying them with new air defense systems and surface-to-surface missiles for both antiship and land attack missions. However, the age of their operating systems and the heavy manning required to operate those systems necessitated their retirement within two years of the Soviet Union's collapse. A 1995 review determined that they were no longer cost-effective to operate and surplus to naval requirements. All are now museum ships.

Although Soviet leader Josef Stalin flirted briefly with building battleships after the war, the Soviet Union in 1956 decommissioned its two surviving battleships, initially commissioned in the 1920s, and scrapped them in 1957. France discarded its two surviving battleships as well, the *Richelieu* and *Jean Bart*, in 1959 and 1960, respectively.

The Soviet Sverdlov-class gun cruisers carried 152mm guns and were based on a blend of Italian and German World War II-era designs and technology. However, the Soviets retained them primarily as flagships and naval gunfire support platforms. Interestingly, some of the U.S. Navy's latest cruiser designs were decommissioned relatively soon after entering service. The large light cruisers *Worcester* and *Roanoke*, for example, mounted a troublesome new main armament suite and served only from 1948 to 1958. The large Des Moines-class ships were used primarily as flagships in the U.S. Sixth Fleet, with the *Newport News* serving until 1975.

The British and French simply decommissioned most of their gun cruisers. The Royal Navy discarded all of its pre-World War II cruisers by 1949, and all but two of its modern cruisers had been decommissioned by 1965. Those two, the *Lion* and *Tiger*, were converted into helicopter cruisers after 1965, retaining only one forward 6-inch gun turret. Both were reduced to reserve status by 1979 and scrapped in 1986.

The United States modified a number of its cruisers to carry heavy long-range SAMs. The first of these, the former heavy cruiser *Boston*, was recommissioned as a guided missile heavy cruiser in November 1955, carrying two

The first nuclear-powered large combatant ship, the U.S. Navy guided missile cruiser *Long Beach*, shown under way at sea, June 1989. (U.S. Department of Defense)

Terrier SAM systems in place of its aft 8-inch gun turret. The *Canberra* followed eighteen months later.

Other cruisers were subjected to a more radical modification. The former heavy cruisers *Albany* and *Chicago* were completely converted to air defense cruisers during 1959–1964, losing all of their guns to make room for two short-range (10 nautical miles, NM) Tartar SAM systems and two long-range (80 NM) Talos SAM systems. They were also equipped with sonars and anti-submarine rockets (ASROC) to become the world's first multipurpose cruisers (capable of antisurface, antiair, and antisubmarine warfare). Several U.S. Navy light cruisers surrendered their aft 6-inch gun turrets for Talos or Terrier SAM systems.

Finally, the United States built the *Long Beach* (CGN-9) as the first cruiser designed as a guided missile platform. More importantly, upon its 9 September 1961 commissioning, it became the world's first nuclear-powered surface warship. Initially completed without guns, the *Long Beach* had two single 5-inch gun mounts added in 1963 at the direct request of President John F. Kennedy, who thought it unwise to rely entirely on missiles for defense.

These conversions and decommissionings left destroyers as the workhorses for all the world's navies, including some whose missions were little more than coastal defense. The need to improve the destroyers' antiair warfare (AAW) and antisubmarine warfare (ASW) capabilities meant adding more radars, missiles, and eventually helicopters in order to increase their surveillance and attack ranges. As a result, destroyers become increasingly complex and expensive as the Cold War entered its second decade. A ship type that had averaged 2,200 tons of standard displacement in 1945 had grown to more than 7,000 tons by 1975.

In fact, among the democracies, legislative resistance to funding such expensive destroyers led to a complete reclassification of warships. The heavily modified classification system that dated back to the London Naval Limitation Treaties was abandoned completely. Now, destroyers were ships that focused on a single mission but had limited capabilities in another. Many multipurpose destroyers were then redesignated as cruisers. Ships that had once been designated as destroyer escorts (ASW-focused destroyers) became frigates, and coastal attack craft became corvettes.

Interestingly, perhaps the greatest changes in surface warship design came about because of Soviet developments in naval weaponry. Lacking the resources to build aircraft carriers during the Cold War's early years, the Soviet Union focused on developing long-range antiship missiles (ASMs) as well as SAMs for its ships. Thus, the Soviets introduced the world's first operational guided surface-launched antiship missile (SASM) into service aboard the destroyer *Bedoviy* in 1961. The North Atlantic Treaty Organization (NATO) designated the ship as a Kilden-class DDG (guided missile destroyer). Its P-1 Strela Shchuka-A (NATO designation, SS-N-1 Scrubber) cruise missile with a nuclear warhead had a range of more than 90 nautical miles (NM), far beyond the *Bedoviy*'s onboard radars and other sensors. The missile system's weight also affected the ship's handling capabilities and stability.

The Soviets then developed a smaller and shorter-ranged missile, the now famous SS-N-2 that NATO designated the Styx missile. Entering service in 1962, the Styx, with a range of 30 NM, equipped small coastal attack boats not much larger than the American PT boats of World War II. The much longer-ranged (300 NM) SS-N-3 also entered service that year when the Soviet Union's first Kynda-class cruiser entered service. As with the Kilden-class DDG, however, the *Kynda*'s command-guided missiles far outranged the ship's sensors. To support a long-range engagement, the ship required an aircraft to remain within radar range of the target and provide its location to the ship throughout the engagement. For a reconnaissance or targeting aircraft to survive an engagement that close to the carrier seemed improbable in wartime. As a result, the Soviet Union focused on starting and winning the war with the first shot: finding and targeting the aircraft carrier and then launching the attack during the war's early minutes.

Soviet technology and tactics had a profound effect on the U.S. Navy's tactical thinking and ship designs into the 1990s.

The United States had studied surface-to-surface missiles during the 1950s but abandoned them due to funding issues. It was hard to justify put-

A Soviet Kynda-class guided missile cruiser under way, October 1985. (U.S. Department of Defense)

ting surface-to-surface missiles on surface ships after investing billions in aircraft carriers, aircraft, and SAM systems. Developing a guidance system for a surface-to-surface missile such as the then-existing Regulus missile did not seem cost-effective. More importantly, battleships and cruisers were the only units large enough to carry them. With their resources focused on aircraft carrier, aviation, and submarine technology, the West abandoned development of surface-launched antiship missiles in 1956. It was a mistake that would prove costly and embarrassing in the Cold War's third decade.

Secure in the belief that the carriers would always be there, Western intelligence agencies largely ignored the Soviet antiship missile threat. During the Vietnam War, since U.S. naval aircraft had destroyed the Democratic Republic of Vietnam's (DRV, North Vietnam) missile patrol boat force, these craft were not considered a serious problem. Certainly, they were not seen as a threat that warranted new solutions. All that changed on 21 October 1967, when a Soviet-supplied Egyptian missile patrol boat sank the Israeli destroyer *Eilat* with a single Styx missile without even leaving port. Fast coastal attack craft could no longer be taken lightly. One hit was enough to cripple, if not destroy, a \$100 million unarmored warship.

The United States and France reacted swiftly, introducing high-priority programs to develop new missiles specifically designed to take out ships.

The United States went a step further, developing long-range surveillance and targeting systems to support over-the-horizon engagements. Some were satellite-based, some were installed on ships, and others were installed on submarines and aircraft. All navies began to develop electronic and infrared detection and countermeasures systems to defeat these missiles' terminal guidance. Electronic warfare now encompassed more than the need to defeat an enemy's air defense systems. By 1972, a ship's electronic warfare capabilities were as critical to the ship's survival as its weapons systems.

These developments occurred parallel to the U.S. Navy's development of a global naval monitoring system driven by the Soviet Navy's first worldwide naval exercise, OKEAN-70, and the introduction of the first exercises demonstrating its first-shot tactics. The resulting Ocean Surveillance Information System (OSIS) entered service in 1972. By the late 1970s, OSIS had taken on the additional mission of supporting rapid over-the-horizon targeting by U.S. Navy and NATO missile-equipped ships. Although the Soviets never developed a similar global oceanic monitoring capability, they did develop an extensive array of electronic air- and space-based targeting systems to support their naval units. Both sides developed increasingly complex and long-ranged antiship, air defense, and surveillance systems.

All this led to navies pursuing two completely different paths of surface warship development. Smaller navies could no longer afford oceangoing ships equipped with all of these systems. This forced them to seek smaller ships that carried weapons and sensors more suited to the missions of coastal defense, environmental protection, and patrol and control of economic exclusion zones.

The rebirth of mine warfare after the 1967 Arab-Israeli War also rejuvenated interest in mine countermeasures ships in the U.S. Navy and in Asian navies. (North Korea's and Europe's navies had never lost interest in mine warfare.) General-purpose corvettes with limited AAW and ASW capabilities and mine countermeasures ships have become the predominant units of the world's smaller navies. Occasionally, these navies employ frigates as their flagships and on long-distance patrols, but 900–1,100-ton corvettes are these navies' workhorses. Destroyers and 10,000-ton all-purpose guided missile cruisers are found only in oceangoing navies—those whose country can afford the ships and the expensive shore facilities and ocean surveillance networks required to support their operations.

Surface ships execute the majority of naval operations, from show-the-flag and gunboat diplomacy, through disaster relief and emergency evacuation operations, to land attack and maritime transport operations. Although the combatant ships garner the headlines and are most often featured in the recruiting posters, a balanced fleet includes tankers, transports, repair and rescue ships, and even range and telemetry ships to help with the calibration of weapons systems and electronics. The Cold War saw these ships evolve from the simple, manually operated systems and uncomplicated designs of World War II to the highly automated, lightly crewed ships of today. Moreover, the Cold War's end brought new missions beyond the traditional ones of the past. Environmental and resource concerns and disaster relief are now

major naval missions, and ship designs are being modified to accommodate those new missions.

Summit meeting between U.S. President Richard M. Nixon and Soviet General Secretary Leonid Brezhnev during 16–25 June 1973. Despite growing tensions in the Middle East and in Indochina, in early 1973 the United States and the Soviet Union continued to build upon détente. Indeed, one major outcome of Nixon's 1972 visit to the Soviet Union had been the resolution to hold regular summit meetings. Although neither side's expectations of the Washington summit were as high as for the earlier Moscow meeting, the 1973 meeting nonetheless reaffirmed the U.S. and Soviet commitment to improving relations. As with the Moscow summit, daily bilateral agreements were signed, and two major agreements pertaining to the Strategic Arms Limitation Talks (SALT) were concluded.

In 1973, Nixon's domestic problems were legion. Congressional hearings on the building Watergate scandal were drawing closer to incriminating the president, and there was a dramatic increase in inflation coupled with sluggish economic growth. These economic problems only fueled growing discontent. The summit offered Nixon a respite from his domestic problems, an opportunity to divert attention from Watergate, and the chance to demonstrate the continuing success of détente.

Brezhnev gave a television address to the American people emulating Nixon's speech in Moscow a year prior. The Soviet leader spoke to the U.S. Senate Foreign Relations Committee and engaged in daily discussions with

Nixon. One of Brezhnev's important goals was to further the Soviet Union's case for most-favored nation (MFN) trade status from the United States. Brezhnev viewed MFN status as a key to the continuation of détente, with the hope that it would revive a declining Soviet economy. In discussions with the Senate Foreign Relations Committee, Brezhnev conceded that the main obstacle to receiving MFN status was congressional opposition to Moscow's policy restricting Jewish emigration. Despite his eloquent plea and soft-pedaling of the emigration policy, he was not successful in making his case.

Nixon and Brezhnev discussed bilateral issues concerning agriculture, transportation, atomic energy, commercial relations, education, culture, oceanography, taxation, and air services. The two conferees reached agreements on Indochina and Europe but differed on policies concerning the Middle East. In the spirit of the 1972 Moscow Meeting, two important agreements concerning nuclear disarmament were reached. The Basic Principles of Negotiations on the Further Limitation of Strategic Offensive Arms and the Agreement on the Prevention of Nuclear War reaffirmed American and Soviet commitments to continuing SALT. Although the Basic Principles agreement was not groundbreaking, it nevertheless served as a new impetus to the continuation of détente and the SALT process. On 21 June, Nixon and Brezhnev signed the Basic Principles framework. The following day, the Agreement on the Prevention of Nuclear War was signed. Nixon's national

security advisor, Henry Kissinger, pointedly revealed the importance of this document. The principal problem in the current global situation was how to prevent a nuclear war, not how to conduct one.

As the summit concluded, Nixon and Brezhnev issued a joint communiqué summarizing the intentions and outcomes of the summit. As with the previous year's Basic Principles of Mutual Relations, the document reaffirmed both parties' commitment to détente. Although there were no completely new initiatives addressed during Brezhnev's visit, it strengthened the precedent of annual summits between American and Soviet leaders. Despite mounting public criticism of the Nixon administration over the Vietnam War, the state of the American economy, and the Watergate scandal, Nixon appeared to be successfully reducing Cold War tensions. Unfortunately, technological advances in nuclear weaponry and Nixon's weakening political position prior to his last visit to Moscow in 1974 largely stalled the forward momentum of détente, a process that had been the cornerstone of both Nixon's and Brezhnev's Cold War foreign policies. The meeting also alarmed the leaders of the People's Republic of China (PRC), who feared that the two superpowers would cement an understanding on détente at the expense of the burgeoning Sino-American rapprochement.

Summit meeting between U.S. President Ronald Reagan and Soviet General Secretary Mikhail Gorbachev on 7–10 December 1987. The principal agenda item for the meeting was nuclear arms reduction. The Washington Meeting showcased not only Gorbachev's new style of leadership but also the unprecedented thaw in the Cold War, which would by 1991 end upon the dissolution of the Soviet Union. The conference marked the first superpower summit on U.S. soil in fourteen years and endeavored to build upon the November 1985 Geneva Meeting, during which Reagan and Gorbachev

**Washington Summit
Meeting, Reagan
and Gorbachev**
(7–10 December 1987)

agreed to a 50 percent mutual reduction in strategic nuclear weapons, and the Reykjavík Meeting of October 1986, which ended on a negative note over disagreements concerning Reagan's Strategic Defense Initiative (SDI). The summit in Washington saw both sides agree to eliminate an entire class of nuclear weapons (land-based intermediate-range missiles), codified by the signing of the Intermediate-Range Nuclear Forces (INF) Treaty in Moscow during Reagan and Gorbachev's final meeting together in May–June 1988.

In spite of the breakthrough in superpower relations, Reagan and Gorbachev still found themselves in disagreement on key issues during the 1987 negotiations. First, the 1972 Anti-Ballistic Missile (ABM) Treaty was interpreted differently by the Americans and the Soviets, which underscored the problems posed by SDI, colloquially referred to as "Star Wars." Gorbachev believed that SDI violated the ABM Treaty, while Reagan tried to legitimize SDI by arguing that it fell into a category of space-based testing and development that did not violate previous agreements. Neither leader even mentioned SDI during postconference speeches to their respective nations, which may explain why the conference was deemed a success. Further, Reagan and Gorbachev failed to come to terms on regional issues in American and Soviet spheres of influence. Reagan criticized Gorbachev for turning a blind eye to the human rights record of the People's Republic of China (PRC) and also for failing to establish a timetable for the withdrawal of Soviet troops from Afghanistan. Gorbachev, in a press conference held three hours after the departure ceremony, stated that a proposal for withdrawal would be instituted as soon as the United States agreed to halt arms shipments and financial aid to insurgent forces battling Soviet troops in Afghanistan. Gorbachev also criticized Reagan over the Iran-Contra scandal and argued that the time had not yet come for the United Nations (UN) Security Council to impose sanctions on Iran for refusing to accept an earlier UN resolution demanding a cease-fire in the Iran-Iraq War.

Even if deemed a marginal success, the 1987 Washington meeting should be considered a significant turning point in Cold War history. Americans were well aware of Gorbachev's internal reforms (*glasnost* and *perestroika*) and saw his visit as powerfully symbolic, perhaps even foreshadowing the end of the Cold War. People crowded the streets to get a glimpse of Gorbachev, and many scholars indeed argue that Reagan needed the Soviet leader's cooperation in order to improve the image of the United States. Reagan had little choice but to address Gorbachev's initiatives regarding nuclear disarmament as an opportunity to divert public attention from domestic issues, such as the Iran-Contra scandal, to those that involved a dynamic new approach to foreign policy.

Whatever the ramifications of the 1987 Washington Meeting, it must be remembered not as the culmination of a process but rather as the beginning of both a new route to nuclear arms reductions and, perhaps more importantly, the end of the Cold War.

Washington Treaty

Far-reaching political scandal involving President Richard M. Nixon (1969–1974) that lasted from 1972 to 1974 and led to a constitutional crisis and the resignation of Nixon in August 1974. Nixon was by nature a secretive and untrusting man, and it was this mild paranoia that drove the Watergate scandal into a colossal political and constitutional crisis.

The genesis of Watergate can be traced to the leaking of the top-secret *United States–Vietnam Relations, 1945–1967: A Study Prepared by the Department of Defense*, often referred to as the Pentagon Papers, that occurred beginning in June 1971. The papers revealed highly classified—not to mention embarrassing—policy decisions made vis-à-vis the Vietnam War going back to the 1940s. By 1971, the Vietnam War had become a political nightmare for Nixon and had deeply divided the nation. The Pentagon Papers served only to heighten public distrust and discontent with the war. Nixon was livid at the leaks and vowed to get even with the man who had released the information, RAND Corporation employee Daniel Ellsberg. In fact, the first illegal break-in encouraged by the Nixon administration occurred in September 1971, when quasi-government operatives ransacked the office of Ellsberg's psychiatrist in an attempt to discredit the RAND employee. Meanwhile, the Nixon administration tried unsuccessfully to halt the publication of more sensitive information.

Watergate (1972–1974)

Now obsessed with plugging any leaks from within, Nixon's aides formed an informal committee of secret operatives whose job was to stop leaks, stonewall Federal Bureau of Investigation (FBI) probes, and retaliate against those who did leak information. The committee was fittingly called the "Plumbers."

On 17 June 1972, Washington, D.C., police arrested five men for burglarizing the offices of the Democratic National Committee, located in the Watergate complex (hence the name of the scandal). While the motive of the break-in is still unclear, one of the burglars, James W. McCord Jr., was on the payroll of the Committee to Reelect the President (CREEP). This seemed to implicate White House involvement, although the connection would not be made in full for many months.

Officials at the White House, meanwhile, began to cover their tracks, engaging in an ever-widening cover-up that only bred more illegal activities. When questioned about the Watergate break-in, Nixon's press secretary famously dismissed it as a "third-rate burglary" of which the White House had no knowledge, and Americans believed him.

Nixon's secret taping system recorded a discussion on 23 June 1972 between the president and his chief of staff in which Nixon agreed that the Central Intelligence Agency (CIA) should be employed to block the FBI investigation into the Watergate affair. This was clear evidence that the White House was involved in the botched break-in. Nixon went on to win a landslide reelection in November 1972, and Watergate seemed all but forgotten. But the walls were about to close in beginning with the trial of the Watergate burglars in January 1973.

The five burglars pled guilty but said nothing. Indeed, CREEP had paid them hush money not to reveal anything that would implicate the president. But McCord, encouraged by the fact that he would receive leniency if he cooperated, recanted his testimony and implicated CREEP in instigating the break-in and in paying hush money to the accused. The rope was now getting tighter for Nixon, who continued to deny any involvement in the growing scandal. Congress now clamored for bipartisan hearings on the Watergate scandal, which began in May 1973 and lasted until August. The nation was riveted by the televised hearings, which revealed one bombshell after another. Perhaps as much as 85 percent of the American public viewed some or all of the hearings. The first bombshell was the realization that the White House had been directly involved in the scandal, indicated by the testimony of John Dean, Nixon's lawyer. The second was the revelation that Nixon had employed a secret taping system in the Oval Office that recorded virtually all conversations. Nixon's popularity began to plummet, and there were sporadic calls for his impeachment, even by stalwart Republicans.

As soon as the existence of the taped conversations was revealed, Archibald Cox, Watergate special prosecutor, and the U.S. Senate moved to subpoena the tapes. Nixon refused to surrender them, citing executive privilege and "national security concerns." Neither party agreed with that logic, however, and many Americans now believed that Nixon was either directly involved in the scandal or was trying to cover something up. In October 1973,

when Nixon ordered Cox to withdraw his subpoena, the special prosecutor refused. The White House promptly fired him. That in turn led Nixon's attorney general and his deputy to resign in protest. A new prosecutor, Leon Jaworski, again subpoenaed the tapes. Nixon, now under immense pressure, responded by releasing selectively edited transcripts of the tapes, which pleased no one. Worse yet, one of the tapes that the White House did release to Jaworski had an unexplained gap, which White House officials blamed on a clerical error committed by Nixon's personal secretary. In the spring of 1974, Congress continued to insist that it receive all of the contested tape recordings. Nixon stood firm.

In July 1974, the U.S. Supreme Court ruled that the Nixon administration must turn over all of the tapes requested by Congress. Meanwhile, in the House of Representatives, articles of impeachment were being prepared against the president. Nixon now had no choice but to surrender the tapes, which he knew would condemn him. On 27 July 1974, the House of Representatives passed the first of three impeachment articles against Nixon, citing him for obstruction of justice. On 29 and 30 July, respectively, two more articles of impeachment passed—one for abuse of power, the other for contempt of Congress. After being told by a delegation from his own party that he would not survive an impeachment trial in Congress, Nixon decided to resign the office of the presidency on 9 August 1974. He was succeeded by his vice president, Gerald R. Ford.

Although the immediate crisis that was Watergate ended with Nixon's resignation, the episode had troubling and long-term implications for American politics and government. Many Americans rightly conflated Watergate with Vietnam. Indeed, just as U.S. policymakers led the nation into a costly, unpopular, and unwinnable war with little public discussion and no real congressional oversight, so too had the Nixon administration engaged in secretive and unsavory activities in the name of national security. As a result, Americans' trust in their politicians—and their political system—suffered a major blow. Many also talked with consternation about the unchecked powers of the presidency, which the Nixonian abuses of power so clearly highlighted. Watergate undermined the power of the Republican Party for a time and may indeed have led to the rise of President Jimmy Carter, who won the presidency in 1976 based in large part on his outsider status, personal integrity, and self-effacing manner. In the end, Watergate displayed in shocking clarity the results of the so-called imperial presidency and a national security state in which personal freedoms were subordinated to political whim and alleged public safety.

Weathermen

American left-wing organization supportive of the worldwide struggle against alleged American imperialism that initiated terrorist attacks against the U.S. government in the late 1960s and early 1970s. The Weathermen emerged in late 1968 as one of several militant factions within the Students for a Democratic Society (SDS). Frustrated with the ineffectiveness of the anti-Vietnam War protests of the 1960s, Bernardine Dohrn, Bill Ayers, Kathy Boudin, and other members of the Weathermen called for a white revolutionary movement that would support African American militants such as the Black Panthers and developing-world revolutionaries in an international struggle against what they viewed as U.S. imperialism. The group took its name from its first position paper, "You Don't Need a Weatherman to Know Which Way the Wind Blows," a line adopted from a Bob Dylan song. This founding statement was circulated during the last SDS convention in June 1969 in Chicago, where the Weathermen and their allies gained control of the organization.

Following Marxist-Leninist logic, the Weathermen believed that American imperialism would compel the American working class to unite in a revolutionary struggle to transform the United States into a socialist state. The Weathermen, who were mainly upper-middle-class college students, considered themselves the vanguard of the coming revolution and intended to spur workers to join the struggle. The group focused its initial recruiting efforts on white working-class youth, but most high school students opposed their militancy and refused to join the group.

As the putative vanguard group of the revolution, the Weathermen also intended to create revolutionary chaos in the United States. One of the group's first campaigns was the so-called Days of Rage that began on 8 October 1969, when the Weathermen and a few hundred supporters smashed windows and battled police in downtown Chicago. Although their attempt to bring the war home failed—a large police force quickly quelled the attack with tear gas, mace, and clubs—the group considered the melee an important inspiration for fellow white radicals. In mid-November 1969, the Weathermen precipitated a similar scuffle in Washington, D.C., where members damaged cars

The Weathermen's attempt to bring the war home failed—a large police force quickly quelled the attack with tear gas, mace, and clubs.

and windows, threw smoke bombs at the Justice Department building, and blocked streets with burning barriers until 2,000 police officers intervened.

When it became clear that their plan to bring about a revolution had failed, the Weathermen decided to continue the armed struggle as a clandestine group of terrorist cells that would attack the American government. During a meeting in Flint, Michigan, on 24 December 1969, the Weathermen, who never had more than a few hundred members, announced that they intended to go underground. In the ensuing years, small Weathermen cells initiated a wave of bombings against government buildings, military installations, and private companies that they believed supported American imperialism. On 9 June 1970, for example, the group bombed the New York City police headquarters as a response to the American invasion of Cambodia.

In December 1970, the Weathermen announced in a letter to the underground press that they had modified their ideology. They no longer considered violence their only revolutionary tool and assigned revolutionary qualities to the counterculture of the New Left. In response to criticism of the group's sexism, the Weathermen also embraced gender equality, changing the organization's name to the gender-neutral Weather Underground. Despite these tactical changes, attacks against federal buildings and private companies continued. Nevertheless, the illegal methods used by the Federal Bureau of Investigation (FBI) to prosecute members of the group led to the dismissal of charges against most of them in 1974.

That same year, the Weather Underground once more announced programmatic changes, calling upon American revolutionaries to organize for mass action clandestinely as well as publicly. As a result, the organization began to form the Prairie Fire Organizing Committee (PFOC) as an official support group. In 1976, internal factionalism led to the split of the organization into a reformist New York PFOC, or Central Committee, and a militant Bay Area Revolutionary Committee (BARC), which became the Weather Underground Organization later that year. While the Central Committee abjured violence, the BARC continued its terrorist activities. After 1977, when several leading members of the original Weathermen surrendered to federal authorities, the Weather Underground splintered into a number of separate organizations, some of which continued to advocate violence. In 1987, U.S. authorities arrested the last fugitive member of the Weathermen, Silas Bissell, and sentenced him to two years in prison.

Weinberger, Caspar

(1917–2006)

U.S. politician and secretary of defense (1981–1987). Born in San Francisco, California, on 18 August 1917, Caspar Willard Weinberger attended Harvard University, where he earned an AB degree in 1938 and a law degree in 1941. He served in the army during World War II, reaching the rank of captain. Following his discharge, he clerked for a federal judge and entered politics, winning election to the California State Assembly in 1952 and later serving as chairman of the California Republican Party.

After working in California Governor Ronald Reagan's cabinet in the late 1960s and early 1970s, Weinberger moved on to Washington, where he was director of the Federal Trade Commission (FTC) in 1970, deputy director during 1970–1972, and director during 1972–1973 of the Office of Management and Budget (OMB), and secretary of Health, Education and Welfare (HEW) during 1973–1975.

Weinberger served as an advisor to Reagan during the 1980 presidential campaign, and Reagan subsequently appointed him as secretary of defense in 1981. When Reagan nominated Weinberger, many conservative Repub-

licans feared that given his reputation as a budget cutter, Weinberger would not support Reagan's calls for increased military spending. As director of the OMB, Weinberger had earned the nickname "Cap the Knife," and Jesse Helms, a right-wing Republican senator from North Carolina, voted against his confirmation based on those fears. However, Weinberger soon developed a reputation as one of the strongest proponents of Reagan's defense buildup.

Reagan and Weinberger identified several major goals, including nuclear arms reduction. But during Reagan's first term as president, his administration embarked upon a major buildup of nuclear weapons. Weinberger also pushed to deploy more nuclear warheads in Europe and supported Reagan's Strategic Defense Initiative (SDI) for the establishment of a laser-guided defense system in outer space to destroy incoming ballistic missiles aimed at the United States. These and other measures were controversial and costly, but Reagan and Weinberger defended them as necessary to meet the Soviet threat. Weinberger resigned his post in November 1987, citing his wife's poor health.

In November 1992 a grand jury investigating the Iran-Contra Affair indicted Weinberger on four counts of lying to a congressional committee and the independent counsel's office and one count of obstruction of justice. During the mid-1980s the Reagan administration sold weapons to Iran in exchange for the freeing of American hostages being held in the Middle East. Some of the proceeds from the sale were illegally diverted to the Contra rebels who were fighting the communist Sandinista regime in Nicaragua.

U.S. Secretary of Defense Caspar Weinberger, who directed an unprecedented peacetime buildup of U.S. military forces. (U.S. Department of Defense)

Once the story became public, Congress created a committee to investigate the affair, and an independent counsel was appointed to probe any criminal wrongdoing. Its office claimed that Weinberger had lied about his knowledge of the sale of arms to Iran. Weinberger declared his innocence and his intention of fighting the charges, but the case never went to trial. On 24 December 1992, President George H. W. Bush issued a full and complete pardon to Weinberger and several other Reagan administration figures. Weinberger died in Bangor, Maine, on 26 March 2006.

Conservative American extremist and founder of the right-wing John Birch Society. Born in rural Chowan County, North Carolina, on 1 December 1899, Robert Welch graduated from the University of North Carolina in 1916, then attended the U.S. Naval Academy, Annapolis, during 1917–1919 and Harvard Law School during 1919–1921.

In 1922 Welch went to work as vice president of his brother's candy manufacturing company, retiring in 1956. He served on the board of directors of the National Association of Manufacturers (NAM). From this forum, he gravitated toward Republican Party politics. Through his work with NAM, he formed relationships with numerous conservative business leaders such as Texas oil magnate H. L. Hunt, the sponsor of radical right-wing groups and radio programming.
